establish his rights he must co-operate with his fellows, for such co-operation is only a means to an end, and that end is the establishment of the principle that through the right of private judgment alone man attains his proper good. In all Protestant Churches and in all liberal States this principle has now 'stormed out into reality.' It is true that it did not triumph all at once; that Luther himself did not always give it its dominant position; that the substitution of the authority of the Bible as the written Word of God has for three centuries been every whit as tyrannical in its application as the older Inquisition (*q.v.*); that autocratic empires are but now being got rid of at the hands of democratic peoples; that the ideal of a free Church in a free State is not fully actualized; and that democracy is yet on its trial. But in spite of these short-comings the principle has so far triumphed that a return to the mediæval ideal is to the modern mind unthinkable, and survives only in relatively obscure coteries which are of the nature of atavistic survivals in bodies under the otherwise undisputed sway of the principle of the right of private judgment. 'A people's bible, then, a reading people, a preaching ministry'—these are characteristic of the modern Church.¹ 'One man, one vote,' and 'manhood suffrage' form their civic equivalent. Robert Browne's *Treatise of Reformation without tarrying for anie* (Middelburg, 1582) is an early land-mark of the principle in English religion (see *BROWNIISM*). The hanging of two men at Bury St. Edmunds in 1583 for circulating it was the counter-blow of the civil government, which had assumed the opposite principle of the papal court. The doctrine of the 'Manchester school'—the theory of *laissez faire, laissez passer*, in economics and politics which from 1845 to 1875 dominated political thought—shows the extent to which the principle of private judgment has swayed the minds of men.

2. Modern thought.—Though the free thought of to-day was prepared for by events prior to Luther, such as the invention of the printing-press, the rediscovery of Greek, and the opening up of the New World, yet to Luther still falls the credit of bringing to its support the forces of religion. The survival of mediæval dogmatism in the churches of the New Learning only serves to show how much harder would have been the progress of thought towards freedom had not Protestant Churches appeared to counteract the Catholic reaction known as Jesuitry. Milton states the case fairly when he says that it is a general maxim of the Protestant religion that 'no man, no synod, no session of men, though called the church, can judge definitively the sense of scripture to another man's conscience.'² Hence, where the right of private judgment is explicitly maintained, heresy is impossible, and a trial for so-called heresy is at bottom merely an action for breach of contract. In the room of the inquisitor now sits the school-master.

Erasmus, in his controversy with Luther on the question of free will, asserted caustically that 'where Lutheranism flourishes the sciences perish.'³ This could hardly be maintained to-day, especially of Luther's fatherland. Rather should we have to say that where Luther's principle of private judgment obtains there is the door opened for the full life of science and philosophy. Not that thought was inactive through the earlier period. The great Schoolmen were no mean thinkers, but they thought in blinkers. The end of their journey was prescribed at the start, and hence free thought was denied them. And thought

³ *Diatribæ*, p. 4.

which is not free runs the risk at least of not being thought at all. It may under the guise of thought deliver us over to the 'double truth'—that of philosophy and that of theology—or rest in a delimitation of boundaries which is made by the assertion that dogma is not contrary to reason, but above reason. But the principle of the right of private judgment cannot stop short of the demand that 'faith and reason,' 'religion and science,' shall resolve their antinomies at the bar of reason and extend the right of reason to autonomous judgment over the whole domain of faith.

How far we have travelled along the road of private judgment, and with what difficulty, may be conveniently seen by comparing a declaration of 1633 with another of 1900. The Congregation of Prelates and Cardinals ruled in the case of Galilei that 'the doctrine that the earth is not the centre of the universe, and is not immobile, but is moved with a motion that is daily, is not only an absurd proposition but false in philosophy, and theologically considered at least erroneous in faith.'¹ On the other hand, Karl Pearson makes the assertion (*Grammar of Science*², London, 1900, p. 366), while deprecating its one-sidedness and exaggeration, that 'the chief motor of modern life with all its really great achievements has been sought—and perhaps not unreasonably sought—in the individualistic instinct.' And, though this instinct may need to be balanced by those of socialism and humanism, yet each of these, even while striving to promote individual or national co-operation in the place of competition, does so avowedly in the interest of the highest good of the individual, of all individuals.

It must not be assumed, however, that the right of private judgment, when asserted, triumphed at once or even in a short time. At first the civil power stepped into the place of the papal, and adopted its spirit. 'Where the individual appealed to the powerful (individual) spirit within him, Luther would have none of it. Further, in politics nothing was heard of save the good of the State, or the general weal.'² The National Church sought to clothe itself with the autocracy of the rejected Roman Church; little respect was paid at first to the rights of individual persons or individual communities. This transition spirit persisted in philosophy until Descartes (*q.v.*), by rejecting all authority and starting *de novo* from the thinking Ego as the basis of all philosophy, became the founder of all philosophy that is entitled to call itself modern. While philosophies are in conflict from generation to generation, they are agreed on one point, and that is, that the appeal of all philosophy is in the end to reason speaking through the individual thinker. In philosophy the right of private judgment is irrefragable. The most striking proof of this is given indirectly by the long sway of the political theories of Bentham and by his maxim that the end of government is to ensure the greatest good of the greatest number. Society exists to perfect the individual, and, if the individual is called on from time to time to sacrifice himself to society, it is only that he may find his life enriched by losing it.

3. **Mysticism.**—This third element has not enjoyed in modern times the same popular vogue as empiricism or rationalism, and indeed it may be questioned whether it ought not to be regarded as the inspirer of thought rather than as an independent and co-ordinate factor. In philosophy indeed it has its definite exponents in More and Cudworth. In religion it underlay Quakerism and the Wesleyan and Evangelical movements. It

emerges in literature in poets such as Wordsworth and Shelley, and in writers such as Novalis, Amiel, Emerson, Walt Whitman, and Coventry Patmore. It inspires the pre-Raphaelites, and art-symbolists of every sort, and Henri Bergson and the pragmatist schools of thought. It is paramount in thinkers like Schlegel (alike in his 'ironic' stage and in his later, where he treats the individual as insufficient to himself, but progressing towards divinity), in Schelling (especially in his 'fourth period'), in the 'Scottish school,' which identified philosophy with the observation of the facts of consciousness, in Rousseau, in the *Wolfenbüttel Fragments* of Reimarus, in Jacobi, and in Jacob Boehme.

Finally, it should be observed that private judgment is properly or directly concerned not with matter of fact but with values. The discussion of matter of fact belongs to science, where private judgment has no legitimate place, but the values of things, whether partial or ultimate, are values for the individual. Interest in them is personal, and hence private judgment must in them assert itself. A good, to be a good to me, must be a good for me. But this is not to say that my private judgment is self-originated or self-sufficient. The social whole and the activities of nature play a large part in supplying the content of that self-consciousness of which private judgment is an inevitable expression. The perfect correlation, however, of the individual and the society remains one of the gravest problems which man has yet to solve.

Menzies, 4 vols., do. 1886-88, iii. 227 ff.; T. H. Green, *The English Commonwealth*, in *Works*³, 3 vols., do. 1906-08, iii. 277-284; J. E. Erdmann, *Hist. of Philosophy*⁴, tr. W. S. Hough, 3 vols., do. 1902, esp. vol. ii. 1910; W. E. H. Lecky, *Hist. of Rationalism in Europe*, do. 1910; K. Ullmann, *Reformers before the Reformation*, tr. R. Menzies, 2 vols., Edinburgh, 1855; Martin Luther, *First Principles of the Reformation*, tr. H. Wace, London, 1884; *Theologia Germanica*, tr. S. Winkworth, do. 1874; R. A. Vaughan, *Hours with the Mystics*⁵, 2 vols., do. 1888; J. Tulloch, *Rational Theology and Christian Philosophy in the Seventeenth Century*⁶, 2 vols., Edinburgh, 1874. W. F. COBB.

PROBABILIORISM.—Probabiliorism is a form of probabilism (*q.v.*). The principle may be stated thus: the *opinio minus tuta quæ libertati favet* may be followed to the detriment of the *opinio tuta quæ legi favet* when the former is more probable than the latter although it is not quite certain, i.e. when the reasons and the scholars militating in its favour have more weight than those militating in favour of the *opinio tuta*. There have always been probabiliorist casuists, but probabiliorism was peculiarly in favour during the first half of the 19th century. Among its defenders may be mentioned Thiels and Billuart. Thiels wrote a treatise in which he refutes the so-called reflex arguments upon which mainly the partisans of simple probabilism rest, viz. (1) 'lex dubia non obligat,' (2) 'lex dubia invincibiliter ignoratur,' (3) 'melior est conditio possidentis.' Billuart, after severely condemning simple probabilism and equiprobabilism (*q.v.*), declared himself in favour of probabiliorism with the help of arguments drawn from reason and from Pope Alexander VIII.'s condemnation of the following proposition: 'non licet sequi opinionem probabilissimam.' If we can follow the *opinio probabilissima*, which always implies a minimum of doubt, it follows, according to him, that we can also follow the simply *probabilior opinio* without the doubt which it leaves in existence sufficing to render it suspect. He demands, however, that the reasons for probabiliority should be very genuine. The resolutions of the assembly of the French clergy in 1900 also seem to him favourable to

² Erdmann, *Hist. of Philosophy*. 'I' § 964, p. 6.

probabiliorism. In the matter of the sacraments he leans towards tutorism. During the second half of the 19th cent. probabiliorism was gradually forsaken. Gousset is inclined towards it, although he does not debar probabilism.

We cannot include in the number of probabiliorists the theologians who demand probability only in certain cases—e.g., when the doubtful law is a natural law, or a very important one—or those who, like Gury, demand it only ‘ubi de solo honesto agitur,’ i.e. in order that an action may be thought honourable, not when it is simply a question of ‘licito vel illicito,’ i.e. whether it is permissible or not. The only purpose of this distinction between the *honestum* and the *licitum* is to limit simple probabilism in appearance, by leaving consciences in reality free to adopt it.

The probabiliorists apply this principle only to the question of law, not to that of fact. In theory, we may follow the *opinio minus tuta* because it is more probable than the *opinio tuta*, but in order to make sure whether the concrete conditions, under which alone the surplus of probability exists, are realized or not, more than probability is needed, viz. certainty; e.g., the law forbids the eating of meat during Lent; nevertheless the contrary is more probable, viz. that in certain circumstances I can eat meat even then; from that time I can admit in principle that in these circumstances I can eat meat during Lent; I cannot, however, do it in a given case unless I am absolutely sure that I am in these circumstances.

LITERATURE. — Thiels, *De reflexis probabilismi principii discussio*, Malines, 1844; C. R. Billuart, *Summa S. Thomæ hodiernis Academicarum moribus accommodata, seu cursus theologiæ juxta mentem divi Thomæ*, new ed., Paris and Lyons, 1887, vii. 407 ff.; T. M. J. Gousset, *Théologie morale*¹², Paris, 1887; L. Potton, *La Théorie du probabilisme*, do. 1874; J. P. Gury, *Compendium theologiæ moralis*, Paris and Lyons, 1885, i. 130 ff. E. EHRHARDT.

PROBABILISM.—By probabilism is signified the moral system according to which, when there are divergent views as to the lawfulness of an action, for each of which solid arguments may be advanced, then, provided the lawfulness be alone in question, we are under no obligation to follow the more probable of the two views, but are equally free to adopt either course.

It is the teaching of all theologians that no one may do any action which he is not sure is right. If a man acts with a doubtful conscience—not knowing whether the thing he is doing is right or wrong—that alone suffices to make his action sinful; for it proves that he is willing to do it even though it should be wrong. He is deliberately exposing himself to the risk of committing a sin. And to expose oneself to the risk of sinning mortally is by common consent a mortal sin. Yet in the conduct of life cases are constantly arising in which we are uncertain whether a given course is forbidden or not. The problem, then, is to determine the conditions in which, notwithstanding this uncertainty, a man may act as though no prohibition existed, with full assurance that his action is morally right. The various moral systems, tutorism (or rigorism), probabiliorism, equiprobabilism (*q.v.*), probabilism, and laxism give the different answers to the question. Since immediate and direct certainty as to the lawfulness of the act is not to be had, each system appeals to some principle of morals to provide the required assurance. In this connexion these are termed principles of reflex certainty or, occasionally, ‘reflex principles.’

In all the cases which we are considering there is said to be, on the one hand, a probable opinion in favour of the law, and, on the other, a probable opinion in favour of liberty, the respective proba-

bility of the opinions being determined according to the weight of the reasons which can be advanced on either side. In order to avoid misconceptions it seems desirable here to call attention to the fact that the meaning of the word ‘probable’ in theology differs somewhat from that now commonly attached to it. In the present sense of the term a thing is said to be probable only when it can claim a greater likelihood than the other alternatives. These are not said to be probable at all. Moreover, the idea suggested is in many minds linked up with the mathematical theory of probabilities (i.e. chance-happenings). In theology, on the other hand, the word is used in its etymological sense. An opinion is probable which commends itself to the mind by weighty reasons as being very possibly true. The idea of chance is altogether absent. Confining our attention, then, to the three systems which alone can be said to have had any actual importance in the theological schools, the probabiliorist theologians hold that we are free to follow the opinion in favour of liberty when and only when it is the more probable of the two. According to the equiprobabilists, in order that we may take this course it is necessary that the two opinions should have at least an equal degree of probability. The probabilist system teaches that, should there be a solid reason to suppose the action not prohibited, then we are free to follow that opinion, even though the reasons on the other side are more weighty, provided that the difference is not such as to render the existence of the law not merely probable, but morally certain.

Before giving the arguments on which the system is based, it will be well briefly to explain two points of importance: (1) what constitutes solid probability, and (2) the limits within which the system of probabilism is applicable.

(1) An opinion is said to possess *intrinsic* probability when the grounds on which it is based are such as to have serious weight with men of competent judgment. Moreover, the grounds must be such as to retain their value even in face of the reasons which can be adduced on the other side. By this it is not meant that they must be equally cogent. But they must be such that the opponent arguments do not render them nugatory. When the arguments on the two sides are drawn from different, and even from disparate, considerations, it will often be the case that those advanced for the less probable cause are in no sense invalidated by those which support the more probable. *Extrinsic* probability is that which belongs to an opinion by reason of the authorities who can be cited for it. Ordinarily speaking, it is held that, if five or six writers of recognized weight in the theological school can be reckoned as independently supporting a view, that view may be safely followed. The condition that the authorities quoted must be theologians of real weight is to be noted. An opinion does not acquire extrinsic probability because it is found in a few works which at one time or another have enjoyed some popularity.

(2) There are certain well-defined spheres of human activity in which probabilism has no place. If we are under obligation to ensure the validity of some act, it would be altogether unlawful to adopt means which will only probably be efficacious, should a safer course be open to us. In such a case we are bound to take the surest means at our disposal. Thus, probabilism is excluded (save in a few exceptional cases) in regard to the administration of the sacraments. If, e.g., a man had some doubt as to whether there was not an ecclesiastical impediment of affinity to the marriage he was intending to contract, he would be bound to procure the necessary dispensation to proceed. The mere fact that there was a sound probability

against the existence of the impediment, and that the question would certainly never be raised, would constitute no justification for neglecting to take the precaution. So, also, probabilism is inapplicable where the rights of another person are concerned. We are under strict obligation not to wrong our neighbour, and it is unlawful to put ourselves in danger of so doing. There may be excellent reasons for thinking that a match thrown at random over the hedge will not fire the hayrick on the other side. But a man would be acting wrongfully if on the strength of those reasons he should take the chance of causing the damage. Finally, probabilism may not be employed when there is question of some end that one is absolutely bound to attain. No man may use merely probable means to ensure his eternal salvation; he is bound to take measures which he knows to be sufficient. It would be erroneous to speak of these as exceptions to probabilism. Probabilism is applicable only where the obligation itself is dubious. In all these cases, although there is a doubtful element in the situation, the obligation is certain.

The argument for probabilism can be stated very briefly. Whenever there is a solid reason for questioning the existence of a law, that law is *ipso facto* doubtful. But a doubtful law imposes no obligation on the conscience ('lex dubia non obligat'), and may therefore be treated as non-existent. This principle, that a doubtful law has no binding force on the conscience, seems scarcely to require proof. But two considerations may be advanced in its support. In the first place, a law binds only in so far as it is known. If, therefore, after taking all reasonable means to make certain, a man still does not know whether a given law exists, he is not yet under any moral obligation in its regard. For practical purposes, he is in the same position as a man who has never heard of it ('lex dubia invincibiliter ignoratur'). Secondly, it is urged that an obligation is always to be viewed as a restriction on a previous state of liberty. Liberty is in possession till the obligation is imposed. Since this is so, and since 'melior est conditio possidentis,' unless the obligation is absolutely certain, a man remains free. But in the cases which we are considering the obligation is not certain but dubious.

These reasons, it is urged, are conclusive, and put the validity of probabilism as a moral system beyond question. Hence, whenever there is a reason for doubt as to the law, a man may adopt the opinion in favour of liberty with absolute assurance that he is justified in doing so, even though there be greater probability on the opposite side.

Probabilism, it is manifest, is concerned solely with what is of obligation, not with what is the most perfect course of action. In other words, it belongs to moral, not to ascetical, theology. It is of no little importance to avoid confusing the two issues. A man is not bound to adopt the more perfect course in all his actions, and the attempt to impose what is most perfect as a matter of obligation always results at last in the total rejection of the moral law, as being too burdensome for flesh and blood. It seems necessary to call attention to this point, as probabilism has often been attacked on the ground that it proposes a low standard of perfection. The fact is that it is in no way concerned with perfection. The study of Christian perfection belongs to ascetical theology.

The first to enunciate clearly and to defend the principles of probabilism was the Dominican, Bartholomew de Medina, in his *Expositio in 1^{am} 2^{ae} D. Thomæ* (Salamanca, 1577). The rules given by previous moralists—e.g., Navarrus—to enable a man to form a safe conscience for himself in doubt-

ful cases were somewhat more stringent; but all were agreed that a confessor was bound to absolve penitents who should announce their intention of following a probable opinion, even though he himself should be aware that this opinion was the less probable of the two. In such a case the confessor had no right to tell the penitent that he was guilty of sin in not following the more probable view. Medina carried the principle to its logical issue in maintaining that a man is always free to adopt a probable opinion as a basis of action. His teaching found general acceptance in the schools, as being in full accordance with admitted principles; and from 1600 to 1640 it was, with a very few exceptions, the universal doctrine of moral theologians. Towards the middle of the century a change took place. The leading Jansenists were advocates of tutiorism in its extreme form, maintaining that in all cases of doubt a man was bound to put himself on the safe side by acting as though the law actually existed. They attacked probabilism as immoral; and, inasmuch as the Jesuit theologians had been extremely active in opposing their doctrinal novelties, they held the order up to obloquy because of the support accorded by its writers to this system. In 1657 Pascal, at the instance of Antoine Arnauld, composed his *Lettres provinciales* in the interests of Jansenism. The mordant caricature of probabilism contained in this work, remote though it was from the truth, was a controversial success of the first magnitude. It brought the system into disrepute for many decades, and, among those who know little of the points at issue, still passes current as a satisfactory account. From 1650 to 1750 the majority, perhaps, of theologians inclined to some form of probabiliorism, though there was always a succession of moralists of real eminence who were faithful to the probabilist solution. From the beginning of the 19th cent. nearly every name of real note may be reckoned among the probabilists—e.g., Génicot, Ballerini, Lehmkuhl, Ojetti, and Slater. A few authors still defend a mitigated equiprobabilism; but there is little practical difference between the two standpoints.

LITERATURE. — A. Lehmkuhl, *Probabilismus Vindicatus*, Freiburg, 1906; *Theologia Moralis*, ed. 1910; F. Ter Haar, *De Systemate Morali Antiquorum Probabilistarum*, Paderborn, 1894; A. Ballerini, *Opus Theologicum Morale*³, Prato, 1899-90; J. M. Harty, *CE*, s.v. 'Probabilism'; T. Slater, *Short Hist. of Moral Theology*, New York, 1909. G. H. JOYCE.

PROBABILITY.—There are certain phenomena of such a nature that their antecedents, being extremely complex, cannot be adequately comprehended by observation, however searching it may be; nor can they be subjected to any analysis that will disclose the causal elements to which the effect in question is due.

In the throwing of dice, e.g., the antecedent shaking of the box and tossing the dice upon the table is about the same each time—at least the difference cannot be determined—and yet the results vary with each successive throw. The causal determination in each case is so complex as to be beyond computation; the initial position of the dice, the force of their ejection from the box, the height of the box above the table when they leave it, the inequalities of the table itself, a variation between the physical and geometrical centres of gravity of the dice, etc.—all make the antecedent so complex that a slight variation in any one of these conditions will affect the result. We find, therefore, double sixes at one time, a three and a four at another, and so on indefinitely.

Again, it sometimes happens that with perfect sanitary conditions an infectious disease will appear that has always been regarded, and that correctly, as due to imperfect sanitation, whereas an entire disregard of sanitary requirements and of all the laws of health may yet give rise to no disease of special moment. Certain conditions of temperature, atmospheric pressure, velocity and direction of the wind, may one day bring storm and rain, and, as far as observation can detect, similar conditions may again bring fair weather. So also the rise and fall in stock and money markets is extremely susceptible to the varying conditions of indefinitely complex forces wholly beyond all powers of determination or of prediction.

Such phenomena present a problem with which the methods of inductive inquiry cannot deal. Observation is not far-reaching enough to provide the data for the solution of the problem, and, even if it were, our methods of computation and determination are not adequate to solve problems of so many terms and of so complex a nature.

The causal connexion may be established beyond all reasonable doubt, and yet the cause obtains in the midst of so complex a setting that the problem is really this—to determine whether a cause, whose exact nature may be known or unknown, will prove operative or inoperative. The cause may be always present and even its exact nature may be known, and yet the complex circumstances attending it may be of such a character that one alone, or two or more combining, may neutralize the operation of the cause, and, on the other hand, a slight variation of the combined circumstances may promote and even accelerate the operation of the cause in question. The problem then is to determine how often the event happens, and how often it fails of happening, the complex and indeterminate antecedent being present in all the instances examined.

When we begin to count instances, we are reminded that we must be in the neighbourhood of the sphere of enumerative induction. Enumerative induction treats instances by noting the number of observed coincident happenings of the antecedent and consequent under investigation, no attempt being made to analyze their respective contents or to determine a causal connexion more definitely by means of any one or more of the inductive methods of research and verification. The result of such an investigation may be formulated in a proposition of the form, 'Every A is B.' This, strictly interpreted, has the force of 'Every A that has been observed is B.' There are cases, however, in which observation leads to a twofold result—a set of instances in which it is observed that the A's are B's, and another set of instances in which the A's are not B's. These instances are of such a nature that the observed A is an antecedent so extremely complex that the element within it, which is a cause capable of producing B, either may be absent without producing an appreciable change in the general nature of A or, being present, may be neutralized by some other element of A itself. The result gives a basis for a probable inference only; and the nature of that inference will depend upon the preponderance of the observed happenings or of the failure of the event under investigation.

The probability attached to such an inference, however, is different from the probability which characterizes the nature of enumerative induction. In the latter, when the observation has been widely extended and no exceptions noted, it is usual to say that the result expressed in the proposition, 'Every A is B,' has the force of a high degree of probability. But in the instances whose investigation shows the result that some A's are B's, and some not, and yet where the former far outnumber the latter cases, it may be inferred that the A's which in future we may meet will probably be B's; and the degree of probability expressed in such a proposition is commensurate with the preponderance of the number of observed affirmative instances over the negative. Here the probability refers to the validity of an inference concerning certain *particular* instances, be they many or be they few, which lie beyond the sphere of our present knowledge; in enumerative induction the probability is attached to the *universality* of the proposition affirmed as a result of observation that has not so far detected an exception. In the

former case the question of the universality of the result is conclusively answered in the negative; there can be no universal proposition possible, as some instances give A and B together, others give A with the absence of B; and the question of probability that here arises, therefore, refers to individual cases not yet examined, as to whether they severally will more likely correspond to the set of affirmative or to that of the negative instances already noted.

The comparison of the number of happenings with that of the failures of an event affords a basis for several kinds of inference, all of them in the sphere of probability.

We find in such a comparison a basis for the calculation of the probability of a particular event happening when there is a repetition of the circumstances which, in former cases, have sometimes produced the event and sometimes failed to produce it. If, according to former observation, the event has happened, let us say, seven times, and failed three, the probability, expressed numerically, of its happening again is $\frac{7}{10}$. The rule is: to express the probability of an event, take as numerator the number of times which the event has been observed to occur, and as denominator the total number observed, both of happening and failure; the fraction thus expressed will represent the probability of the event happening. The counter-probability may be represented by the number of observed failures of the event divided by the total number of cases observed. The counter-probability *plus* the probability evidently is equal to unity. If, therefore, the probability is unity, the counter-probability will equal zero; i.e., the probability in that case has merged into certainty. Zero, therefore, represents absolute impossibility. All fractions between the limits zero and one represent varying degrees of probability, from impossibility at one extreme to certainty at the other.

Not only may there be this inductive basis for the calculation of probability, arising from actually observed instances; there may be also a deductive calculation of probability based upon the known structure or nature of the phenomena themselves in advance of any observation as to their actual behaviour.

We say, e.g., that the probability of a penny turning up heads is $\frac{1}{2}$. Knowing the form of the penny and that there are but two possibilities, heads or tails, and there being no reason why one is more likely to turn up than the other, we say that there is one chance favourable to heads against the two chances which represent the total number of possibilities under the existing circumstances. With a die, in the form of a perfect cube, we say there is one chance of its turning up the face marked 1 against the six chances represented by the six faces—the total number; here the probability is $\frac{1}{6}$. Thus the basis for the calculation of probability may be a theoretical as well as an empirical one.

In the estimate of the probability of an event in the actual conduct of affairs we seldom express that probability numerically; we express a degree of probability adverbially rather than numerically; i.e., we say an event is *quite* probable, *very* probable, or *extremely* probable. The fact is that, as regards most phenomena, we do not keep an exact or even approximate memorandum of the number of happenings compared with that of the failures. We rather classify our observations in terms of more or less. Certain circumstances that we observe produce about as many failures as happenings of an event, other circumstances produce far more happenings than failures, others far less, and so on. Consequently we receive certain psychological impressions of varying degrees of intensity according to the preponderance of happening over failure, or *vice versa*; this impression becomes the basis for estimating the probability in question, and the degree of that probability is commensurate

with the intensity of the original psychological impression arising from concepts of more or of less. In such a sphere, however, as that devoted to the interests of betting, gambling, pool-selling, book-making, etc., probabilities are estimated according to observations and theoretical considerations whose conditions are expressed numerically; and the amount risked in each case is strictly estimated according to the exact ratio of probability to counter-probability under the existing circumstances.

The estimation of probability in terms of a greater or less degree is, however, more usual, and applicable to the conduct of human life generally (for the theory of probability as the guide of life see art. BUTLER). It has special force and utility as a mode of inference when the observed instances so far outnumber the exceptions as to create an impression of such a high degree of probability as to approximate practical if not theoretical certainty.

It has been noted over a wide field of observation that a second attack of scarlet fever is extremely rare. Exceptions have occurred and, therefore, by enumerative induction it is impossible to generalize the universal proposition that a second attack will never occur. It is, however, possible to assert with somewhat positive assurance that it is highly probable that a person will be exempt from a second attack.

The comparison of failure and happening of events based upon observation or theoretical considerations of structure and nature leads also to inferences concerning large numbers of instances considered together. If a memorandum is kept of the number of times an event has happened and of the number of times it has failed, and the total number of instances examined be sufficiently great, then the resulting ratio of favourable instances to the total number will be found approximately repeated if a second set of an equal number of instances be likewise examined. There is a law of tendency whereby Nature seems to repeat herself even when the attendant circumstances of an event are most complex and beyond all powers of accurate determination.

As the result of observations extending over thousands and thousands of instances, it is affirmed that about $\frac{1}{4}$ of the children born in the world die before the age of sixteen. In a group of 10 children the ratio would perhaps be deviated from very materially; in a group of 100 the deviation is apt to be less; in a group of 1000, still less; and in a group of 100,000 the ratio as above given would be substantially realized. The approximation would be so near that the error would be insignificant as compared with total number of cases.

The following law, therefore, expresses this tendency—that, while in a small number of instances there is irregularity in the observed ratio between the number of times a given event has happened and its failures, still in a large number of instances this ratio tends towards a constant limit.

This is clearly seen in the pitching of a penny: 10 throws might very possibly result in 7 heads and 3 tails; in 100 throws, however, the ratio expressing the result as to heads and tails observed will be much nearer $\frac{1}{2}$ than in the former case; while, if 1000 or 10,000 throws be observed, the result will approximate the ratio $\frac{1}{2}$.

The comparison of observed cases with the number given by the calculation of the probabilities in question has been made by Quételet, and also by Jevons. Their results are most significant and interesting.

Quételet made 4096 drawings from an urn containing 20 black balls and 20 white. Theoretically, he should have drawn as many white as black balls, 2048 each; the actual drawings resulted in 2066 white balls and 2030 black. Jevons made 20,480 throws of a penny; the theoretical result should have been 10,240 heads; the actual result was 10,853 heads.

The tendency towards a constant ratio in aggregates containing a considerable number of instances is strikingly illustrated in the record of baptisms taken from an old parish register in England. The number of male baptisms registered to every 1000 females ran as follows for the respective years from 1821 to 1830: 1048, 1047, 1047, 1041, 1049, 1046, 1047, 1043, 1045, 1034. We see with what surprising accuracy the constant ratio was repeated substantially year after year.

A like regularity seems to pervade every depart-

ment of life. The total number of crimes is approximately the same, year after year; the annual death-rate, the apportionment of deaths, moreover, to the several diseases as their evident causes, the number of missent letters each year, the annual number of suicides, of divorces—all these diverse events indicate a regularity in the long run, as regards their numerical estimate.

The results which are thus attained regarding aggregates cannot be stated as probable results. If a sufficiently large number of instances are taken, the result will be certain within a very small, and in many cases an insignificant, margin. In estimating the probability of a single event the question is whether it will happen or not happen, and the element of uncertainty is therefore prominent. In dealing with aggregates, however, no such element of uncertainty enters; the question is not whether or not there will be certain results, but concerns rather the degree of exactness with which the results will approximate a definite ratio. And the law of tendency is that the larger the number of instances, the greater will be the approximation of an accurate and definite result.

This is especially illustrated in the numerous insurance companies whose business is conducted upon the basis of an approximately constant death-rate. The general procedure is somewhat as follows:

Suppose 10,000 persons insure their lives at £200 per individual, and the annual death-rate observed over a wide extent of territory, and including a very large number of instances, amounts to 200 persons out of 10,000. The losses then to the insurance company will amount annually to £40,000 on such a basis. These losses, distributed among the 10,000 insuring in the company, would amount to £4 apiece. The company, therefore, has a numerical basis for calculating the amount which each person must pay in order to cover the annual losses and to provide an assured revenue for the company.

The problem has been stated in round numbers merely to illustrate in general the principle involved; the actual calculation is more complicated, because, in each particular case, the age of the individual and the varying death-rate for different year, must be taken into account. The substantial standing of the innumerable insurance companies in our country bears witness to the fact that these enterprises are based upon a practical certainty regarding death-rates when applied to large aggregates. Chance is thus eliminated almost entirely; that which would be a serious risk as regards an individual is substantially void of all risk when large numbers are concerned.

Moreover, phenomena indicate a marked departure from the ratio of frequency as determined by prior observation or by theoretical considerations; then it is ordinarily inferred that a new cause has become operative, not before existent, or, if present, with its effect neutralized.

We would naturally expect a die to show the face 3, on an average, about once in six throws. But, if it repeatedly turns up 3 in succession, and if no other number appears, or appears but rarely, we are warranted in inferring that the die is loaded. The number of homicides in the United States in 1894 far exceeded the annual number observed for the several years preceding. This discrepancy is easily accounted for by the fact that the natural number was swollen by the deaths caused by the strikers and rioters in the month of July of that year. So also a marked departure from the annual death-rate of a large city is at once an urgent suggestion to the public health authority to start investigations that will unearth the hidden cause that one is constrained to believe must be present. Such causes as defective drains, prevalence of epidemics, etc., are again and again found to accompany an increase of the average death-rate.

Under such circumstances the method of investigation which should be pursued, when practicable, is to endeavour to break up the total into smaller groups of a specific nature. Thus, if the death-rate for the year is appreciably increased, examine the death-rate per month. See if any month shows a marked departure from the average. If so, this will suggest a careful investigation of the circum-

statistics and characteristics of the month in question. Or it may be possible to make a geographical distribution of the total over different sections of the city under investigation. Some special locality may indicate an unusually large death-rate. Investigation, therefore, at that point may reveal a lurking cause of disease, otherwise unnoticed.

By similar considerations it is often possible to distinguish between a chance coincidence and a determinate cause which has produced the event in question. For, if the possibility of some one definite cause is considered out of the question, and if the origin of the event is found among complex phenomena of such a number and variety that they may form an indefinite number of combinations only one of which can possibly produce the event in question, then the probability that the event has actually been produced by such a chance combination is extremely small. We are then thrown back upon the other hypothesis, that, instead of one out of many possible combinations, there is some one determinate cause operative in the case. Its nature may not be definitely indicated, but at least the possibility of its presence is suggested.

This line of reasoning is illustrated in the following account of the discovery of the existence of iron in the sun, in the researches of Bunsen and Kirchhoff:

'On comparing the spectra of sunlight and of the light proceeding from the incandescent vapour of iron, it became apparent that at least sixty bright lines in the spectrum of iron coincided with dark lines in the sun's spectrum. Such coincidences could never be observed with certainty, because, even if the lines only closely approached, the instrumental imperfections of the spectroscopic would make them apparently coincident, and if one line came within half a millimetre of another, on the map of the spectra, they could not be pronounced distinct. Now the average distance of the solar lines on Kirchhoff's map is two millimetres, and if we throw down a line, as it were by pure chance, on such a map, the probability is about $\frac{1}{2}$ that the new line will fall within one-half millimetre on one side or the other of some one of the solar lines. To put it in another way, we may suppose that each solar line, either on account of its real breadth, or the defects of the instrument, possesses a breadth of one-half millimetre, and that each line in the iron spectrum has a like breadth. The probability, then, is just $\frac{1}{2}$ that the centre of each iron line will come by chance within one millimetre of the centre of a solar line, so as to appear to coincide with it. The probability of casual coincidence of each iron line with a solar line is in like manner $\frac{1}{2}$. Coincidence in the case of each of the sixty iron lines is a very unlikely event if it arises casually, for it would have a probability of only $(\frac{1}{2})^{60}$ or less than one in a trillion. The odds, in short, are more than a million million millions to unity against such a casual coincidence. But on the other hypothesis, that iron exists in the sun, it is highly probable that such coincidences would be observed; it is immensely more probable that sixty coincidences would be observed if iron existed in the sun, than that they should arise from chance. Hence, by our principle, it is immensely probable that iron does exist in the sun.'¹

This principle is also illustrated in instances of circumstantial evidence. In such cases the observed combination of so many diverse circumstances, even as regards an indefinite number of minor details, precludes the hypothesis of casual coincidences, and suggests some one definite cause that will prove a unifying principle of explanation of all the attendant circumstances. As Bullen says:

'A presumption is very often more convincing and more satisfactory than any other kind of evidence. It is not within the reach and compass of human abilities to invent a train of circumstances which shall be so connected together as to amount to a proof of guilt without affording opportunities to contradict a great part, if not all of these circumstances.'²

In the various illustrations which have been given we find that the theory of probability provides a method of dealing with phenomena which cannot be subjected to the ordinary inductive methods. The phenomena are so complex that a specific cause cannot be determined, for the rea-

cause in question is a correlation of many diverse forces, and, if only a few instances are examined, no causal connexion will be disclosed; it is necessary, therefore, to deal with large numbers, statistical averages, etc., in order to detect an emerging relation of a causal character, expressed by a constant ratio. This ratio once determined, it becomes a further test, as we have already seen, when the results widely depart from it, to suggest the presence of a new force outside of the combinations to which the effect would be naturally referred according to the indications of the probability-ratio. The latter mode of inference is akin to the method of residues, for the inference in question is based upon the fact that the probability-ratio will account for only a certain frequency of occurrence of the event under investigation; a marked excess must be accounted for by positing a definitely operative cause. And, if an antecedent of such a nature is known to be present, the suggestion at once arises in our thought that this in all probability is the cause producing this excess in the results.

JOHN GRIER HIBBEN.

PROBATION.—One of the most obvious and striking aspects of experience, one which forces itself upon a man's mind as soon as he begins to reflect at all, is its incomplete and fragmentary character. In the pursuit of truth he finds himself confronted sooner or later with unanswerable questions, face to face with insoluble mysteries. Knowledge may be real as far as it goes, but finality is not to be found. In the pursuit of the good, again, there is a perpetual discrepancy between the actual and the ideal, a constant failure of achievement. And the passion for the beautiful is never really satisfied, though its hunger may be partially stayed. In all these directions neither the mind nor the heart of man ever finds absolute satisfaction; his capacity finds neither limit nor adequate response.

The questions, then, are inevitably thrust upon us: Why is aspiration so far in advance of attainment? Has it always been so? Will it always remain so? The incomplete, the inadequate, the fragmentary, is abhorrent to us, aesthetically and spiritually, and we cannot 'sadly and soberly acquiesce' without at least attempting to find some explanation of this character of the given.

The theory of probation is an attempted answer to the above questions. We have seen that experience does not satisfy, that this world is not adequate to the complete realization of our desires. There is no doubt about that. But how if it was not meant to satisfy? How if its incompleteness and fragmentariness and apparent illusion were not errors and defects in the character of the world, as we are first inclined to think, but just those very qualities which give it such value as it

has? The world, as we perceive it, may be only a part of a larger universe; our temporal existence may be but a phase in an experience that is not to be numbered by years; in a word, this present world may be but a period of probation, a period, that is, whose explanation and justification lie beyond itself in the idea of an end to which it may serve as means, of a purpose of which all 'the change and chances of this mortal life' may be so many ways of fulfilment.

Now the probation of which this life is the scene is to be conceived not as a process that goes on impersonally, as it were, but as the direct work of the God and Father of mankind. The theory presupposes, then, that there has already been formed the conception of a personal God, with whom the spirit of man is in immediate contact. For probation is a teleological concept, and a purpose or end is the expression of the will of a person, and cannot have its source in a mere 'tendency, not ourselves, that makes for righteousness.' Hence it is an idea that seems very closely bound up with the belief in a personal God. Probation is a distinctively religious, not only a moral or philosophical, theory.

The ideas of discipline and purification are to be found in any religion which has any ethical quality at all, but that of probation does not seem to have been fully developed except among the Jews, of whose theology it is an important element, and whose history is interpreted by the prophets in the light of it. The history of the Jews, broadly speaking, is the history of a people whose high calling, to be in a special sense the medium of Divine revelation and blessing to the world, was equalled only by their failure, as a nation, to discern its import and to rise to its fulfilment. For this fulfilment all the vicissitudes of their history, as that of a 'chosen people' *par excellence*, were meant to fit them; all was meant, in Scripture language, to humble them, and to prove them, whether they would keep God's commandments or no (cf. Dt 8³). 'Elect peoples,' it has been said, 'have tragic careers,'¹ and the tragedy is never more deep and complete than when the nation is spiritually blind to the meaning of its destiny, which is throughout recognized, by those who have eyes to see, to be of Divine appointment and plan. It was the unique relation of the nation to a personal God, known as such, that is, as a Being of moral nature, that gave their failure the further character of sin.

To regard this world as the scene of probation is to regard it from a point of view that throws light on much that is otherwise hopelessly obscure and inexplicable in experience; for instance, some such conception as probation, that is, of life as a time of testing and training the will rather than of complete moral achievement, seems the only possible direction whence the nearest approach to a solution of the problem of evil could come; it is along these lines only that we can justify the twofold deliverance of the religious consciousness, that evil and sin are temporally real, and yet that God is good and that He is almighty. The only justification for even the temporary existence of evil would lie in its being an essential condition of the attainment of an end which is of supreme value. If we may attempt to define the end for which this world was called into being as the realization of the conscious communion of every soul with the God and Father of that soul, then it at once becomes plain that from the beginning the possibility of evil must have been recognized, and recognized as worth while. For man can attain the Divine likeness and become

in the fullest sense partaker of the Divine nature only by a process of probation, in which temptation plays an essential part. Character is an acquired product; no virtue or goodness is assured which has not been put to the test in some way or another, and such trial or probation is accomplished through an experience in which the necessity of a choice between good and evil is constantly presented. One of the most profound truths embodied in the OT narrative of the Fall is that man, though originally innocent, i.e. ignorant of the distinction between good and evil, can attain holiness only through such a process of probation and temptation.

'Goodness as a moral experience is for us the overcoming of experienced evil. . . . So, in the good act I experience the good as my evil lost in goodness, as a rebellion against the good conquered in the moment of its birth, as a peace that arises in the midst of this triumphant conflict, as a satisfaction that lives in this restless activity of inner warfare. This child of inner strife is the good, and the only moral good, we know. . . . No genuine moral goodness is possible save in the midst of such inner warfare. The absence of the evil impulse leaves naught but innocence or instinct, morally insipid and colourless. Goodness is this organism of struggling elements' (J. Royce, *The Religious Aspect of Philosophy*, Boston, 1885, pp. 452, 456, 459).

Goodness is not forced upon us; we make it our own by willing identification of our will with the good. Hence probation implies freedom, power to 'choose the good and refuse the evil.' This is not the place for a discussion of the interminable Free Will *versus* Determinism controversy. It is enough to point out what will be denied by none, that those who regard this life as a period of probation make the implicit assumption that man is free—an assumption which receives most emphatic confirmation from the witness of the moral consciousness. It would be futile to speak of the 'probation' of a being who could not be otherwise than unflinching regular in the performance of duty; in fact, such an one could scarcely attach any meaning to the word. Freedom, as Kant pointed out once for all, is a fundamental presupposition of morality, and the belief in probation lays great stress on this side of truth. Hence probation is not consistent with determinism, Calvinistic or otherwise. This world is no scene of probation for *Johannes Agricola in Meditation*.¹

If this life is a period of probation, it makes a constant appeal to the will to 'take sides with a cause not yet won'—that is the testimony of the moral consciousness, while yet the religious consciousness possesses the fundamental assurance that the victory is already accomplished. God's will shall be done; that cannot fail. But then arises the question as to the attitude of the individual, whether he will co-operate in its fulfilment or not. The constant pressure of this question is his probation.

And, just because the probation to which man is subject is an appeal to his willing spirit, it is no merely theoretic experiment to see what he will or can do, but is essentially practical, leading to definite issues for conduct, which can then be dealt with by way either of correction or of confirmation. It is a test or experiment not simply to increase the knowledge of the one who makes it, but continually carried on to affect the nature of the subject. This leading to a definite issue, whether for good or for evil, is an important aspect of probation. Indifference, neutrality, lukewarmness calls for the remedy of 'a piercing pain.'² Acts may be forgiven, but not even God Himself can forgive the hanger-back. 'At every instant, at every step in life, the point has to be decided, our soul has to be saved, heaven has to be gained or lost.'³ Hence probation, even though it may

⁴ R. L. Stevenson, *Lay Morals*, ch. iii.

result for the time in the choice of evil, is the first step of the way that leads through purification towards perfection.

The belief that this is the divinely appointed way for man finds its classic expression in the words of Job: 'He knoweth the way that I take: when he hath tried me, I shall come forth as gold.'¹ It may be objected that, in the case of Job at any rate, we see an instance of probation for purely theoretic interests. The drama represents Job's trials as being sent to supply an answer to the cynical question, 'Doth Job fear God for nought?' Here mere knowledge seems the end in view. But this is not really so. Two things must be remembered. First, Job's real devotion to, and trust in, God were practically tested, and the issue of his probation was a far higher, more deeply rooted, type of goodness than was possible to the merely prosperous, God-fearing man who is first depicted. His choice of the good becomes a perfect passion for right. Besides, 'the more righteous the man, the more urgent the demand for a testing experience.'² And, secondly, even if the testing had been unnecessary for Job himself, the results are never limited to the individual. 'Piety and prosperity must sometimes be dissociated, if it were only to let piety have an opportunity for evincing its sincerity,' and to 'silence doubt as to the reality of goodness.'³ And the effects go even further than this, as the language of St. Paul makes abundantly clear.⁴

We have seen, then, that this life is meant to be a stage in the progress towards perfection, through probation and purification of the will and character.

'It looks as if this strange life of ours were made only for character. . . . For all other purposes—the making of fortune, the enjoyment of pleasure, the securing of worldly wealth or position or fame—this is a life ill-adapted. The flux of things, the uncertainties of fate, the varied unforeseen combinations of circumstances adverse to or destructive of health or wealth or happiness—all these make life a place obviously not formed primarily for these ends, the attempt to gain which is so easily and often thwarted, and which, even when gained, are held on so uncertain a tenure. This is really not the world for worldliness. But . . . all these conditions—this flux, this risk, this uncertainty—are the very conditions that help to form character. They make just the discipline by which a man may become tender and spiritual, patient and humble, unselfish and loving. The circumstances of life may defeat all other ends, but they cannot defeat, and they even must contribute towards, this end' (P. Carnegie Simpson, *The Fact of Christ*, London, 1900, p. 82f.).

But we do not yet see probation taking effect in the complete purification of character, much less in its perfection. 'Life, as we know it, does not give full scope for the working out of individuality, ethical or intellectual.'⁵ The gradual perception that this is so leads to two alternatives: either to a form of pessimism which stops short with the conviction that

'All my life seems meant for falls,'

or to a belief in immortality—a belief that is due not to a selfish desire to 'call into being a new world to redress the balance of the old,' or to a mere craving for continuance, but a belief that is seen to be not so much a postulate as a positive implication of morality. A spiritual being cannot be a mere temporary phenomenon. And probation, taken in its deepest implication, seems essentially a process that demands a sphere of completion. We can scarcely conceive that it should stop short with the bare judgment that the subject of the testing, having failed to discern its true meaning, is useless and unfit for the purpose it was meant to serve, and is therefore to be left as a 'castaway.' It is possible, of

course, that the probation of a nation does stop short at such a point. But the case of the individual is scarcely parallel; here we do not judge that his value consists only in his capacity to be an instrument, and that, if at a given point he is a failure in this respect, no further effort will be made by his Creator. The relation of man to God is not exhausted by the category of the clay and the potter. Each individual is in himself of inestimable worth to God, at least from the Christian point of view. Probation, then, demands a future life for its completion, both for those in whose case the results are already evident and for those who as yet are still blind to spiritual issues. But, even with regard to such, 'life beyond death holds hope, the hope that under other conditions, through other experiences, the awakening may come, evil be renounced, and good chosen.'¹

Such speculations, such deepest hopes, only serve to emphasize the supreme significance of that probation which is the key to temporal experience. After all, it is first for its illumination of the present that the theory has value. The belief is a marked characteristic of Browning's philosophy of life. A brief analysis of the argument of a poem, *Easter Day*, which is typical in this respect may help to throw some light on the doctrine itself.

'How very hard it is to be
A Christian!'

is the exclamation which opens the dialogue. In the admitted hardness lies the test; were it easy to be a Christian, easy to the flesh, to the mind, or to the spirit, it would be comparatively valueless. The difficulty is to see vividly and acutely, to grasp once for all, the relation between the finite and the infinite. Hence the need for faith. Now faith demands, not proof, but probability; it is satisfied

'So long as there be just enough
To pin my faith to, though it hap
Only at points: from gap to gap
One hangs up a huge curtain so,
Grandly, nor seeks to have it go
Foldless and flat along the wall.'

But the 'faith' that is a mere balancing of probabilities and choice of that which in the long run may prove to be the most profitable is by no means the true faith consisting in that strenuous attitude of will which is demanded by the facts of life as we find it. It is not to elicit a merely intellectual and cold selection of 'the safe side' that we are set in the midst of all that the world has to offer. To one who can penetrate beneath 'the shows of things' issues the most profound disclose themselves To the purged eyesight it becomes a marvel

'why we judged
Our labour here, and idly judged
Of heaven, we might have gained, but lose!'

Such an one recognizes, in a moment of sudden, intense illumination, that the failure to choose heaven means choice of the world, that the refusal to renounce the finite and transitory is the rejection of the Infinite and Eternal, of which they are the shows and symbols.

'This world,
This finite life, thou hast preferred,
In disbelief of God's plain word,
To heaven and to infinity.
Here the probation was for thee,
To show thy soul the earthly mixed
With heavenly, it must choose betwixt.'

He finds that neither nature, nor art, nor culture, nor even love itself, taken as complete in itself, is enough to satisfy the spirit's hunger. The infinite hunger of a soul cannot be satisfied with the things of sense.² God alone is great enough to satisfy the heart of man. As St. Augustine says, 'Tu fecisti nos ad Te, Domine, et iniquitum est cor nostrum donec requiescat in Te.' But God does not force this truth on any one; He sets us here to learn it for ourselves, through a manifold experience, upheld by the confidence that He is dealing with us as with sons.³

'And so I live, you see,
Go through the world, try, prove, reject,
Prefer, still struggling to effect
My warfare; happy that I can
Be crossed and thwarted as a man,

⁵ E. M. Caillard, *Individual Immortality*, London, 1908, p. 65.

Not left in God's contempt apart,
With ghastly smooth life, dead at heart,
Tame in earth's paddock as her prize.'

This constant silent process of insight, of judgment, of appreciation and choice, is our probation. To be alive to its reality and significance, is to interpret experience from the point of view of the man who judges the finite 'sub specie aeternitatis.'

LITERATURE.—This has been cited throughout the article.

F. R. SHIELDS.

PROCESSIONS AND DANCES.—I. PROCESSIONS.—In the history of social ritual the procession occupies an important place. The most cultured and the most primitive society known to us alike lay stress on what is in the first instance merely the act of moving a body of the people from one place to another—a social mobilization or route-march, conducted with solemnity or in accordance with the emotions expressed by the purpose of the movement. Similarly, the return home is of a ceremonial character—a recession. Using the term 'worship' in the wide sense of all solemn social action, we may regard procession as being in itself an act of worship.

Besides the primary use of procession as a means to an end—the celebration of a particular ceremony—procession may have virtue in itself, and express a particular emotion or idea, or produce a particular effect. Again, it may serve to do honour to a person or thing carried in procession, or to exhibit to society the actual persons engaged. But these purposes cannot always be distinguished, and in many cases they are combined.

1. Types of procession.—Procession being employed for practically all social ceremonial, it is unnecessary to enumerate every ceremony served by it, but some types may be mentioned in which procession as such is emphasized.

Ceremonies which bind the individual life to the social, by making solemn the various physical crises, usually accompany in all cultures circumcision, marriage, burial, and the like. The lowest cultures, however, such as that of the Central Australians, do not celebrate these to any considerable extent, if at all. But at the stages represented by the ancient Hebrews, Greeks, and Italians, mediæval Europe, and modern Egypt, these and other occasions are emphatically celebrated, and the procession is an important feature. Some of these peoples may be said to live processionally. Very complete examples may be seen among the Chinese and the modern Egyptians.¹ Among funeral processions that of the ancient Roman *nobiles* is remarkable. The dead man was accompanied by all his ancestors, represented by persons resembling them in form and stature and wearing wax portrait masks (*imagines*). In Western civilization the funeral and the wedding processions survive in some completeness, while those celebrating other life-crises are more or less obsolete.

As social organization develops, the solemnity of the procession is applied (1) to the economic operations on which the existence of man depends—agriculture, owing to its sedentary character, being conspicuous for this feature of celebration—and (2), as social operations are gradually differentiated, to the various subdivisions of activity—religious, legal, social, royal, and even athletic.

2. Earlier processional forms.—The earlier forms of these applications throw light upon the meaning and purpose of procession. To expel the demon of cholera, a Chinese population marches in procession, with music and dances.² In such a case the idea is probably that of a demonstration

in force, to show the strength of the community. In a more elaborate form we have the procession of the Roman *Salii*. The priests of this college were armed with peculiar helmets, shields, and staves, and their processional ritual was obviously a military pantomime, intended to overawe the demons of blight and infertility.³ The processions of the *Perchten* in Austria were of a similar character.⁴ It is possible that, besides their minatory aspect, such mobilizations of the people were intended to disseminate the virtue of vegetation-spirits, who may have been represented by certain of the performers.⁵ Many processional rites have the object of exhibiting sacred things and distributing their potency.

Thus, in the ancient Greek world, the 'gardens of Adonis,' a vegetation-charm, were carried in procession.⁶ In Egypt at the festivals of Osiris women carried in procession phallic images of the god, perhaps as 'a charm to ensure the growth of the crops.'⁷ Greece and India have similar phallic processions.

But the meaning of the symbol may be simply minatory.

The human sacrifice of the Khonds of Orissa, the *meriah*, is clearly an agricultural charm, and his virtue was distributed to the inhabitants in solemn procession.⁸ What Frazer terms 'the form of communion in which the sacred animal is taken from house to house, that all may enjoy a share of its divine influence,' is well illustrated by the rite of the Gilyaks. The sacred bear is taken in procession 'into every house in the village, where fish, brandy, and so forth are offered to him. . . . His entrance into a house is supposed to bring a blessing.'⁹ The Hebrew Ark of the Covenant carried in procession served both as a protection and as a blessing.

The carrying of sacred sheaves, trees, and other innumerable symbols of corn and wine is a regular practice of agricultural ritual, which Frazer has abundantly illustrated.

3. Civic and religious processions.—The processional 'beating of the bounds' seems to have had primarily a purificatory intention. Processions of a disciplinary character, to inspire respect for law and custom, and so forth, are frequently combined with pantomime and mask-performance—e.g., by such 'societies' as the Duk-duk and Mumbo-jumbo. In such cases as the fall of Jericho in early Hebrew story there seems to be implied a belief that procession round an object not only hems it in but also dominates it. The converse idea, illustrated by some uses of the magical circle (*q.v.*), is that procession round an object protects it. This idea may perhaps exist in the customs of beating the bounds and of civic processions round the city area. Of this character are mayoral shows, though originally derived from gild-processions, celebrating both the gild and its patron, and the Panathenaic procession of ancient Athens, in which the sacred *peplus* of Athene served as the sail of the ship carried or drawn on rollers through the city, perhaps symbolizing the maritime power of the Athenian empire. Magnificent processions of athletes, horses, and chariots introduced the performance of the great 'games' of Hellas; and the modern revival of Olympic games includes the procession. When crime was still expiated in public, a procession attended the malefactor to the place of punishment and execution. In this case there was a striking contrast between the outlying rabble and the procession itself, which should be 'an organized body of people advancing in a formal or ceremonial manner.'¹⁰ In modern times the procession is retained to dignify the law, royalty, parliament, civic and municipal functions, and is a special

instrument of public appeal by bodies with a grievance or desirous of demonstrating this or that political view. Friendly Societies and similar bodies make great use of it, and it is one of the chief instruments of the Salvation Army.

Procession is a simple means either of honouring or of degrading a person. The triumphal entry of Jesus balances the procession to Calvary. The 'triumph' of Roman generals was a very elaborate procession, including captives and spoils. It was remarkable for some peculiarities, which, in the opinion of Frazer, constitute an impersonation by the victor of the Jupiter Capitolinus to whose temple he was borne in procession. He wore the robes of the god, and his face was painted with vermilion. The custom survived the regal period into the republican.¹

4. **The procession in Roman Catholic ritual.**—The procession and the recession, as modes of proceeding to and receding from a ceremony, and also as acts of worship in themselves, have always been of great importance in the organized religions. An exception is the Churches of the Reformation, which practically abolished, along with other ritual, every procession but the funeral,² and this is more or less extempore, and not arranged by the clergy. Ever since Christianity, as early as the 4th cent., adopted the procession from the existing religions, pagan rather than Jewish, and primarily for the funeral, the Roman Catholic Church has exploited it thoroughly. *Litania, rogationes, and supplicationes* were processional functions.³ After the time of Gregory the Great the processional entry of the celebrant and the procession to the station became regular. In processions to the stations of the Cross the Saviour's route to Calvary is represented and symbolized. The procession of the blessed sacrament is an old Roman Catholic function.⁴ The rulings of the *Rituale Romanum* (tit. ix.) must be noted, as showing the continuity of processional ideas.

There are: (1) *processiones generales*, in which the whole body of the clergy takes part; (2) *processiones ordinariae* on yearly festivals, such as the Feast of the Ascension of the Virgin, the procession on Palm Sunday, the *litaniae majores et minores*, the Feast of Corpus Christi, and on other days according to the custom of the churches; (3) *processiones extraordinariae*, or processions ordered on special occasions—*e.g.*, to pray for rain or fine weather, in time of storm, famine, plague, war, or in *quacunque tribulatione*—procession of thanksgiving, translation of relics, the dedication of a church or cemetery. There are also processions of honour—*e.g.*, to meet a royal personage, or the bishop on his first entry into his diocese.⁵

5. **The 'pardon' of Brittany.**—Processions of a special character or unusual interest are numerous. Purificatory processions through fire, or in which the people walk upon fire, occur in agricultural ritual.⁶ To the same sphere belong the processions of giant figures, carried to the burning, processions to the midsummer bonfires, and those in which torches are waved over the gardens and fields.⁶ The carnival processions of France and the pardons of Brittany are remarkably developed. The latter play an important part in the religious and social life of the people.⁷ In Normandy such festivals are rare; in Flanders they survive partially in the *Kermesse, e.g.*, of Brussels. It has been suggested that the Breton pardon is a survival of pagan feasts of the dead. But in the most famous, that of Notre Dame de Bon Secours at Guingamp, held about midsummer, there is certainly a connexion with the agricultural ritual of fire, the central act of the night procession being the lighting of a huge

fire in the chief place of the town.¹ The pardon aptly links together pilgrimage and procession. It illustrates equally well the early connexion of religion with all spheres of social life. Fairs of all kinds are held during the pardon, and merry-making is interpolated between solemn functions.

'From far and wide the people crowd to this festival' (the Pardon of Guingamp). The chief procession is by night; 'down every dark street flowed a double file of lights, each casting a bright reflexion on the face of the person who bore it. Thus, most of the pilgrims being in black and their bodies not distinguishable from the darkness, it seemed a procession of white-capped white-winged cherubs of various ages, floating in mid-air, while in their midst appeared rich banners, reliquaries, statues of favourite saints, and finally Madame Marie de Bon Secours herself, in embroidered satin and sparkling jewelled crown.'²

Each parish procession is accompanied by its clergy, who lead the singing of ancient canticles. The several processions, as many as can be accommodated in the available space, halt round the great wood-pile, which is solemnly set alight by the priests.³ The Godiva procession and the Bezan procession of mediæval England seem to be developments of the 'ridings' or 'watches' connected with agricultural worship.⁴

6. **Procession and the drama.**—Before referring to the accessories of procession and its development by aid of the drama into such complex forms as the pageant or *trionfo*, some details of method may be noted. The most elementary forms of ceremonial procession perhaps are supplied by the performers in the *altherta* (corroborees) and *intichiuma* dramas of the natives of Central Australia. They march in single file, chanting. On certain occasions they trot, using a curious high action of the knee.⁵ Perhaps the most artistically dignified of processions were those in which the *κατηφόροι* maidens of Hellas figured as bearers of sacred things.⁶ Such processions as those of the Greek Mænads and Thyiades may be regarded as among the most emotional.⁷ The chorus of the Greek theatre came on the stage in procession (*πάροδος*), and left it in recession (*ἐξόδος*). Mediæval village festivals have been divided, as regards method, into two classes: (1) the processional dance (*e.g.*, in beating the bounds—this is the 'country dance'), and (2) the 'ronde,' or round movement round a worshipped object, such as the Maypole. Variation in the latter method was produced by moving either with or against the sun or clock, *deasil* or *withershins*.⁸ The term of 'limping dance,' or halting rhythm, mentioned in the OT, was characteristic of Hebrew procession; hence the term *hajj* applied to pilgrimage,⁹ which in essence is a prolonged procession.

A typical order is supplied by the *Rituale Romanum* (tit. ix.):

'Those taking part in procession are to walk bareheaded (weather permitting), two and two, in decent costume, and with reverent mien; clergy and laity, men and women, are to walk separately. The Cross is carried at the head of the procession, and banners embroidered with sacred figures—these banners must not be of military or triangular shape. Violet is the colour prescribed for processions, except on the Feast of Corpus Christi. The officiating priest wears a cope, or at least a surplice with a violet stole.'

It was probably the lack of great theatres capable of accommodating the whole population, such as those of ancient Greece, that led the mediæval peoples to make the 'mysteries' processional through the streets. The scenes were staged on moving platforms.¹⁰ Another reason was the

⁷ The term 'pardon' is an application to the whole festival of a particular detail, not necessarily the primary feature, viz. the absolution obtained after pilgrimage to the shrine of the saint.

natural tendency to make processions dramatic. Two converse causes thus helped to unite the procession and the stage. The 'ridings' on St. George's Day and other occasions were 'glorified' by these pantomimic representations or dumb-show pageants.¹ These culminated, or rather reached an artificial climax, losing their folk-interest, when Elizabethan artists elaborated the pageant and the Italians the *trionfo*. A conspicuous example of such processional exhibitions, though the scenes were not apparently always acted, is the dance of death, *danse macabre*, *Todtentanz*, *trionfo della morte*. Cars, draped in black and white, were drawn through the streets. On these were the Angel blowing the last trump and Death with his scythe. Before and behind marched men robed in black and white, and wearing 'death masks.' Choirs chanted the *Miserere*.² This dance of death, and the possible origin of the Breton pardon in the funeral, taken with the fact that the earliest Christian procession was funeral, while it is to-day the latest to survive, show the funeral procession to be the most constant expression of the religious march.

II. DANCES.—Dancing and procession are sometimes confused terminologically—a result partly due to the existence of processional dances, or the enlivening of the procession by the dance. The heretic Albigenses called dancing the procession of the devil.³ The bear dance (*ápreia*) of Athenian girls was probably processional rather than choric.⁴ The 'dances' of the old Roman *collegia*, such as that of the *Salii*, were dignified processions with some variety of movement.⁵

1. Physical and psychical aspects.—Dancing⁶ is an instinctive mode of muscular expression of feeling, in man and many animals, especially birds. In the social life of the human race it has played a part which touches every activity of the individual and society. Dancing may be described as 'play' in its absolute form. Rhythm is inseparable from its movements, as it is from any bodily function, and therefore belongs to it without aying. It is in the middle stages of culture that dancing is seen at its highest development. Here it is much more, and also less, than a 'poetry of motion,' or the 'silent poetry' of Simonides. It is rather life expressed in muscular movement. The human instinct of play is closely connected with the human love of excitement. The dance satisfies both, and its rhythmical character also makes it suitable for the expression of the most solemn and controlled emotions. It is at once the servant of Apollo and of Dionysus.

Dancing, in the proper sense, consists in rhythmical movement of any part or all parts of the body in accordance with some scheme of individual or concerted action. As Aristotle remarked, dancing is imitative; and in all its forms it is an artistic imitation of physical movement expressive of emotions or ideas.

In its simplest terms it has been described as 'merely the voluntary application of the rhythmic principle, when excitement has induced an abnormally rapid oxidation of brain tissue, to the physical exertion by which the overcharged brain is relieved.'⁷

The social importance of dancing depends on its instinctive causation and its results. It has been noted that the physiological effects of dancing

are identical with the physiological results of pleasure.¹

'Muscular movement, of which the dance is the most complex expression, is undoubtedly a method of auto-intoxication of the very greatest potency.'² 'A girl who has waltzed for a quarter of an hour is in the same condition as if she had drunk champagne.'³

With regard to the muscular movements involved, the following has been observed of Kafir dancing:

'The perfection of the art or science consists in their being able to put every part of the body into motion at the same time.'⁴

Sergi notes that it 'touches every vital organ.'⁵ Of the Marquesan girls Melville writes:

They 'dance all over, as it were; not only do their feet dance, but their arms, hands, fingers, ay, their very eyes seem to dance in their heads. In good sooth, they so sway their floating forms, arch their necks, toss aloft their naked arms, and glide and swim and whirl.'⁶

'Primitive dancing . . . embraces all movements of the limbs and body expressive of joy or grief, all pantomimic representations of incidents in the lives of the dancers, all performances in which movements of the body are employed to excite the passions of hatred or love, pity or revenge, or to arouse the warlike instincts, and all ceremonies in which such movements express homage or worship, or are used as religious exercises.'⁷

Groos speaks of the 'self-created world of the dance,'⁸ in which the dancer realizes himself in a physical improvisation. 'The sensation of motion,' says Kline, is 'a pleasure-giving sensation,' and Aristippus defined pleasure as a 'gentle motion.'⁹ On the physiological side dancing develops energy and releases it; it promotes tumescence and effects detumescence.

'I have seen a young fellow's muscles quiver from head to foot and his jaws tremble, without any apparent ability on his part to control them, until foaming at the mouth, and with his eyes rolling, he falls in a paroxysm upon the ground.'¹⁰

In both individual and social functioning the dance is thus a translativ engine of emotional energy. Philosophy has noted this, and Pythagorean mysticism found in it a replica of the movements of the stars in their courses, 'when the morning stars danced together.' Folk-lore has it that the sun dances on Easter Day. John Davies elaborated such fancies in his poem *Orchestra* (London, 1596).¹¹

The dance is thus a natural method of celebrating anything, and of expressing individual or social emotions or ideas. Primarily mere physical play, it has developed in many spheres, gymnastic and artistic, as a pastime, and as a sexual stimulus; but in social evolution its main applications are the ceremonial and the dramatic, which of course may include various other functions of the dance. Thus, in the mimetic dances of the simpler cultures there are combined worship, drama, exercise, excitement, pastime, play, art.

2. Range of movements.—The range of movements in dancing is naturally very considerable, connecting on the one side with marching steps, 'parades,' and on the other with the gestures of the hands used in conversation. Metrical terms in versification are frequently derived from choric steps. In modern dancing as a pastime, movement is practically confined to the legs. But in earlier stages the rest of the body and especially the hands are employed.

⁷ *EBR*11 vii. 795c.

The typical Malay movements are shuffling of the feet and swaying of the hands.¹ An old Roman writer speaks of the 'eloquent hands' of a pantomime dancer.² The funeral dancing in ancient Egypt included a curious outward twisting of the hands raised above the head.³ The dancing of the Indians of Guiana 'consists chiefly in stamping on the ground, and staggering in different attitudes as if intoxicated.'⁴

Movements of the trunk are conspicuous in ancient and primitive dancing. National and racial differences in method are not fundamental, and the use of music and of paraphernalia, such as weapons and scarves, is an obvious aid to physical expression.

Most of the ancient Greek ball-games were dances. In a Malay dance the performers carry sheaves of areca-palm flowers, to which their movements give the appearance of being alive.⁵

In some of its aspects artistic dancing borders on the acrobatic and the juggling arts. The majority of social religious dances, on the other hand, are more akin to the procession, and consist largely of processional dancing, evolution, or pantomime.

That dancing is a development of physical play is shown by the familiar fact that some animals, especially birds, dance, not only as a method of courting, but at other times, as an individual expression of play, often combined into social dancing.⁶ The dance of the argus pheasant, the 'waltz' of the ostrich, the bowing and scraping of the penguin, are well known. It has been observed that animal dancing is very human-like in appearance.⁷ Insects and birds perform air-dances, and fishes water-dances. Dancing on skates is man's use of another element.

A dance of the Timagami Algonquins will typify the ordinary pastime dance of the simpler peoples and of peasantry generally.

'The common Round Dance is an outdoor performance generally performed at the camp. One man sings any one of a set of tunes, which seem to be mostly improvisations in which humorous passages are often introduced, accompanying himself upon a drum which is suspended from the branches of a tree. The dancers form a circle, generally with the men at the head of the line, some carrying rattles. Then they begin trotting around to the left quite close together, in time to the music. There is very little room to the dance. It seems to be for the most part merely a form of amusement in which women and children join for the sake of excitement. At irregular intervals the dancers may face right about and circle in the opposite direction a few turns.'⁸

This and other dances of the Timagami were still being performed in the ordinary course at the time of writing.

3. Auto-intoxication and ecstasy.—The powerful neuro-muscular and emotional influence, leading to auto-intoxication, is the key both to the popularity of dancing in itself and to its employment for special purposes, such as the production of cerebral excitement, vertigo, and various epileptoid results, in the case of medicine-men, shamans, dervishes, prophets, oracle-givers, visionaries, and sectaries even in modern culture. The similar results attainable by the normal person indicate that the dance with its power of producing tumescence was the 'fundamental and primitive form of the orgy.'⁹ The effect of dancing 'among the spinning Dervishes or in the ecstatic worship of Bacchus and Cybele amounted to something like madness.'¹⁰ It is probably due to some instinctive appreciation of these effects, as well as to the similar desire to retain self-possession and dignity, which is one of the chief causes of aversion from intoxication generally, that the ancient Greeks and Romans and many Oriental peoples confined dancing to professionals. Socrates danced

for exercise only. Cicero observes that no gentleman dances unless intoxicated or mad: 'Nemo fere saltat sobrius nisi forte insanit.'¹¹

The Bororo medicine-man, by dancing and singing for several hours and by incessant smoking, works himself up into a state of ecstasy.¹² In European folk-lore it was believed that witches danced unholy dances.¹³ The Hebrew prophets often availed themselves of this method of inducing inspiration.¹⁴ The spinning of the dancing dervish is paralleled by the 'dancing manias' of the Middle Ages and the performances of the Shakers in more recent times. The howling dervish would cut himself with knives and eat live coals. He was 'unconscious of the acts of his body.'¹⁵ Russian sectaries, such as the Khlysti, produce religious excitement by wild dancing.¹⁶ To induce possession it is a favourite method among all classes of shamans; and it was practised for this purpose by African kings.¹⁷

4. Courtship and dancing.—Just as the male bird of several species parades and dances before the female, with the object of producing tumescence both in himself and in her, so to the savage dancing is the chief means of courting a woman, and for the same reason. In both bird and man the 'intention' is unconscious; it is prompted and engineered by instinct. The 'showing off' of modern youth is equally instinctive. The dancing of the modern ball-room is of course one of the recognized means of bringing young people together. It is a refined form of stimulus, though, when the waltz was introduced into England about a century ago, it caused much popular indignation,¹⁸ due mostly to the detail of mutual clasping by the dancers, practically unknown till then in social dancing. It is stated that the waltz was originally the closing act of a dramatic dance representing the 'romance of love, the seeking, and the fleeing.'¹⁹

In New Guinea courtship no words are spoken. The suitor, on convenient occasions, dances before the girl, making athletic bounds, and going through the movements of spearing and the like.²⁰ Conversely, the Minnetaree girl dances and then taps on the shoulder the man of her choice.²¹ In Torres Straits, as elsewhere, a good dancer is admired by the women.²² Here, as in masculine admiration for women-dancers, may be seen an example of how art and sex interact. The Australian natives, like many primitive peoples, celebrate with dancing various social ceremonies and solemn meetings.²³ This is often in group-formation, men and women *vis-à-vis*. Licence generally follows. Many peoples perform such dances at ceremonies celebrating sexual crises—e.g., the Kaffirs at circumcision and marriage.²⁴ It is significant that intercourse of the sexes also follows group-dancing in Australian celebrations of peace.²⁵ In pastime dances for purposes of courtship or artistic dances for the excitement of spectators appropriate movements are naturally employed in the earlier societies. The Nias women emphasize the curves of the body, and undulate the flanks. A sarong is wound and unwound over the face and breast.²⁶ This is a typical basis for many such dances among various peoples. The *hula-hula* of Tahiti and the *danse de ventre* of N. Africa are well-known examples.

5. The war-dance.—The primary aim of the war-dance seems to be the development of physical excitement, and consequently courage, in the dancing warriors, and, secondarily, as magical ideas attach themselves, the aim of frightening the enemy by a demonstration of violence is added. But, throughout, the practical but unconscious result for the savage regiments is drill and a rehearsal of attack. The latter meaning also takes on the notions of imitative magic. In the same way a modern peasant soldier, rehearsing an

attack or practising with the bayonet, may imagine that he is actually fighting the spiritual forms of the enemy or some vague ghostly foe. There can be little doubt that the war-dances of barbarous peoples and even those of the ancient Spartans were, unconsciously, rehearsals of battle.¹

War-dances are performed also for the purpose of combating supernatural influences of any kind.

The Arunta of Australia, after returning from an expedition of vengeance, dance an excited war-dance, by way of repelling the ghost of the man whom they have executed.²

In agricultural ritual the evil influences of blight, bad weather, and general infertility with its various causes are often assailed by a war-dance or similar demonstration.

Thus, in ancient Italy, 'the dancing priests of the god [Mars] derived their name of Salii from the leaps or dances which they were bound to execute as a solemn religious ceremony every year in the Comitium. . . . Similar colleges of dancing priests are known to have existed in many towns of ancient Italy.'³ But their dancing was a war-dance with curious weapons (see above), more potent, doubtless, for expelling demons of infertility⁴ than their high leaps were for making the corn grow high. The natives of French Guinea prepare the fields for sowing, thus: 'Fifty or sixty blacks in a line, with bent backs, are smiting the earth simultaneously with their little iron tools, which gleam in the sun. Ten paces in front of them, marching backwards, the women sing a well marked air, clapping their hands as for a dance, and the hoes keep time to the song. Between the workers and the singers a man runs and dances, crouching on his hams like a clown, while he whirls about his musket and performs other manoeuvres with it. Two others dance, also pirouetting and smiting the earth here and there with their little hoe. All that is necessary for exorcising the spirits and causing the grain to sprout.'⁵

A remarkable Greek parallel to this is the agricultural ceremony of the ancient Magnes and Anianians termed *kapnaia*. Men ploughed and sowed, but acted as on the alert against robbers. The drama ended in a conflict and the repulse of the enemy.⁶ The old English morris-dancers wore bells fastened to their legs to frighten away evil spirits.⁷

6. Agricultural dances.—In many such ceremonies at the operations of agriculture the movements of the performers may be supposed to stimulate, by the action of imitative magic, the growth of the crops, or the performers may be supposed themselves to represent the spirits of vegetation, and by their presence to disseminate virtue and fertility. It is not impossible that such ideas should have been combined. Many European cases are thus explained by Frazer:

They are 'intended both to stimulate the growth of vegetation in spring and to expel the demoniac or other evil influences . . . and these two motives of stimulation and expulsion, blended and perhaps confused together, appear to explain the quaint costumes of the mummers, the multitudinous noises which they make, and the blows which they direct either at invisible foes or at the visible and tangible persons of their fellows.'⁸

Where, however, the operations of agriculture are ceremonially imitated, the stimulation is probably not so much from the supposed presence of the corn-spirits or from any precise action of imitative magic as from the actual, practical result of a rehearsal, the instinct to which comes naturally from the human tendency to imitate and dramatize—in simpler terms, to play. Among the later developments of this instinct into 'magical' applications the most important seems to be the production of movement (or growth) in nature, following upon the movements of man. Many 'sympathetic' rites are explained by this idea, which is derived straight from the psychology of the dance.

⁷ GB³, pt. vi., *The Scapegoat*, p. 250 f. On morris-dancers see E. K. Chambers, l. 195, where the most probable derivation of 'morris' is given, from Morisco, a Moor, in reference to the blackened faces of the mummers.

⁸ GB³, pt. vi., *The Scapegoat*, p. 251 f.

Thus, appointed, though ceremonial, overseers may very practically inspire the workers and instruct them in the details of their work. In modern slang, they cause not only nature but the workers also to 'get a move on' by themselves moving.

The Cora Indians of Mexico at their sowing-festival depute two old women to represent the goddesses of sowing; they imitate in dancing the operations of digging and placing the seed.¹

This kind of description may fairly represent the belief of the informants at the time, but, in view of the previous considerations and of others to be stated, it is probably one of the late sophistications of which folk-lore is full, and which obscure the natural origin of many social customs and ceremonies.

The Motu of New Guinea dance that 'there may be a large harvest. If the dancing is not given, there will be an end to the good growth.' These people hold that every dance has some material result; 'no dances are useless.'² The Kayans of Borneo dance in order to bring to the fields from its distant home 'the soul of the rice.'³

Simple folk have not always a reason to give for their instinctive acts, nor is it possible always to assign a reason except instinctive reaction to this or that desire. But the cases just cited fall in with others, which may be described as merely persuasive in intention. The dancer seems to be saying, 'I am energetic and am proving it; I pray thee, do likewise.' The idea that to be busy oneself will inspire other persons or things to be the same is the psychological explanation of many of these 'magical' processes, especially the 'sympathetic.'

In Scotland the farmer's wife danced at the harvest festival with 'the sheaf' on her back.⁴ In the Danzig district the people dance round 'the Old Man' (the last sheaf), or the woman who bound it dances with 'the Old Man.'⁵

Dancing at agricultural festivals round a sheaf, tree, or pole, the May tree and the like,⁶ is the commonest of those folk-dances which combine ritual with pastime. Dancing round an object may apparently have an honorific intention. The following is a type of a large number of agricultural dances:

To ensure a tall crop of hemp, it is the custom among the peasants of Franche Comté, Transylvanian Saxony, Baden, and Suabia to dance with high leaps. So in the case of flax and various cereals.⁷ In such customs as this the notion that the higher the jumping the taller will be the crop is probably an after-thought.

There are numerous rites in which the sexual activity of human beings is supposed to assist the fecundity of nature. Sexual processes are often imitated in the dance, and may lead to magical ideas.

Thus, the natives of N.W. Brazil imitate in dance the act of procreation and 'are believed to stimulate the growth of plants.'⁸

Such dances seem to be in origin rather celebrations of the season or its work than magical charms, and, when the magical meaning is added, it is probably only half-serious. The permanent and original element is the vigour and movement of the dancers, representing the workers.

At the Matabele festival of the new fruits the soldiers danced round the king, who sometimes joined in. 'When he did so, the medicine-men and their satellites, armed with thorn-bushes, rushed about among the dancers and incited them to fresh efforts by a vigorous application of the thorns to the bodies of such as seemed to flag. The king's wives also sang and danced before him in long lines, holding the marriage-ring in their right hands and green boughs in their left.' Similarly at the Kaffir corn-festivals generally; in one of these the king dances 'in a mantle of grass' or 'of herbs and corn-leaves. This mantle is

afterwards burnt and its ashes are scattered and trodden into the ground by cattle.¹ Here the king acts as master of the ceremonies in a celebration of harvest. It is unnecessary to suppose that he definitely represents a corn-spirit; his costume is naturally adapted to the occasion.

7. Magical dancing.—The notion that dancing by reason of its vigorous movement can induce movement in the environment is illustrated by curious customs employed for rain-making.

In Morocco ball-games of the hockey type are played for this purpose; the rapid movements of the ball and the players are supposed to induce movement in the clouds.² Another case of ceremonial movement (which is of the essence of magical dancing) is that of the rain-maker of the Australian Arunta. To produce a shower of rain, he goes through a curious process of quivering in his body and legs, while his assistants chant in time with his movements. At day-break he makes a final and exhaustive effort.³

It has been suggested that the crane-dance (γέρανος) of Greek mythology records a magical dance for assisting the progress of the sun. This case is complicated.

When Theseus landed with Ariadne in Delos on his return from Crete, he and the young companions whom he had rescued from the Minotaur are said to have danced a mazy dance in imitation of the intricate windings of the labyrinth; on account of its sinuous turns the dance was called 'the Crane.'

In various parts of the world, pantomimic dances have imitated the flight of birds. This may be the case here. A similar dance was practised by the Romans, as 'the Game of Troy.' The maze-scheme for dancing evolutions, however, is quite common, and would easily attach to itself famous names and exploits. Frazer suggests that the intention of both was to imitate, and so to assist, the sun's progress through the sky.⁴

The data are insufficient to analyze such cases as that of the king of Onitsha, on the Niger, who danced annually before his people, possibly to show his physical fitness.⁵ But, certainly, throughout what may be called the positive applications of dancing, personal vigour is demonstrated and invites attention. In many customs it may be said both to compel attention and to invite imitation.

Some applications of the dance are 'sympathetic' in the natural sense, without being necessarily magical.

Thus, it is recorded of old Madagascar that, 'while the men are at the wars, and until their return, the women and girls cease not day and night to dance. . . . They believe that by dancing they impart strength, courage, and good fortune to their husbands.'⁶ So Yuki women danced continuously that their men might not be weary.⁷ These very natural practices, such as children would instinctively develop, are not primarily magical. On the Gold Coast, when a battle is expected, the women at home have a kind of sham fight, in which they cut to pieces green gourds, as if they were the enemy.⁸ The wives of soldiers, in all ages, have shown a fundamental desire to be fighting by the side of their husbands.

Dancing very frequently accompanies the funeral, and no less frequently is performed at or round the death-bed. These customs are still found to-day among the peasantry of Spain, France, and Ireland, as well as among such natives as those of the E. Indian islands, and N. and S. America.⁹ Various beliefs attach to this application of the dance.

The Gauchos dance to celebrate the dead person's entrance into heaven.¹⁰ In 1879 the congregation of a coloured church in Arkansas danced for three nights round the grave of their dead pastor, trying to bring him back to life.¹¹

8. The religious dance.—Dancing as a form or part of religious worship is a natural phenomenon, whatever may be the precise meaning or application of the particular occasion. In early Christianity bishops led the faithful in the sacred dances both in the churches and before the tombs of the martyrs. The practice was forbidden by the Council of 692, but the prohibition was ineffective. Centuries later the Liturgy of Paris included the rubric, *le chanoine ballera au premier psaume*. As late as the 18th cent. dancing by the priests on saints' days was practised in French provinces.¹

The various ideas connected with dancing will be found latent in the religious dance. When David danced before the Ark, the act no doubt meant something more than the desire to honour the sacred object. In some cases where the intention is certainly to 'move' the deity, the vigorous movements of the dancer make the dance a real form of prayer. The following example is suggestive:

The Tarahumare Indians of Mexico hold that 'the favour of the gods may be won by what for want of a better term may be called dancing, but what in reality is a series of monotonous movements, a kind of rhythmical exercise, kept up sometimes for two nights. By dint of such hard work they think to prevail upon the gods to grant their prayers. . . . The Tarahumares assert that the dances have been taught them by the animals. . . . Dance with these people is a very serious and ceremonious matter, a kind of worship and incantation rather than amusement.'²

The honorific element pervades many customs. In some cases it is direct.

Thus, among the Timagami Indians the feast-dance is 'a celebration in honour of someone who has provided a feast for the camp. The guests are invited in the afternoon, and the food is shared from a common place where it has been spread upon the ground, each guest being provided with his eating utensils. Tobacco is distributed after the feast. When evening comes on, the chief performs the feast-dance in honour of the donor. He wears some extra apparel and carries a drum in his hand to accompany his singing. . . . While singing the feast-song, inserting a few words at times in honour of the feast-maker, and drumming, he dances before the assembly. Soon he threads his way in and out amongst the people, continuing his song, and when he has gone through the ranks of the spectators he dances back to the feast-ground and ends his dance.'³

9. Pantomimic dancing.—From the point of view of aesthetics dancing may be described as muscular music. Like music, it expresses primarily itself; secondarily it expresses whatever is within the scope and material of the art. In this secondary function dancing is pantomimic.

The pantomimic has the longest history of all forms of dancing. It is highly developed in the lowest cultures, such as the Australian, and it is popular in the highest civilizations of to-day. Like other forms, it is applied to various purposes and on various differing occasions. Many other forms (see examples cited above) are pantomimic. Practically all the ceremonial of the Arunta and other Australians is pantomimic, and special ornamentation and dress are usual accessories.⁴

A good deal of mysticism is attached to the masked dances or pantomimes which have had so remarkable a development among the natives of N.W. America. They represent incidents in the lives of the guardian spirits of the tribe.

'The gift' of a dance 'means that the protégé of the spirit is to perform the same dances which have been shown to him. In these dances he personates the spirit. . . . The obtaining of the magical gifts [e.g., the 'death-bringer,' and the water of life, as well as the dance itself] from these spirits is called *loko-ala*, while the person who has obtained them becomes *naualaku*, supernatural, which is also the quality of the spirit himself. The ornaments of all these spirits are described as made of cedar bark, which is dyed red in the juice of alder bark. They appear to their devotees only in winter.'⁵

In so far as any worship is connected with such animal-dances, they will involve various religious emotions.

Thus, if no reason is given, we assume that, when the Yuchi Indians in some of their dances imitate the movements and cries of their totem-animals, they are doing them honour.¹ The Zuñi dance before sacred tortoises may be 'to intercede with the ancestral spirits, incarnate in the animals.'²

The secret societies of the Nass River Indians possess as heilooms ceremonial dances in one of which the performers practise cannibalism; in another they eat dogs; in a third they break objects with a long club, paying for the destroyed property with property of higher value.³ The last detail is akin to the system of potlatch.

In the bear-dance of the Timagami Indians the men and women form a large circle, with a leader to direct operations. 'The circle of dancers led by the chief, who carries a drum and sings the bear-dance song, then starts around counter-clockwise. The leader sometimes dances backwards, turns around, stoops, and in other ways initiates the bear. . . . The circling keeps up until the song is finished. The idea of this dance seems to be to honour the bear by imitating him.'⁴ In another dance of the same people, the duck-dance, the movements of a flock of ducks and drakes are represented by the evolutions of the dancers, in swerving chain-figures. It is curious to note that such a dance is interlarded with European steps—a modern waltz turn or two is introduced 'between the movements. At the close the performers quack two or three times. 'This is purely a pleasure-dance.'⁵

Pantomime is recognized as an educative process in elementary schools to-day, simple operations, such as sowing and reaping, being represented by appropriate movements.⁶

A good illustration of the pantomimic dance as fine art with a touch of superstition remaining, or revived for artistic effect, is found among the Malays. In their monkey-dance pantomime represents the spirit of a monkey entering the girl-dancer as she is rocked in a cot. Then she imitates the behaviour of a monkey, and performs some remarkable tree-climbing.⁷

In pantomime itself the drama is more important than in pantomimic dancing, as it is, *e.g.*, in the ceremonial dances of the Australians and American Indians. The representation of a dramatic story in dumb show, with more or less of dancing movement, is the ballet of Europe and the pantomime of ancient Rome. Under the Roman Empire this form of dancing attained extraordinary popularity, superseding other shows, and with it remarkable artistic excellence. The *fabulae salticae* used plots from old mythology, a love-motive being the favourite. The best poets of the day were commissioned to write the scenarios, which seem at times to have been drawn from contemporary life. The modern cinema picture-drama is a close parallel, but in the *fabula saltica* an explanatory recitative was sung by a chorus accompanied by an orchestra.⁸

In another form, parallel to modern skirt-dancing, the dancer represented all the action of the various characters by the movements of his body and the manipulation of a long cloak.⁹

The modern ballet, in common with artistic dancing generally, dates from the 15th century. The great Renaissance included a new birth of dancing. Probably the tradition of the Roman *pantomimi* assisted the institution. From Italy the ballet passed to France, where it was perfected as the *ballet d'action*.¹⁰

⁹ Purser, *loc. cit.*

¹⁰ EB¹¹, s.v. 'Ballet,' iii. 269 f. It is there defined as 'a theatrical representation in which a story is told only by gesture, accompanied by music, which should be characterized by stronger emphasis than would be employed with the voice.' The etymology of *ballet*, *ballad*, *ball*, etc., is doubtful. Skeat and the OED refer them to L. Lat. *ballare*, 'to dance'; the former favours a connexion with the Sicilian Gr. βαλλίζεω, 'to dance', but the origin of βαλλίζεω (? βάλλειν) is uncertain. Some derive from *balla* (ball) 'on the alleged ground that in the Middle Ages tennis was accompanied with dancing and song' (OED). Neither of the classic authorities on tennis (Julian Marshall, in *The Annals of Tennis*, London, 1878; J. J. Jusserand, *Les Sports et jeux d'exercice dans l'ancienne France*, Paris, 1901) corroborates the musical accompaniment of tennis. E. B. Tylor thought that these words came from the Græco-Roman ball-dance.

ro. Dancing as a social pastime.—Artistic and dramatic dancing has frequently and among various peoples been placed under a social ban, in the same way and for the same reasons as the drama. More rarely this has been the case with dancing as a social pastime. Apart from ceremonial dancing in religious worship, Greeks and Romans and most Eastern peoples, while encouraging dancing as a form of entertainment—*e.g.*, at banquets—have refused to admit it as a social pastime. There is thus a professional class. The Malays never dance themselves, but will pay well for good professional dancing.¹ Roman dancers were *infames*.² But as a professional class they had an important though unofficial status, like that of the *bayaderes* of India, the *geishas* of Japan, or the *almehs* of Egypt. Even religious dancing developed a professional class, if the *q'dheshóth*, *e.g.*, of Hebrew sanctuaries may be so described.³

In the history of the world's art the great dancing geniuses, such as Taglioni and Pavlova, are entitled to a position only second to that of great singers and musical composers.

The use of dancing as a social pastime is comparatively modern. Plato was in favour of boys and girls dancing together. The only approximation to this was the *δρμος*, in which boys and girls danced in counter-formation.⁴ The 15th cent. renaissance of dancing in Italy passed to France, which has been termed 'the school' of the art of dancing, and Spain its 'true home.'⁵ It is outside the scope of this article to discuss the development of this form of dancing, which belongs to the sphere of pastime. But it may be noted that the evolution of the art throws much light on the evolution of society and the individual, and in a more clear-cut manner than the evolution of music. For, in the case of dancing, the whole system is involved. As in music, so in dancing, stages of evolution, 'schools,' have developed a method, to be superseded by another. Among typical movements may be mentioned the *pavane*; its character was processional. The minuet has been described as the 'fine flower of the art.'⁶ But actually it expresses merely an artificial code of courtesy. The type of pair-dancing is the waltz, a dance of uncertain origin.⁷

When in contact with European culture, native peoples throughout the world soon assimilate European dances; *e.g.*, the people of Ceram (E. Indies) have adopted the waltz.⁸ Conversely, the higher cultures assimilate the dances of the simpler peoples, and the ephemeral popularity of the tango and 'ragtime' serves to illustrate the continuity of human physical evolution.

LITERATURE.—The authorities quoted in the article supply satisfactory data, but there are no treatises written on any scientifically comprehensive lines.

A. E. CRAWLEY.

PRODIGIES AND PORTENTS.—I. INTRODUCTORY.—I. Interpretation of prodigies.—What fortune or misfortune the prodigy portends is determined for the individual by the culture to which he belongs. Its origin in the culture is properly matter of historical research, for the same interpretation may have had different origins, and different interpretations may have the same objective cause, the respective similarity and difference representing the varied reactions of the cultures in question. Were the interpretations given by differ-

ent cultures wholly arbitrary, they would not present such thoroughgoing, or even such partial, resemblance. Some of the resemblances may be attributed to cultural diffusion, where the phenomenon is really continuous in development, overflowing, as it were, the cultural bounds within which it originates. The classical cultures are good instances, for here we have historical proof of the diffusion, such proof, in the nature of the case, being very difficult to obtain in primitive society, where tribal tradition is an unsafe guide. The spontaneous effect of the phenomena upon the mind is, however, in some cases such as, if not to rule out diffusion, at least to make this supposition superfluous. The eclipse and the earthquake, e.g., never portend good. The reason is not far to seek: earthquakes never effect any good, and frequently leave disaster in their train; the completion of what the eclipse partly effects, in bringing about a diminution of light, would be the culmination of disasters; darkness has ever been the harbinger of evils which the garish light of day dissipates.¹

In many other instances the prodigy points its own moral, though one largely determined by the predisposition of the people who interpret it (as, e.g., Napoleon's 'sun of Austerlitz'). Whether or not the inference made is historically true, the following passage shows that the suggestion of the interpretation grows out of the nature of the event:

'At the time of the amplification and enlarging [of the village from which Milan grew] by Bellonesus there happened a very strange accident, which gave occasion of the denomination. For when it was new building, a certain wilde Sow that came forth of an olde ruinous house very early in the morning, hapned to meet some of those that were set aworke about the building of the city. This Sow had halfe her body covered with hard bristly haire as other Pigges are, and the other halfe with very soft and white wool: which portentum, Bellonesus took for a very happy and ominous token, so that he caused the city to be called Mediolanum from the halfe-wooled Sow. What his reason was why he should esteem this strange spectacle for such a luckie token I know not but I conjecture it might be this: perhaps he supposed that the bristly haire might presage strength and puissance in his subjects, and the wool plenty of necessary means that might tend to the clothing of their bodies.'²

2. The realm of the unknown.—The unknown is highly charged with mystic power. Many peoples, like the Thonga, have added faith in foreign medicines just because they come from a distant land.³ For this reason the Bakongo seldom engage the medicine-man of their own village.

'They know too much about him to waste their money on him. They flout him and send for the medicine-man of another village of whom they know little or nothing.'⁴

In the skill with which iron is worked there is something mystical. Among the Bakongo, as among many of the tribes of Africa and of India, the blacksmith holds an honourable position, or is despised and feared. Similarly, the forge is often regarded as a sacred place, and respect is shown towards the anvil and the fire.⁵

In the Middle Ages this superstitious fear and dread attached to the higher learning and superior skill.

A good instance of this tendency is the attitude taken towards Michael Scot, an Irishman of the 13th cent. who narrowly escaped being an archbishop over the see of Cashel. 'He was so widely renowned for his varied and extensive learning that he was credited with supernatural powers; a number of legends grew up around his name which hid his real merit, and transformed the man of science into a magician. In the Border country traditions of his magical power are common. Boccaccio alludes to "a great master in necromancy, called Michael Scot," while Dante places him in the eighth circle of

Hell'—all because his learning was beyond the comprehension of his fellows. In the 14th cent. similar magic powers were attributed to Gerald, the fourth earl of Desmond, solely on account of his learning.¹ In Ireland, during the witchcraft superstition, many women were put to death on the charge of using black magic solely because of their skill in simples and their knowledge of the medicinal value of herbs—just such skill and knowledge as have given rise to our present pharmacopoeia.

The realm of the unknown is peopled by many monstrous beings. This is especially true of the celestial regions and what are, for the people in question, the remoter parts of the earth. In the moon and on parts of the earth, say the Eskimos, are manlike creatures without head or neck, but having a broad mouth, armed with sharp teeth, across the chest.² Many tribes in Africa have similar beliefs. They prevailed in Europe until a century ago.³ In fact, the disposition to make monsters out of the distant and poorly-known is as old as history. The early Babylonians reported an attack by a strange people who had the bodies of birds and the faces of ravens, whose dwelling-place was in the mountains to the north of Mesopotamia.

3. The psychology of prodigies.—(a) *Recognition of events as prodigious.*—What phenomena are recognized as prodigies and what importance attaches to them depends upon the state of mind, social and individual. The wise man, as Seneca⁴ has expressed it, is not moved with the utmost violences of fortune, nor with the extremities of fire and sword, whereas a fool is afraid of his own shadow, and surprised at all accidents, as if they were all levelled at him. As Pliny⁵ says, the Romans could not be sure of anything, not even that a person was dead; there are, in fact, many examples of the dead returning to life, in some cases after the funeral pyre had been lighted and the flames had proceeded too far to permit rescue. There are critical moments when the mind, group and individual, is especially liable to harbour hallucinations and to magnify the ordinary into something prodigious. Intense expectancy gives exaggerated proportions to every event which is extraordinary, and heightened anticipation leaps forward into supposititious realization. The politico-religious fervour of the down-trodden Jews affords many illustrations.

Prior to the revolt in Judaea which broke out in A.D. 66 this expectancy gave life and permanency to a host of terrifying rumours, which, in turn, fanned the fervour into greater vagaries. 'Men dreamed only of signs and omens; the apocalyptic hue of Jewish fancy stained everything with a bloody halo. Comets, swords in the sky, battles in the clouds, light breaking forth of itself from the depth of the sanctuary, victims at the moment of sacrifice bringing forth a monstrous progeny,—these were the tales told with horror from mouth to mouth. One day the vast brazen gates of the Temple had flown open of themselves and refused to close. At the Passover of A.D. 66, about 2 a.m., the Temple was for half an hour lighted as bright as day; some thought that it was on fire. Again, at Pentecost, the priests heard a sound as of many persons in the interior, making hasty preparations as if for flight, and saying to one another, "Let us depart hence!" The great disturbance of mind was itself the best of signs that something extraordinary was about to happen.'⁶

The devil you know is better than the devil you don't know, and the latter always excels in power and malignity.

An observer of the Iroquois has declared that no Iroquois lives who would not in the night-time quail at seeing a bright light the nature of which he did not understand.⁷ The Jesuits who visited the Huron in 1653 found them entertaining 'a superstitious regard for everything which savored a little of the uncommon. If, for instance, in their hunt they had difficulty in killing a bear or a stag, and on opening it they found in its head or in the entrails a bone, or a stone, or a serpent, etc.,

they said that such object was an *oki*, that is, an enchantment which gave strength and vigor to the animal, so that it could not be killed; and they used it as the superstitious do reliquaries, in order to be always prosperous.¹

In many parts of England and of America a crowing hen is considered very unlucky and can by no means be permitted to strut and fret with impunity:

'A whistling woman and a crowing hen
Always come to some bad end.'

The Australian is somewhat afraid of the unique and weird 'Ha! ha!' and 'Hoo! hoo!' of the laughing jackass.² The Ainus find it wise not to imitate the cry of any unknown bird, for strange birds are often sent by the devil and carry about the seeds of disease.³ Double fruits in bananas, nuts, etc., being somewhat out of the ordinary, are believed in N. Queensland to be made by certain invisible beings. The Romans were similarly impressed with the presence of a double 'head' of the liver of a victim, as also by the absence of a 'head.'⁴

When the devout Brahman ascetic heard the elephant talking to a tree, he exclaimed in amazement, 'Ha! what is this wonder, that an elephant should speak with an intelligible voice, and that I should understand him?'⁵

Those trees are regarded as sinister and are considered inauspicious which are never propagated from seed, and bear no fruit.⁶ It portends evil when the cultivated olive changes into the wild, and the white grape or fig becomes wild. It was an evil portent when, upon the arrival of Xerxes at Laodicea, a plane-tree was transformed into an olive and sank into the earth shortly before the civil wars of Pompeius Magnus began, leaving only a few of the branches protruding from the ground. The Sibylline Books were consulted, and it was found that a war of extermination was impending, which would be attended with greater carnage the nearer it approached the city of Rome. Another kind of prodigy is the springing up of a tree in some extraordinary and unusual place—e.g., the head of a statue, an altar, or another tree. A fig-tree shot forth from a laurel at Cyzicus, just before the siege of that city; in like manner, at Tralles, a palm issued from the pedestal of the statue of the dictator Cæsar, at the period of his civil wars. So, too, at Rome, in the Capitol, in the time of Perseus, a palm-tree grew from the head of the statue of Jupiter—a presage of impending victory and triumphs. This palm having been destroyed by a tempest, a fig-tree sprang up in the very same place, at the period of lustration made at a time at which, according to Piso, 'an author of high authority,'⁷ all sense of shame had been utterly banished. 'Above all the prodigies that have ever been heard of, however, we ought to place the one that was seen in our own time, at the period of the fall of the Emperor Nero, in the territory of Marrucinum; a plantation of olives, belonging to Vectius Marcellus, one of the principal members of the Equestrian order, bodily crossed the highway, while the fields that lay on the opposite side of the road passed over to supply the place which had been thus vacated by the olive-yard.'⁸

The fear of ghosts is universal.

When the supposedly dead Geraint, hero of the *Mabinogion*, rose up and slew one of the assembled company, 'all left the board and fled away. And this was not so much through fear of the living as through the dread they felt at seeing the dead man rise up to slay them.'⁹ It was natural for Teigue O'Neill, the Irish blacksmith, when he discovered that the rider of the horse was a ghost, to 'recoil with a terrified prayer.'¹⁰

This fear is not a fear of physical injury, but a fear far transcending this. In this territory all natural restraint breaks down.

Horror was on the faces of the friends of a certain John Browne of Durlay when, as he lay dying in the year 1654, they saw a great iron triple-locked chest, which stood at the foot of the bed, 'begin to open, lock by lock, without the aid of any visible hand, until at length the lid stood upright.'¹¹

Horror would be on our faces too, if we accepted the fact that there was no natural explanation. There is no other attitude to take in the presence of events that shatter our every-day working categories.¹²

(b) *Religious aspect.*—The concepts and emotions that harbour prodigies, and find in them a wealth of mystic meaning, have much in common with the religious attitude. Disasters of all kinds are recognized as the inflictions of an angry god. Pindar's remark, 'I ween there is no marvel impos-

sible if gods have wrought thereto,'¹ is profoundly true. The divine nature of the ruler himself was, from the time of Alexander the Great to that of the Roman emperors of the 1st cent. and even longer, evidenced by oracles, portents, and supernatural displays of various sorts.

The Christian army of Ferdinand of Spain, when besieging the Moors in the stronghold of Mochling, near Granada, discharged from their guns inextinguishable combustibles.² One of these, which passed high through the air like a meteor, sending out sparks and crackling as it went, entered the window of a tower which was used as a magazine of gunpowder. The tower blew up with a tremendous explosion. . . . The Moors, who had never witnessed an explosion of the kind, ascribed the destruction of the tower to a miracle. Some who had seen the descent of the flaming ball, imagined that fire had fallen from heaven to punish them for their perversity. The pious Agapida, himself, believes that this fiery missile was conducted by divine agency to confound the infidels; an opinion in which he is supported by other Catholic historians.³ Thus each interpreted the event in a way that fitted in with his intellectual background, while both parties found in its superhuman and, for them, supernatural character something of the divine. When, later, the Spanish forces had suffered a year of discouraging reverses with scarcely a bright spot in all their campaigns against the Moors, the unusually severe storms which swept the land seemed to have a sinister meaning, and suggested visitations from on high. High winds prevailed and rains deluged the land, overflowing the valleys, undermining the houses, and drowning the flocks. "A vast black cloud moved over the land, accompanied by a hurricane and a trembling of the earth. Houses were unroofed, the walls and battlements of fortresses shaken, and lofty towers rocked to their foundations. Ships, riding at anchor, were either stranded or swallowed up; others, under sail, were tossed to and fro upon mountain waves, and cast upon the land, where the whirlwind rent them in pieces and scattered them in fragments in the air. . . . Some of the faint-hearted," adds Antonio Agapida [the Spanish chronicler], "looked upon this torment of the elements as a prodigious event, out of the course of nature. In the weakness of their fears, they connected it with those troubles which occurred in various places, considering it a portent of some great calamity, about to be wrought by the violence of the bloody-handed El Zagal and his fierce adherents."⁴

A like interpretation was given by the inhabitants of Constance, in Switzerland, of a terrific storm of rain and hail which came upon some encamped soldiers, on a Sunday night (8th May 1642), when 'all the tents were in a thrice blown over. It was not possible for any match to keep fire, or any sojourner to handle his musket or yet to stand. . . . Our sojourners, and some of our officers too (who suppose that no thing which is more than ordinary can be the product of nature) attributed this hurrican to the devilish skill of some Irish witches.'⁵

The catastrophic drives men to their wits' end, and even beyond the bounds of reason. He who is deterred by no clearly apprehended danger becomes panic-stricken in the face of mysterious forces. The feeling of human inability to cope with the situation intensifies the individual's helplessness. There is nothing to do but cringe and hope.

'For what can one believe quite safe,' asks Seneca, 'if the world itself is shaken, and its most solid parts totter to their fall? Where, indeed, can our fears have limit if the one thing immovably fixed, which upholds all other things in dependence on it, begins to rock, and the earth lose its chief characteristic, stability? What refuge can our weak bodies find? Whither shall anxious ones flee when fear springs from the ground and is drawn up from the earth's foundations? If roofs at any time begin to crack and premonitions of fall are given, there is general panic: all hurry pell-mell out of doors, they abandon their household treasures, and trust for safety to the public street. But if the earth itself stir up destruction what refuge or help can we look for? If this solid globe which upholds and defends us, upon which our cities are built, which has been called by some the world's foundation, stagger and remove, whither are we to turn?'⁶

When there is public alarm through fall of cities, burying of whole nations, and shaking of earth's foundations, what wonder that minds in the distraction of suffering and terror should wander forth bereft of sense? Indeed, on no occasion will one find more instances of raving prophets than when mingled terror and superstition have struck men's hearts. The Malakand tribes that attacked the British in 1897, under the leadership

of the Mad Mullah, are one of many examples of a people assailed by supernatural terrors and doubts, lured by hopes of celestial glory, and taught to expect prodigious events.¹

II. HISTORY.—1. The Greek view of prodigies.—According to Empedocles, the various parts of animals had a separate existence. Heads grew supported by no necks, arms wandered about detached from shoulders, and disembodied eyes pierced the solitudes. These several parts united, forming in some cases normal creatures, but, because of their vagarious juxtaposition, in some cases monstrosities, such as man-headed oxen. The normal ones, being better adapted to the conditions of life, survived, while the monsters perished because of their maladjustment.

The stress of the times always heightened the interest in prodigies. Thus, during the Peloponnesian War there were earthquakes unparalleled in their extent and fury, and eclipses of the sun more numerous than are recorded to have happened in any former age, if we are to believe Thucydides.² Again, while Xerxes was leading his army into Greece, prodigies of his defeat were not wanting: a mare gave birth to a hare, signifying, says Herodotus, that Xerxes would return fleeing for his life, and a mule brought forth a colt with the organs of both sexes.³ Again, when the Persian army approached the temple at Delphi, numerous prodigies appeared: the sacred arms transported themselves outside the temple; thunder struck two crags above the heads of the barbarian force and brought them down upon the foe with considerable mortality.⁴ Two days after the olive-tree in the Erechtheum had been burned down, a shoot a cubit long had sprung up from the stump.⁵ Salt fish that were being fried leaped from the pan; this signified that the deceased Protesilaus would leap from the dead and avenge himself on the one who had wronged him.⁶

By reading the horoscope Greek astrologers were able to predict the birth of monstrosities. If there was disjunction (*ἀσύνδερα*) between all or most of the recognized proper positions of the planets, a monstrous birth might be expected. It would not be of human birth if the planets in question were in the sign of one of the animals.⁷

2. The Roman view.—The speculations of Empedocles found place in the philosophy of the Romans. The earth in the beginning produced various monsters that sprang up with wonderful faces and limbs. But these 'prodigies and portents' were generated to no purpose, for nature abhorred and prevented their increase.⁸ Pliny⁹ speaks of races having but one eye, and that in the middle of the forehead—veritable Polyphemoi. Some had their feet turned backwards; they could proceed with wonderful velocity, and wandered about indiscriminately with the wild beasts. Some peoples were partly male and partly female. Some had only one leg, but with a foot so large that they could lie down in the shade of it. Some had no noses, some no mouths, subsisting upon odours, and needing neither meat nor drink. Some lived to be 400 years old.

Livy relates three prodigious births: at Frusino, a lamb with a sow's head; at Sinuessa, a pig with a human head; among the Lucani, a foal with five feet.¹⁰ Women gave birth to elephants, to serpents, to hippocentaurs.¹¹ The birth of more than three children at one birth was looked upon by the

Romans as portentous. During the reign of Augustus the birth of four children at one birth was quickly followed by a famine.

In the troublous times following immediately upon Nero's reign, and inaugurated by it, there appeared through the Roman world loathsome spectres, monsters born of slime, and prodigies of every sort. Prominent among these were monstrous births, especially cases where several heads were possessed by the progeny. To the Roman mind each of these represented an emperor. Real or pretended hybrids were given a similar interpretation. A hog with claws like a hawk's was accepted as a perfect image of Nero.¹

Bright lights sometimes proceeded from the heavens during the night-time, as though the day had suddenly ventured to intrude; a burning shield was seen to dart across the sky at sunset, from west to east, scintillating. In one case a spark fell from a star, increasing in size as it approached the earth, until it attained the magnitude of the moon, shining as through a cloud. It afterwards returned into the heavens and was converted into a *lampas*. Stars moved about in various directions.² A bow, or a circle of red, might suddenly appear about the sun.

In ancient Rome it rained milk, blood, a flesh which did not putrefy, wool, iron, and baked tiles. During the war with the Cimbri, and at other times, the air was filled with the rattling of arms and the sound of trumpets. Armies were seen marching, countermarching, and fighting, and the heavens themselves were seen in flames.³ In the district of Mutina two mountains rushed together, falling upon each other with a very loud crash, and then receding; in the daytime flame and smoke issued from them. There was the usual great crowd of witnesses. All the farmhouses were thrown down by the shock, and many of the animals in them were killed. This heralded the Social War, which was even more disastrous for Italy. Near Harpasa, in Asia, was a large rock which could be moved by the finger, but not if the entire body was applied to it. Near the river Indus a certain mountain had such attraction for iron that, if shoes containing iron were placed on it, they could not be withdrawn, while another repelled iron to such an extent that the foot within a shoe containing iron could not rest upon it. In several places things pushed into the ground could not be pulled out.

Prodigies might appear at any time, but they were especially frequent in time of political or national danger or disaster. In the year in which Fabius Maximus was for the third time elected to the consulship the sea appeared on fire; at Sinuessa a cow brought forth a colt; the statues in the temple of Juno Sospita, Lanuvium, sweated blood, and a shower of stones fell in the neighbourhood of that temple.

¹ On account of this shower the nine days' sacred rite was celebrated, as is usual on such occasions, and the other prodigies were carefully expiated.⁴

Prodigies announced from many places while Hannibal was threatening Rome augmented the terror. In Sicily several darts of the soldiers had taken fire; in Sardinia the staff of a horseman who was going his rounds upon a wall took fire as he held it in his hand; the shores were frequently ablaze; at Præneste two shields sweated blood; at Arpi red-hot stones fell from the heavens; at Capena shields appeared in the heavens, and the sun fought with the moon; two moons rose during one day; the fountain of Hercules flowed with spots of blood; in Antium bloody ears of grain fell into the basket as the people were reaping; at

Falerii the heavens appeared cleft as if with a great chasm, and from the cleft came a vast light; the prophetic tables suddenly diminished in size, and one fell out, on which appeared the inscription, 'Mars shakes his spear.' The statue of Mars at Rome, on the Appian Way, sweated at the sight of images of wolves; at Capua the heavens seemed to be on fire, and the moon appeared to be falling amid the rain. This must, indeed, have been good preparation for smaller wonders.

'After these,' says Livy, 'credit was given to prodigies of less magnitude: that the goats of certain persons had borne wool; that a hen had changed herself into a cock; and a cock into a hen; these things having been laid before the senate, as reported, the authors being conducted into the senate-house, the consul took the sense of the fathers on religious affairs. It was decreed that these prodigies should be expiated, partly with full-grown, partly with sucking, victims.'¹

Later, in the Punic War, another flood of prodigies aroused new fear to supplement the old. Crows had torn some gold in the Capitol with their beaks and had eaten it; at Antium mice gnawed a golden crown; an immense quantity of locusts, coming apparently from nowhere, filled the whole country around Capua; at Reate a foal with five feet was born; at Anagnia scattered fires appeared in the sky and were followed by a meteor; at Arpinum the earth sank into an immense gulf, in a place where the ground was level; the 'head' of the liver was absent from the first victim immolated by one of the consuls. These prodigies were expiated by offerings and sacrifices.²

A circle of stars near the moon was visible when Augustus entered Rome, after the death of his father, to assume the name by which he was afterwards known.³ Shakespeare is following ample precedent in announcing the ominous appearance of five moons immediately after the death of Prince Arthur.⁴

3. The early Christian view.—The spirit of evil, typified by the Roman power or by the violent party of Jerusalem, as the case may be, is a dragon which pours out a flood of water to sweep away the Church (Rev 12¹⁸⁻¹⁹). The concept is possibly of Babylonian or Egyptian origin,⁵ though it is found also in Mazdeism.⁶ The false prophet or Antichrist is especially liable to representation as some prodigy. The 'false prophet' whom the writer of the Apocalypse represents as an ally of Nero is a wonder-worker who causes fire to fall from the sky, graven images to live and speak, and who puts the 'mark of the beast' upon men (13¹⁴⁻¹⁷ 16 19). Elsewhere (13¹¹) the false prophet is a monster, speaks like a dragon, and has 'two horns like a lamb.' Nor are there lacking elements of the prodigious in that hated Antichrist, the emperor Nero, whose life has been likened to the discordant cries of a grotesque witches' revel.

In the bloody troublous days of Nero meteors and celestial signs received heightened attention.

'Comets, eclipses, mock-suns, northern lights, in which appear crowns, swords, and streaks of blood, fantastic forms of clouds in time of heat, with traces of battles or strange beasts,—drew eager attention and seemed never to have been so vivid as in these tragic years. All the talk was of showers of blood, of wonderful thunder-bolts, of rivers flowing up-stream, or of bloody torrents. A thousand things never noticed in ordinary times came to have a high importance in the feverish excitement of the public mind.'⁷

Christ Himself had prophesied that nation would rise against nation, kingdom against kingdom; there would be earthquakes, terrors, famines, pestilences on all sides, and great signs in the sky (Mt 24⁶⁻⁸, Mk 13⁷⁻⁸, Lk 21⁹⁻¹¹). The prophecy had

its ample fulfilment in the near future. The famine came in the year 68; inundation from the Tiber in 69 and from the sea along the coast of Lycia; the pestilence visited Rome in 65, carrying off 30,000 inhabitants; Lyons was swept in the same year by a devastating conflagration, and the Campania by scarcely less destructive cyclones and tornadoes; tempests spread terror broadcast, and nature seemed everywhere perverse. It was a prevalent belief that portents, hiding of the sun and moon in darkness, brandishing of swords in the sky, were to usher in the Messianic kingdom.¹ This view—that calamities were signs of the Messiah's approach—was in vogue among the Jews for many centuries after the time of Christ.²

Similar interpretations, inherited no doubt from Rome, were rife as late as the 9th cent., and persisted through the Middle Ages. It was during a wild storm that Cromwell passed away; for had not the devil come to carry off his soul? Numerous and more terrible were the omens heralding the death of Charlemagne, recounted by his contemporary and biographer, Eginhard:

There were frequent eclipses, both solar and lunar, and a black spot appeared for seven days on the sun, during the last three years of his life; the gallery between the basilica and the palace fell suddenly in ruin; accidental fire consumed the wooden bridge over the Rhine at Mayence—both gallery and bridge had been constructed by Charlemagne; during his last campaign into Saxony a ball of fire fell suddenly from the heavens with a great light. 'It rushed across the clear sky from right to left, and everybody was wondering what was the meaning of the sign, when the horse which he was riding gave a sudden plunge, head foremost, and fell.' His javelin was struck from his hand with a violence that sent it twenty feet away. The palace at Aix-la-Chapelle frequently trembled, the roofs of whatever buildings he tarried in kept up a continual crackling noise, the basilica was struck by lightning, and the gilded ball that adorned the pinnacle of the roof was shattered by the thunder-bolt and hurled upon the bishop's house adjoining.³

III. ANIMALS.—1. Divination.—Divination is by no means confined to the classical cultures.

It is practised by means of lice in the Torres Straits, and on the island of Mer is a divinatory shrine where omens are taken from the movements of insects, lizards, and other animals.⁴ The Kirghiz divine by means of the shoulder-blade of a sheep; the Buriats use the shoulder-blade of a sheep or a goat in divining the cause of disease or for the discovery of a thief. A written law was given by God to the chief tribal ancestor of the Buriats, who, on his way home to his own people, fell asleep under a haystack. A ewe came to the stack and ate up all the law as well as the hay, but the law remained engraved on the ewe's shoulder-blade.⁵ The Kayans of Borneo cast bears' teeth as dice by way of divination, and the Igorot resort to divination with chickens. Before going to battle the Samoans observe the movements of a lizard in a bundle of spears. If it runs about the points of the spears and the outside of the bundle, it is a good omen; if it works its way into the centre for concealment, it is a bad omen. If a lizard comes down on the bare post rather than on the matting which partly covers it, this is a bad portent; similarly if it crosses the path of a man going to battle.⁶ The Thonga preserve, as useful for divinatory purposes, the astragalus of a smaller animal found in the stools of a hyena—a most uncommon discovery.⁷

See, further, artt. DIVINATION.

2. Omens.—Omens likewise are common among primitive people.

The flocking of vultures denotes impending war, it being the habit of these birds to prey upon the bodies of the slain.⁸ The snake portends death to a Bushman.⁹ Among the Thonga it is a bad omen for a mole to cross one's path.¹⁰ The screech of the eagle informed the Takelma that some one would be killed

⁷ Renan, ch. xiv.

by an arrow. When a snake crosses a person's path, it is a sign that one of his relatives will die; if a rattlesnake bites a person's shadow, it is a sign that he will vomit.¹ The Yana declare it a bad sign if a fox 'talk' before daybreak.² If the rail-bird flies before a Samoan war party, it is a good omen; if it is a bad omen if seen to fly in any other direction. If a certain fish swims rapidly, the Samoans go to battle cheerfully; but, if it turns round now and then on its back, the party would not dare to proceed.³ The flight of the owl is a good or a bad omen according to the direction taken. If the cuttle-fish is close to shore when the party is about to set out, it is a good sign; if far away, a bad sign. Evil is portended when the sea-eel is driven upon the shore—as often happens after a gale—and the event creates a commotion throughout that locality. If the heron flies before the war party, it is a good sign; but, if it flies across the path, this is a bad omen. The appearance of the creeper-bird in the morning or in the evening means that one's prayers are accepted, while its failure to appear means that the god is angry. If the teeth of the sperm-whale, after being placed in position, lie east and west, it is a good omen; while, if they point towards the north or south, it is a bad omen. A war party will return if a lizard is seen crossing its path.⁴

In Borneo an expedition, prepared by months of labour, will turn homeward if bad omens are observed—e.g., if a particular bird calls on a certain side or flies across the river in some particular fashion; and a newly-married pair will separate if on the wedding day the cry of a deer is heard near the house. Similar beliefs prevail among the Todas.⁵

In Holland, as early as 1611, the presence of a stork upon a house was looked upon as a good omen, and its leave-taking as a bad omen.⁶

3. The crow and the raven.—The English rustic who pronounces a curse on the ill-betiding croak of the crow might well be considered the inheritor of the Roman belief that the crow is a bird of ill-omened garrulity and especially inauspicious at the time of incubation, i.e. just after the summer solstice. In the Shetlands the raven is believed to keep close to a house in which there is a corpse, and in Northumberland the cry of the raven is an omen of ill-luck. In rustic England the raven has generally been considered a bird of ill omen. A similar belief is current on the west coast of Africa, where the white-breasted raven is called a man-eater, and magic medicine is manufactured from it. No rain falls when it lays its eggs—the exact contrary of the belief prevailing in the western part of the United States. Its flocking portends impending war.⁷ Pliny declares that ravens are most direfully ominous when they swallow their voice, as if being choked. They are unique among birds in having a comprehension of the meaning of their auspices. When the guests of Medus were assassinated, all the ravens departed from the vicinity of Attica and the Peloponnesus. Both Alexander and Cicero were warned of approaching death by the raven. In some instances, however, the presence of the raven betokened divine favour.⁸

4. The owl.—In *Hiranyakesin Grhyasūtra* the owl that flies to the abode of the gods is addressed with the words:

'Flying round the village from left to right, portend us luck by thy cry, O owl!'

Striges, 'screech-owls,' was the Roman appellation for witches. The horned owl was especially funereal and greatly abhorred in all auspices of a public nature. Its appearance in the city was a dire omen, though its perching on a private house portended no ill. During the consulship of S. Paepelinus Hister and L. Pedanius one entered the very sanctuary of the Capitol, in consequence of which the city was purified on the nones of March in that year, as also again in the consulship of L. Cassius and C. Marius (A.U.C. 647).¹⁰ The note of an owl heard on the left annuls the auspicious note of other birds.¹¹ The note of the *strix* and

the presence or cry of the *bubo* bode ill.¹ The Ainus say that the owl can bewitch people by its hoot, and its cry must not be imitated. The eagle owl is especially respected. To imitate its cry would be nothing short of blasphemy, though the bird is regarded as benevolent. Among the titles given it are 'divine little bird,' 'servant of the world,' 'mediator of the world.' When about to sacrifice one of them, the Ainus offer the following prayer:

'Beloved deity, we have brought you up because we loved you, and now we are about to send you to your father. We herewith offer you food, *Inao*, wine, and cakes; take them to your parent, and he will be very pleased. When you come to him say, "I have lived a long time among the Ainu, where an Ainu father and an Ainu mother reared me. I now come to thee. My father, hear me, and hasten to look upon the Ainu and help them."²

In one Samoan village the god was said to be incarnate in the owl. If an owl flew ahead of a party going to fight, it was regarded as favourable; but, if it flew across the road or towards the rear, it was unfavourable.³ Among the Yao the owl was a favourite companion of the witch, and Thesalian women used its feathers as a magic ingredient. In Shetland the old women say that a cow will give bloody milk if it is frightened by an owl, and will fall sick and die if touched by it. Screech-owls are ghosts among the Arapaho, and in many American tribes the owl is regarded as a bird of ill omen or of magic power, as, notably, in the south-west area. With the Navaho it is a sort of bugaboo used to frighten children into submission.

IV. NATURAL PHENOMENA. — I. Aurora borealis.—The Mandans say that the northern lights are occasioned by a large assembly of medicine-men and distinguished warriors of several northern nations who boil their prisoners and slain enemies in huge cauldrons. The Eskimos say that they are the ghosts of the dead playing football with a walrus skull.⁴ To the Malecite they represented blood and portended war. The Tlingit share with the Eskimos the belief that the northern lights are the spirits of the dead at play,⁵ while the Saulteaux say they are the spirits of the dead dancing.⁶ The *aurora borealis* heralded the defeat at sea of the Lacedæmonians and the loss of their influence in Greece. This 'flame of a bloody appearance (and nothing is more dreaded by mortals) which falls down upon the earth'⁷ appeared again when King Philip was harassing Greece. Pliny is inclined to interpret it as due to natural causes, but does not deny its association with untoward events:

'They have indeed been the precursors of great events, but I conceive that the evils occurred not because the prodigies took place, but that these took place because the evils were appointed to occur at that period. Their cause is obscure in consequence of their rarity.'⁸

2. Earthquakes. — According to Pliny,⁹ the Babylonians attributed earthquakes to the influence of the stars when in a certain conjunction with the sun or with one another. The Greeks attributed thunder and earthquakes to one and the same cause, the former to agitation of the air above the earth, the latter to disturbances in the air beneath the earth. Yet, in spite of the scientific theories, such as we find in Aristotle¹⁰ or Herodotus,¹¹ an earthquake was a portent by which

the deity intimated to men the evils that were about to befall them. During the 2nd cent. of our era, when earthquakes were both frequent and frightful in their destruction of cities, the Stoic philosophers, feeling the old explanation insufficient to account for such disasters, attributed them to the displeasure of the gods—a view which later Christian theology welcomed and made popular. The earthquakes which were so prevalent in the region of the Bay of Naples in the 1st cent. A.D. were interpreted by Christians as signs of divine wrath visiting deserved punishment upon the wicked and licentious Romans; and the latter also regarded them as supernatural. Lucretius, following Epicurus, Democritus (water and air), and Anaxagoras (fire and air), ascribes earthquakes to the fall of great substances beneath the earth as well as to air escaping from subterranean caverns. Seneca attributes them to escaping air.¹

Earthquakes occurring during the day or a little after sunset are heralded by a long thin cloud extending over the clear sky. The water in wells is more turbid than usual and emits a disagreeable odour. Birds settle upon vessels at sea and give the alarm. Yet so ominous are earthquakes that Pliny, who is inclined to find their cause in subterranean winds, declares that the city of Rome never experienced a shock which was not the forerunner of some great calamity.²

The Japanese once held that the magnet loses its power during an earthquake or even immediately prior to one. They attributed earthquakes to movements of a tortoise, on which the earth rests, or to the flapping of a large subterranean fish, which, when it wakes, wriggles about and causes the vibrations. During a severe earthquake masses of people can be seen, robed in white, some of them on their knees, attempting to appease the wrath of the gods or demons who are responsible for the disturbance.³ The Indians of the south-western part of the United States have a similar belief. They say that the shaking of the earth is caused by the wriggling of a large subterranean serpent or dragon. The Tlingit attribute them to Old-woman-underneath.⁴ This is almost identical with the belief prevalent in Melanesia and Polynesia. The Arabs regard an earthquake as the will of Allah and resign themselves to it calmly, not anticipating any greater calamity. The Caribs attribute earthquakes to a subterranean people.⁵ The natives of Bali and of the Pagi Islands attribute them to evil spirits, as do the Mao Naga. With these peoples, as also among the ancient Hindus and in ancient Rome, a tabu was placed on all ordinary occupations; a Brahman might not read the Veda. Earthquakes were so common in Rome in the year 193 B.C. that all public business was blocked, and during the following year shocks lasting thirty-eight days called for a total cessation of business. As late as the time of the emperor Claudius an earthquake was always followed by the appointment of a holiday for the performance of sacred rites.⁶ After the occurrence of an earthquake during a battle Earth would be appeased.⁷ In the first centuries A.D. the pagan Romans usually attributed them to displeasure towards the Christians.⁸ In the 8th cent., Bede⁹ attributes earthquakes to the leviathan in his subterranean prison, who, in his indignation, shakes the earth. Aristotle's view

was generally championed by the later mediæval theologians (as by Cardinal d'Ailly, *Concordia astronomice veritatis cum theologia*, Paris, 1483); yet in 1580, during the reign of Queen Elizabeth, earthquakes were generally considered by the clergy as evidence of God's wrath—a view popular in the New England States as late as the last half of the 18th cent., and revived on the Pacific coast after the earthquake of 1906 which destroyed San Francisco.

3. **Eclipses.**—The Chaldeans explained eclipses on the supposition that one half of the moon was bright, the other half dark. When she suddenly turned the bright side away from men and presented to them her dark visage, they had evidence of her displeasure. Some event of importance—a pestilence, a famine, a war, an earthquake—followed hard upon each eclipse. For the Greeks, similarly, an eclipse boded no good. It signified the turning aside of the face of the god and the approach of a dire crisis. The moon hid the sun, and the sun fell into a swoon, or *ἐκλειψις* (*défaillance*). The moon, assisted by the other planets, then provided the energy which the sun temporarily could not supply.

Xerxes [remarking an eclipse of the sun] was seized with alarm, and, sending at once for the Magians, inquired of them the meaning of the portent. They replied: "God is fore-showing to the Greeks the destruction of their cities; for the sun foretells for them and the moon for us." So Xerxes, thus instructed, proceeded on his way with great gladness of heart.¹ An eclipse caused Cleombrotus to bring his army home.

'For while he was offering sacrifice to know if he should march out against the Persian, the sun was suddenly darkened in mid sky.'²

In 585 B.C. a sudden eclipse of the sun caused the fighting Medes and Lydians to lay down their arms and hastily make peace; and the Athenian expedition which was about to depart from Syracuse in 413 B.C., after ignominious defeat, was delayed by an eclipse of the moon which filled the soldiers with fear. Thales was reputed able to predict an eclipse of the sun and to account satisfactorily for the phenomenon. Pythagoras likewise explained eclipses as natural phenomena, as did Aristotle and Pliny. The Egyptians also attempted to explain them as part of normal celestial occurrences and to predict them.³ Lucretius explains eclipses of the sun and moon in the modern way,⁴ as do Seneca⁵ and Livy.⁶ Livy says that Caius Sulpicius Gallus, military tribune, 'lest they should any of them consider the matter a prodigy,' foretold to the army an eclipse of the moon on the following night. He refers also to the custom of making a din during an eclipse of the moon, presumably to frighten away the beast that is devouring it.⁷ Pliny admits, with his prevalent inconsistency of reason and superstition, that many eclipses are portentous, especially such as are unusually long. This was the case when Cæsar was slain, as in the war against Antony, when the sun remained dim for almost an entire year. Driving away an eclipse by beating drums and cymbals is referred to by Tacitus.⁸ The inhabitants of Turin long continued this practice.⁹

The Armenians believed eclipses of the moon to be caused by the interposition of a dark body between it and the earth during the earth's revolution about the moon.¹⁰ Orthodox Hindus look upon an eclipse as the arrest of the sun by his creditors, Rāhu and Ketu. They accordingly

give alms and observe a fast during the eclipse. There is another belief to the effect that it is caused by a demon, called Svarbhanu.¹ This is similar to the Chinese belief that the sun or moon is being swallowed by a dog or other beast. They accordingly beat gongs to rescue it by frightening away the devourer.² Since an eclipse of the sun portends some awful and mysterious event, the natives of Ceylon observe a fast on that day.³ The Todas fire off guns and send up rockets to frighten away the snake that is trying to eat the hare in the moon, and accompany these demonstrations with shouts. They observe a fast also.⁴ Shintō religion ordained that, at the time of an eclipse, certain jewels, regarded as amulets, should be suspended from the highest branches of the sacred *clevera*, their brilliance being suggestive of the light of the sun which it was desired to restore.⁵ The lighting of fires, doubtless for the same reason, will dispel an eclipse, and so will the crowing of cocks, as they are the usual heralds of the sun's return. The penultimate *sūrah* of the Qur'an contains a spell designed to ward off the evil influences that normally accompany an eclipse.

Pierre Bayle argues in some detail that comets and eclipses do not presage ill. He refutes the doctrine of the ancients and that of his contemporaries, by showing that no more misfortunes came after the appearance of certain comets of his day (17th cent.) than before them.⁶

On the west coast of Africa an eclipse of the moon is attributed to the shadow of the sun, which is constantly in pursuit. The natives throng the streets, shrieking and shouting, 'Leave her! Be off! Go away!'⁷ But Junod⁸ declares that the Thonga are not much impressed with eclipses, being more struck with wonder at the supernatural knowledge of the white people than with fear of the phenomenon itself.

For the Maori an eclipse of the moon presages the fall of the enemy's fortress.⁹ The Tahitians it filled with dismay. They supposed it under the influence of some evil spirit which was about to destroy it. They accordingly repaired to the temple and offered prayers for the release of the moon. Some said that the sun or moon, as the case might be, was swallowed by a god whom, through neglect, the celestial body had offended. Liberal presents were offered to induce the god to abate his anger and eject the luminaries of day and night from his stomach. The Tonga Islanders are content to explain the eclipse of the moon as due to a thick cloud passing over it.¹⁰ The N. Queensland natives attribute an eclipse to the anger of spirits;¹¹ and the Sandwich Islander says that the moon is bitten, pinched, or swallowed.¹²

The Bellacoola believe that during an eclipse the moon paints her face black. At this time the moon performs one of the most sacred ceremonies of the *Isusuit*, which are thought to be very dangerous to the performers. The black paint

with which her face is covered is supposed to be a protection against these dangers. Aialilaaya, the guardian of the moon, restores her to her full size, and cleans her face after an eclipse.¹ The Dakota discharge their rifles in the air to drive away the demon or evil spirit that is causing the eclipse.² The Eskimos of the Lower Yukon believe that a subtle essence or unclean influence descends to the earth during an eclipse. If any of it should be caught in utensils, it would produce sickness. To avert this, at the commencement of an eclipse every woman turns all her pots, wooden buckets, and dishes upside down.³ The Navahos say that an eclipse is caused by the death of the orb, which is revived by the immortal bearers of the sun and moon. During an eclipse of the moon the family is awakened to await its recovery. Similarly, a journey is interrupted and work ceases during an eclipse of the sun. Songs referring to the *hozhoji*, or rite of blessing, are chanted by any one knowing them; otherwise the passing of an eclipse is awaited in silence. It is not considered auspicious to have a ceremony in progress during an eclipse of the sun or moon, and a ceremony is often deferred on this account. The rising generation, however, pays little or no attention to this custom.⁴ The Tlingit say that the sun and moon are hiding their faces during eclipse, and they blow their breath towards them in order to blow away the sickness which the eclipse is bringing.⁵

4. Hail.—Hail was formed by the freezing of an entire cloud (Posidonius). At Cleonæ, according to Seneca,⁶ were hail-guards appointed by the State to notify the people of the approach of hail. Upon such notification the people offered sacrifices, some a chicken, some a lamb. If these were not to be had, they pricked the finger with a well-sharpened stile and made atonement with their own blood.

Aristotle considered hail and snow the same in formation, differing only in size and shape.⁷ For Pliny it was merely frozen rain, probably caused by the winds; but the star Arcturus scarcely ever rises without accompanying storms of hail.⁸ Lucretius leans towards a similar interpretation, but his views of its formation are not clearly expressed.⁹ Hail is the result of frozen rain-drops, said Bede;¹⁰ but the *Lex Visigothorum*, the earliest Teutonic code, provides a penalty for those who, by incantations, bring hail-storms upon the fields and vineyards.¹¹

Hail is often personified in N. American mythology, but the phenomenon is seldom regarded as of any special significance. Among the Nandi no work was permitted during the twenty-four hours following a hail-storm.¹² The Kafirs permitted no field work on the day following a hail-storm, for this would bring down more hail.¹³

5. Lightning and thunder.—Thunder, especially on a cloudless day, was the great omen of Zeus.

If heard on the right, it was favourable, and therefore unfavourable to the foe, who would hear it on the left. The thunderbolt was cast by Zeus.

¹All night Zeus the counsellor meditated evil against them, thundering terribly. And pale fear seized them and they poured wine from their cups upon the ground, nor did any one dare to drink before he had poured a libation to the exalted son of Kronos.¹

The Pythagoreans believed that lightning was intended to terrify the damned in Tartarus. The Persians considered it a missile of divine wrath.

Said Artabanus, the adviser of Xerxes, 'Thou seest how the Deity strikes with thunderbolt those beasts that tower above their fellows, but the little ones worry him not; and thou seest also how his missiles always smite the largest buildings and trees of such kind; for God loves to truncate all those things that rise too high. Thus, too, a large army may be ruined by a small one, when God in his jealousy hurls a panic or a thunderbolt, through which they are shockingly destroyed; for God permits none but himself to entertain grand ideas.'²

For the Romans thunder predicted the good or evil fortune attendant upon an undertaking, and might itself be compelled or invoked. According to an Etrurian legend, thunder was invoked when the territory of Volsinium was laid waste by the monster Volta. To perform the ceremonies improperly was to court death from the lightning—a punishment visited upon Tullus Hostilius for such shortcomings. Thunder on the left was propitious, for the not very enlightening reason that the east is on the side of the heavens. It is very propitious if the thunder proceeds from the north to the east and then returns to the north. The remaining quarters of the heavens are neither so propitious nor so much to be dreaded. When Marcellus was about to enter upon the duties of consul, it thundered. The augurs were summoned and declared the election invalid, whereupon the fathers spread abroad the report that the gods were displeased because of the election of two plebeians as consuls.³ Seneca finds marvellous effects in lightning, which leave no doubt that a subtle divine power is inherent in it. But he discountenances the prevailing view that lightning has the sovereign power of destroying the force of other portents, and also the view of Cæcina that, when something is simmering in one's mind, the lightning-stroke either urges it or deters from it. The truth is, if one has a design, then the lightning that occurs counsels; but, if one has no such design, it warns. Nor does he agree that the bolt which occurs first after entrance on an inheritance, or when a city or an individual has entered upon a new phase of existence, embraces in its prognostication the series of events through the whole subsequent life. Sometimes it portends nothing, or at least nothing that we can discover—e.g., if it strike in the sea or in the desert.⁴ The Stoic Attalus, according to Seneca,⁵ recognized a class of lightning portending nothing that concerns us, and a class intimating what does concern us. Of the significant lightning there are several varieties—a favourable, an unfavourable, and a neutral. The unfavourable portents may be (a) unavoidable, (b) avoidable, (c) such as may be mitigated, or (d) such as may be delayed. If benefits be foretold, they may be (a) abiding or (b) transient.

In violent storms at sea stars seem to settle on the sails. This is accepted as aid from Castor and Pollux. It is, says Seneca,⁶ really a sign that the storm is breaking and the wind subsiding; otherwise the stars would flit about without settling. When Glyppus was on the voyage to Syracuse, a star appeared resting on the very tip of his lance. At other times stars rested on the points of the Roman spears.⁷

The Mission Indians of California personify ball-lightning, which they generally regard as possessing malignant power.

In the belief of the Saxons thunder on Sunday of a certain year betokens great bloodshed in some nation; on Monday, that a royal child shall be put to death; on Tuesday, failure of crops; on Wednesday, the death of the field labourers; on Thursday, the death of the women; on Friday, the death of sea animals; on Saturday, the death of judges and bed-fellows.¹

The thunderbolt, according to mediæval belief, was of diabolical origin and eccentric in its workings. It would strike the sword in its sheath, gold in the purse, the foot in the shoe, leaving the respective coverings unharmed; it would consume a human being internally and leave the skin unscathed; it would destroy nets in the water, but not on land. This is in keeping with the belief that the thunderbolts with which the leaders of the Lapygians were stricken down were for a long time afterwards visible.²

The belief in thunder-stones, usually the stone implements of previous and forgotten peoples, is almost world-wide.³ Bushman philosophy declares that it is the rain that lightens. The Bakongo say that thunder is the voice of a great fetish and the lightning the fetish itself.⁴

On the north-west Pacific coast of N. America the thunder-bird, which is associated with the thunder, plays an important part in mythology, in art, and in initiation ceremonies.

The Tlingit say that 'the thunder bird causes thunder by flapping its wings or by moving even a single quill. When it winks, lightning flashes. Upon its back is a large lake, which accounts for the great quantity of rain falling during a thunder-shower. . . . The thunder bird keeps on thundering and the sky continues cloudy until the bird catches a whale.'⁵

The Tewa say that 'lightning is produced by 'ōk'wa, who throw it from the clouds'⁶—a view prevailing throughout the Plains area, as also in Guiana.⁷ The Mewan of S. California say that thunder is caused by two personages who entered the heavens in the form of birds. Another account attributes its origin to Mother Deer and Coyoteman, who made thunder by shaking the dry skin of the bear, while lightning was made from the eyes of boy fawns. To the northern Mewuk thunder is a prototype of the valley bluejay living down below to the west, in the San Joaquin valley, where the clouds are. The rumblings that come from him when he is angry are called thunder by human beings.⁸ The Takelma caused thunder to cease rumbling by pinching dogs until they barked. Probably the dog's bark was supposed to frighten away the racoon-like animal whose drumming was the source of the thunder.⁹ The Mandans attribute thunder to the flapping of the wings of a huge bird. When the bird flies softly, as is usually the case, it is not heard; but, when it flaps its wings violently, it occasions a roaring noise. It has two toes on each foot, one pointing ahead, the other behind. It dwells on the mountains, and builds nests there as large as one of the forts. It preys upon deer and other large animals, the horns of which are heaped up around the nest. The Hidatsa, similarly, attribute thunder to the flapping of the wings of a large bird which causes rain,

the glance of its eye when seeking prey giving rise to the lightning.¹

The Australian native alleges that thunder causes tortoises to come out of the water and lay their eggs.²

6. Meteors, meteoric stones, and comets.—Meteors were generally portentous among the Greeks and Romans, and meteoric stones were venerated by them. In the Gymnasium at Abydos was a meteoric stone which Anaxagoras was said to have predicted would fall in the middle of the earth. Another was at Cassandria, formerly Potidæa, 'which from this circumstance was built in this place.'³ Pliny reports seeing one which had been brought from the fields only a short time before, in the country of the Vocontii (modern Dauphine). He regards meteors as stars which are visible only when falling.⁴ Alexander, in Lemaire,⁵ gives the following definition:

'Meteors ista, super cervices nostras transeuntia, diversaque a stellis labentibus, modo aerolithis ascribenda sunt, modo vaporibus incensis aut electrica vi prognata videntur, et quamvis frequentissime recurrent, explicatione adhuc incerta indigent.'

The Aleuts and the Eskimos use meteoric stones as amulets, and the Dakota consider them imbued with mystic power. In Pechili and Manchuria they are worshipped because they come from heaven. In some parts of China they are supposed to originate from thunderbolts, and the fall of one is an evil omen.⁶ In Japan meteorites were given over to the priest and were kept in the temple. They were offered annually to Shokujo on her festival, the seventh day of the seventh month. They were said to have fallen from the shores of the Silver River, Heavenly River, or Milky Way, after being used by the goddess as weights to steady her loom.⁷

It is not stars but fire that falls from heaven, declares Bede:

'It springeth off the heavenly bodies as sparks do from fire. In fact there are as many stars still in heaven as there were at the beginning when God created them.'⁸

The Chaldeans explained comets as special thunderbolts, flaming torches hurled by the thunder-gods. The Greeks held, among other views, that they were rockets formed of particles thrown off by the earth and set on fire in the higher regions of the sublunary world. Here they were consumed, and afterwards fell back to earth.⁹ Aristotle held the much more advanced view that they were the result of a certain juxtaposition of the stars.¹⁰ Pliny adopts in large part the classification of comets inherited from the Greeks:

There are the Crinitæ, 'as if shaggy with bloody locks, and surrounded with bristles like hair; the Pogonia, having a mane hanging down from their lower part, suggestive of a beard,' etc. 'There is also a white comet, with silver hair, so brilliant that it can scarcely be looked at, exhibiting, as it were, the aspect of the Deity in a human form. There are also some that are shaggy, having the appearance of a fleece, surrounded by a kind of crown.'¹¹

The rising of a comet does not convey a threat of wind and rain in the immediate future, as Aristotle says, but casts suspicion over the whole year. Hence it is plain that the comet has not derived prognostications from its immediate surroundings to reveal them for the immediate future, but has them stored up and buried deep within by the laws of the universe. The comet which appeared in the consulship of Paterculus and Vopiscus fulfilled the anticipations of this kind

entertained by Aristotle, and, for that matter, by Theophrastus; for there were everywhere prolonged storms, while in Achaia and Macedonia cities were overturned by earthquakes.¹ A meteor as big as the moon appeared when Paulus was waging war against Persens. A similar portent appeared about the time of the death of Augustus, when Sejanus was executed, and before the death of Germanicus.² For the Roman sailor many shooting stars were the sign of a storm.

Shooting stars are the embers thrown down from the fires kept by spirits of the dead.³ They are usually unpropitious. The Spartan ephors might depose a king at the end of eight years, if, during their vigil on a clear and moonless night, they saw a meteor or shooting star. Frequently they portend some important event:

'When beggars die, there are no comets seen;
The heavens themselves blaze forth the death of princes'
(Shakespeare, *Julius Cæsar*, act ii. sc. ii.).⁴

7. The Milky Way.—The Jews thought of the Milky Way as a river flowing through the heavens, proceeding from the throne of God—an idea derived in its general conception from Babylonia.⁵ The Japanese say that the River of Heaven or the Milky Way is a vast river in the sky, whose overflow is represented by the Yangtse. Across this river is neither bridge nor ferry, but once a year, on the seventh day of the seventh month, Kasapagi, an immense jay, comes to it and spreads its wings across. Over this bridge meet Kengin, the neatherd, who presides over arms, and Shokujo, the weaver, who presides over weaving and other feminine arts.⁶

A tradition current among the Micmacs states that the Milky Way was formed when the Virgin Mary, returning across the heavens with a pail of milk, stumbled and fell. The Tlingit say that the Milky Way was made by the culture hero Lq'ayak when journeying across the heavens.⁷ The Tewa call it the backbone of the Universe Man.⁸

8. Perihelion.—The perihelion was explained by Aristotle as due to refraction from the sun,⁹ and by Seneca as the reflexion of the sun in the heavens.¹⁰ To the Romans it portended rain, and often some considerable misfortune. The Tlingit say that, if a mock sun goes down with the sun, good weather is portended; if it goes away before sunset, bad weather.¹¹

Bishop Latimer in 1552 speaks of rings about the sun as signs of the approaching end of the world.¹²

9. Rainbow.—The Catawba (as also the Tlingit) call the rainbow the 'dead people's road.'¹³ The Teton Dakota will not point at the rainbow with the index-finger, though they can point at it with the lips or elbow. Should one forget and point at it with the fore-finger, the bystanders laugh at him, saying, 'By-and-by, O friend, when your finger becomes large and round, let us have it for a ball bat.'¹⁴ The Hopi and the Thompson Indians of British Columbia have a similar tabu. The Hidatsa call the rainbow 'the cap of the water' or 'the cap of the rain,' and attribute its formation to the claws of a red bird. The Mandans say that it is a spirit accompanying the sun.

The 'great snake of the underneath' is the rainbow-god of the Yoruba. It comes up at times to

drink water from the sky. A variety of the python is the messenger of this god.¹

Pliny gives a purely naturalistic explanation of the rainbow, denying that it is either wonderful or ominous, yet he admits that it means either war or a fierce winter which will make an end of men's work and injure the sheep.² Seneca tells us that a rainbow in the south portends a heavy fall of rain; one in the west, a dew or light rain.³

To the Arawaks the rainbow heralds the approach of white people from that quarter in which it appears. When the Caribs see it at sea, they accept it as a good omen, but, if it appears while they are on land, they hide in their homes, considering it a strange and masterless spirit which is seeking to kill somebody.⁴

10. Volcanic activity.—For the Romans volcanic activity presaged dire calamities.⁵ Avernus, in Italy, was commonly thought the entrance into the infernal regions.

The old crater in Ceylon contained salt water which was considered the residue of the tears of Adam and Eve, who retreated here after their expulsion from paradise and for one hundred years copiously bewailed their sin.⁶ Gregory the Great⁷ saw the soul of Theodoric going down a volcano on the island of Lipari.

11. Waterspout.—The waterspout took the form of a great animal and was much dreaded by the Roman sailor.⁸

12. Will o' the wisp.—The Yorkshireman can elude a will o' the wisp by putting a steel knife into the ground, handle upwards. It will run round this until the knife is consumed, thus providing the pursued an opportunity to escape. The mysterious power of attraction which it possesses can be escaped by twining one's apron. In 16th cent. England many superstitions were associated with this phenomenon.⁹

Among the Micmac, as also among the Dakota, the word for will o' the wisp means also ghost. Both tribes believe that it will pursue one. The Dakota have a medicine which will protect the wearer from such pursuit. The Micmac elude it by putting a pin point upwards in their tracks; this the *skedegamutch* will not go past.¹⁰ In Maryland the superstitious Whites believe that it is the evil eye pursuing them.¹¹

V. PHYSIOLOGICAL AND PSYCHIC PHENOMENA.

1. Albinos.—The albino person or animal is often the object of religious reverence. The sudden and mysterious appearance of the white buffalo was the 'sign' for which the Fox Indians waited.¹² For many of the American tribes the white buffalo or the white deer portended some extraordinary fortune. The skin of the white buffalo cow was an eminent fetish with the Mandan and Hidatsa, worn on rare occasions and sometimes used as a sacrifice. The Crow have a superstitious fear of the white buffalo cow. When they meet one, they address the sun with these words: 'I will give her to you.' They then attempt to kill the animal, but leave the flesh untouched, saying to the sun, 'Take her; she is yours.' They never make use of the hide of such a cow.¹³

Throughout the Lower Congo an albino or the hair of an albino person is necessary to supply the needed magical power for the Ndembo society.¹ On the West Coast the albino is regarded as a sacred person, and is *ipso facto* a candidate for the priesthood.²

The white dog was sacred among the Iroquois and was sacrificed. In Siam the white elephant or white monkey was sacred and might not be killed—an inconvenient restriction to those who 'had a white elephant on their hands.' A white horse, a white pig, and a white cock were among the offerings at harvest-time prescribed by Shintō ritual. By virtue of such gifts the diviners obtained from the god of harvest the secret of a magical process which enabled them to save the imperilled crop. The white horse also served to establish the ruling house:

'As this white horse plants firmly his fore-hoofs and his hind-hoofs, so will the pillars of the Great Palace be set firmly on the upper rocks and frozen firmly on the lower rocks; the pricking up of his ears is a sign that your Majesty will, with ears ever more erect, rule the Under Heaven.'³

In the book of *Enoch*⁴ the Messiah, at the conclusion of the world drama, appears under the figure of a white bull, and in this guise secures the respect and fear of all the heathen, who, thanks to this apparition, are converted to righteousness. He is feared by all the beasts. When all the other animals have become white, He changes into a buffalo with black horns.⁵

Xerxes sacrificed white horses and young men that the gods might give him victory.

2. Birth.—(a) *Supernatural birth.*—To assure the divine nature of the ruler, and as a logical result of his alleged divinity, his origin was attributed to some other than natural birth.

'It seems to me that a hero totally unlike any other human being could not have been born without the agency of the deity,' said the biographer Arrian, when discussing the parentage of Alexander the Great.⁶ 'He to whom the gods themselves reveal the future, who impose their will even on kings and peoples, cannot be fashioned by the same womb which bore us ignorant men,' said the Augustan writer Arellius Fuscus in his discussion of astrologers.⁷

In N. America the concept of a supernatural origin is frequently held with regard to the culture hero or heroine, who often originates from a blood-clot or from menstrual blood.⁸

(b) *Twins.*—The Navaho accept twins as a divine gift, though the advent of twin colts is viewed as an evil omen and both mare and colts are killed. Many primitive peoples, however, consider twins uncanny and may kill one or both of them. Most of them regard triplets unfavourably, though in some instances they are welcomed.

3. Dreams.—The prophetic nature of dreams and their use as auguries are familiar themes to the student of Greek and Roman culture.⁹ Prometheus, says Æschylus,¹⁰ was the first to teach men what sort of dreams were destined to prove realities. In obedience to dreams the great emperor Augustus went through the streets of Rome begging.¹¹ Incubation was practised there as in the temples of China at the present time.¹² Pliny doubted the mind's knowledge of the future, when in sleep,

but in spite of his amazing credulity he was an advanced sceptic.¹

Muhammad, according to tradition, said :

'A good dream is of God's favor, and a bad dream is of the devil's; therefore, when any of you dream a dream which is such as he is pleased with, then he must not tell it to any but a beloved friend; and when he dreams a bad dream, then let him seek protection from God both from its evil and from the wickedness of Satan; and let him spit three times over his left shoulder, and not mention the dream to any one; then, verily, no evil shall come nigh him.' 'The truest dream is the one which you have about daybreak.'²

Specific and conventional interpretations are often given to dreams.

In Persia 'seeing bees in a dream indicates riches. To dream of eating grapes presages sorrow and flowing tears. To dream of buffaloes fighting means that the angels will come for the soul of some member of the family.'³

In Northumberland to dream of a hare means that you have an enemy; if one crosses your path, it is an omen of ill-luck. To see many eagles is to be warned of plots and intended assaults. If it be bees carrying honey, you will earn money from wealthy people. If the bees sting you, your mind will be tormented by foreigners. If bees fly into the house, the house will be destroyed. To dream of many fowls together is a sign of jealousy and chiding.⁴ Any dream on the first night of the moon's age is a good omen, while the second and third nights are neutral. The following two nights betoken good. The dream of the sixth night should not be forgotten. That of the seventh is sure to be fulfilled. Whatever is dreamed on the eighth and ninth nights will become public. If it is unpleasant, turn the head towards the east and pray for mercy. Similarly, birth has its fortune embodied in the days of the lunar calendar, and each month, from the first to the thirteenth, has its particular portent.⁵

Dreams play an important part in the lives of most primitive peoples, and usually betoken something in harmony with their content. Among the Dakota to dream of the moon is unlucky. It is lucky to dream of hawks, but unlucky to dream of bears, for the latter are slow and easily wounded. A dream about snakes will be the result of killing one, and no good comes from snakes, they say (the Menominee have the same beliefs). As among all the Plains tribes, in the dance associations of the Eastern Dakota dreams play a prominent part. In the Buffalo society of the Santee only those who had had visions of the buffalo, or the sons of such, were entitled to membership.

'One man might dream that he was a buffalo and had been shot with an arrow so that he could barely get home. The arrow continued to whirl round in his body. He dreamt that the only way to recover was to go into a sweat-lodge. First he asked for one of four different kinds of earth to mix with water, drank the mixture inside a sweat-lodge, and then recovered. Such a man painted himself vermilion to represent the trickling down of blood. Another man dreamt of being shot with a gun. Such a one would act out his dream during a Buffalo dance. A third man dreamt that a bullet pierced his eye and came out at the back of his head. He announced his dream, and shortly afterwards was actually shot in that way. Still another man announced a dream to the effect that he was shot through his temples, and this also came true. While dancing, dreamers would call on outsiders to bear witness to the truth of their statements about such experiences. Once a *heyoka* (a Clown) challenged a dreamer's account, saying that no man could recover from a wound of the kind described. Straightway the dreamer offered to be shot by the Clown, who sent a bullet through him. The wounded man staggered off, went to a sweat-lodge, and actually recovered within a few days.'⁶

Among the Arapaho dreams were revelations. To the Omaha the moon would appear, having in one hand a burden strap, in the other a bow and arrows, and the man would be bidden to make a

choice. If he reached for the bow, the moon would cross its hands and attempt to force the strap on him. If he should wake before taking the strap, or if he should succeed in capturing the bow, he would succeed in escaping the penalty attached to the dream. If he failed and the strap was taken, he would become like a woman, follow her vocations, and adopt her dress. Instances are reported in which the unfortunate dreamer, unable to ward off the evil influence, has resorted to suicide as the only means of escape. To the Menominee a dream about the moon brings long life, but a life that will end in misery. Such people are strong when the moon is full, weak and sickly when it is on the wane.¹ To the Huron the dream gives voice to the soul's desires.² Among the Hidatsa only those dreams that follow prayer, sacrifice, or fasting are portentous;³ while for the Mandan dreams are always prophetic or ominous. A Mandan dreamt of fire-arms, and soon afterward the Whites arrived with them. They dreamt of horses in similar manner before they obtained any. For the fasting youth to dream of a piece of cherry-wood, or of any animal, is a good omen. The Thonga profess to be disgusted when any dream is fulfilled,⁴ but this must depend somewhat on the nature of the fulfilment. The Kafir medicine-man acquires his powers through dreams, and the expectant mother learns by this medium the sex of her unborn child.⁵ Similar predictions were made from dreams by the Maoris, by whom much attention was paid to the dreams of the war-chief or of the principal priest, especially on the night before an engagement. They were guided by the omens of which the dream was an index.⁶

The Japanese recognize a creature by the name of *baku*, whose particular function is the eating of dreams. The male *baku* has the body of a horse, the face of a lion, the trunk and tusks of an elephant, the forelock of a rhinoceros, the tail of a cow, and the feet of a tiger. The picture of the *baku* hung up in the house will secure the protection of the animal. The Chinese character representing its name used to be put in the lacquered wooden pillows of lords and princes. By virtue of this character on the pillow the sleeper was protected from evil dreams. When a man awakes from a nightmare, or from any unlucky dream, he should quickly repeat three times the invocation, 'Devour, O *baku*, devour my evil dream!' The *baku* will then eat the dream and change the misfortune into good fortune and rejoicing.⁷ The Vedic texts direct one who has had an evil dream to wipe his face in order to get rid of its malign influence.⁸ This is more simple than the Navaho remedy, which may call for a 'renewal' ceremony.

4. **Epilepsy.**—Many peoples attribute epilepsy to possession by a demon. This was the view held by the Hindus, and in the Vedic texts a ritual ceremony is prescribed for its exorcism. Its uncanny nature has generally been recognized. From the time of Edward the Confessor to that of Queen Anne epilepsy was considered curable by royal touch.⁹

5. **Liver.**—The liver has long been considered an unusual organ of the human body, and unusual qualities have been attributed to it.¹⁰ In ancient Greece goose liver was used as being efficacious in medical

treatment;¹ the liver of the lizard would impart peculiar powers to the eater.² The Lushais eat the witch's liver in order to destroy the witchcraft,³ and the Cochinchinese express their deepest hatred of a person by saying, 'I wish I could eat his liver.'⁴ In ancient Arabia Hind, the wife of al-Fakih, inspired by similar motives, gnawed the liver of her arch-enemy Hamza,⁵ while a modern Arab will eat the liver or heart of a snake in order to acquire an understanding of the language of birds. In N. Morocco the Jbala bride and bridegroom partake at the wedding ceremony of the liver of a sheep, to make them 'dear to one another'; and in Andjra the bridegroom, though not the bride (for no woman may eat of it), partakes of the liver of the bullock.⁶ Arabian influence may be reflected in the Apocryphal account of the evil spirit who loved Sarah and was exorcized by flames arising from the heart and liver of a fish which Tobit, by the instruction of the angel, burned on the evening of his wedding.⁷

Similar attribution of unusual powers to the liver of a person or an animal is wide-spread. The Veddas of Ceylon chew the dried liver of a man in order to imbibe his virtue, and the Sinhalese have a tradition to the effect that they formerly followed the same practice.⁸ In Erub (Torres Straits) the liver, 'presumably of a deceased male,' was cut up and distributed among the young male members of the family to make them plucky.⁹ The Koita of British New Guinea allowed only girls to partake of the liver of the wallaby, the virtues of this animal affording no enhancement to males.¹⁰ In Australia the virtue elsewhere usually attributed to the heart or the liver resided in the fat around the kidneys.¹¹ The Maoris gave the liver of the *kakawī*-fish to a nursing child as a cure for flatulence. The liver is the seat of the affections, as also among the Greeks; and a piece of the liver of the first man slain must be offered, along with a piece of the heart and the scalp, to the goblin god, Whiro. So acute is the power of the liver that the Maoris call one of their implements for cutting wood the *kotiāte*, 'liver cutter.'¹² The Tonga Islanders believe that turtle has a peculiar effect upon the liver and they will not eat it, fearing the enlargement of the liver which indulgence in this food will produce. The liver is the seat of courage, and therefore the largest livers pertain to the largest men. They have found also that in left-handed people it tends to shift to the left side, and in the ambidextrous it is in the median line of the body.¹³ The Kayans of Borneo knew that the omen was bad if the under side of the liver of the pig was dark, good if it was pale.¹⁴ So general was haruspiction among the Borneans that W. Warde Fowler is convinced that its origin is common with

that derived by the Romans from the Etruscans.¹ But, as the phenomenon is so common to savage culture, any theory of the connexion of the divination rites of the natives of Borneo and those of ancient Rome will have to take account of this fairly wide distribution of similar and related things in the larger world of savagery. The supposed uniqueness of the phenomenon does not exist, and the historical hiatus must be bridged by data that show the probability of actual contact between the two in the past.² Geographical proximity as well as early historical contact makes Africa a much more probable land of origin for Etruscan influence, especially since the ancient Arabians entertained such beliefs, and they are common among African tribes. Leo Frobenius³ has attempted to establish the African origin of Etruscan culture, but the argument remains unconvincing to those who feel the need of historical demonstration.

Several tribes of Central Africa attribute special virtue to the liver—in some cases to the liver of the alligator.⁴ It is the seat of the soul, and to eat of it is to enhance one's own spiritual being, though, as often happens, this beneficence is denied to women.⁵ Accordingly, the Bakongo drink the blood and eat the liver of those killed in a fight.⁶ For similar reasons the Kagoro (of Nigeria) evil-wisher will catch one's soul or take one's liver.⁷ The pottery-makers of the Thonga (at least those dwelling near Morakwen) may not eat the liver of any animal. In the ceremonies and superstitions of this region the gall-bladder plays an important part, as does also the liver of the ox. When two parties not within the permitted relationship wish to marry, they must break the tabu by a ceremonial eating of the raw liver of this animal. They must first tear it out with their teeth, for it is tabu to cut it with a knife, and then eat it. 'You have acted with strong *shibindji*,' they say to those who are eating their way to matrimony, 'Eat the liver now!' (*shibindji* means both 'liver' and 'determination,' a history of the interdependence of the two).⁸ When an ox is killed by the headman of the village for distribution among the villagers, the liver is given to the 'grandfather' and the old people, 'because it is soft and they have no teeth to gnaw the bones,' but doubtless, also, because it imparts, more than does any other portion, the strength of the animal.⁹ The Ovaherero, of Damaraland, attribute their black complexion to the eating by their ancestors of the black liver of an ox killed when the first people emerged from the tree that gave them birth.¹⁰ A Matabeland native who wished to learn sorcery paid a big price to one of the recognized medicine-men in order to induce him to accompany the candidate to the grave of a recently buried person, unearthen the body, cut it open, remove the liver, and, by its help, inculcate the desired instruction.¹¹ The Bechuana find effective, in their prescription designed to defeat the enemy, the gall of a black bull whose eyelids have been sewed up, the animal then being allowed to wander for three days. If they find little gall in the gall-bladder of an animal, they say that some ancestral spirit has previously sucked it out. A man often cleanses himself with the gall of an ox, and a chief will

drink it to acquire strength to withstand his enemies. During the initiation ceremonies the boys eat a portion of the liver of an ox killed for that purpose, and thereby acquire courage and intelligence. Yet any one who eats a certain tongue-shaped lobe of the liver (the *lobus Spigellii*) will forget the past, and this is given only to the old women, who thus enter into forgetfulness of their sorrows.¹

The liver—sometimes the heart—is spoken of by the Kafir as the seat of courage, the gall being the fluid that contains its very essence.

'Arbousset declares that the Basuto consider the gall to represent the anguish of death; but it seems problematical whether the natives have any conception of such an abstract thing as the anguish of death. The gall is regarded in most tribes as the seat of courage and boldness. When the natives wish to describe the bravery of a great man they say that he has a large liver. Perseverance, that elemental faculty in human nature, is coupled in the native mind with perspiration; and, as the first place this is seen is on the skin of the forehead, they frequently consider that its seat or "centre" (as physiologists would say) is there. Intelligence or enlightenment is also sometimes considered to reside in the liver; but I fancy the sort of intelligence that is referred to is that which is displayed in battle. . . . The man who is capable of enduring hardness is said to have a hard liver.'²

The Chukchis of Siberia, in order to bring sickness upon a murdered man's kindred, eat the liver of the corpse, and the Eskimo practised a similar rite that the dead man's relatives might not possess the courage to avenge his death.³ Moreover, by eating the liver of the murdered man, they deprive the ghost of the power that he would otherwise have of rushing upon them.⁴ A story given by Rink shows the importance attaching to the liver:

'At last there was silence; and during this, one of the two brothers stood forth, and, taking a bit of dried liver (this being exceedingly hard), raised his voice, saying, "I have been told that I have an enemy in Niakungnak." At the same time he tried to crush the piece of liver he held in his hand; but failing to do so, he again put it by. Silence still prevailed, when Niakungnak's son advanced, and, taking up the same bit, crushed it to atoms with his fingers, so that it fell like dust upon the floor. All were utterly amazed, and not a word was spoken.'⁵

Here some special significance seems attached to this crushing of the liver in the manner portrayed. It seems probable that liver was associated with magic power.

'They thus entered, and saw all the brothers stretched out at full length on the ledge, only their feet visible on its outer edge (a sign of wrath). They were treated to some frozen liver in an oblong dish; but when they had got only half through with it, the frozen roof fell in and covered the dish with turf-dust.'⁶ 'When she had ended, Habakuk went closer to them, saying, "Well, take the skin of my seal with blubber and all, and the liver besides."⁷

An *angakok* gave the liver of a seal caught by a lucky hunter to one who was unlucky, and the latter acquired the desired luck by slowly chewing and swallowing the flesh. In Greenland the mother giving birth to her first child might not eat the liver of any animal; in Labrador she might partake of a portion of it.⁸

The *chenoo* of Micmac mythology, an ogre, representing, not improbably, Eskimo influence, showed a special liking for the liver of a conquered foe.⁹ The Chippewas were long ago admonished by the Crows to leave them the liver of the animal as part of their portion, and this custom is followed to-day.¹⁰ The Siouan tribes of the Plains area attach great importance to the liver of the buffalo and, in some instances, to that of the dog. The Omaha eat the liver of the buffalo raw. It gives

a man a clear voice and imparts courage.¹ Accordingly, the youth who has shot his first buffalo eats the liver with the gall over it as a potent dressing.² The Plains Cree warriors also, when they killed a bison, ate its liver raw.³ The Northern Shoshone imparted additional power, and, in this case, malign power, to the liver by placing rattlesnake heads on hot coals in a hole in the ground. The liver was that of a wild animal and was covered with the gall. The liver absorbed the poison from the fangs and was then carefully preserved in a little buckskin bag carried by the owner.⁴

A society of 'Liver Eaters' is found among the Crow,⁵ and members of the Bear clan of the Teton Dakota (Ogla division) sometimes eat the liver of the dog raw. A male must not eat the liver of a female dog, nor a female that of a male dog. Sores will break out on the face of an offender.⁶

The 'Dog-Liver-Eaters' Dance Association' is one peculiar to the Eastern Dakota.

It 'takes its name from the fact that the raw liver of the dog is eaten by the performers. It is not often performed, and only on some extraordinary occasion. The performers are usually the bravest warriors of the tribe, and those having stomachs strong enough to digest raw food.

When a dog-dance is to be given, the warriors who are to take part in it, and all others who desire to witness it, assemble at some stated time and place. After talking and smoking for a while, the dance commences. A dog, with his legs pinioned, is thrown into the group of dancers, by any one of the spectators. This is dispatched by one of the medicine-men, or jugglers, with a war-club or tomahawk. The side of the animal is then cut open and the liver taken out. This is then cut into strips and hung on a pole about four or five feet in length. The performers then commence dancing around it; smacking their lips and making all sorts of grimaces; showing a great desire to get a taste of the delicious morsel. After performing these antics for a while, some one of them will make a grab at the liver, biting off a piece, and then hopping off, chewing and swallowing it as he goes. His example is followed by each and all the other warriors, until every morsel of the liver is eaten. Should any particle of it fall to the ground, it is collected by the medicine-man in the palm of his hand, who carries it around to the dancers to be eaten and his hands well licked.

After disposing of the first dog, they all sit down in a circle, and chat and smoke a while until another dog is thrown in, when the same ceremonies are repeated, and continued so long as any one is disposed to present them with a dog. They are required to eat the liver, raw and warm, of every dog that is presented to them; and while they are eating it, none but the medicine-men must touch it with their hands. Women do not join in this dance.

The object of this ceremony is, they say, that those who eat the liver of the dog while it is raw and warm, will become possessed of the sagacity and bravery of the dog.'⁷

The Ainu have the custom of cutting up the liver of the bear, which is one of their sacred animals, and of eating it raw. If a Pima woman ate liver, her child would be disfigured by birth-marks.⁸ The Zuñi hunter takes the liver from his captured game, and, while eating it, exclaims, 'Thanks!'⁹ The Aztecs practised a well-developed system of haruspication, reading omens from the liver or other organs of the slaughtered animal, and the Araucanians of Chile were given to related practices. They dissected the body of a person of distinction in order to examine the liver. If it was found to be in a healthy state, the death was attributed to natural causes; if inflamed, malign magic had caused the death. The gall is extracted, placed in a magic drum, and, after various incantations, taken out and put over the fire in a carefully covered vessel. If, after sufficient roasting, a stone is found in the bottom of the pot, it is known to have been the cause of death.¹⁰

Roman ideas have persisted to the present day. Vesalius recognized a natural spirit emanating from the liver, as a vital spirit came from the heart and an animal spirit from the brain. Mediæval belief attributed to the eating of the liver of a goat good sight after dark, for the goat could see as well during the night as during the day. In *Macbeth* the liver of a 'blaspheming Jew' is one of the concoctions used by the witches.¹ There was a curious belief to the effect that the liver of the mouse increased and decreased with the waxing and waning of the moon. The Saxons attributed many complaints, and some of them rightly enough, to disorders in the liver. Blood that was thick and saturated was spoken of as 'livery,' i.e. such as flows through the liver. They cured stomach and intestinal troubles by the application of a burned goat's liver 'rubbed somewhat small and laid on the womb,' or stomach.² In Italy at the present day a fresh human liver, especially that of a woman, is believed to confer magical powers upon the one who eats it.³ This may be directly related to the belief recorded by Pliny that the liver of the weasel will cure pains in one's own liver.⁴

6. Sneezing.—From time immemorial the sneeze has been deemed worthy of notice and has usually elicited some form of salutation from bystanders or some expression from the agents. The phrase, 'not to be sneezed at,' has behind it an importance attaching to the act of sneezing to which the whole human race bears witness. Even children notice it as something peculiar and have sayings of their own, such as 'Scat!' or 'Shoo!' The origin of the importance attaching to sneezing is thus a question of psychological import as well as one of culture diffusion.

'It is,' as W. R. Halliday has remarked, 'per se a startling phenomenon to find the body, which in normal action is the slave and instrument of its owner's will and intention, behaving in a way independent of his desire or volition. Simply because it is involuntary, the twitching of the eyelid or the tingling of the ear must be miraculous. And primitive man finds a significance in everything which attracts his notice, particularly in cases where there is no obvious cause.'⁵

This is good psychology, and ample facts could be adduced to support it. The superstitions connected with sneezing and the omens drawn from it are noticed in art. NOSE, vol. ix. p. 398, and need not be repeated here.

7. Miscellaneous.—Many of the American Indian tribes attach some significance to belching, crackling of the joints, ringing in the ears, twitching of the eye-lid or arm or leg. Thus the Navahos frequently omit or postpone a journey if the one intending it belches or has a ringing in the ears; a Micmac, however, considers belching a sign of good luck in hunting—the hunter will soon find game. European peoples, likewise, often attach some prophetic meaning to such bodily involuntary disturbances.

W. D. WALLIS.

PRODUCTION (of wealth).—The contact of ethics and economics is more directly at the distribution (*q.v.*) and the consumption (*q.v.*) of wealth than at its production. Because it put

production before them, the classical or formal economics has often been called soulless. But it was natural at that time to put stress on the increase of capital, and on the great merit of saving. And it was easy for readers to slip wrong meanings into the terms 'productive' and 'unproductive spending' and 'productive' and 'unproductive labour.' Nor did economists wrong the actual system; it, too, made production the measure of prosperity, regarded wages as the means of keeping labour efficient, and saw in high interest and profit the best guarantee for the upkeep of capital. Neither the economists nor the system were without good reason; for, whatever the best use and distribution of wealth, these are limited by the amount of it, and by the efficiency that can be given to the three agents that produce it—nature, capital, and labour.

It is through labour that the efficiency of nature and capital is discovered and made real. Capital is its product; and, while nature does all the work, it needs directing. One has only to compare the unimproved value of nature in land and beast, plant and mineral, heat and electricity, with the value that only minds can give. Hence two ethical topics are traditional in the text-books, when they are dealing with labour as producer. One concerns its quantity, the other its quality. The first is connected with the doctrine of Malthus (see MALTHUSIANISM), the second with education, and not merely technical education, but even more with its product in grit and conscientiousness. The two questions have now a unanimous answer from ethics and economics.

When, however, we ask about the fitness not of the labourer for the economic system, but of the system for the labourer, the question becomes critical. The division of labour that is essential in the system may mean to the man monotony, ill-health, and loss of the market for his skill. All the books, since the *Wealth of Nations*, discuss the advantages and disadvantages, but the only practical question now is how to meet the disadvantage from the gain. This has been the work of factory and other labour legislation. At first the argument for higher wages, for shorter hours, and for better health was their economy as measured by the work done. Labour, however, does not rely on this argument; it claims a better share on the ground of justice; it refuses to abide by the open market measure of its price. And it is still true, though less than before, that the harder and more debasing the labour, the worse it is paid. The reason is that the lower the grade, the greater the competition. There are two ways of reducing the competition: one by combination, the other by moving some of the stress from lower to higher grades. The latter is the perfect way. It has been universal in economics since the death of the iron law of wages; the doctrine that cheap labour is necessary has come so near its end that it has disappeared from press and platform; and the right way tends to make itself permanent and easier. But progress on it must be slow, and its results are mainly enjoyed by the next generation. And so, though it would be even more necessary in a socialistic system than in the present one, there is nothing like a militant spirit on behalf of it, as there is for the other way.

Here too the quarrel between ethics and economics has been settled. But one far more serious has opened between them, on the one side, and the actual working of the industrial system. It did not appear in the early days of capitalism, when competition was unchecked. This made for the greatest production of wealth, and to ethics it seemed that the rude justice of the market could be made more and more equitable by equalizing

opportunity. Thus it was both the moral and the economic policy of the 19th cent. to keep the course open and see fair play. It was a new policy in that it deserted regulation for competition. But competition has become more and more regulated from within. The advantage of one large over many small units of production has led to aggregations of capital that give virtual monopolies; and the advantage of collective bargaining has brought an aggregation of labour, and another of employers to meet it. The original notion was that competition would give the best form of co-operation; it was a child-like faith that one hates to surrender. But the competition has come to a state of war in which the morals of war play havoc; and they do it without remorse, because a class conscience has made itself superior to private scruples and regret.

The concentration of capital has not in itself been prejudicial to production, for it seeks to regulate rather than limit the output; it obviates the waste and dislocation of too many plants and shops, and the advertising and other costs of commercial rivalry; and there is plenty of scope for competition within. The evils have been notorious: in company promoting, in crushing rivals, in controlling prices as buyer and as seller. And mere size may prevent the coming of a competition that would be healthy. But the best course is to accept the natural development from competition to amalgamation, and to meet the evils by developing regulation, from which, indeed, monopoly was never made exempt. Co-operation is always the final word. Competition is only a means, and a better means the less it is a jostle, and the more it is a directed course, where there is no loss in the struggle.

Unlike the concentration of capital, the concentration of labour easily becomes prejudicial to production. To over-time, piece-work, all speeding-up and labour-saving, there is opposition; and no measures are taken, as by the old guilds, to prevent fraud and incompetence. This is only another instance of the division of function, and nothing to condemn. But, again, it is a competition that has broken away from co-operation. The hostile relation of master and man is thought to be not incidental, but inevitable and permanent. The men see that it is the interest of the management to use as little labour as possible, and they think that the owners are an incubus, and dividends a tax on their wages. As well, therefore, try to instruct a nation at war in the arts of peace as point to the injury they do and the loss they suffer; they think the injury to be deserved, and the loss to be a sacrifice for their class. To many of them the crimes of syndicalism are no more criminal than machine-breaking was at an older day. There are several things that keep the war civilized; but the main consideration is failure or success; and in either event the damage to the oppressor is always a pleasure. In times of peace a union is always preparing for war; men who are not members are denied the right to work; and others of the old natural rights and duties are made subordinate. It has been futile to insist on them, for an unnatural system is thought to make right wrong.

The contentions against the system are often ignorant, but, as a rule, they are honestly urged; and so, as in the days of slavery, it is the system itself that holds the centre in an ethical view of industrial life. It is a late system, and the forces within it have always prevented it from resting where it is. But they may be directed, and it may grow, in either of two ways that have a very different moral value. The root of the system, and the directions in which it grows, may best be seen from its origin, and as a stage in the history

of industry. The older forms are never quite superseded, and they may all be seen to-day.

In the earliest system the family was an industrial unit supplying nearly all its wants; there was a division of labour according to sex and capacity; with slaves and officials the unit grew large, but kept its unity even when the slaves were hired out, or were employed in producing for a market. When a family became too large for its land, it was natural for some members to learn skill in a trade, and to confine their labour to it, working for other families, often living with them till the job was finished, or having the work brought to their forge, oven, or loom. Thus came the formation of artisan families; and tools, skill, and custom passed down like the land. So far the payment is almost all for labour. At a later stage, when the workman began to keep a stock of raw materials, his profit included interest as well as wages; and he had apprentices and hired labour. The first great split in the industrial system was complete—the separation of the workman from the soil. Industrial capital increased, but there was not yet capitalism, for the owner took little risk of producing on the chance of a market; the customer was still the employer. Capitalism came when the risk was definitely undertaken. The *entrepreneur* was sometimes the manufacturer, oftener the merchant; but the work of those two—the work of making, moving, and selling the product—can be distinguished from the more invisible work of ordering it and finding a market. This is the work of the *entrepreneur* or business man. In the art. DISTRIBUTION it is explained how the business man is the pivot of the system, guarantees to all the other agents of production their share in the price, and pays himself from the residue.

Thus the second great separation of labour from the other agents was the separation from capital. It is often held that both separations were by dispossession, and that they were an evil. But no one looks for peace by undoing either—by replacing men on the land, or by giving them the capital that employs them, that each may employ himself. Nothing would give greater stability than for workmen to be shareholders in the enterprise that employs them, or in others; and it would be the best kind of revolution if unions tried to establish themselves in business. But the great majority of owners must always lend their capital instead of using it themselves. And, if we look from the owner to the real user, we find that the emphasis is on him, the acting capitalist, and not on the capital. Just so it is on the sculptor and the inventor, though nature does all the work that is done by the invention, and though the statue is all in the marble.

The process of production has become more and more roundabout; an ever greater distance has separated producer from consumer. The workman is bewildered by the number of intervening agencies; and to his divorce from land and capital he adds, for a general source of inequity, that the system allows many parasites to live on his product. He has been taught that the real value of a product comes from the labour spent on it, and he sees that, besides rent and interest—the extortions of the idle ownership of land and capital—money and middlemen lay hold on his work, and make a better living out of it than he does. He does not see that the production of a commodity is not complete—its value is not produced—till it is in the hands of the consumer. If advertising, drumming, and commissions do not help to sell it, they will not be employed. Useless measures of commerce are no more secure than labour that is made useless by a machine. It is through economy in

marketing, no less than in manufacturing, that large capital has its advantage. Everything useless and predatory tends to be expelled; for everything must be demanded by an employer, if it is to get its price; and, provided there is publicity and knowledge enough, he pays no more for it than he must. It is natural for those whom he employs to think his profit an extortion from them, and that 'what is somewhere gotten is somewhere lost.' But the profit of an enterprise is like the royalty from an invention, which gives more than it gets. Interest is different; it is like the royalty paid for mere ownership, and simply a burden. W. Smart thought that 'the community gets its employing done for it more cheaply than it gets any other service' (*Distribution of Income*², London, 1912, p. 159 f.).

If a system of production were more moral and progressive the more it crushed incompetence, again the present system could well defend itself. Its path of progress is by curtailing cost, and employers are driven on it by the competition of one with another, or with the consumer, who is the final employer. It is a precarious position for a working man, and the thing that really threatens the life of the system. He cannot but want to be a civil servant, and have his future a charge on the community instead of at the necessity or the mercy of competing employers. He is in the majority; and, however little we like it that the lives of men should centre on his livelihood, he has been given the power to bring that about. Wages-boards and courts of arbitration are useful, but they add evils of their own; animosity remains and preparation for war. To co-partnership and often to co-operation (*g.v.*) the war-spirit is actively hostile. The moral situation on the other side is no better; there it is thought that socialism must come, but that everything should be done to resist and postpone it. And both sides think that they are acting in the highest human interest, and that this consists in giving the freest scope that can be given to our spirit.

It is something that they make the same appeal, for so far the dispute becomes a question of means. The question breaks into two, one about the best management of the forces of production, the other about their ownership. The best management of an enterprise is from within; the bane that weakens a public enterprise is interference from without. Democracy has kept some of its self-denying ordinances fairly well, but it is far easier to refrain from interfering with the bench or the navy, where there are no profits and the voters are few, than with the conduct of a railway, and with industries that are less subject to mechanical regulation. If there were as little interference as that of the shareholders in a going concern, and if the same price were paid for ability, the efficiency and even the enterprise might be as great. Assuming the best in regard to management, would it be well to pool the stocks of every enterprise, and pay the owners a uniform rate of interest? This is what socialism recommends, because it assumes that there must be an annual surplus for the ordinary shareholder, the tax-payer.

A rapid change to such a system would intensify the moral chaos of the present; if it has any chance of working well, it must come gradually and through a long apprenticeship in the joint-stock system. And then, no doubt, the single amalgamation of socialism would lose its attraction. But the demand for it will persist in embittering the present relations of owners and workmen unless the number of owners is greatly increased. The best way to retain the freedom and efficiency of the present system is by such increase. It is a form of co-operation like that of the co-operative

distributing societies, and, like them, would be far more effective than co-partnership and the co-operative ownership by workmen in the same enterprise; and it would give these a fairer field. If the thing were easy, it would have come long ago; but it was never less difficult than now; and it could be made easier. It would offer a stronger impulse to thrift than the fear of a rainy day has proved. The forecast of such a development is at least as historical as that of a single amalgamation, which is the hope and the fear now confounding every effort at amelioration; but it will not come of its own accord.

LITERATURE.—The general text-books on economics all devote a main division to production, and P. H. Gastberg, *Production*, London, 1907, shows that nearly the whole subject may be seen from this point of view. The earlier books dealt mainly with the three agents of production, the later with their organization. This is naturally approached through its history, and C. Gide, *Political Economy*, tr. C. H. M. Archibald, New York, 1914, well illustrates the closing of the old division between deductive and historical economics. The history of production from the point of view of organization can be read in C. Bücher, *Industrial Evolution*, tr. S. M. Wickett, New York, 1907, and can best be studied in the increasing literature of economic history which deals with particular periods, and publishes contemporary records. Recent collections are *Economic Annals of the Nineteenth Century*, 1801–20, ed. W. Smart, London, 1910, and *English Economic History, Select Documents*, compiled and ed. A. E. Bland, P. A. Brown, and R. H. Tawney, do. 1914.

W. MITCHELL.

PROFANITY.—I. Meaning and use of the term.—In popular usage the term 'profanity' is frequently limited to a verbal reference and identified with 'profane swearing.' It is perhaps unnecessary to say that such a limitation cannot be justified by historical and etymological investigation. It is undoubtedly true that an unfitting and frivolous use of certain verbal symbols has been almost universally included in the class of practices condemned as profane. The names of the gods in primitive religions and the name of the one God in more advanced religions have been considered as too sacred to be ordinarily employed, and even the sacred usage has been restricted to certain privileged persons. 'Thou shalt not take the name of the Lord thy God in vain' is one of the commandments, and the OT writers constantly warn the people against 'profaning the holy name' of Jahweh. Sacred formulæ have been, in all religions, rigorously safeguarded, and the employment of them by other than authorized persons at the proper time and place has been regarded as constituting the sin of profanity. It is true also that, by investigating those prohibitions having a verbal reference, we may approach an understanding of the ideas underlying the disapproval of the profane. The words which must not be carelessly used refer to a world which is separated by a wide and deep gulf from the world of the ordinary, and the fact that verbal formulæ are of a somewhat artificial origin indicates that the separation is to be maintained not so much by a recognition of rational distinction between the two worlds or an appreciation of the inherent superiority of the sacred as by elaborated and external regulations. Yet, notwithstanding all this, the term 'profanity' includes far more than mere indifference to the distinction in verbal matters, and the wider meaning must be clearly kept in view.

The etymology of the word 'profane' (lit. 'before or in front of the shrine') may give us a certain amount of guidance because of its spatial suggestiveness. There immediately arises in our minds the idea of a walled or fenced enclosure within which only peculiarly precious objects and specially privileged persons may remain, and outside of which there is a world of rigorously excluded persons and things having lesser assigned worth than those within. The same kind of suggestion comes to us from a consideration of the Greek

words, *βέβηλος* and *βεβηλῶς*, which are used to indicate profanity in the NT, and which introduce the idea of 'threshold'—a threshold strictly guarded, which should not be crossed, but yet which is crossed by those to whom the epithet 'profane' applies. Such persons properly belong to the world outside the sacred edifice, but they illegitimately enter in.

2. **The idea of artificiality.**—As we consider these spatial implications, we arrive, first of all, at the idea of artificiality. There is no intrinsic reason why one particular place should be more sacred than another. If the temple had been founded a few yards away from its actual position, the ground which is now profane would have been rendered sacred, and that which is now sacred would have retained its common or profane character. In primitive religions the location of the sacred and, contrariwise, of the profane depends very frequently upon chance. The importation of reason for the distinction comes entirely from the outside. We are thus not surprised to find that, *e.g.*, in certain Australian religions the totemic animal or thing which is worshipped has no intrinsic value entitling it to special reverence. Profanity lies in a failure to recognize an imposed rather than an actual value. The sacred object has not such a position in a universal scheme as will entitle it to permanent reverence. It has not within itself a power of protection sufficient to guard its sacredness. It follows, more generally, that the religions which most commonly avail themselves of the distinction between the sacred and the profane are not those which have attained to the highest level of security. They are still at the stage of struggle. Their gods have still to compete with the gods of other tribes, and the people who worship the particular gods, and who thus acquire something of their sacredness, have to be preserved by external means from the infiltration and pollution of other tribes. Even in the OT the disapproval of profanity is closely connected with the giving of worship to other gods, as, *e.g.*, participation in the rites of Molech (cf. Lv 20⁹). The house of Israel is profaned among the heathen because the people have disregarded the restrictions upon which the exclusiveness of the nation depended (cf. Ezk 36^{20, 23}). The stage has not yet been reached at which it is recognized that all people may be sacred, and that there *are* no other gods who can come into rivalry with the God of Israel. It is therefore easily intelligible that the distinction between the sacred and the profane is based originally, for the most part, upon definite injunction and prohibition. The religion or the body of sacred things has to be zealously guarded by law, and the profane person is the man who transgresses the law protecting the sacred ideas and rites. Of course, in the more advanced religions these ideas and rites acquire a greater degree of intrinsic value, but within the region of thought, where the distinction between sacred and profane is most intensely regarded, such value either has not yet been recognized or has been forgotten, and we may use the word 'artificiality' in order to draw attention to this dependence of the distinction upon external support.

Perhaps the most striking illustrations of artificiality are to be found in connexion with the verbal formulæ, prescriptive of rite or expressive of doctrine, to which we have already referred. The connexion between the sacred character which they now possess and their inherent meaning is exceedingly weak, and it is just where this meaning is most completely overlooked or forgotten that the disapproval of an unauthorized use of the formulæ is most intense. The more elaborate a system of ceremonies is, and the more clearly it

bears upon it the marks of artificiality, the more numerous are the injunctions against profanity. The more complex the rite, the stricter is the priestly monopoly regarding it. The danger of profanity seems to be regarded as in inverse proportion to the degree of intelligibility possessed by that which is liable to desecration.

Among the Australian tribes it is an act of profanity to speak the names of some of the totems, and even the men of certain tribes have a sacred name besides their ordinary name which must not be made known to women and children, and must not be used in every-day life. In Vedic times in India we find the doctrine of 'secret names' of the gods, and these names were so sacred that it would have been considered profanity to reveal them to the vulgar. In the same land also, even at the present day, it is considered a disgraceful thing for a wife to utter the name of her husband, and ceremonies of initiation are accompanied by the giving of a sacred formula, or *mantra*, which has value rather as given by the priest than as understood by the initiate, and which the initiate is forbidden to reveal to others if he wishes to escape the sin of profanation of sacred things.

3. **The idea of separation.**—Another idea, related to the foregoing and also suggested by the spatial etymology of the word 'profane,' is that of absolute, abrupt, and rigorous separation between the sacred and the profane. The sacred enclosure is definitely separated by wall or some other effective protection from the profane world, and access from the one world to the other is only through a rigorously-guarded portal. The dominant characteristic of the two worlds is their heterogeneity. The close connexion between the ideas of artificiality and separateness is obvious. It is the fortresses without natural strength that require the broadest and deepest moats. Risks of contact between the sacred and the profane must be avoided at all costs, and the mind of the worshipper must be kept constantly alive to the dangers of the profane.

(a) **Place.**—An exceedingly large class of prohibitions against the profane have reference to separateness of place. In many of the primitive religions we find emphasis upon the profanity of entering the place where the sacred emblems of totem-worship are deposited, and all ordinary work within the sacred enclosure is forbidden. We find the same attitude also in connexion with OT worship. Ezekiel, *e.g.*, prescribes elaborate measurements in order 'to make a separation between the sanctuary and the profane place' (42²⁰), and by the same prophet a certain portion of the city land is called 'profane' to distinguish it from the portion assigned to priests and Levites. One of the chief arguments brought against St. Paul by later Jewish orthodoxy seems to have been that he had profaned the Temple by bringing into it men of an alien or unprivileged race.

(b) **Time.**—Very commonly also profanity is held to consist in disregard of a strict division of time. The ordinary world is so separate from the sacred that the occupations of the former have to be altogether given up when the latter is entered. The time which is assigned to the sacred must be characterized by rest from the regular forms of labour. If at such a time work has to be carried on at all, this work must have an essentially religious character and be freed from connexion with utilitarian considerations. If it bears any resemblance to ordinary work, it can be redeemed from profanity only by the fact that it is performed by privileged persons. In Mt 12⁵ the priests are said to be without blame when they profane the Temple, because, though performing on the Sabbath actions similar to those of ordinary life, they are yet absolved by reason of their sacred office from the sin of Sabbath desecration. This failure to observe the sacredness of the Sabbath and of other special times and seasons is, in the Jewish religion generally, one of the most frequent grounds for the accusation of profanity (cf. Neh 13¹⁷, Ezk 22^{8, 23³⁸}).

(c) **Tabu.**—An intense desire to keep the profane

at a distance is clearly seen in connexion with tabu (*q.v.*) and the religions in which this conception is important. The word connotes exclusiveness (being derived from root *ta*, 'mark,' and *pu*, an adverb of intensity). It is opposed to *noa*, the general or the common. It is from this idea of tabu that the distinction between sacred and profane arises in many communities, and the rigour of the distinction owes much to the awe which the tabu inspires. Profanity is a grievous sin and at the same time more frequently possible where the transition from the ordinary world to the profane is made as difficult as possible. The constant demand is that all actions and interests belonging to the ordinary world must be left behind by the would-be initiate. Literal contact is of course forbidden, and the prohibition extends to the contact involved in the taking of food. The food of the profane must not be eaten by the initiated, and, contrariwise, the food of the priests must not be eaten by the profane. The latter must not even have the degree of contact which is implied in the sight of the sacred objects. In some communities certain instruments of worship are profaned if, *e.g.*, women catch the faintest glimpse of them. The whole idea of asceticism has originally a very close connexion with this idea of absolute separation. Everywhere also elaborate ritual is accompanied by the most zealous care for the separation of the priestly class from the ordinary community. Many of the uses of the word 'profane' in the OT have reference to this withdrawal. The priests are to symbolize their separateness by changes of garments 'when they enter into the inner court.' They are to avoid ordinary food and the ordinary forms of family relationship, and in many other ways prepare themselves to teach the people 'the difference between the holy and profane' (cf. Ezk 44¹⁷⁻²⁶). The erring priests are those who have themselves 'put no difference' (22²⁶).

4. **Profanation of sacred doctrine.**—The danger of profanity also attaches itself to an incautious use of the body of sacred doctrine. This is often regarded as the exclusive property of certain privileged classes. The ancient sacred scriptures of India, *e.g.*, are profaned if they are read or taught to people outside the prescribed classes. In various parts of the literature terrible penalties are announced for those who venture to teach the doctrines of the Vedas to a Śūdra.

'The ears of the Śūdra who hears the Veda are to be filled with molten lead and lac' (Śaṅkarācārya, Commentary on *Vedānta-Sūtras*, I. iii. 38 [*SBE* xxxiv. 228]), and, if he dares pronounce them, 'his tongue is to be slit.'

Occasionally the idea is that the sacred doctrine is also to be kept strictly separate from other truths or opinions which are of lesser value. To mingle sacred and other knowledge is in itself profanity. Perhaps there is a lingering trace of this idea in the use of the word 'profane' in the First Epistle to Timothy. Timothy is urged to 'refuse profane and old wives' fables' and to avoid 'profane and vain babblings, and oppositions of science falsely so called' (1 Ti 4⁷ 6²⁰). The idea of a strict line of demarcation certainly persists in the mediæval distinction of sacred and profane learning.

5. **Reasons for distinction between sacred and profane.**—So far we have been content with noticing the character and the breadth of the distinction between the sacred and the profane. If we go farther and ask for reasons for the distinction—reasons which lie deeper than mere artifice—we shall find these partly in belief in a divine revelation and partly in tradition and the social custom and pressure enshrined in such tradition. Though we have emphasized the artificial character of many of the defences of the sacred, it does not follow

that these may not have previously involved a clearer consciousness of the inherent value of what is regarded as sacred. The original reason for the consecration of certain experiences and disapproval of unauthorized incursions into the sphere which they occupy may have been a sense of a divine revelation, even though that reason may now have been forgotten. The sanctuary at Bethel may have, in later times, become a home of priestcraft, but none the less it was the vision of the angels of God ascending and descending that gave it originally a sacred character. Even in religions where a divine revelation is not recognized the artificial character of the interdictions against profanity is not the whole of the matter. These interdictions are not of recent growth; they enshrine tradition, and in this tradition we may perceive the embodiment of a social consciousness. The totem-animal is protected from profanity because it symbolizes the spirit of the clan and represents a social pressure which the individual recognizes as superior and authoritative. Among men more religiously-minded or more enlightened this law of the community is regarded as the law of God, and the profane person is one who transgresses the ordinance of God and deserves, like the prince of Tyre, to be 'cast as profane out of the mountain of God' (Ezk 28¹⁶). But whether the divine origin of the law and its reference to an all-comprehensive divine community be recognized or not, the anti-social character of profanity seems to be an unmistakable reason for disapproval of it. The profane person is the anti-social person who refuses to recognize the code of the community, and therefore one upon whom the law falls. Esau is called a 'profane person' seemingly for the reason that he sold his birthright or despised his connexion with the community (He 12¹⁶). In India the person who has broken through caste regulations becomes at once profane and a source of pollution for those who remain within the caste. The anti-social character of profanity is also illustrated by the frequency with which accusations of profanity are brought against those who indulge in magical practices. It is no doubt possible to speak of profaning a magical rite in the sense of doing it in an unaccustomed and ineffective manner, but, for the most part, magic as a whole is itself condemned as profane just because it indicates a separatist procedure and a contravention of the regularized and socially approved worship of the community. Otherwise it is difficult to see why magic rites, which have a considerable resemblance to religious rites, should be regarded with such horror as profane in those communities, at least, where a social worship has been firmly established.

6. **An inadequate differentiation.**—We have emphasized certain inadequacies in the distinction between the sacred and the profane, arising from the artificial and abrupt character of the distinction. But this must not blind us to the elements of enduring value associated with these conceptions. Among primitive peoples the idea of tabu has often been the foundation of morality, and in the more advanced communities the rigorous protection of the priests from possible profanation may indicate a regard for personal purity as well as for privilege. The development of the social consciousness which underlies the abhorrence of profanity has been an ethical asset, and the asceticism by which the heterogeneity of the sacred and profane worlds may be transcended has often been a first step towards personal holiness.

Yet it must be admitted that the distinction between sacred and profane, as it is usually applied, does not belong to the highest level of thought. It still betrays the dominance of merely spatial categories; it is still influenced by the idea

that the divine is limited in the sphere of its operation, that God sets a seal upon certain persons, places, and times, relating them with special closeness to Himself, and leaving the rest of the world to be reckoned as common and profane. We must transform the distinction if we are to retain its underlying value. We must be permitted to honour as sacred the whole of the world which God has made, and encouraged to condemn as profane, not certain specified places, things, or persons, but the spirit of the dweller, whether in the temple or in the street, whose

vision is narrow and whose aim is low, who fails to recognize that the way to the Holy of Holies lies along the path of the good citizen, and that even in the lonely wilderness he may find 'the very gate of heaven.' See, further, artt. HOLINESS.

PROPHECY.

American (L. SPENCE), p. 381.

Christian (E. K. MITCHELL), p. 382.

PROPHECY (American).—Among both the semi-civilized and the savage aboriginal peoples of the American continent prophets were held in peculiar veneration, and on many occasions they have moulded the destinies of tribes and nations. The advent of the white man in America, we are informed by many authorities, was heralded by numerous prophecies, but in most cases the authentic character of these is open to the gravest doubt. The vision of Papantzin, sister of Moctezuma, Tlatoani of Tenochtitlan (Mexico), is a case in point. This princess, it is said, fell into a death-like trance, on emerging from which she said that she had been led by a spirit through a field littered with dead men's bones to a place where she had seen strange, bearded, white men approach the coast of Mexico in large vessels. Another prophecy appears to have been current in Mexico in pre-Columbian times, to the effect that Quetzalcoatl (a god whose worship differed in certain of its characteristics from that of the other native cults, and who had come from the Land of the Sun and had been driven from Mexico by hostile deities) would one day return. The coming of Cortes and his comrades was regarded by the Mexicans as a fulfilment of the prophecy, and the title of Teule ('godlike being'), conferred by them upon the Spaniards, is proof that the tradition really existed.

Among the Maya of Central America prophecies were delivered by the priests at stated intervals. Writings which profess to incorporate some of these are to be found in the so-called books of Chilán Balam (*q.v.*), and these also deal with the advent of Europeans. There are not wanting statements to the effect that in Incan Peru prophecies were current about the coming of white strangers, but the events alluded to in at least one of them are not in accordance with known facts.

In modern times numerous prophets have arisen among the N. American Indians, usually in periods of crisis in the history of the tribe. In 1675 Popé, a medicine-man of the Tewa (Pueblo Indians) near San Juan, New Mexico, was charged along with others with the crime of witchcraft. He preached the doctrine of independence from Spanish rule and the restoration of Indian customs, and instituted a wide-spread conspiracy to drive the Spanish colonists from the country. Popé, along with his disciples, Catiti, Tapatú, and Jaca, set apart 13th Aug. 1680 as the day of massacre. Extraordinary precautions were taken to ensure that no European should learn of the intended revolt, but the news leaked out, and Popé had perforce to strike three days before the time. Four hundred Spaniards were massacred and Santa Fé was besieged, but a successful sortie ended in the rout and discomfi-

Hebrew (E. KÖNIG), p. 384.

ture of the Indians. The Spaniards were, however, forced to abandon the town and to retreat to El Paso. Popé washed with a native preparation those of his followers who had been baptized into the Christian Church, burned the churches, and obliterated every remaining mark of Christianity. But his rule became so despotic and was followed by such misfortunes that he was finally deposed. He was re-elected, however, in 1688, and died in 1692.

Tenskwatowa ('open door') was a famous prophet of the Shawnees and a twin brother of Tecumseh. An ignorant and drunken youth, he was one day engaged in lighting his pipe when he fell back in a state of trance. His friends, believing him dead, were preparing for his funeral when he revived and stated that he had paid a visit to the spirit-world. In 1805 he assembled his tribesmen and their allies at Wapakonita, now in Ohio, and announced himself as the bearer of a new revelation from the Master of Life. He declared that, whilst in the spirit-world, it had been granted to him to lift the veil of the future and behold the blessedness of those who followed the precepts of the Indian god and the punishments of such as had strayed from his path. He vehemently denounced witchcraft and medicine practices, the drinking of 'fire-water,' the intermarriage of Indian women with white men, the wearing of European clothing, and all White customs and institutions. If these things were eschewed, the Master would receive the Indians into favour once again. He further announced that he had been granted the power to cure all diseases.

These statements caused great excitement among the people of his tribe, and those who dealt in witchcraft were boycotted. From time to time Tenskwatowa announced further wonderful revelations to his followers from his abode near Greenville, Ohio. He predicted an eclipse of the sun which took place in the summer of 1806, and this greatly enhanced his reputation as a prophet. His apostles travelled from tribe to tribe disseminating his doctrines, and a belief arose that within four years all those who did not credit his predictions would be overwhelmed in a great catastrophe. Shortly before the war of 1812 a confederacy was entered into for the purpose of driving out the Whites, but Harrison's victory near Tippecanoe destroyed both the faith and the movement connected with it. Tenskwatowa received a pension from the British Government. Although of somewhat forbidding appearance and blind of an eye, he had great gifts of fervour and personal magnetism.

Kanakuk, the prophet of the Kickapoos, received inspiration from the career of Tenskwatowa. In 1819 the Kickapoos ceded their extensive territory

in Illinois to the United States, and were assigned a reservation in Missouri. This region, however, was occupied by the unfriendly Osages, so that the Kickapoos were unable to take possession of it. Kanakuk exhorted his people not to abandon their territory and preached a moral code which forbade superstition, the use of alcohol, and internecine quarrels, promising them that, if they recognized it faithfully, they would in time inherit a land of plenty. He became chief of that remnant of them which remained in Illinois. He was in the habit of displaying a map or chart of the true path through which the virtuous must proceed, beset with fire and water, did they desire to attain the happy hunting-grounds, and he furnished his disciples with prayer-sticks engraved with holy symbols. Ultimately the tribe was removed to Kansas, but Kanakuk remained its chief until his death from smallpox in 1852.

Tavibo ('white man'), a Paiute chief and medicine-man, when his tribe was forced to retreat before the Whites, went into the mountains to receive a revelation, and prophesied on his return that the earth would swallow the Whites and that their possessions would be given to the Indians. But his followers were unable to entertain the idea of an earthquake that would discriminate between the Red Man and his enemies. He therefore sought a second vision, which revealed to him that, although the Indians would be engulfed along with the Whites, they would rise again and would enjoy for ever an abundance of game and provisions. Followers flocked around him and, when they became sceptical, he had a further revelation, which told him that only those who believed in his prophecies would be resurrected. He died in Nevada about 1870.

Wovoka, the son of Tavibo, was responsible for the 'Ghost-dance' religion and prophecies, perhaps the most important from a political point of view in the history of the relations of the Whites and Indians. This creed he nurtured among the Paviotso of Nevada about 1888. It spread rapidly until it embraced all the tribes from the Missouri to the Rockies and even beyond them. Wovoka (who was known to the Whites as Jack Wilson), like other native prophets, declared that he had been taken into the spirit-world, where he had received a revelation from the god of the Indians to the effect that they would be restored to their inheritance and united with their departed friends. They were to prepare for this event by practising song-and-dance ceremonies given them by the prophet. During these dances many of the Indians fell into a condition of hypnotic trance, and intense excitement usually prevailed. The movement led to an outbreak in the winter of 1890-91. It has now degenerated into a mere social function.

Smohalla was the originator of a religion current among the tribes of the Upper Columbian River and the adjacent region. The name (Shmoqula) means 'preacher,' and was conferred upon him after he had attained celebrity. In his boyhood (he was born about 1815 or 1820) he frequented a Roman Catholic mission, from which he appears to have derived certain of his religious ideas. Beginning to preach about 1850, he quarrelled with a rival chief, left his tribe, and wandered south as far as Mexico. On returning, he declared that he had visited the spirit-world, whence he had been sent back to deliver a message to the Indians. The substance of this was that they must return to their aboriginal mode of life and eschew the Whites, their teachings, and their customs. Smohalla found many adherents, and the sect which he instituted, known as 'The Dreamers,' and possessing an elaborate ceremonial, has maintained its religious organization.

The mysterious sect or secret society known in Central America as **Nagualists**, which had for its object the destruction of Christianity, numbered several prophets among its priests and adherents Jacinto Can-Ek, who led a Maya revolt at Valladolid, Yucatan, in 1761, prophesied the destruction of the Spaniards. Maria Candelaria, an Indian girl, headed a similar and previous revolt, and likewise falsely prophesied the Spanish downfall.

LEWIS SPENCE.

PROPHECY (Christian).—1. **Primitive form**.—The opening of the Christian era was signalized by a remarkable awakening of the spirit of prophecy, and this was accepted by all believers as the fulfilment of Jl 2^{28t}. (Ac 2^{17t}). Moreover, our Lord Himself had seen in His own equipment and ministry the fulfilment of the promise of the Spirit (Is 61^{1st}, Lk 4^{17t}). And 'to the people he was a prophet, strong in action and in utterance' (Lk 24^{19t}; cf. 13³² 7¹⁶, Mt 13⁵⁷ etc.). Earlier still John the Baptist had attracted the multitude by the declaration that the baptism of the Spirit was at hand (Mk 1⁸). And Zacharias and Simeon, Elisabeth, Mary, Anna, and many others who were 'looking for the consolation of Israel' had borne witness a generation earlier to the presence of the Spirit and His fuller advent as heralding a new era of divine grace (Lk 1^{8t}, 2^{25st}). Furthermore, the whole Jewish Apocalyptic literature of the period testifies to the general expectation of the dawning of 'the last days' and the bestowal of the spirit of prophecy.

The demonstration of the Day of Pentecost was the opening of a new era in the religious history of mankind (Ac 2^{16t}). Tongues were loosened, and the impulse to prophesy spread like wild-fire among the converts to the new faith. This was natural and indeed inevitable under the circumstances. Believers were at once impelled and compelled to account for to themselves and to explain to others the things that were happening among them and what was about to come to pass. For the Day of the Lord had dawned, and they were all eager to know what it meant to themselves and to the world. Looking back over the history of Israel, they sought to trace the purposes of God, and they then projected them into the future in the light of the fresh dispensation of grace. This was Christian prophecy in its primitive form, and the apostles were its first exponents. But other voices were soon heard explaining the ways of God and expounding the gospel of salvation. Stephen arraigned the Jewish leaders for resisting the Holy Spirit, killing the prophets, and murdering the Son of man (Ac 7⁵¹).

2. **Spiritual gifts differentiated**.—The persecution which followed the stoning of Stephen scattered the disciples widely and multiplied the number of those who sought to interpret 'the signs of the times.' It thus came about that each little community of believers had those among them who 'spoke as the Spirit gave them utterance' and were accounted as prophets of the Lord. Many were no doubt often overwrought and distraught and promised things that failed of fulfilment; but the fittest survived and held high rank among those who set themselves 'to minister unto the saints.' The freedom that prevailed everywhere in public assembly encouraged each disciple to exercise whatever gift the Spirit had bestowed upon him for the upbuilding of the brotherhood

As time went on, these gifts became distinguished from one another and more sharply outlined (1 Co 12^{28f.}).

It is St. Paul who gives us the first clear classification of 'spiritual gifts' and announces that they have been bestowed for the common good. 'God has set people within the Church,' he says, 'to be first of all apostles, secondly prophets, thirdly teachers, then workers of miracles, then healers, helpers, administrators and speakers in tongues of various kinds' (1 Co 12^{28f.}; cf. 12¹², 1 Th 5³⁰, Ro 12⁴⁻⁸, Eph 2²⁰ 4^{11f.}, 1 Ti 1¹⁸ 4¹⁴, 2 Ti 1⁶). And yet these gifts were not bestowed singly and to the exclusion of all the others. For the apostles prophesied, taught, governed, and exercised their manifold ministry. And the prophets also taught and sometimes spoke in a tongue, wrought miracles, and healed. But the individual became classified by his most conspicuous gift, and each little community of believers looked to this one or that for the performance of his chosen function. Certain gifts, however, from their very nature, were unstable and intermittent—e.g., speaking in a tongue, working miracles, healing, and even prophesying. On the other hand, there were gifts that were naturally stable and continuous—e.g., teaching, administering, and governing. The intermittent, unstable gifts were liable to lapse in any given community. There were not enough accredited prophets, healers, or speakers in a tongue to go round; and, where genuine inspiration failed, the pretender often came to the front. St. Paul found it necessary to advise restraint and moderation in speaking in a tongue (1 Co 14^{24f.}); and he also warns against unrestrained prophecy: 'Let only two or three prophets speak, while the rest exercise their judgment upon what is said. Should a revelation come to one who is seated, the first speaker must be quiet. . . . Prophets can control their own prophetic spirits' (1 Co 14^{29f.}).

3. The Church and 'false prophets.'—The freedom of the early years gradually came under the restraint of the general judgment of the Christian communities and their accredited leaders. The stable continuous functions in the life of the Church grew in influence and power. The apostles themselves saw to it that the churches were supplied with permanent leaders, such as presbyters and deacons, who should direct the affairs of the brotherhood and guard the purity of its life and teachings (Ac 6¹² 11^{27f.} 14²³ 15^{2f.} 21^{10f.}, 1 Th 5^{20f.}, Gal 2^{2f.}, 1 Co 14^{37f.}, Eph 2²⁰, Col 2¹⁸, 1 Ti 1¹⁸). They were careful, however, not to put the ban on the exercise of any God-given power or to restrain any genuine effort to minister in the name of the Master. For every disciple was a member of the 'body of Christ' and under obligation to contribute to the welfare of all; to his own Lord he stood or fell. And yet abuses of freedom were sure to arise, and did occur. Not all saints were sanctified, and impostors and pretenders appeared here and there. The apostles began to recall that Jesus had warned them against false prophets (Mt 7^{15f.} 24^{4f.}). And His forecast was soon fulfilled (Ac 20^{29f.}, 2 Th 2^{2f.}, Col 2⁴⁻¹⁸, 1 Ti 1^{19f.}, 2 Ti 2^{18f.} 3^{1f.}, Rev 2²⁰ and often, 1 Jn 4^{1f.}). The appearance of these false prophets, pretending superior wisdom, ere long created distrust and aroused the churches and their leaders to the dangers that threatened their welfare. But as yet there was no recognized 'form of discipline' adequate for the suppression of those would-be spokesmen and pretentious revealers of the secret counsels of God. There were no specific standards by which to test and try those 'spirits.' Standards, however, were sure to be found, and, if not found, then created, by the churches for their protection from vagaries in doctrine and aberrations in life. The apostles, whether in common councils or as

individuals, were the first court of appeal. They based their judgments on the words of the Lord and the mind of Christ. Then the appointment of bishops (i.e. elders or presbyters) and deacons supplied the place of an apostle when he was absent. Letters were a substitute for personal presence. The disappearance of the apostles and the first disciples tended to leave the churches, now widely scattered, open to the invasion of presumptuous claimants to leadership, and the words of the Lord were not often specific enough to meet the case. And who could claim to have the 'mind of Christ'?

4. Warnings of the early fathers.—The rise and development of the monarchical episcopate was here and there favoured and fostered in the interests of sound doctrine and as a restraint against new-fangled notions, foreign to the faith. Hermas, *Pastor* (Mand. xi. and xii.), and Ignatius (Eph. vii., ix., and xvi., Mag. viii., Tral. vi., Phil. ii., iii., Smyr. iv., vii., ad Pol. iii.) are full of warnings and admonitions against false prophets and teachers; and Ignatius especially exhorts to obedience of the bishop. This was his hope for the maintenance of sound doctrine. Clement likewise relies upon the bishops (i.e. presbyters) for the preservation of the unity and purity of the Church (1 ad Cor. xlii.-xliv.). Prophecy, however, was not yet suppressed, but only repressed and somewhat regulated by the rising officials in the Churches. The *Didache* informs us that prophecy was still free and in good repute in Syria (or Egypt), although often counterfeited and condemned (xi. 7-12). Its days, however, were numbered, for it was soon to share the general distrust and opposition towards all extravagant claims to divine wisdom. The Gnostics and Marcion had prophets as well as the churches, and they were sometimes indistinguishable from each other (see artt. GNOSTICISM, MARCIONISM). Then the rise of Montanism (q.v.) was in some respects but a resurgence of prophetism. It was an effort to revive primitive Christian conditions where each believer was free to exercise his God-given gift.

5. Disappearance of the prophetic office.—The churches were now put on the defensive and they soon sought to co-operate in the maintenance of their apostolic heritage. Joint action in councils was the most effective means at hand. This brought the bishops together and greatly increased their prestige and power. The appeal to the words of Christ was enlarged to include an appeal to the teaching and writings of the apostles, and the use of the OT as a book of discipline and standard of doctrine grew in favour. The Law and the Prophets had sufficed for Israel, and the Old Covenant needed only to be supplemented by the New with its apostolic guarantees. Prophecy was thus placed under the restraint of written records, and it was considered more important to interpret the old prophecies than to utter new ones. All the unstable, intermittent spiritual gifts shared the fate of the prophetic. Tongues, miracles, healings waned; and by the end of the 2nd cent. they were all, including prophecy, under the restraint of the regular officials of the respective churches and subordinated to them. Prophecy as well as the rest was not denied its theoretic claims, but it must keep within the bounds of Holy Scripture and the standards of discipline. The pressing primitive need of interpreting the 'signs of the times,' however, seemed to have passed away. Men were now trying to adjust Christianity to its place in the world. There were sporadic efforts to reinstate prophecy as a special function in the life of the Church, but it had served its day (Iren. adv. Hær. ii. 32; Eus. HE v. 7). Its most important and essential element was absorbed by

the teachers and preachers, and the office practically disappeared.

E. K. MITCHELL.

PROPHECY (Hebrew).—I. Soothsaying and prophecy.—According to Cicero (*de Div.* i. 18), there were, traditionally, two kinds of divination, the one based upon an art or theory (*ars*), the other lacking such basis. The former consisted in the application of certain rules which earlier generations believed to have been drawn from the observation of occasional coincidences between certain appearances and certain subsequent occurrences; thus the Greeks (looking to the north) regarded a bird appearing on the left as of evil omen, and one seen on the right as a harbinger of good fortune (cf. *Hom. Od.* xv. 159, 173 f.; so 524, as contrasted with xx. 242), while the Romans, looking towards the south, saw a favourable sign in an *avis sinistra*. Those, again, who cultivated the second main type of divination are described by Cicero as perceiving the future beforehand by means of a certain agitation (*concitatio*), or unconstrained and free movement of the mind. The two modes of seeking to foretell the future are now usually distinguished as divination and prophecy. Now the historical writers of the OT, who have of late been frequently accused of suppressing the truth, do not conceal the fact that in almost every age the first type of prediction had a considerable vogue in Israel.

Thus (a) 'ōnēn is forbidden in *Lv* 19²⁶, *Dt* 18¹⁰, *2 K* 21⁶, *Mic* 5¹², *Jer* 27⁹, *Is* 57³; the term seems to have denoted the observing of cloud-formations and of the weather in general, and certainly the practice of observing the configuration and colouring of the clouds played an important rôle among the Babylonians and Assyrians (cf. C. Bezold, *Nineve und Babylon*, Bielefeld, 1903, p. 85). Again, (b) the practice of rhabdomancy is deplored in *Hos* 4¹²; this form of divination, according to Herodotus (*iv*. 67), was found among the Scythians, and Tacitus (*Germ.* x.) describes the way in which it was practised among the Germans (see *ERE* iv. 827^a). Further, (c) there were people in Israel who believed that they had a connexion with an 'ōb, most probably 'one who returns' (cf. *Fr. revenant*), i.e. a spirit that could not rest in the grave, and might bring tidings from the under world: the pl. 'ōbōth is used in *Is* 8¹⁹ as a parallel of *mēthim*, 'the dead,' and the word may be derived from Arab. 'aba, 'redit' (cf. the form *qām* instead of the regular *qām* [*2 K* 16⁷]; the *ō* may have been used also to distinguish the word from 'ab, 'father'). Those who were believed to be connected with such a spirit imitated its supposed weak voice by hollow tones (*Is* 29⁴), like those of the ventriloquist, whence *LXX* sometimes gives ὑποφωτισμένοι.

This whole species of prediction, working with objects or persons as its media, was called *gesem*, the agent being the *qōsēm* (*Is* 3² etc.). The term is connected with Arab. *qāsama*, lit. 'to cut in pieces,' then 'to part,' and *gesem* would thus be what gives a decision regarding the future. The representatives of the lawful religion, however, were convinced of their superiority to the *qōsēm* in every respect (*1 S* 28³, *Is* 3², *Jer* 14⁴, *Zec* 10² etc.); and it was a principle of that religion that there was no *gesem* in Israel (*Nu* 23²³), i.e. among those who were faithful to the lawful religion. The true religion of Israel nevertheless countenanced the second type of divination noted by Cicero, and actually traced its origin to those who bore the title *nābī*—the meaning and history of which we must now investigate.

2. The vocation of the Hebrew prophet.—The nature of the prophetic calling can best be studied by starting from the name *nābī*, pl. *nēbī'im*.

The word means 'speaker,' being formed from the verb נָבַא, *nāba*, which corresponds to the Arab. *nāba'a*, signifying 'to announce'; so, too, the Assyrian *nāba*, 'to call,' 'inform,' 'command'; cf. *Nabū*=*Nebo* (*Is* 46¹), identified with Έβουης (*Ac* 14¹²), and the Eth. *nabāba*, 'to speak.' It is true that many scholars

(e.g., Kuenen, Wellhausen, Stade) connect *nābī* with נָבַא, *nāba*, 'to well forth,' 'to bubble up,' but this theory ignores the difference between the final gutturals, and severs *nāba* from its Semitic cognates; moreover, if *nābī* meant 'bubbling up,' a 'prophet' would hardly have been blamed for 'boiling over' (*pahāzūth*, *Jer* 23³²; cf. *Zeph* 3⁴); while Kuenen's assertion (*De Propheten*, i. 50) that the sense of 'bubbling up' may have developed into that of 'speaker' still leaves it open that the *nēbī'im* were 'speakers' from the outset. The rendering 'speaker' is supported also by the fact that one's *nābī* is sometimes styled his 'mouth' (*Ex* 41⁶ 71, *Is* 30², *Jer* 15¹⁹, *2 Ch* 6⁴), and that a *nābī* of God is also called His *mēlīs*, 'interpreter,' 'ambassador' (*Is* 43²⁷). Cornill's interpretation of the word is but relatively different from that maintained here; from the Arab. *nāba'a* he infers that *nābī* means 'authorized speaker'—wrongly, as the present writer thinks, since *nāba'a* signifies, not simply 'to speak,' but 'to inform,' 'to announce.' J. A. Bever (*AJSL* xviii. [1901] no. 2) proposes to connect *nābī* with Assy. נָבַא, 'to carry off,' and to give it the sense of 'one who is carried away,' 'transported' (by a supernatural power), but Babylonian-Assyrian usage does not give the slightest hint of such a derivation; the divine name Nabū points rather to the derivation from the Bab.-Assyr. *nābu*, 'to name,' 'to call.'

While the *nēbī'im*, accordingly, were 'speakers,' we must of course understand that they were such in a unique sense, i.e., that they were heralds or messengers in the highest sphere of human interests, viz. religion. They were not, e.g., legal counsel or advocates, as is asserted by H. Winckler (*Religions-geschichtlicher und geschichtlicher Orient*, Leipzig, 1906, p. 23 f.); for the preparation of 'written contracts,' to which he refers, required not a speaker but a writer, and, while 'writers' are mentioned, as in the admittedly ancient Song of Deborah (*Jg* 5⁴), we never hear of a *nābī* as spokesman or counsel in any record of judicial proceedings (*Ex* 18¹³, *Jos* 7¹⁹, *1 S* 22¹², *Ru* 4¹²; cf. *2 S* 15³⁷). In the Code of Hammurabi, moreover, we find the *šibu*, 'elder,' 'assessor' (cf. *šēkēnim*, *Ru* 4¹²), and the *dāinu*, 'judge,' but there is no mention of the *nabiu*. We infer therefore that the Hebrew *nābī* was the 'speaker' in the religious sphere, thus corresponding to the Greek προφήτης, originally 'the interpreter of the oracle,' and thus 'the expounder of divine revelation,' so that neither term at first connoted the idea of prediction.

If the Hebrew prophets, accordingly, were 'speakers' in the religious sphere, it is obvious that they were neither priests (*kōhānim*) nor 'judges' (*šōphētim*). It may not be quite so clear, however, whether they were poets, as they have recently been often called. The present writer would here refer to the conclusion at which he arrived in his *Stilistik, Rhetorik, Poetik in Bezug auf die bibl. Litteratur* (Leipzig, 1900, p. 308 ff.), viz. that, while the Hebrew prophets occasionally introduce lyrics (cf. *Is* 5¹⁻⁶ 23¹⁶), and often involuntarily break into the rhythm of the dirge (e.g., *Am* 5³), they were otherwise speakers or orators. Further, the author of *Ps* 74, writing in the Macabæan period (cf. *1 Mac* 4⁴⁶ 9²⁷ 14⁴¹), could never have said (v. 9) 'There is no more any *nābī*,' had he—a poet—regarded himself as one; while, again, the poetic books of the OT are, in the Hebrew arrangement, kept quite apart from the prophetic writings. For similar reasons the *nēbī'im* cannot be classed as philosophers. The Hebrews too had their philosophers, the *hākhamim*, or 'wise,' whose literary productions are found, e.g., in *Proverbs*, *Job*, and *Ecclesiastes*; but no prophet of the OT ever calls himself a *hākham*—Isaiah (29¹⁴) indeed positively differentiates himself from the class—and in the Hebrew order of the OT books the *nēbī'im* and the *hākhamim* appear in different divisions.

3. The rise of Hebrew prophecy.—The present writer would begin here by giving the conclusion to which his own investigations have led him, viz. that prophecy was from the first, so to speak, the heart-throb of the lawful religion of Israel. This is just what we might expect, and, besides, it agrees with the testimony of the Pentateuchal

source E, which, while some scholars regard it as at least second in point of age, the present writer and others believe to be the oldest of all (cf. E. König, *Einführung in das AT*, Bonn, 1893, pp. 200, 203 f.); thus E in Gn 20⁷ calls Abraham a *nābī* (as in Ps 105¹⁸ the name is given to the patriarchs generally, and in Dt 18¹⁵, Hos 12¹³ to Moses). And, if other religions found a voice in some form of prophecy, why should this not have been the case from the first with the lawful religion of Israel?

A somewhat different view is taken by Cornill, who inclines to think that Arabia was the native soil of *nābī*-ism (*Der israelitische Prophetismus*⁶, p. 12). He seeks to support this theory by pointing to the fact that the basal form of the verb corresponding to *nābī* is not found in Hebrew. But Hebrew has many nouns that have no corresponding verb at all, as, e.g., *dām*, 'blood,' *sāphā*, 'dung,' and these words certainly did not connote foreign or imported concepts. Moreover, while *kīhēn*, 'to act as priest,' the verb corresponding to *kōhēn*, is as much a mere *verbum denominativum* as *nībā* or *hithnabbē*, 'to prophesy' (from *nābī*), no one would ever deny that the priesthood was an ancient and indigenous institution among the Hebrews. Yet some scholars go even farther than Cornill; thus Wellhausen (*Die israel.-jüd. Religion*, Leipzig, 1906, p. 20) asserts that prophecy arose in Israel in the agitated period before the outbreak of the Philistine war. At first sight this view seems to find support in 1 S 9^{9b}; 'the prophet (*nābī*) of to-day was formerly called the seer' (*ro'eh*). The present writer is of opinion, however, that in the exposition of this passage certain points have not been fully taken account of.

(1) Samuel bears both titles—*ro'eh* in 1 S 9^{11.18f}. (cf. 1 Ch 9^{22.28.29.30}), *nābī* in 9^{9b}; and we need not attach much importance to Cornill's statement (p. 13) that he is always called 'seer' in the earliest source, for he is there also styled 'man of God' (9^{6a.10}). Moreover, Hanani (Asa's reign, c. 900 B.C.) is still called a seer in 2 Ch 16^{7.10}, and there, accordingly, it is not implied that the two terms belonged to different periods. In point of fact, the man of God might be described either as one who perceived, or as one who proclaimed, religious truth, so that the *nābī* was subsequently also called *ro'eh* (Is 30¹⁰); and the prophet's act of reception or perception is always (from Am 7¹ onwards) denoted by the verb *ro'eh*, of which the *ro'eh* of 1 S 9^{9b} is the active participle. Hence Wellhausen's idea of an absolute distinction between 'prophet' and 'seer' is unfounded.

(2) We must take into account the purpose of 1 S 9^{9b}, that purpose being to explain why Saul chose the term *ro'eh* (v. 11), which is not used of Samuel in the previous part of the chapter. It seems very probable, therefore, that the LXX has here preserved the true reading (ὅτι τὸν προφήτην ἐκάλεi ὁ λαὸς ἐμπροσθεν, ὁ Βαλῆαν); for (a) the Hebrew here presents a difficulty, and, even if we read *lineb' hayyōm*, this would mean 'the prophet of to-day'; (b) the adjunct *hayyōm* is never found in the many other references to changes of designation (cf., e.g., Gn 17⁹); *hayyōm* might easily arise from *ha'am*, 'the people,' which is precisely the reading of the LXX, and certainly other passages (e.g. 1 K 3²) seem to speak of 'the people' in the special sense of 'the multitude.' Thus the statement that the *nēbī'im* appeared in Israel shortly before the Philistine wars finds but frail support in 1 S 9^{9b}.

That statement, moreover, is confronted by the fact that in the historical consciousness of Israel there had been *nēbī'im* long before the period indicated, as may be inferred from Gn 20⁷ (already noted as belonging to E), from Nu 11^{25f.29} (J), from reminiscences of the prophetic function of Moses (Dt 18¹⁵, Hos 12¹³), and from Jeremiah's utterance regarding the unknown prophetic sequence from the Exodus (Jer 7²⁵). Notwithstanding all this, however, the statement in question has been amplified by the assertion that prophecy in Israel was derived from the Canaanite religion. It was Kuenen (*De Profeten*, ii. 227 f.) who formulated the theory that in the closing period of the Judges the Canaanite phenomena of *geest-verrukking* ('ecstasy') passed over to the worshippers of Jahweh, and that Samuel placed himself at the head of the movement. This theory won the approval of Wellhausen and others, including W. R. Harper (*ICC*, 'Amos and Hosea,' Edinburgh, 1905, p. lv). (a) It is to be noted, however, that Harper himself (p. lv) does not deny that prophecy was indigenous to other Semitic religions, and it would be strange that Israel should be an exception. (b) It is extremely unlikely that the Israelites should borrow an institution from a religion which they despised and to whose gods and orgiastic practices they were bitterly hostile (Ex 20^{23.24} 34^{12f}, Dt 23^{18f}. etc.). (c) Had the Israelites, in the period of the Judges, not possessed the institution which constitutes the deepest source of their religious power, then the Canaanites, with their superior external culture and an alluring form of religion, would almost certainly have absorbed them. (d) The statement of Wellhausen and his successors, viz. that prior to Samuel's time there was a whole host of *nēbī'im* in Israel, and that Samuel simply put himself at their head, finds no support in the sources. We read of no religious movement before Samuel's day, for we can hardly think of Samson in this connexion, while in Eli's time the Ark itself was not guarded against capture by the enemy (1 S 4¹¹). Far from there having been a multitude of prophets before Samuel's day, we read that 'the word of the Lord was rare in those days; vision was not widely spread' (3¹).

VOL. X.—25

The actual situation, as it appeared to the historical consciousness of Israel, was, in contrast to the foregoing views, rather as follows. The fervour of faith in Jahweh as supreme among the gods (Ex 15¹¹ 18¹¹), which had been kindled by the deliverance from Egypt, never wholly died out (Jos 24³¹, Jg 2¹⁰); on the contrary, clear-sighted representatives of the true religion, such as Deborah (Jg 4⁴), and God-fearing men like Gideon (8²³) had striven to maintain it. Nevertheless, the national and religious life sank to a very low level, and, in particular, the nation seemed about to be overwhelmed by the Philistines, who were constantly being reinforced from Crete (A. Noordtzijs, *De Filistijnen*, Kampen, 1905, pp. 39, 123 f.). Even the high-priestly family fell into a state of complete degeneracy in Eli's sons, Hophni and Phinehas; the ancient symbol of the divine covenant was captured by the enemy; and a daughter-in-law of Eli, heart-broken at her people's calamity, gave her child the name Ichabod, 'dishonour,' 'ignominy' (1 S 4¹⁹⁻²²). It was in this extremity that Samuel stood forth on behalf of his people; speaking as a messenger of his God, he brought them to repent, and to turn to Jahweh (7³⁻¹²). It was Samuel who once more raised the standard of religion and nationality, and this standard was then seized and carried far and wide by others. It is only after his great victory, which he commemorated by setting up the stone called Eben-ezer ('stone of [Jahweh's] help,' 7¹²), that we find traces of the 'prophetic companies' (10⁶).

4. The development of Hebrew prophecy.—(a) *Companies of the prophets*.—We would note here, to begin with, the operation of the general law according to which the great figures in the prophetic field draw round them numbers of emulative disciples. Thus Moses has satellites in Miriam, the prophetess, who led the women in their chant of victory at the Red Sea (Ex 15^{20f.}), and the elders who received a portion of his spirit (Nu 11^{25f.} [J]).¹ In a similar way those who had been moved by the religious and patriotic spirit of Samuel drew round him as their leader. Such prophetic bands—often, though less correctly, called 'schools of the prophets'—come once more into special prominence in the struggle between Ba'al and Jahweh, when Elijah and Elisha stood forth as champions of the legitimate religion of their people. Even Amos (c. 760 B.C.) makes reference to 'sons of the prophets,' as such disciples or scholars could be called in the Hebrew idiom (Am 7¹⁴; cf. 1 K 20³⁵). The status of the prophets Samuel, Elijah, Elisha, and Amos, in relation to the members of the prophetic companies, may to some extent be made out from the following references: the latter prophesied before Samuel (1 S 19²⁴), or sat before Elisha (2 K 4³⁸), and, as this mode of expression finds a parallel in the well-known affirmation of Elijah, 'the Lord, . . . before whom I stand' (1 K 17¹ etc.), we infer that they were the agents or pupils of the greater men; moreover, they addressed Elisha as 'man of God' (2 K 4⁴⁰); and Elisha treats one of them as his servant (6¹⁵⁻¹⁷; cf. also 9⁴). In Samuel's time, again, we see the bands of prophets marching in procession to the sound of harp and timbrel, and from this fact, as from other references in the sources, we infer that the part which they played in the religious development was of a threefold kind: (1) they disseminated the ideas of men like Samuel, Elijah, and Elisha among the people (in 2 K 8⁵ Gehazi recounts the great deeds of Elisha); (2) in chants expressing the great historic memories of their people they sounded forth the praise of God to the accompaniment of musical instruments; (3) in all probability they recorded the history of

¹ On the trustworthiness of the earlier strata of the Hebrew historical record cf. E. König, *Gesch. des Reiches Gottes*, p. 12 ff.

Israel in the spirit of the prophetic religion; and accordingly it would doubtless be in their circle that the book of Jashar (Jos 10¹³, 2 S 1¹⁸), the book of the wars of the Lord (Nu 21¹⁴), and especially the many other prophetic writings mentioned as sources (1 Ch 29²⁹ etc.) were composed. As regards the inner relationship between men like Samuel and these prophetic societies, we may say that, while the former were vehicles of revelation, the members of the latter were derivative or reproductive prophets. But a more important mark of distinction is the fact that, while these derivative prophets caught the excitement of the times and in their vehement movements would throw themselves half-naked (*ārôm*, Is 58⁷ etc.) upon the ground (1 S 19²⁴), such enthusiastic and ecstatic behaviour is never ascribed to Samuel, Elijah, or Elisha; hence Stade, in attributing such action to the leading prophetic figures as well (*Bibl. Theologie des AT*, Tübingen, 1905, § 64), is speaking entirely without authority. Thus, to sum up what the sources tell us regarding a possible first step in the development of genuine Hebrew prophecy, we may say that the leading representatives became centres of groups or circles of emulative disciples who sought—sometimes, doubtless, in ways not wholly commendable—to spread the true light. This view contrasts with the genetic theory advanced, e.g., by Wellhausen. This scholar speaks of the members of these prophetic unions (1 S 10^{5ff.}), somewhat disparagingly, as ‘swarms of prophets’ (*Prophetenschwärme* [p. 20, etc.]), compares them to the modern dervishes of the East and to the Thracian Bacchantes of Greece, and regards them as having provided the raw materials from which the prophetic function of a Samuel or a Nathan was developed by a process of refinement. This now widely accepted theory (propounded also by K. Marti, *Gesch. der israelit. Religion*, Strassburg, 1907, p. 139), however, stands opposed to the statements of the sources. For (i.), as was shown above, Abraham and Moses were thought of as having been prophets, and Samuel is expressly called a *nābî* (1 S 3²⁰). (ii.) None of the later prophets who occupied an independent position is ever described as having been previously a member of a prophetic society; thus Elisha was called from the plough (1 K 19¹⁶), and Amos plainly declares that he was not the son (i.e. disciple) of a prophet, but a herdsman and a dresser of sycamore trees, the Lord having called him from following the flock (7^{14f.}). (iii.) It seems probable that the members of the prophetic companies, by reason of their national and more material points of view, became the popular prophets referred to in the passage of Amos just cited and in Is 3² etc. Thus the theory of Wellhausen conflicts with the actual data, and in point of fact it rests upon the evolutionary hypothesis, which so many scholars of the present day treat as an axiom.

(b) *False prophets*.—A further distinction among those who claimed to speak for Jahweh was that between true and false prophets. A concrete illustration of this distinction will be found in the scene in which Ahab and his ally Jehoshaphat seek to ascertain the possibilities of an attack upon the Syrians (1 K 22^{2ff.}). Four hundred prophets assured them of victory, but another, Micaiah the son of Imlah, predicted a different issue, and went to prison rather than keep silence regarding the defeat which his prophetic consciousness divined. Here, then, we find a cleavage which affected not merely the rank but also the spirit of the prophets. Other representatives of the class to which the four hundred belonged are those with whom Amos contrasted himself (Am 7^{14ff.}), those whose removal was predicted by Isaiah (Is 3² etc.), and those who were denounced by Micah (Mic 3^{2ff.}); cf. also the

collision between Hananiah and Jeremiah (Jer 28^{1ff.}).

How are we to explain the rise of this inferior type of prophet? It is not adequately accounted for by the desire of court favour or of material gain (cf. Am 3^{5ff.}). The true explanation lies rather in the fact that the conception of God set forth by Samuel, Nathan, Elijah, Amos, etc., was unwelcome to many in Israel. Thus, while these greater prophets represent God as the stern patron of justice and the avenger of wrong-doing, and therefore as one who must often threaten retribution, others ventured to regard the Deity as a weakly indulgent being. These, accordingly, fawned upon the rulers and upon all who were inclined to violate justice within the State (cf. Is 28⁷ ‘they reel in wine . . . they stumble in judgment’). From the period of the Assyrian invasion of Palestine (c. 733 B.C.), again, there emerged a fresh element of differentiation among the prophets of Jahweh. About that time the prophet Isaiah arrived at the conviction that it was not the task of those who had received the true religion to emulate worldly states in political undertakings or in amassing munitions of war. But, while Isaiah accordingly denounced alliances with Egypt and other countries (30^{1ff.}) and reprimanded the boastful display of military stores (39^{2ff.}), there were other prophets who sided with king and people and whom the people called their ‘wise ones’ (29¹⁴ et. 10). It was the habit of these counsellors to paint the horizon of external politics in the brightest colours (cf. Jer 6¹⁴ ‘saying, Peace, peace; when there is no peace’).

Now it can scarcely be doubted which of these classes represented the true Israel. For, while Harper (p. cx) says that the adversaries of the OT prophets should not be called ‘false prophets,’ this was precisely the designation applied to them by the characteristic representatives of the nation, who found the true prophets of Jahweh, e.g., in Moses, not in Balaam; in Micaiah, not in the four hundred partisans of Ahab; in Isaiah, not in those who joined the wealthy in their dissipations (Is 28⁷); in Jeremiah rather than in Hananiah (Jer 28^{1ff.}). That Moses and his successors were given the pre-eminence appears from the fact that their words were preserved among the treasures of the national literature, and this procedure finds absolute justification in the circumstance that in the face of the people (who were acquainted with both classes) Isaiah stigmatized his opponents as drunken, and Micah (3¹¹) his as diviners ‘for money’ (cf. § 9). Our conclusion, accordingly, is that the prophets whose writings appear in the OT represent the true type of Hebrew prophecy, while their opponents were a degenerate species.

(c) *Idolatrous prophets*.—Not a few prophets among the Hebrews rendered homage to the cults of Baal and Astarte, personifications respectively of the sun and the moon; such were those who enjoyed the patronage of Jezebel (1 K 18^{19, 25}, 2 K 10¹⁰, Jer 23¹³). Other phases of the development are of less moment, and are discussed below.

5. The aim of the true prophets.—(a) The aim of the true prophets was not, as has recently been asserted (Wellhausen, p. 15; E. Meyer, *Die Israeliten und ihre Nachbarstämme*, Halle, 1906, pp. 82, 84, 136), the realization of the so-called ‘Bedawi ideal.’ The hypothesis is all the more inconceivable because there was in Palestine a non-Israelite clan, viz. the Rechabites (q.v.), whose great object it was to maintain the Bedawi mode of life, and who sought to honour their ancestral tradition by not building houses or planting vineyards (Jer 35^{6ff.}). But none of the Hebrew prophets adopted this principle, and even Elijah did not always live in the desert or in caves (1 K 17^{9ff.});

on the contrary, the genuine prophets appreciated the efforts and achievements of human culture, and accordingly we read in the OT that man is to subdue the powers of nature (Gn 1²⁸), and that he is permitted to enjoy the products of the land (Ex 3⁸ etc.), as well as the gratifications of adornment (Gn 24^{22ff.} etc.) and of the arts (Ex 15^{20f.} etc.). The 'Bedawi ideal' is surely something very different from the prophetic hope that in the coming age 'they shall sit every man under his vine and under his fig tree' (Mic 4⁴). Nor did the prophets stand aloof from the common life of their fellows, or from their duties to the nation. As a matter of fact, their patriotism was one of their most characteristic qualities, as is shown by what we read of Abraham (Gn 14), Moses, Deborah, and Samuel. Isaiah identified himself so closely with his people that it wrung his heart to have to prophesy calamity (Is 6¹¹), and how sorely, with other prophets, did he mourn the political disruption of the nation (Is 11¹³, Jer 3¹⁸, Ezk 37^{18ff.}, Hos 1¹¹ 3⁶)! Jeremiah in particular was second to none in the intensity of his patriotic feeling (cf. Jer 4¹⁹ 9¹ etc.).

(b) The real aim of the true Hebrew prophecy was to uphold the religion of Jahweh as the Eternal God, and to supply spiritual guidance to the nation which had been chosen to be the earliest focus of that religion. The function of the prophets, accordingly, was to perform a task in the highest sense religious, and to work for the loftiest ideals of human civilization.

6. The means employed.—(a) *Actions*.—It was natural that the Hebrew prophets, especially in the earliest times, should seek to reinforce their words by actions. In point of fact, Abraham, the herald of what became the recognized religion of Israel, championed it almost exclusively by his conduct, and his greatest service to it was his obedience to the impulse that led him to abandon his polytheistic neighbours (Gn 12¹, Jos 24²) and to found a new home for his faith in a strange land. Moses himself was a man of deeds rather than a 'man of words' (Ex 4¹⁰), and we note a similar energy of action in prophetic personalities like Deborah (Jg 4^{4ff.}) and Samuel. The prophetic work of Elijah and Elisha (1 K 17-2 K 13¹⁴) likewise consists almost entirely of actions. Now, while many features in the records of these actions may be regarded as later embellishments—for Hebrew history cannot claim to be free from what is a characteristic of all human tradition (cf. König, *Gesch. des Reiches Gottes*, pp. 7 ff., 37 ff.)—yet, before rejecting the marvellous deeds ascribed to the prophets, we should bear in mind the following points: (1) the Hebrew historical books contain many remarkable indications of trustworthiness (*ib.* p. 15 ff.); (2) the narratives regarding the patriarchs are free from the miraculous element; (3) we find Isaiah offering to King Ahaz an evidential sign from the upper or the under world (Is 7¹¹)—here, therefore, a man of most discerning mind (cf. 5^{20ff.}) thinks it not impossible that the Supreme Spirit should overcome other cosmic powers; (4) it is easier to accept the theory that the marvellous deeds have been embellished than to reject the substratum of the records relating to these deeds; there can be no husk without a kernel. The kernel in question here, however, consists in the deepest convictions of a whole people—a people, moreover, that stands at a relatively high stage in the development of human culture and was compelled by a destiny of the sternest character to test the objective validity of its religious position.

A link between deed and speech as media of the prophet's work is found in the symbolic action. Moses, during a battle with Amalek, holds up his rod towards the sky, thus pointing to the true

source of help (Ex 17¹¹). Samuel pours oil upon the head of Saul (1 S 10¹), and so indicates the lamp of the sanctuary, which was fed with oil and symbolized the knowledge that streams from God. The prophet Ahijah, in meeting Jeroboam, rends his garment in twelve pieces in order to show that God is about to divide the kingdom (1 K 11^{30f.}). In 1 K 20^{35ff.} we read that one of the sons of the prophets asked one of his fellows to strike him, so that by his wounds he might concretely depict the punishment which Ahab had incurred. Another action of a symbolic character is mentioned in 22¹¹, and still another perhaps in Am 9¹.

A peculiar group of such actions is furnished by the following passages from the Prophets: Hos 1. 3, Is 20²⁻⁴, Jer 13¹⁻¹¹ 18¹⁻⁶ 19. 25¹⁶⁻³¹ etc., Ezk 4^{1ff.} 5^{1ff.} 12^{3ff.} 21⁶. 14. 19-23 24^{2ff.} 37^{18ff.}, Zec 11^{4ff.}. A key to the solution of the problem presented by these passages may perhaps be found in the narrative of Jer 25^{16ff.}. Here the prophet is commanded to make a whole group of nations drink from the cup of God's fury—a command which could not of course be literally carried out, although the story runs as if it had been. Jeremiah's words would therefore simply imply that he had been prompted by his divine monitor to perform the action indicated, and that he performed it in his own consciousness; and the real aim of the narrative is to depict the corresponding determination of God in the clearest way (full discussion in *HDB* v. 174-176).

Another type of symbolic action brings us closer still to the distinctively prophetic media. This is found in the instances in which a symbolic name is given to a person or thing, as, e.g., when Isaiah calls one of his sons Shē'ār-jāshūb, 'a remnant shall return,' in order that, when this son should pass through the streets of Jerusalem, he should be a silent yet eloquent witness to the hope that at least a minority of Israel would return to their God (Is 7³; cf. 8³ 7¹⁴ 8⁸ 10 30¹, Zec 11⁷).

(b) *Speech and writing*.—The earlier Hebrew prophets, or 'prophets of action' (J. G. Herder, *Vom Geist der ebräischen Poesie*, in *Werke*, Karlsruhe, 1820-27, II. ii. 135), whose utterances consisted mainly of brief oracles, may be clearly distinguished from the 'literary prophets,' the authors of the distinctively prophetic literature that took its rise (c. 760 B.C.) in the composition of the primitive Obadiah (cf. König, *Einleitung*, pp. 360-362). The grounds of the literary development have been found mainly in one or other of the following factors: (1) the injunction to make a permanent written record of prophetic utterances (Is 8¹ 30⁸, Hab 2^{2ff.}, Jer 30² 36²), as was urged by Oehler (*Theologie des AT*, Tübingen, 1873-74, § 180); as a matter of fact, however, more than one book of prophetic discourses was extant prior to Is 8¹; (2) 'the more ethically reformatory efforts of the prophets of the 8th century' (so Kuenen, *Einleitung in das AT*, Germ. tr., Leipzig, 1885-94, § 48. 1)—a theory that seems questionable in view of the powerful defence of morality made by men like Nathan and Elijah; while, again, the connexion between the reformatory efforts of the prophets and the recording of their speeches is far from clear. The present writer's view is that the change was due not to a religious development at all, but to the general progress of civilization. As noted above, the utterances of the earlier prophets are of the nature of isolated sentences, and light is thrown upon this by the fact that, while the words of Balaam are described as *m'shālēm* (Nu 23⁷ etc.), the word *māshāl*, in this sense, never occurs in the prophetic books. Prophetic utterance, however, would naturally share in the progress which raised Hebrew literature in general to a higher level. At a time when such methodical and yet plastic historical works as J were being composed the

simple oracle of the prophets gave place to more elaborate discourses, and some prophets were now indeed writing books of their own.

7. **Period and chronological sequence.**—The chronological succession of the literary prophets as well as their actual date is a matter of great importance, since the historical background of the discourses furnishes the best commentary upon them. The chronological succession may be made out from certain indications both in the form and in the contents of the books. (1) Linguistically, we note, *e.g.*, that the ratio in which *ʾnōkhi* and *ʾni*, the two Hebrew words for 'I,' occur in Samuel is 48:50; in Kings 9:45; and in Chronicles 1:30; and, again, that in Amos it is 10:1, in Hosea 11:10 (owing perhaps to a mid-Palestinian colouring of the work); in Isaiah (1-39) 5:8; in Micah 1:2; in Jeremiah 37:53; in Ezekiel 1:138; in Haggai 0:4; in Zechariah 1:8; and in Malachi 1:5. Here we notice that in the prophetic books, as thus arranged, the use of the form *ʾni* constantly increases. Now, as the three historical works named by way of example doubtless came into being successively in different centuries, it follows that these prophetic writings, running parallel to them in their linguistic character, must also have arisen in the order given.¹ (2) Still clearer indications of the date of a particular prophet are to be found in the political conditions to which he refers. Thus the discourses of Amos allude to a number of still independent states lying around Israel—Damascus (1⁸⁻⁹), Gaza, *i.e.* Philistia (6-8), Tyre (9^a); while Samaria too is still independent (7^{9a}). Further, Amos (5²⁷) and Hosea (9⁸ 10⁶ 12²) make but cursory allusion to Assyria as the power which was to execute judgment upon the unfaithful portion of Israel. In Isaiah (7^{20ff.} 10^{5ff.} etc.), however, the allusion is quite unmistakable; Assyria, in fact, has now trodden Damascus (732 B.C.) and Samaria (722) under foot (10⁹); in 20¹ mention is made of Sargon, the Assyrian monarch who, according to the cuneiform chronology, reigned 722-705 B.C.; and in the later discourses of Isaiah Judah is the only kingdom that still preserves its independence (28^{5ff.}). In Nahum and Jeremiah, again, we see the fall of Assyria and Babylon's advance to the hegemony of W. Asia. The Exile, which Jeremiah had predicted (25¹¹ etc.), was a fact of experience for Ezekiel (1¹ etc.); and, finally, Haggai, Zechariah (1-8), and Malachi refer to the Persian king, or to the viceroy (Mal 1⁸) who now ruled in Jerusalem.

The mass of the prophetic literature, accordingly, arose in the period 760-460 B.C.; and, in the present writer's opinion, a group of five books (Amos, Hosea, Isaiah, Micah, Nahum) represents the golden age of Hebrew rhetoric, while other three groups (Jeremiah, Joel, Zephaniah, Habakkuk; Ezekiel, Deutero-Isaiah [40 ff.], Jonah; Haggai, Zechariah [1-8], Malachi) may, in view of their tendency to pleonasm and their less metaphorical style, be assigned to the silver age. The concluding portion of 'Isaiah' (55-66), while containing perhaps some literary remains of the prophet, will then, in its present form, probably be the work of a disciple (cf. 8¹⁶); and 'Daniel' will be a recast of traditions and expectations connected with a historical Daniel (Ezk 14¹⁴ 20 23⁸), circulated during the Maccabæan wars with a view to exhorting the weak and comforting the godly (cf. Dn 8¹⁶, and König, *Einleitung*, §§ 78-82).

Recently, it is true, the theory has been hazarded that the writings of all the Hebrew prophets were composed in the period 300-200 B.C. (so, notably, M. Vernes, *Essais bibliques*, Paris, 1891, p. ix, etc.)—a theory which demands some examination in view of the fact that certain scholars (Duhm, P. Haupt,

etc.) assign portions of the prophetic literature (Is 24-27, Hab.) to the 2nd cent. B.C. Now (a) the type of Hebrew written c. 300 B.C. is found in Chronicles, Ezra, and Nehemiah. It is true that Vernes (*Précis d'histoire juive*, Paris, 1889, p. 802) believes that the editor of these three books lived c. 150 B.C.; the latest hand in the composition of Nehemiah, however, closes the genealogy of the high-priestly family with Jaddua (Neh 12¹¹ 23), a contemporary of Alexander the Great (Jos. *Ant.* xi. viii. 7), so that we must still assign the books in question to c. 380-300; and hence the prophetic writings, reflecting an older stage in the development of Hebrew, must be products of an earlier period. (b) It is easy to see why Hebrew contemporaries of Nabu-kudurri-uzur (604-562 B.C.), king of Babylon, should reproduce his name in the form Nebukhadrezzar, which occurs 27 times in Jer. (21² etc.) and is the only form found in Ezk. (26⁷ 29^{18f.} 30¹⁹). If Jer. and Ezk., however, were written in the 3rd cent. B.C., *i.e.* some 800 years after the time of Nabu-kudurri-uzur, the form Nebukhadrezzar is by no means so intelligible, quite apart from the fact that in Hebrew works which really date from the post-Exilic period the form Nebukhadrezzar is used. (c) It is surely mere caprice to say that the kingdoms of Damascus and Israel, Nineveh, the Babylonian monarchy, and the Persian empire would be made the historical background of books written (according to the theory) at a time when these political magnitudes were no longer in existence (for a full discussion of the theory cf. König, *Einleitung*, § 59).

8. **What the true prophets actually accomplished.**—(a) They upheld the lawful religion of their nation. We see this in Samuel, who by his appeal for loyalty to Jahweh moved the people to express their penitence by a common symbolical action (1 S 7⁶). We see it in Elijah, who at a critical moment stood forth as the champion of the ancestral religion (1 K 17¹). We likewise find it in Amos, when, in his very first discourse, he pre-figures a divine retribution upon Damascus for the evils which it had wreaked upon Israel (Am 1³). Amos here assumes that the Disposer and Judge of all will act on Israel's behalf, and makes it clear, as by a lightning flash, that the nation was connected with the Eternal God by an ancient bond which it is the prophet's one aim to maintain. It was with the same conviction in their hearts that Hosea (11¹ etc.), Isaiah (12¹), and the other representatives of true prophecy came upon the scene. Hence the prophets of the 8th cent. B.C. were in no sense creators of a new era in religion, as is so widely held to-day—a view that reappears in Wellhausen (p. 23), while Marti (*Die Religion des AT unter den Religionen des vorderen Orients*, Tübingen, 1906, Eng. tr., London, 1907) finds three successive periods in the spiritual history of Israel, those namely of the 'Bedawi religion,' the 'peasant religion' (beginning with Israel's arrival in Canaan), and the 'prophetic religion' (from Amos onwards). This quite modern hypothesis, however, rests upon a misconception of the permanent and fundamental character of the lawful religion of Israel. This, even on the lowest estimate, comprises the following elements: (1) belief in the existence of a God who is not, like the Babylonian or Greek deities, a product of the cosmic process (Gn 1¹ 2^{4b}, Is 31⁸); (2) a thoroughgoing monotheism, involved in the universal scope of the religion that began with Abraham (Gn 12^{3b}, from an ancient Jahwistic source); (3) the thought of God as purely spiritual—there being at first no trace of an idol in the history of the earliest patriarchs (Gn 12²⁻²⁵ 18¹); (4) the rejection of magic and soothsaying (Ex 22¹⁸, Nu 23²³), etc. The supporters of the modern hypothesis assert that Amos made the idea of justice the main element in the conception of God. But, besides the fact that Amos himself says nothing of any such radical change and adopts no new divine name to signalize it, it must be remembered that the God of the prophets had all along been the patron of justice and law. Was it not in the name of this God that the great principles of justice found in the Decalogue were promulgated, that Moses instituted courts of law (Ex 18¹⁵⁻²⁶ [E]), and that even royal transgressors were arraigned (2 S 12, 1 K 18)? All that can be said of Amos in this regard

¹ The distinctive linguistic characteristics of the prophets are fully discussed in the present writer's *Einleitung*, § 59.

is that he strongly emphasized the divine justice by proclaiming that the Eternal God would not pass over His own people when His day came (Am 5^{18ff.}). What Amos did with reference to the justice of God was in fact precisely what, a little later, Hosea did with reference to God's love (cf. Hos 1^{2ff.} 11¹), and Isaiah with reference to His holiness (6^{3ff.}; as a sanction for universal righteousness, 1⁴ 5¹⁶ 24 etc.). Nevertheless, the prophets of the 8th cent., in thus emphasizing individual attributes of God, were certainly not the founders of a new religion.

(b) The prophets directed the affairs of the Kingdom of God. Originally and in principle God Himself was to be the sole ruler, and could be represented only by those who were filled by His spirit. When at length an earthly kingdom was sanctioned, the prophets still retained their religious jurisdiction, and acted as the conscience of the nation. This explains Samuel's conflict with Saul (cf. König, *Gesch. des Reiches Gottes*, pp. 133 f., 199 f., 202 f.); and even to a David prophecy in the person of Gad had to make clear that the king's part in external politics was to maintain the independence of the country and to avoid wars of offence (2 S 24). Solomon's political and religious obliquities were denounced by Ahijah the Shilonite (1 K 11^{29ff.}), and Shemaiah and Elisha likewise intervened effectively in national affairs (1 K 12²²⁻²⁴, 2 K 9¹). The most important factor here, however, was Isaiah's great utterance, 'In quietness and in confidence shall be your strength' (Is 30¹⁵), and his assertion that by political alliances and material preparations for war Jahweh's people were only trying to rival the Gentile nations (v. 18, and the contemporary passages Zec 9^{9ff.}, Hos 2²⁰). The chosen nation must keep to its mission of being a light to mankind (Is 42⁶ 49^{6ff.}); and, if it had but obeyed this prophetic injunction, it would not only have preserved its existence as a state, but would have discharged a supremely great function in the world's history.

On similar lines the Hebrew prophets solved the related problem of their attitude to foreign nations. As was said above (§ 5 (a)), the true prophets were ardent patriots. Isaiah identifies himself fully with his guilt-laden nation (cf. 1⁹ 31²), and Micah can but wail and howl for its calamities, deserved though they were (1⁸). True patriotism, however, does not consist in pandering to the natural instincts of the masses—instincts but too easily directed to the conquest and exhaustion of alien peoples. The genuine patriot, on the contrary, must ever keep in mind the higher ideals of his nation. Hence the Hebrew prophets, with their unparalleled gifts of a spiritual leadership, brought all things under the moral and religious point of view, and it is this too which regulates their attitude to the great monarchies of their time. The prophet might hold over his own people the doom of foreign invasion, but the invader himself was only an instrument in the hands of the Supreme Disposer. Thus the Assyrian was the rod of God's anger (Is 10⁵), and the evils which he wreaked upon Israel were an element in the retribution to which the majority of Jahweh's people were rightly liable by reason of their unfaithfulness. Similarly, foreign rulers are sometimes even called the 'servants' of God (Jer 25⁶ 27⁶ 43¹⁰, Ezk 26⁷). But, when such rulers in mere ruthlessness pass beyond the limits of their divinely appointed work of retribution, the prophet threatens them with judgments of the sternest kind (Is 10⁶ 'Woe to Asshur, the rod of mine anger' 1¹ [RVm], Jer 50⁷ 11¹⁷, Ezk 38^{1ff.}, *Enoch*, lxxxix. 69).

In view of the actual facts, it is strange that the old charge of unduly favouring the Chaldeans should recently have been once more brought against Jeremiah in particular (H. Winckler,

KAT³ [1903], p. 170 f.). We can but repeat, however, that, as the sources make absolutely clear, Jeremiah demanded the submission of Israel to an alien domination only by reason of his divinely inspired conviction that God had so decreed it in order to punish the unfaithful majority (so, e.g., K. H. Graf, *Der Prophet Jeremia*, Leipzig, 1862, and others, as cited in König, *Gesch. des Reiches Gottes*, p. 260 f.).

(c) A third phase of the prophets' activity appears in their preserving, expanding, and spiritualizing the Law. (1) That they loyally defended the legislative basis of the Jahweh religion scarcely requires proof. In view of certain modern theories, however, it may be well to state that Amos accused his people of rejecting God's Law and not keeping His statutes (2⁴); and Hosea bitterly denounces the same evils (4⁶ 8¹²). But, without adducing further testimony, we may affirm that what the prophets did with regard to the divine commandments was, in the first place, to guard the long-inherited religious and moral ideals of the community. They were primarily reformers, and their demand for repentance could never have appealed to the conscience of their contemporaries except upon the common ground of a recognized law. (2) That the prophets also expanded the Law, though not quite so obvious, is nevertheless distinctly shown by the following incidents: at the institution of the human kingship Samuel defined 'the prerogative of the kingship,' i.e. some kind of constitution, and deposited it 'before the Lord,' i.e. in the most holy place of the chief sanctuary of the time (1 S 10²⁵); in Hosea (2¹⁶), again, we find the injunction that the designation 'Ba'al' (lit. 'owner,' 'husband') shall no longer be applied to Jahweh, the implication being that, in the critical days of the conflict between the Ba'al cult and the worship of the Eternal, the people must avoid what had previously ranked as an adia-phoron; once more, the law in Deuteronomy (23¹ [Heb. 2]) by which eunuchs were excluded from the community of Jahweh is repealed in the closing (Exilic) division of Isaiah (56³⁻⁵)—the result of a deepening sense of the ultimate universality of God's Kingdom. (3) The prophets spiritualized the Law by the emphasis which they laid upon religion and morality as the all-important factors in human life. This appears from a long series of prophetic utterances which begins with Samuel's great saying, 'To obey is better than sacrifice' (1 S 15²²), and is continued in the question of Amos (5²⁵), 'Did ye bring unto me sacrifices . . . in the wilderness forty years?' Devotion to God can find expression without sacrifice—a truth that is even more strongly insisted upon in Hos 5⁶ 6⁸ 13¹⁴, Is 1¹² 29¹³, Mic 6⁸⁻⁹, Jer 7²². Nor does even Ezekiel in any degree depart from this attitude. He severely reproaches his people with their impiety and immorality; he calls Israel 'a rebellious house' (2⁵ etc.); he insists above all things upon an inward transformation (11¹⁹ 36²⁵⁻²⁷); he is anxious to prevent disloyalty in every form (37^{16ff.}); his zeal for the rebuilding of the Temple was a means of making Israel ashamed of its past transgressions (43¹⁰ 44^{9ff.} 45⁹⁻¹⁰); and one of his great aspirations was the benevolent treatment of aliens (47²²). If Ezekiel was also concerned for the ceremonial law, it was simply in order that by means of a regular order of worship the impious might be warned against a repetition of their former disloyalty. The prophets, moreover, sought to spiritualize the Law positively; thus, in contrast to the ordinance regarding fasting (Lv 16^{29ff.} etc.), we read in the prophets: 'Is not this the fast that I have chosen? to loose the bonds of wickedness,' etc. (Is 58^{6ff.}; cf. Zec 7⁵⁻¹⁰), while, in place of the rending of garments as a symbol of mourning (cf. 2 S 38¹), Joel (2¹³) bids the people rend their hearts (cf. König, *Gesch.*, p. 317 ff.).

(d) These three aspects of prophetic activity

with regard to the Law are now largely ignored, and the main emphasis is usually laid upon what the prophets say about the future. Here, however, it is to be noted that they were much less concerned with prediction (of concrete occurrences) than with true prophecy, i.e. the verbal portrayal of the great regulative lines of the future course of things. Sometimes, no doubt, they foretold special events, such as the fall of Shebna (Is 22^{16ff.}), the withdrawal (29^{1a}) and the destruction (31⁸) of the Assyrians, the death of Hananiah within the year (Jer 28^{1a}); cf. also Am 7⁹, Jer 34⁸.⁸ [2 K 25⁷⁻²⁷], Zec 7⁶). In the main, however, prophetic utterances regarding the future were designed to set forth the fundamental lines upon which the divine kingdom would evolve.

The vistas of the future thus opened are manifold and glorious; a notable instance is the vision of the nations flocking exultantly to the Temple of Jahveh (Is 2⁴ || Mic 4¹⁻³). Still, these unveilings of times to come could not, in view of human guilt, but be sometimes full of menace, and it was only in rarer moments that the prophets could depict the splendours of the final consummation. It must be remembered, of course, that the more ominous forecasts were given conditionally, as Jeremiah (18⁶⁻¹⁰) realized in the potter's house, though this conditional character extends no doubt to the promises as well. The conditional nature of prophecy is a fact of the utmost significance, for it serves as a preliminary explanation of that non-fulfilment or only partial fulfilment of certain prophecies which has led some recent scholars to disparage OT prophecy in general (cf. e.g. Kuenen, *De Profeten*, i. 114ff., with König, *Der Offenbarungsbegriff des AT*, ii. 374 ff.). There are other explanations, no doubt, and the most important of them lies in the supreme achievement of the prophets in the distinctively prophetic sphere, viz. the *spiritualization of prophecy* relating to the future of the divine kingdom.

Of this spiritualizing process we may trace the following main indications. (1) The relation between the divine kingdom and its earthly sphere is more and more relaxed. The noteworthy circumstance that the patriarchs had no permanent possession in the Land of Promise except a burial cave (Gn 23²⁰ etc., 47³⁰ 49²⁹) seems to presage the later historical development—the restriction of the Davidic dynasty to the lordship of Judah and its immediate neighbourhood (c. 937 B.C.), and the final overthrow of that dynasty (c. 586 B.C.). Prophecy is often an eloquent commentary on these facts. Isaiah (11¹) had said that the perfect governor of the divine kingdom would spring from the root (not the top) of the Davidic tree, and Micah (5²) added that he would be born in the ancestral village (not the capital) of the dynasty, while in the post-Exilic section of Isaiah (esp. 55⁵⁻⁶) the Davidic line recedes into the background, and Malachi (3¹) makes no reference to the Davidic descent of the coming messenger. (2) Other indications of the growing spiritualization of prophecy are found in the increasing clearness with which the following truths were realized: the superhuman gifts of the coming leader (Is 9⁶, 11², Mal 3¹); suffering as an element in his work (Is 11¹, Mic 5¹, Zec 9⁹ 12¹⁰, Is 53), and finally his priestly function (Ps 110⁴, Zec 6¹³); inward change as the necessary condition of salvation (Jer 31^{33ff.}, Ezk 36²⁵, Mal 3^{2a}, [4^{6f.}]); the universalistic tendency of the divine kingdom (Zec 8²³, Mal 1¹¹). For a more detailed account of this process cf. König, *Gesch.*, pp. 267–278.

Notwithstanding these lofty ideals, the Hebrew prophets have in recent times been charged with one-sidedness and partiality, more especially by Kuenen, who (*De Godsdiens van Israël*, Haarlem, 1869–70, li. 358 f., Eng. tr., *Religion of Israel*, London, 1874–75) exclaims: 'We will not let ourselves be robbed of the

conviction that God rules in all history.' (1) This protest, however, does not really affect the design by which, according to the prophets, the human race was to be disciplined and redeemed. A father who permits his son for a time to go his own way cannot be accused of indifference regarding that son's welfare. So may the providence of the Heavenly Father encompass even the peoples whom He suffers 'to walk in their own ways' (Ac 14¹⁶), and He actually does more: He instructs the husbandman (Is 28²⁶); in the heavens He manifests His glory to all (Ps 191); He instructs the nations and teaches man (94¹⁰). (2) Nor do the destinies of Israel violate the justice of universal history. In Israel the law of equipoise as between rights and duties was maintained with remarkable strictness; here it held good that 'mighty men shall be mightily tormented' (Wis 6⁶), and here were enforced the principles that 'to whomsoever much is given, of him shall much be required' (Lk 12⁴⁸; cf. Ro 2¹²) and 'many shall be lost that are first' (Mt 19³⁰). Exultation in the covenant with God is often stifled by sorrow for the frequent violation of that bond and the attendant penalties. (3) Friedrich Delitzsch (*Babel und Bibel*, Leipzig, 1903, ii. 38) asserts that in OT prophecy the history of the ancient world is looked at from a most oblique visual angle. Here, however, Delitzsch not only overlooks the facts just adduced, but ignores the universalism that forms the sublime element in the historical design unfolded by the prophets. He quotes Gn 12^{3a}, but omits 3b (repeated in 18¹⁸ 22¹⁸ 26⁴ 28⁴): 'In thee [or 'in thy seed'] shall all the families of the earth be blessed.' He likewise leaves out of account the excellence of the laws relating to aliens, in which the OT surpasses both the Code of Hammurabi and the Hellenic attitude to 'barbarians.' Nor has Delitzsch any real understanding of that lofty stage of culture from which sprang a passage like Is 22⁴ || Mic 4¹⁻³ (see above). Our rejoinder to his strictures must therefore be that, on the universalistic side of OT prophecy, the history of the ancient world is surveyed from a pre-eminently ideal point of view.

The consummate achievement of OT prophecy, however, lies in the idea of the *new covenant*—a covenant which is to secure the effacement of human guilt, in which the fundamental law of acknowledging God is alone to prevail, and which is to be observed in hearts renewed by gratitude. This idea first emerges in Jer 31³¹⁻³⁴, and nothing could more clearly indicate the aspiration towards a higher stage in the development of the divine kingdom. The work of the Hebrew prophets thus culminates in a prospect which corresponds at once to the highest longing of the human heart and to the most perfect conception of God.

9. The inner sources of prophecy.—In the discourses of Micah (3⁸) that prophet says, 'I am full of power, even the spirit of the Lord' (RVm), so expressing his conviction that his prophetic gift came from a superhuman source. Similarly Isaiah (8¹¹) says, 'The Lord spake to me with strength of hand' (RVm), implying that he felt himself profoundly influenced by something outside the range of ordinary forces. A like impression, as from the wave-beats of some 'immortal sea,' was known also to Jeremiah (23²³); and the Psalmist (Ps 104^{29f.}) interprets these throbbings as the pulsations of a heart at the centre of things, and sees in them the source of cosmic movement. Now, reflexion upon the origin of this cosmic movement (*πρωτὴ κίνησις*) really brings us, as far as the present writer can judge, to the conclusion that—in agreement likewise with Aristotle—the truth that 'God is Spirit' (Is 31³, Jn 4²⁴) contains the only reasonable solution of the primordial riddle of the universe. But, if we admit the possibility of an abnormal impulse proceeding from this focal energy, may not the consciousness of the prophet have been affected by it in an abnormal way? May not his power of spiritual vision have been peculiarly intensified? As a matter of fact, if the prophet's conviction of his being influenced by an unwonted spiritual impulse has a basis of reality, this increased sensitiveness is psychologically quite intelligible. Even in the sphere of ordinary experience, sense and memory may be strangely quickened by some unusual impression; thus, in moments when a man is suddenly brought face to face with the peril of death, scenes long forgotten will pass before his mental vision, and he may make discoveries that at ordinary times seemed beyond him. Hence it is in no sense incredible that a

soul, receiving, as it believes, an impression from a region otherwise unknown, should thereby be endowed with a capacity for a knowledge beyond the range of wonted experience.

The prophets also affirm that they are granted visions of what lies behind the ordinary process of events. This is implied in their repeated use of the expression 'I saw'—an assertion all the more significant because it is always expressed in a special way (over 30 times; Am 7^s etc.). Thus the true prophets, when speaking of their abnormal visions, use the verb *rā'āh*, the Hebrew word for simple ordinary seeing, whereas, when referring to those who falsely claimed the title of prophet, they expressly denied that such could 'see' (*rā'āh*), saying of them that they 'follow . . . what they have not seen' (Ezk 13^s), and ascribing to them at most a certain power of 'beholding,' 'looking at' (*chāzāh*), i.e. a purely sensuous faculty, and not 'seeing' in the proper sense at all. That the true prophets were able to speak of others in this way argues a remarkable degree of conviction regarding their own powers of prophetic vision.

It may be asked, however, whether the prophets were not simply men like Swedenborg, who, e.g. (as we shall not deny, and as is admitted by Kant [*Werke*, ed. G. Hartenstein, Leipzig, 1838-39, x. 453 f.]), 'saw' a conflagration in distant Stockholm, a letter in a secret drawer, etc. But Swedenborg's clairvoyance (parallels to which may be found, e.g., in Ezk 8¹⁴ 11¹⁸ 24²¹) falls short of the true prophetic faculty of prescience. The prophets claimed to foretell new things before they sprang forth (Is 42^s), and they actually did foretell them. The prophecy, sometimes associated with the characteristics given on p. 390, anticipated the course of events, as shown in signal fashion by Is 55³⁻⁸. Thus, too, Isaiah amazed his fellows by his conviction that Jerusalem would be delivered from the Assyrian beleaguering in 701 B.C. (Is 29⁷⁻⁹); he also foretold that the Assyrian host would be destroyed by a 'not-man' (31⁸), i.e. a superhuman power, as actually took place on the Egyptian frontier (37³⁶; Herod. ii. 141). Similarly Ezekiel (33^{21c}) knew of the fall of Jerusalem the day before it took place.

These examples suffice to furnish us with a principle that governs the relations of history and prophecy (cf. König, *Der Offenbarungsbegriff des AT*, ii. 278 ff.), viz. that, while the discourses of the OT prophets run parallel to history in form and matter (§ 7 above), history is not their source. Thus Jeremiah's conviction that he was called to a great religious task doubtless came to him during the Scythian invasion of W. Asia (c. 628 B.C.; Herod. i. 103-106); his work as a prophet, however, was not causally connected with that invasion, but is simply concurrent with it. The historical events of his day merely supplied him with imagery (Jer 13²⁷), but countless utterances of the prophet show that his commission was not derived from the course of events, and could not be so derived; cf. e.g. 20⁷ (it is Jahweh who prevails over him) and 32²⁷ (the symbolical action with the deed of sale, expressing his conviction that the departed Israelites would return).

The knowledge of the future which we find in the words of Isaiah and other prophets cannot be explained as resting upon 'the interpretation of the historical revelation of God' (F. Wilke, *Jesaja und Assur*, Leipzig, 1905, p. 96). Isaiah certainly reproaches his people with disregarding the work of the Lord (61²), but by that work he means the events that have already happened. His prophetic knowledge, however, was of a peculiar kind; cf. 28²² 'I have heard,' and the fact that, when the king's counsellors were at their wits' end (29⁹), he himself knew what would happen, and was convinced of his superiority to the prophets whom the people called 'their wise men' (vv. 10-14). The present writer's belief that the insight of the prophets was something distinctive and exceptional is shared by such modern scholars as C. F. A. Dillmann, F. Bleek, S. R.

Driver, R. Kittel, and C. von Orelli; and S. Oettli (*Die Propheten als Organe der göttlichen Offenbarung*, Berlin, 1904) puts the matter admirably when he says that 'to speak here of religious genius is merely to substitute one mystery for another.'

Here we must once more consider the judgment passed by the true prophets upon certain of their contemporaries who likewise claimed to speak in the name of Jahweh.

(1) As regards the commission of the latter, the true prophets held that it was not from Jahweh at all (Jer 14¹⁴ etc.). The motives of these pretenders were really of a material kind (Mic 3⁸ 11), and arrogance and presumption lay at the root of all that they did (Jer 23³², Zeph 3⁴ etc.)—'they follow their own spirit' (Ezk 13³). (2) As regards the sources from which their utterances were drawn, these are stigmatized as 'lying visions' (Jer 14¹⁴, etc.), 'what they have not seen' (Ezk 13³ AvM), visions by night (Mic 3⁶), i.e. mere dreams (Jer 23²⁸), or 'their own heart' (14¹⁴ 23¹⁶, Ezk 13³ 17). As already said, these characterizations indicate a remarkable intensity of conviction on the part of the genuine prophets, all the more so because they were uttered in face of a public to which both classes were known.

The claim of the true prophets, nevertheless, is still being met with objections.

(1) It is said, e.g., that Ezekiel suffered from temporary dumbness and hemiplegia (A. Klostermann, *SK* 1. [1877] 391 ff., 417 f., 422; A. Bertholet, R. Kraetzschmar [Commentaries on Ezekiel]; A. Jeremias, *Das AT im Lichte des alten Orients*², Leipzig, 1906). Klostermann finds symptoms of these diseases in the prophet's occasional dumbness (324-27 2425-27) and his lying alternately on his left and his right side (44⁷). But this is assuredly mere caprice; for we must not isolate these occurrences from other actions of a kindred character imposed upon Ezekiel by God. What bodily idiosyncrasy would such critics associate, e.g., with Ezekiel's shaving his head and beard (51), his basking with excrement for fuel (41⁹), or his withholding his tears (24¹⁶)? (For a full discussion of the points at issue cf. *HDB* v. 175 f.; also König, *NKZ* iii. [1892] 650 ff., and J. Hermann, *Ezechielstudien*, Leipzig, 1908, p. 72.) The theory of bodily indisposition is in any case quite inadequate to account for the spiritual insight so characteristic of the prophets.

(2) A fairly common theory is that the prophets were subject to ecstasy, and a recent scholar of some eminence, F. Giesebrecht (*Die Berufsbegabung der AT Propheten*, Göttingen, 1897, p. 47), comes to the conclusion that their prophetic consciousness was in part due to the ecstatic state. The prophets in question, however—not to be confounded with the 'sons of the prophets' (§ 4 (a))—give no hint of any state of ecstasy, i.e. unconsciousness or frenzy. It is true that Jeremiah was said by one of his opponents to be mad (Jer 29²⁰). Hosea, again, referring probably to himself, says that the prophet is out of his senses (9⁷); quite obviously, however, his meaning is that the iniquities of his people (cf. Is 124, Jer 210-13 814) were enough to derange the mind of a true prophet and patriot. It is clear, accordingly, that the theory of ecstasy finds no support in the passages cited, while we have the positive evidence that the prophets lived an ordered life in the family and the State, and that their discourses, alike in construction and diction, are the work of sane and sober minds. Moreover, even in the hour of their call, i.e. when most deeply moved by abnormal influences, they perfectly retain their self-consciousness and their memory; it was precisely in such experiences that Isaiah realized his own sinfulness (6⁹), and Jeremiah felt that he was too young for the task set before him (16).

(3) The Hebrew prophets have also been charged with ignorance in matters of psychology. In answer to this we may recall Isaiah's severe strictures against the sophistical perversion of moral concepts (52⁰) and the remarkable precision of his own ideas and judgments. How often does Jeremiah reprove his people for 'the stubbornness of their evil heart' (31⁷ etc.)! It is he too who speaks of his God as searching the heart and trying the reins (17¹⁰), and it is most unlikely that such a mind would mistake its own phantasies for divinely-given convictions (cf. Cornill, *Das Buch Jeremia erklärt*, Leipzig, 1905, p. 420). This may be said also of Ezekiel, who (speaking in God's name) declares, 'I know the things that come into your mind' (11⁵). Such utterances are not easily reconcilable with ignorance regarding the nature of the human spirit.

In point of fact, taking into account the precise intellectual distinctions and the delicacy of moral feeling displayed in the prophetic writings associated with the names of the prophets, we find it impossible to charge the prophets even with self-deception. Self-deception always implies some lack of discrimination and of religious and moral sobriety—the very opposite of the characteristics set forth above, to ignore which were to reject the one line of evidence that can avail in the question at issue.

Wellhausen (p. 15) has finely said that the individual upon whom the grace of God has come remains a mystery. In view of what the prophets

said and did, however, we must go beyond this and recognize that they were wrought upon by some mysterious force lying behind the veil of ordinary phenomena. Difficult as it may be for the modern mind to acknowledge this, there seems to be no other way of doing justice to the historical facts. After all, as the phenomena of life and of the human consciousness cannot be explained by reference to their antecedents, it need not seem strange that the paramount position of the true prophets in the spiritual history of the Hebrew people should defy every attempt to explain it on natural grounds.

10. Non-Israelite analogies.—(a) In Babylonia and Assyria divination, which was rejected by the prophetic religion of Israel (§ 1), was an organized function of the State (cf., e.g., C. Bezold, *Die babylon.-assyrl. Lit.*, Leipzig, 1906, p. 44 f.), the Babylonian-Assyrian religion being in this respect on a level with the religion of Egypt, Greece, and Rome, but assuredly falling far short of what we find in Israel. In Hebrew literature, moreover, we hear nothing of any person like Enmeduranki, to whom Babylonian literature traces the art of divination. But we must still ask whether, outside the recognized practice of divination in these lands, there were individuals of prophetic character who might be compared to the prophets of Israel.

A personality of this type has been found in Hammurabi (cf. art. LAW [Babylonian], vol. vii. p. 817 ff.), who, in a relief preceding his well-known Code, is depicted as standing before the sun-god (Shamash). From this, however, we are to infer that Hammurabi is not the pupil or prophet of that deity, as Bezold thinks (p. 3), but rather his counterpart; for in the introductory lines of the inscription we read:

'Anu and Bel called me, Hammurabi, the exalted prince, the worshipper of the gods, to go forth like the Sun . . . to enlighten the land,' etc. (R. F. Harper, *The Code of Hammurabi*, Chicago, 1904, p. 3).

Further, the particular laws are as often ascribed to Hammurabi himself as to the sun-god, and towards the close of the inscription we find such utterances as 'My weighty words I have written upon my monument' (Harper, p. 101), and 'My words are weighty, my wisdom (Harper, p. 103, 'deeds') unrivalled'—sayings which we cannot well imagine coming from Moses (cf. Ex 34¹¹. [EJ], Nu 11²⁹ [EJ] 12³ [EP], or from the literary prophets of a later age. Is 5²¹, Jer 23^{10a}, Ezk 13^{2, 17} etc.).

In the cuneiform literature of the 7th cent. B.C. another writer speaks of himself as follows:

'I, the servant, the prophet (?), of his lord the king, utter my prophecies for my lord the king. May the gods whose names I have enumerated accept and hear these prophecies on behalf of my lord the king; may they add to him more than his portion, and give to my lord the king! But may I, the prophet of my lord the king, stand before my lord the king, and with all my heart worship on my side (?). When my sides become weak, may I exert my power to the utmost by the power of my word. Who must not love a good lord? Surely it is said in the song of the Babylonians: "Because of thy gracious lips, my shepherd, all men look to thee." (We follow the version of F. E. Peiser, in *MVG* iii. [1898] 257 f.; but the original term here rendered 'prophet' simply means 'servant,' 'worshipper.')

Winckler (*KAT³*, p. 170 f.) refers to this passage as exhibiting a Babylonian-Assyrian counterpart to the Hebrew prophet, as, e.g., Jeremiah. In point of fact, however, a speaker who stands 'before the king,' and is obviously subservient to him in all things, rather suggests the 'prophets' who, while claiming to speak for Jahweh, were but the servile agents of King Ahab (1 K 22⁶); or those who in the days of Isaiah were regarded by the ruling faction as 'their wise ones' (Is 29^{10, 14}, Jer 28¹² etc.)—men from whom the representatives of the lawful religion of Israel distinguished themselves in the most decided way (1 K 22³⁰, Am 7¹⁴, Is 3⁹ 9¹⁸ 28⁷ 29^{10, 14}, Mic 3¹¹, Jer 7²⁸ 23¹ etc.).

Winckler has also sought to disparage men like Amos and Jeremiah by speaking of them as 'political agents' (*Gesch. Israels*, Leipzig, 1895-1900, i. 95), and as the 'spies' or 'professional agitators' of the rulers of Nineveh or Babylon (*KAT³*, p. 170 f.). Thus Amos is said to have laboured on behalf of the policy of King Ahaz (Winckler, *Religionsgeschichte und geschichtl. Orient*, p. 38). In answer to this, however, we need only recall the fact that, when Amos was ordered by Jeroboam II. to leave Bethel, he asserted that he had been called to his religious office by God (Am 7¹⁵), and in all his utterances we overhear his conviction that he is in the service of the Eternal (13³⁷ etc.). As for Jeremiah, again, it is clear that the Monarch whom he believed himself to serve was none other than the King of kings, and that he regarded himself as belonging to that great succession which had championed the supreme interest of Israel throughout the ages (Jer 7²⁵). His patriotism and his attitude in political affairs have already been dealt with (§ 8 (b)). Jeremias (*Das AT im Lichte des alten Orients²*, p. 35) suggests that the Hebrew prophets were the vehicles of Babylonian culture: 'Mercury is the morning-star; his name means "harbinger." Here we come upon the astral interpretation of the word *nabî*, "prophet"; he is the harbinger or vehicle of a new age.' The Babylonian-Assyrian diviners, however, found their patron, not in Mercury, but in the sun-god (*KAT³*, p. 388), while the genuine Hebrew sources say nothing of any such connexion between their prophetism and Mercury, and in fact actually protest against divination in every form (§ 8).

If, therefore, we find in Babylonia and Assyria no direct evidence of the existence of prophetic personalities comparable to the Hebrew prophets, it remains to ask whether we have any indirect traces—such as might be afforded, e.g., by the literature. Here, however, as in Assurbanipal's library, we find nothing higher than series of omen-tablets, in one of which, e.g., we read:

'If in the month of Sivan (June) an eclipse occurs between the first and thirtieth day, vegetation throughout the land will lag behind.'

But where in the Babylonian-Assyrian literature do we find anything to compare with the profound religious ideas, the earnest moral exhortations, and the glowing anticipations of the future, so characteristic of the writings of the Hebrew prophets?

Attention has been directed to the following passage as indicating Babylonian visions of the future (F. Hommel, in *Glauben und Wissen*, i. [1903] 9 f.):

The god Marduk, seeing a sick person, says to his father Ea: 'My father, disease has come upon man; I know not by what means he may be healed.' Then Ea answered his son thus: 'My son, what may there be that thou knowest not? What new thing might I still teach thee? What I know, thou knowest, and what thou knowest, I know: go, my son, and break the spell upon the sick one.' Then come the directions for exorcizing the disease.

Now, while this may show that the Babylonian-Assyrian deities were regarded as ready to heal man, it is to be noted that the healing implied was only of a physical kind; and, besides, the passage is not really predictive at all. T. K. Cheyne (*EBi* iii. 3063), however, finds the predictive element in the following passage:

'Sea-coast against sea-coast, Elamite against Elamite, Cassite against Cassite, Kuthæan against Kuthæan, country against country, house against house, man against man. Brother is to show no mercy towards brother; they shall kill one another.'

But this prediction, referring probably to Hammurabi's triumph over the neighbouring kings, is a purely political one. It is hardly necessary to point to the contrast with Hebrew prophecy, which moved essentially in the sphere of religion, and for which the founding of a divine kingdom has as its supreme practical end the culture of the ethico-religious interest—assuredly the highest element in the life of a nation.

(b) E. Meyer (*Die Israeliten und ihre Nachbarstämme*, Halle, 1906, pp. 451-453) asserts that Hebrew prophecy was derived from Egypt, and cites a prophecy (partly from the earlier, partly from the middle, period of Egyptian literature, and recently more accurately deciphered) to the following effect:

'A wise man (or the inspired lamb) reveals to the king the future of Egypt, and then with his last word falls down dead, and is ceremoniously interred by the king. His prophecies,

however, are put on record and handed down to future ages. Their tenor is that there is coming, to begin with, a period of awful distress, in which everything in Egypt turns topsy-turvy—foreign peoples make inroads, servants become masters, people of position are slain, women enslaved, the entire social order subverted, temples plundered and desecrated, and their mysteries laid bare, while the king himself is carried away captive or forced to flee to a foreign land. Then follows an epoch in which the gods once more bestow their favour upon the country, and in which a just king, beloved of the gods and sprung from the sun-god Re, expels its enemies, restores its worship and its ancient order, subjugates the neighbouring lands, and enjoys a long and happy reign.'

Meyer maintains that this 'fixed traditional schema' was known to the Hebrew prophets, who, in fact, merely elaborated it in detail and applied it to the situation of the day. But there is certainly no positive evidence to show that Hebrew prophecy was based upon any such design. This schema was not followed even by the popular prophets, whose great watchword for the future was 'peace' (Jer 6¹⁴ etc.). The important point, however, is this: the distinctive features of Hebrew prophecy are that its predictions of good or evil were conditional upon the moral and religious bearing of men, and that it was concerned throughout with the founding of a peculiar divine kingdom, which was instituted in the call of Abraham (Gn 12¹⁻³) in order to establish in Israel a nursery of true religion and morality (Is 51⁴), and so to open a fountain of blessing for all nations (42⁶ etc.). Egypt supplies nothing that may for a moment compare with this.

(c) Finally, as to a possible comparison of the Hebrew prophets with Muhammad, we find an OT scholar (J. Köberle, *NKZ* xvii. [1906] 202) giving expression to the view that their consciousness of their vocation loses significance when we look at Muhammad, who likewise, for that matter, regarded himself as a divine messenger. In answer to this we must carefully examine the qualities of the evidence which the Hebrew prophets themselves give regarding their mission. As the value of a witness's testimony may be measured with a fair degree of objectivity by certain of its characteristics, we shall compare the Hebrew prophets and Muhammad with reference to the following points.

(i.) *Clearness and definiteness.*—The clear conviction which underlies the utterances of men like Amos, Isaiah, etc., meets us everywhere in their works; they had distinct recollections of their call (cf., e.g., Is 6^{1a}), as also of a certain reluctance to respond to it (e.g., Jer 1⁸ 20⁷). Such definiteness is certainly not exceeded by the utterances of Muhammad. Moreover, scholars who, like A. Müller (*ThLZ* xii. [1887] 278 ff.), are anxious to do all justice to the latter speak of his 'indeterminate thinking,' his 'self-deception,' in that he claims a divine source for narratives which, like the 'Joseph' *sūrah* (xii.), are obviously mere plagiarisms.

(ii.) *Difficulty of the situation in which the testimony was given.*—The genuine prophets had to affirm a distinction between themselves and others who claimed to represent the same God (cf. § 9), while Muhammad had no such difficulty in what

he said about himself—a contrast to which due weight has not yet been given.

(iii.) *Disinterestedness.*—The Hebrew prophets never strove for earthly honour or for material gratification of any kind; on the contrary, indeed, neither popular misunderstanding nor persecution on the part of the ruling classes turned them from their task (cf. 1 K 22^{6a}, Jer 38^{4a}, 2 K 21^{16a}). We should also remember how, as the living conscience of their nation, they fought against the perversion of ethical concepts and against all immorality. In Muhammad, on the other hand, we find no such renunciation of worldly honours and enjoyments, or of material expedients for the furtherance of his plans. *Sūrah* xxxiii., relating the various exceptional privileges alleged to have been accorded to him in the matter of marriage, cannot but excite repugnance in any unprejudiced mind, and, as A. Tholuck (*Vermischte Schriften apologetischen Inhalts*², Gotha, 1867, p. 13) suggests, speaks less of a devout enthusiast than of a godless deceiver.

Even apart from the moral aspect, however, and regarded simply as an enthusiast, Muhammad still falls far below the true Hebrew prophets, in whom, as was shown above (§ 9 (2)), we find no trace whatever of fanaticism or ecstasy. So fearless a critic as Cheyne (*EBi* iii. 3854) was compelled to write:

'A succession of men so absorbed in "the living God," and at the same time so intensely practical in their aims—i.e., so earnestly bent on promoting the highest national interests—cannot be found in antiquity elsewhere than in Israel.'

It is, moreover, a remarkable circumstance that in all that long succession no single prophet ever appealed to the words of another, while the fact that the succession came to an end all at once in the person of Malachi is another point that has not yet been sufficiently pondered.

Thus, when compared with Muhammad, the prophets of Israel still maintain their distinctive place in the history of religion, and we would summarize, in closing, the factors by which this historical position may be appraised. These are (1) the prophets' clear and definite consciousness of their vocation; (2) their unquestionable disinterestedness; (3) their achievement in the development of culture, i.e. their mediation of moral and religious principles which even to the present day compel the recognition of thinkers and scholars; and, finally—connected with the foregoing—(4) the relationship between their place in history and the appearance of Jesus, who nevertheless did not answer to their prophetic presentation of the future in any mechanical way, but with fresh and original power carried it to its most sublime consummation (cf. König, *Gesch.*, pp. 317-328).

PROPITIATION.

Introductory and Biblical (C. M. KERR), p. 393.

PROPITIATION (Introductory and Biblical).—Propitiation (Lat. *propitiatio*, *propitius*, 'perhaps originally a term of augury meaning flying forward [*pro*] or well; cf. Skr. *pat*, to fly, Eng. *feather*' [Webster, s.v. 'Propitious']; cf. Eng. 'petition') may be defined as the appeasing of the

Greek (A. FAIRBANKS), p. 397.

Roman (A. C. PEARSON), p. 398.

wrath of one by another in order to win his favour; or the means adopted to that end. The root ideas of the term imply that he who propitiates feels himself in some manner to be lacking or at fault, and that the favour of him who is propitiated is worth the gaining. It further implies that he who

is propitiated is more powerful than he who propitiates; else the latter would not require to implore, either by entreaty or by offering, those things which he considers necessary to his welfare. It is with propitiation in its more definitely theological sense, *i.e.* as affecting the relations between God and man, that we have here to deal.

1. **The idea in primitive religion.**—Religion finds its origin in the conviction of man that his life is overruled by forces other and greater than those which he finds in himself. This power man has construed, from the earliest times, and according to his light, in the terms which he applies to his own life and personality. The only difference is that those characteristics which he recognizes to be rudimentary and fragmentary in himself are conceived of as existing in all their ideal perfection in the nature of the divine. In this sense all religions, whether their development be high or low, are anthropomorphic. Again, since man, in the earliest stages of his evolution, has little self-sufficiency, and is in all things closely dependent upon Nature and her forces, even for his bodily wants, he is instinctively impelled to find this superior power in every external object or circumstance affecting him. This is the stage of animism, when worship is paid to the spirit or spirits which reside in trees, fire, wind, cloud, or sky.

Yet the mere belief in the existence of those superior powers would not be sufficient in itself to give rise to religion. It is felt also that these powers are interested in the welfare of man; and, further, that their interest can be quickened, or restored when lost, provided that proper means be adopted to achieve this result. Primitive man attributes to his god the same feelings of like and dislike, of love and aversion, of friendship and hostility, as he finds to exist between himself and his fellow-men. Hence, from the first, there are present in religion the elements not merely of thought, but also of feeling and of will. In fact, it is due to the conjunction of these that religion ever came into being. Man does not merely think of his god; since, through nature, that god manifests his power often in terrible form, he conceives of him, now with feelings of utter dependence, now with awe and fear, as of one who smites and visits him with wrath and destruction. Yet the emotion is not entirely that of fear. Fear in itself has the effect of sundering and driving farther apart. But, in point of fact, religion is the expression of an exactly contrary effect upon the will. Viewed in its practical aspect, religion is the effort on man's part, not to flee from, but to draw near to his god.

While the beginning of religion is not to be attributed entirely to fear, it is unquestionable that that emotion played a great, and even a predominating, part in the awakening of the religious consciousness. The things by which primitive man is first prompted to think of the divine are generally those disastrous to himself or to the community. Any misfortune or disaster that he cannot trace to known human or natural sources he attributes to the direct agency of his god. Since, then, in primitive times the realm of the unknown was much wider than it is now, and since also, leaving out of count man's spiritual wants, even his bodily comfort was then more open to attack, there was all the more room for the working on him of that fear of his god which is the beginning of wisdom.

But, if fear thus awakens him to a knowledge of his god, it is his instinct of self-preservation that impels him to give to that knowledge a practical turn. The aim of religion is not solely to draw near to gods, nor even to propitiate them, but to

secure the worshipper's well-being and happiness. It is just because man recognizes his present happiness to be imperfect, because he feels that only through his god can that deficiency be supplied, that he ever seeks to win his favour. And the means which primitive man adopted towards this end were those which he employed in his dealings with his fellows—conciliation and petition. From this arose the ancient religious system of propitiatory sacrifice.

While the broad aim of sacrifice is thus to please the gods, the meaning and content attached to it are more clearly defined by reference to (a) the nature of the god who is to be propitiated and (b) the evil which renders propitiation necessary. It may happen that man identifies this evil not with himself, but with the essential being of his god. This god is conceived of as one who delights in violence and bloodshed, and who sends plagues, storms, and floods in order to satiate himself with the suffering of man. Man therefore offers such sacrifice as he imagines will appease this passion for blood on the part of his god, that the impending doom may be averted from himself. It is with this notion that some of the darkest rites of early sacrifice are associated. A degraded idea of the god leads to a degraded form of worship.

On the other hand, man may feel that the cause of his suffering lies not so much in the nature of his god as in his own misdoings or shortcomings. This was the idea that ultimately prevailed. Experience accumulated throughout the ages taught him that much of his misfortune was simply his own fault, and that by methods of forethought, of industry, and of hygiene he could avert many of those evils which formerly he traced solely to supernatural influence; and that which experience taught him to be true of part of his existence he came more and more to infer as true of the whole. Thus he reached the conception that, wherever his present happiness was marred, it was due not to the arbitrariness of his gods, but to his neglect to pay deference to them or to obey their commands. Once this truth emerged, the idea underlying propitiatory sacrifice assumed a new and more hopeful trend. Man aimed no longer at changing the original nature of his gods and bringing them into a temporary state of favour to himself; he sought rather to restore them to that normal condition of benevolence which, by his offence, had for the time being been disturbed. How, then, could he better accomplish this than by sacrificing a part of his goods and possessions, in order to show the gods that he valued their favour more than anything else? It is not, of course, contended that primitive man regarded his own confession as part of the propitiatory sacrifice. That idea lay as yet in the background. He still retained a mechanical conception of the relations between sin and punishment, between sacrifice and benefit. In his eyes not his repentance, but the material offering that he made, was the thing of propitiatory value as affecting his god. Yet, despite all this, in the higher sacrificial forms of primitive religion, in which man dimly confessed himself as the sinner and his god as the standard of righteousness and love, were embodied the rudiments of those truths concerning propitiation which were to receive a fuller and more spiritual meaning in ethical religions, and which at last attained to their perfection in Christianity.

2. **In the OT.**—In the religion of the Hebrews the intermediary stages of this evolution are clearly traceable. Man is now not merely conscious of the fact that he offends against God; that fact has taken on for him a moral significance—he is conscious of it as sin. Davidson (*The Theology of the OT*, p. 315 ff.) points out how in the OT a distinct

tion comes to be drawn between (a) sins of ignorance or inadvertence and (b) sins done with a high hand or of purpose.

(a) *Sins of ignorance or inadvertence.*—To these alone do the Levitical sacrifices apply. In this there is a certain natural fitness. The idea of sacrifice in general arose at that stage in man's development when he conceived of his relations to God as being semi-mechanically rather than morally conditioned; when, too, he imagined that the Deity could be propitiated in a correspondingly mechanical fashion, by material offerings. The Hebrew priests merely carried forward this idea and gave it a greater symbolism and elaboration. In the first place, the moral sense being as yet imperfectly developed, there was in their conception of sin no element of personal guilt. The idea of sin was attached to no specific acts of which the perpetrators were conscious at the time that they were wrong; it belonged rather to the entire nature of man, as being tainted and impure. Thus sin was placed by them in that region intermediate between the purely physical and the definitely moral; i.e., it belonged to the region of the æsthetic, and partook of the nature of uncleanness. Again, corresponding to this view of sin as uncleanness was their view of the manner in which it offended against God. Being not yet definitely of the moral, not yet a wilful transgression of God's law, it did not violate God's righteousness, and so did not provoke His wrath. It was rather an offence against God's holiness. These are the considerations which lie at the root of the ancient Jewish sacrificial system. They explain how the priestly offerings were regarded as atoning not for definite misdoings, but for the whole life as being imperfect or impure. They explain, too, how the symbolical 'covering,' or 'wiping out'—the root ideas of the Hebrew word *ḥṣp*, which stands at the centre of Levitical thought on sacrifice (cf. *HDB*, s.v. 'Propitiation,' vol. iv. p. 131)—had in itself a propitiatory value as affecting God. Since God's justice had not been offended, and His actual wrath had not been provoked, there was no need that any positive recompense should be made. There was need only that the cause of offence to His æsthetic nature, i.e. to His purity and holiness, should be removed. That being accomplished by the priestly sacrifices, complete harmony was established. And, lastly, though no definite explanation is given in the OT itself, these considerations may help to make clear why special emphasis was laid on the efficacy of the blood-sacrifice as a means of propitiation. Since 'the life of the flesh is in the blood' (Lv 17¹¹), so the offering to God is the effort on man's part to make propitiation not for certain sins, but for the whole soul or person. Again, the blood, as it is sprinkled on the altar, symbolically wipes out, or cleanses away, impurity and uncleanness. God is thus enabled to look on the inadvertent sins of His people as covered or non-existent; He is propitiated in this negative sense, in that the stain offensive to His holiness is washed away, and His favour is restored.

(b) *Sins done with a high hand or of purpose.*—Just as the sense of personal guilt implies a new stage in the growth of the moral personality, so also does it lead to a higher conception of the divine nature and of the means of propitiation. The relationship between man's offence and the wrath of God is uplifted from the physical and the æsthetic to the moral and the spiritual. Material sacrifices are felt to be no longer available to propitiate God. But the need for propitiation is even more poignantly felt. This was the class of sins with which the prophets especially dealt; and for them the only remedy was for sinners to cast themselves upon God's mercy, when He Himself

would cover their sins (Ps 65³). Here the propitiation is effected not by any offering on man's part, but by some transaction within the being of the Divine. God's mercy prevails over His justice, so that His wrath is done away. But no hint is given that this victory of God's love or mercy is won at any cost to itself. At the same time, it is dimly suggested that the self-surrender of the soul in repentance and prayer to God possesses an element of propitiation—'A broken and a contrite heart, O God, thou wilt not despise' (Ps 51¹⁷).

The last idea emerges into clearer consciousness when the intimate connexion between suffering and sin is recognized. Since sin is the cause of suffering, the thought inevitably arises that suffering may in turn have some propitiatory value. But the ethical note is not lost sight of. Thus it is essentially the sufferings of the righteous that are regarded as having expiatory value. This coupling of suffering with merit as having power, by vicarious means, or in a substitutionary sense, to propitiate God is witnessed to in the frequent OT references to the trials of Abraham and other patriarchs and prophets, and reaches its culmination in the passage describing the Suffering Servant of Is 53. Yet even there the idea is not fully wrought out. It is simply stated that 'it pleased the Lord to bruise him' (v. 10), and that 'with his stripes we are healed' (v. 5). Thus the relationship between the propitiatory act (the bruising) and the beneficial effect (the healing) is still regarded as in great part mechanical; and to mankind, apart from the Servant, is relegated simply the part of the passive onlooker, who reaps the results, but who himself has no vital or active part in the transaction.

3. In the NT.—It has been indicated how in the OT the idea of propitiation developed in its higher aspects along two different lines of thought. On the one hand, the consciousness of personal guilt led to the casting aside of material sacrifice and to the surrendering by the sinner of his soul to the mercy of God; on the other, the connexion between sin and suffering gave rise to the thought that suffering, and especially the suffering of the righteous, possessed a propitiatory value. Yet both these conclusions were deficient. The former certainly recognized the need for a change in the attitude of the soul; but it did not give sufficient consideration either to God's justice or to the demands of His wrath. It simply made God's mercy take the place of the Levitical sacrifice, in that the mere exercise of that mercy was sufficient to wipe out all past transgressions, even those done with a high hand. No account is taken of the fact that not merely God's holiness, but also His righteousness, has been offended, and that this violated righteousness demands a certain satisfaction before His mercy can intervene. In the latter there is a procedure to the other extreme. Emphasis is now laid upon God's just indignation, and how it is by suffering that it is propitiated. Yet this is viewed wholly in a vicarious sense, and no vital organic connexion is traced between the propitiation rendered to God and the spiritual change effected in man. It will thus be seen that the two trends of thought are in a sense complementary. The connecting link between them consists in this, that both lead up to the idea that propitiation is in itself a divine act, and consists in the interaction of certain aspects of, or certain personalities in, the godhead. Such was the truth embodied in the Incarnate Christ; and a consideration of the NT passages where He is referred to under the heading of 'propitiation' will render this clear.

(1) In 1 Jn 2², *ἵλασμός ἐστιν περὶ τῶν ἁμαρτιῶν ἡμῶν*, Christ is simply stated to be 'the propitiation for our sins.'

(2) In 1 Jn 4¹⁰ this idea is elaborated. The main thought of the passage (vv. 8-21) is that God is love, and that God is fully Himself only when that love is completely exerted. But the realization of the divine love is checked by the presence of sin in man, which produces in him fear (v. 18) and want of love towards God (v. 8). Thus, though the situation or the occasion for propitiation is created by man, it is in God that the active stimulus and the felt need for reconciliation initially arise. 'Herein is love, not that we loved God, but that he loved us'; i.e., it is not so much that man feels himself alienated from God as that God feels Himself alienated from man. In the same way, it is not man, but God, who not only feels the need but also provides the means or the instrument of propitiation. Here, then, is repeated the OT priestly idea of God's mercy or love 'atoning' or 'covering' the sins of His people. But it is no longer stated in bald terms that God's mercy or love simply prevails over His righteousness. That victory is effected at the cost to His love of sending His own Son. There is further this new idea, prominent in the teaching of St. John, and in many ways the dominant note of the NT, that the sending of Christ is not merely in satisfaction to God's justice, but also—and this thought received from St. John far greater emphasis—exerts a propitiatory effect upon man, in that it shows forth, or exhibits, God's love to him, and so wins him to draw near to God. By this indication of the vital, dynamic connexion between the divine propitiatory act and its spiritual effect on man does St. John supply the other deficiency in the OT theory of atonement (cf. above on Is 53). It is God's love that stimulates Him to send His Son, and this exhibition of His love in turn stimulates man to love God. Hence, for St. John the immediate propitiatory effect of the gift of Christ is not upon God, but upon man. But this is not the ultimate end of propitiation. Once this immediate effect is accomplished in the awakening of man's love through faith in Christ, then God's love assumes its proper function of bestowing upon man eternal life (Jn 3¹⁶). Thus God's love first treats itself as a means, in order that it may return to the normal mode of its activity, in which it is at once the means and the end of its own existence, and in which alone it realizes its complete self-satisfaction.

(3) He 2¹⁷, πιστός ἀρχιερεὺς τὰ πρὸς τὸν θεόν εἰς τὸ ἰλασκεσθαι τὰς ἁμαρτίας τοῦ λαοῦ. If in the second reference prominence is given to the 'covering', or 'annulling', of sin by God through Christ, emphasis is here laid upon the element of suffering in propitiation. According to the writer of the Epistle to the Hebrews, the qualifications of a true high-priest are divine appointment to his office (51) and 'at oneness' with his people (21). To this high-priest Christ is now compared (217). But Christ's appointment is ratified, and His identification with His people is sealed, by the fact that He is 'made like unto them' in undergoing the experience of suffering (210-17). Thus it is in virtue of His sufferings that Christ is qualified to make propitiation for the sins of His people. In this there is a correspondence with the thought of Is 53. But the aim of the writer to Hebrews is now to develop this thought and show how Christ's sufferings produce this effect. The underlying idea is not that suffering in itself gives satisfaction to God. For what God supremely and ultimately desires is to 'bring many sons unto glory' (210). But sin is the barrier which stands in the way of this perfection, and suffering is the only means by which it can be removed (cf. 214); hence, in this derivative sense, suffering does possess a pleasing aspect in the eyes of God. Again, since Christ's sufferings bring Him into greater sympathy with His brethren, and so enable Him to render them greater help (215), suffering has the additional propitiatory effect upon God in that it furthers the attainment of that by which God is completely satisfied.

It has been suggested that the view taken by the writer to Hebrews regarding Christ's sacrifice may be that its propitiatory value lies not in its suffering but in its obedience (cf. W. P. Paterson, *HDB*, s.v. 'Sacrifice', vol. iv. p. 346). Yet it is not necessary to place these two views in so sharp a contrast. In the interpretation of the writer to Hebrews, suffering and obedience both possess a propitiatory value, but in a different sense. The immediate purpose of suffering is not to please God. Its direct effect is (a) upon Christ, to teach Him obedience (cf. 210-58) and to create in Him sympathy towards man, (b) upon man, awakening his trust and confidence in Christ (149). This confidence then passes into obedience; and in this way does Christ become the author of man's eternal salvation (58). Thus suffering is propitiatory only as a means; but obedience—the end towards which suffering is directed—is propitiatory in itself, as being that by which God is immediately satisfied.

That this is the view of the writer to Hebrews regarding suffering is corroborated by the manner in which he relates Christ's sacrifice to sin. The class of sin for which Christ is the propitiation is not so much a wilful transgression of God's law as a state of moral or spiritual uncleanness (cf. 1022). Because sin, then, while it offends God's holiness, does not offend His justice, there is attached to suffering no idea of expiation, i.e. as satisfying the divine wrath. The death, or the blood, of Christ is interpreted rather along the line of the OT Levitical sacrifices (cf. He 9). His perfect and spotless offering suffices to sprinkle men's hearts from an evil conscience and to wash their bodies with pure water (914 1022). That being accomplished, 'their sins and iniquities will God remember no more' (1017). But just as, according to the Mosaic law, there were certain sins to which the priestly sacrifices could not apply, so also, according to the writer to Hebrews, there is one especial sin for which not even Christ can atone, and that is wilful transgression after knowledge of the truth (cf. Dt 17:7 with

He 10²⁶). It is only when the unpardonable sin of rejecting Christ's sacrifice has been committed that God punishes man in wrath. But the suffering which this punishment involves, being not disciplinary but penal, in no way leads to any reconciliation between man and God. The sending of it is indeed in satisfaction of God's wrath; but the enduring of it by man does not tend towards the appeasing of that wrath or to the restoration of God's favour. It comes upon man only in utter condemnation—'It is a fearful thing to fall into the hands of the living God' (1031). Thus again it is seen that for the writer to Hebrews there is no propitiatory value in suffering except as it is borne in the spirit of obedience and leads to a further development of that virtue.

(4) Ro 3²⁵, ὃν προέθετο ὁ θεὸς ἰλαστήριον διὰ πίστεως ἐν τῷ αὐτοῦ αἵματι. In the passage Ro 3¹⁹⁻²⁶ St. Paul also takes his starting-point from the OT. But Christ is now regarded not as a high-priest, the active agent who through His suffering unto obedience propitiates, but as the passive means or place through which that propitiation is wrought, and in which God's righteousness is declared. This may be the reason why St. Paul uses the Greek word ἰλαστήριον instead of ἱλαρός. In further contrast to the writer to Hebrews, his aim is not so much to win men to accept Christ as the sacrifice as to show the necessity for that sacrifice in the nature of the godhead.

While the teaching of the writer to Hebrews concerning suffering is a great advance upon that of Isaiah in that it explains its educative value, it does not sufficiently make clear the divine aspect of suffering, as being a law immanent in the very being of God. It treats it rather as something extraneous to the divine nature, and merely imposed upon man to bring him to obedience. This defect, as is indicated above, is a consequence of the view which the writer to the Hebrews takes of sin as uncleanness and of God as essentially holy. Thus for him God is still in great part the God of the OT, who accepts the offering made by Christ, and who, at no cost to His own nature, simply pardons or forgets the sins of His people. These defects, then, St. Paul sets himself to correct. In the first place, he takes a more serious view of the nature of sin. It is not simply uncleanness, but a definitely moral disorder, and is connected with the will. In the second place, he makes the chief attribute of God's being to consist in righteousness. With these two principles alone no atonement would, according to OT theory, be possible. But St. Paul finds a way out of the dilemma by putting a new construction upon suffering. He treats it no longer as external to the godhead and operative merely upon man, but as a vital principle of the divine nature itself. Suffering, in so far as it falls upon man in consequence of his sin, is simply the working out of his condemnation. But, if that suffering be assumed and vicariously endured by one who is himself sinless, the demands of God's wrath will be appeased, and that reconciliation with God will be effected which man by his own efforts or by his own suffering cannot achieve. This is the view which St. Paul expounds. It is because Jesus Christ is the setting forth or the declaration of this truth that He is the propitiation for our sins (Ro 3¹⁹⁻²⁶). Further, since God is the one who requires to be propitiated, and is both the provider and the offerer of the sacrifice, He is at once just to Himself, or true to His own righteousness, and the justifier of the man who believes in, who accepts, or who appropriates that sacrifice as made on his own behalf.

4. Summary and conclusion.—The form of the idea of propitiation, from its appearance in early religion to its presentation in the theology of the NT, is constant: God has been offended, and means must be found whereby His wrath may be appeased and His favour restored. It is in the content given to that form that the development takes place. Man seeks first to propitiate God by material offerings. To these, and especially to the blood-sacrifice, a symbolical meaning is afterwards attached, as representing the offering by man of his own life to God. A clearer understanding of the nature of sin then leads to the casting aside of material sacrifices and to the idea that God is pleased only with repentance and personal obedience (cf. Is 1¹¹⁻²⁰). Side by side with this, the connexion between sin and suffering suggests the thought that suffering may possess in itself a propitiatory value. A further stage is reached when man begins to realize that he is utterly unable of himself to make any offering sufficient to recover God's favour. Hence the idea emerges that God Himself must provide the sacrifice. But, if God is the provider of the sacrifice, it cannot be the whole of His nature which is the object of propitiation. He is no longer simply the God of holiness, or the God of righteousness; but He partakes of the complex nature of a personality. Thus it is only one aspect or attribute of that personality which is propitiated, while another aspect or attribute provides the propitiation. But this in itself would

lead to nothing further than that God becomes reconciled to Himself. Yet it is in the interests of man that God's love seeks to propitiate His righteousness; and therefore man must also be involved in the transaction. Two difficulties, however, stand in the way of his inclusion. The first is that recompense must be given for his past sins; and the second is that, since man's natural state is sinful, therefore there must be infused into him that divine life which alone can make him acceptable to God. The theories of St. John, of the writer to the Hebrews, and of St. Paul are all endeavours to show how in Jesus Christ these difficulties are met and overcome. St. Paul alone lays emphasis on the first. It is by the vicarious suffering of Jesus Christ that the wrath of God, aroused by the sin of man, is appeased. St. John and the writer to the Hebrews deal principally with the second. According to St. John, God's love, made manifest in Christ, appeals to man's love, and so induces him to lay open his heart to the inflow of the divine life. According to the writer to the Hebrews, suffering, borne in the spirit of and under the guidance of Jesus, is that which makes man perfect. It is to be remembered, however, that St. Paul also gives consideration to this second difficulty. Faith is the contribution that man must bring before the process of propitiation is finally completed. It may thus be concluded that the propitiation made by Jesus Christ acts both upon God and upon man. It acts upon man in that it is a revelation to him of the immensity of God's wrath and of the intensity of His love. It thus wins him to draw near to God in reverence and humility, yet in faith, trusting in the efficacy of the sacrifice made on his behalf. It acts upon God in that it satisfies His offended justice, and enables His love to go forth in all its fullness to the man who now has a share in the righteousness and life of Jesus Christ. Finally, just as the 'appeasing of wrath' is only the first term in propitiation in order that 'favour may be restored,' so the ultimate end of Christ's sacrifice is that God may be able to say of each of his children, 'This is my beloved son, in whom I am well pleased.'

C. M. KERR.

PROPITIATION (Greek).—The nature of divine anger, as conceived by the Greeks, has been considered in the art. EXPIATION and ATONEMENT (Greek); the special rites for allaying the anger of the gods remain to be treated under the present heading. Briefly stated, calamities not easily traceable to human causes are referred to the gods—failure of the crops, plagues and diseases, childlessness, disaster at sea, and defeat in battle—and, when they occur, the anger of the gods is assumed. It is necessary first to remove the causes of divine anger, and then to propitiate the gods, as in the first book of the *Iliad* Chryseis must be returned to her father, the army purified, and sacrifices offered to Apollo who had sent the plague. While the thought of possible anger and its propitiation was doubtless present in all worship, the proper sacrifices to an angry god were totally different from the normal worship to the Olympian deities. The normal form of sacrifice was the communion

meal, in which the animal was consecrated to the god, certain portions were burned on the altar, and the remainder was cooked and eaten by the worshippers. This form of sacrifice (*θυσία*) was frequently described in the Homeric poems (e.g., *Il.* ii. 421 f.), and with slight variations it was the typical form of worship to the greater gods of Greece. In sharp contrast with it is another type of sacrifice, called by a different name (*σφάγια*; cf. *ἐναγίζεσθαι*, *ἐντρέμνεν*, etc.) and decidedly different in character. Ordinarily it took place at night rather than in the morning; the animal prescribed was often black; when its throat was cut, the blood was allowed to flow on the ground; the altar was a low mound (*ἐσχαρά*), not the structure used in ordinary sacrifice (*βωμός*); and the body of the animal was never eaten, but was usually entirely consumed by fire. Animals not suited for food, like the dog, were used for these sacrifices at times; but offerings of food as such, grain or cakes, found no place in them. These sacrifices, however, were not reduced to one definite type, but retained variations peculiar to the god to whom they were offered and the occasion of the offering. Similarly, the libations to angry gods or gods prone to anger differed from the usual libation to Olympian gods, in that wine was regularly used for the latter but never for the former; honey and milk were the more fitting to soothe angry deities (*μελιγματα*).

According to tradition in Greece, human sacrifice was at times demanded to soothe the anger of the gods. Agamemnon, who had offended Artemis by slaying a hind in her sacred precincts, was prevented from sailing for Troy till he had sacrificed to the goddess his daughter Iphigeneia; and the death of Polyxena alone made it possible for the Greeks to start on their homeward voyage. A sacrifice of Egyptian youths was attributed to Menelaus as a means of stilling winds that prevented his voyage (Herod. ii. 119; cf. *Æsch. Agam.* 146 f.); and it seems possible that *σφάγια* offered in later times to secure favourable winds (cf. *Plut. Ages.* 6; Herod. vii. 191) were substitutes for human sacrifice. According to Plutarch (*Aristid.* 9, *Them.* 13), three captive Persians were sacrificed by Themistocles before the battle of Salamis. In myth similar sacrifices to secure success in battle were demanded by the oracle of Creon (*Eur. Phœn.* 890 ff.), of Erechtheus (*Apollod. Bibl.* iii. xv. 4; *Lycurg. Leocr.* § 99), of Aristodemus (*Paus.* iv. ix. 2, 5), and of other heroes. It is Greek tradition that the oracle at Delphi commanded human sacrifice on the occasion of pestilence to allay divine anger. Human sacrifice is also reported as part of the regular worship of Zeus Lykaïos in Arcadia, of Apollo Katharsios in Leucas, and of Apollo at the Athenian Thargelia. The explanation given (*Eus. Præp. Evang.* iv. 16, p. 156^a; cf. *Eur. El.* 1026; *Virg. Æn.* v. 815) is that the anger of a god which threatens to destroy a whole people may perhaps be satisfied by the voluntary sacrifice of one of their number. The Greek practice, however, was to substitute an animal for the man, as a deer is said to have been substituted for Iphigeneia (cf. the calf treated like a child and sacrificed to Dionysus at Potniæ [*Paus.* ix. viii. 1]).

The gods who received propitiatory sacrifice regularly were not the Olympian deities, but spirits who had shown their anger or who were easily stirred to anger. Such were the Eumenides at Athens, whose very name of 'kindly ones' was a euphemism to denote the blessings which the Furies might send when propitiated (cf. *Æsch. Eumen.*, *passim*); the *θεοὶ μελιχχοὶ* of Myonia (*Paus.* x. xxxviii. 4); Hecate, goddess of spirits of the night; the winds and in particular Boreas, the north wind (*Paus.* ii. xii. 1; *Xen. Anab.* iv. v. 4);

gods of the sea (Arr. *Anab.* vi. xix. 5) and of rivers (I. de Prot, *Leges Græcorum sacræ*, i., *Fasti sacri*, Leipzig, 1896, p. 14, no. 5, line 36 f.). The spirits of the dead received sacrifices similar in character, doubtless to prevent evil results that might be caused by their anger (Herod. v. 47), and it was the regular method of worshipping local heroes who might send special blessings, but whose anger was terrible if they were neglected. When *σφάγια* were offered to Olympian deities, as not infrequently occurred, it was because of some special reason for fearing their anger. Zeus Meilichios, feared like the *θεοὶ μελίχιοι*, received holocausts of pigs to allay his possible anger and secure his blessing (Xen. *Anab.* vii. viii. 4, and accounts of the Diasia at Athens), and Zeus Chthonios, a god of agriculture, received propitiatory offerings at Myconos. In Ionian regions these sacrifices were offered to Apollo to avert danger from the crops, as in general they were offered to him to get rid of pestilence (G. Kaibel, *Epigr. græc.*, Berlin, 1878, no. 1034; Paus. ii. xxiv. 1, and *passim*). Before the battle they might be offered to Artemis (Xen. *Hell.* iv. ii. 20). Some of the peculiar sacrifices to Dionysus (Paus. ix. viii. 1) and Demeter (Diod. Sic. v. iv. 2, iv. xxiii.) as well as to Poseidon (Arr. *Anab.* vi. xix. 5) should also be classified as propitiatory in nature. That propitiatory sacrifice found no larger place in the worship of the Olympian gods is due to the intimate and normal relation which existed between these gods and their worshippers, a relation that found fit expression in the communion meal sacrifice.

The occasion for propitiatory sacrifice was the presence of calamity or the fear of calamity. A pestilence that attacked men, herds, or crops, or the fear of possible calamity before battle, a voyage, or any important undertaking, furnished such an occasion. These sacrifices were offered in Athens before marriage and childbirth (Æsch. *Eumen.* 835). In agriculture specific dangers threatened the crops at certain seasons, and at these times rites to avert them were performed. Finally, as dangers or blessings might at any time be expected from such spirits as the Eumenides and heroes and souls of the dead, propitiatory sacrifices to them occurred both at stated intervals and on special occasions.

The meaning of this type of sacrifice, in so far as one type is found, is clear from its form. While in the communion meal the victim was shared by god and worshippers together and the rite strengthened the actual bonds that united them, the propitiatory sacrifice assumed no such bond, but rather the opposite. The rite here seems to centre in the death of the animal, sometimes clearly the death of an animal as a substitute for a man; its life-blood is poured out to appease the gods, and it only remains to dispose of the body by burning it or casting it into the sea. When Polykrates followed the advice of Amasis (Herod. iii. 41) and threw into the sea the ring that was his most valued possession, he acted on the naive principle that too much prosperity was likely to bring calamity from the gods, and sought to propitiate them. In the Greek divine world were many powerful spirits who were easily offended, be it by too much prosperity, by neglect, or for some reason not clear to men. If their anger could be anticipated and allayed, its effects might be escaped; accordingly, propitiatory sacrifices were offered before important undertakings and even at regular intervals. It was the same principle that led men to bring votive offerings to the gods that the gods might not look with disfavour on the undertakings which they had in view. When the calamity was present, the need of propitiatory sacrifice was so much the greater.

The life of the animal was given to the god, sometimes clearly as a substitute for the life of the man, in the hope that thus divine anger might be allayed. It is the peculiarity of Greek religion that ordinarily men feared the anger of other than the Olympian gods, and that therefore propitiatory sacrifice to the great gods of Greece was unusual.

ARTHUR FAIRBANKS.

PROPITIATION (Roman).—If we accept the definition of religion as an 'effective desire to be in right relation to the Power manifesting itself in the universe' (W. Warde Fowler, *Religious Experience of the Roman People*, p. 8), propitiation in its widest sense is co-extensive with religion. Every utterance of prayer and every act of sacrifice, as being religious, is necessarily propitiatory. But it is unnecessary to make this the occasion for a general survey of the Roman attitude towards religion, more especially since the ambit of propitiation is usually confined to the placation of an offended deity, as distinguished from the effort to secure a continuance of divine good-will. On the other hand, propitiation is a religious act which assumes the personal intervention of a deity, and has nothing to do with the objects and methods of tabu or magic. Thus, certain ceremonial practices of which we have a record from historical times may be survivals from an era antecedent to the development of the national religion. Horace's *triste bidental* (*Ars Poet.* 471), the walled enclosure preventing ingress to the spot where a thunderbolt had fallen, is an example of a permanent tabu not associated with any particular cult. But a definite act of propitiation is involved in the sacrifice of two black lambs to Summanus by the Arval Brethren, which took place whenever the grove of the Dea Dia was struck by lightning at night (W. Henzen, *Acta Fratrum Arvalium*, Berlin, 1874, p. 146). For Summanus, though an obscure personality (*Ov. Fast.* vi. 731), was associated with Jupiter as lord of the thunderbolt, and his name appears occasionally as an epithet of that god (G. Wissowa, *Religion und Kultus der Römer*, p. 124, n. 4). Another example may be quoted to show the difficulty of tracing the history of the most primitive Roman cults. The mysterious rite of the 14th of May, on which day 27 straw puppets known as *argei* were thrown into the Tiber from the *pons sublicius*, is sometimes interpreted as a magical ceremony whose chief intention was to serve as a spell ensuring an adequate rainfall in the coming summer (Warde Fowler, *Roman Festivals*, p. 119). In that case it would be unnecessary to suppose that any deity was specially concerned with it. Much the same may be said of the rite of the *lapis manalis*, which is nowhere definitely associated with Jupiter Elicius (*ib.* p. 233). But the above-mentioned explanation of the *argei* is not generally accepted, and an alternative view treats the puppets as substitutes for human victims, holding that on some occasion of stress during the 3rd cent. B.C. a piacular sacrifice of foreigners (*Ἀπρυεῖοι*) was introduced on the advice of a Sibylline oracle (Wissowa, *Gesammelte Abhandlungen*, p. 228). We should then be in possession of a parallel to the otherwise isolated sacrifice of two Gauls and two Greeks, who were buried alive in the *forum boarium* in the year 216 (Livy, xxii. lvii. 8).

A few examples of propitiatory rites which go back to the oldest stage of the native religion may now be mentioned.

On the 25th of April, in order to remove from the crops the danger of mildew or red rust, a procession marched to the grove of Robigus near the fifth mile-stone on the Via Claudia, and a dog was sacrificed by the *flamen Quirinalis* (Ov. *Fast.* iv. 905 ff.; Pliny, *HN* xviii. 285). On the 15th of April at the Fordicidia pregnant cows (*fordæ boues*) were sacrificed to Tellus as well in the several curies as by the *pontifices* on the Capitol (Ov. *Fast.* iv. 629 ff.). The unborn calves were torn from their mother and burnt, with the object of securing the fertility of the corn then lying in the womb of the earth (Warde Fowler, *Roman Festivals*, p. 71). Vulcanus, the god of fire, had his special festival on the 23rd of August at a time of the year when the danger of fire was particularly to be dreaded for the new grain. The antiquity of his cult is shown by the existence of the *flamen Volcanalis*, but, beyond the appearance of the Volcanalia in the calendar, very little is known about it. Domitian probably followed ancient precedent when, in erecting an altar to Vulcanus in commemoration of the fire in Nero's time, he ordered the sacrifice of a red calf and a boar on the day of the Volcanalia (*CIL* vi. 826). We also have the curious information that on this day it was the custom to throw living fish into the fire as a piacular offering (Varro, *de Ling. Lat.* vi. 20; Fest. p. 238).

Although the institution of *flamines* marks the establishment of a State religion, the earliest cults indicate its development from a worship by the family intended to secure the prosperity of each of its members. The powers to be propitiated were spirits originally nameless, which were severely limited in the extent of their operations, and only by degrees acquired a distinct identity (Warde Fowler, *Religious Experience*, p. 117). It is noticeable, however, that there had arisen a tendency to group the divinities in pairs, a male and a female, Faunus and Fauna, Liber and Libera, Quirinus and Hora, and that there were grades of dignity among them, as is shown not only by the distinction between *flamines maiores* and *minores*, but also by the fact that piacular offerings were made to the *famuli diui* as well as to the *diui* themselves (Wissowa, *Religion und Kultus*, p. 19). Even the great gods of the city, Mars, Jupiter, and Quirinus, being disconnected from any traditional mythology, were, as originally worshipped, devoid of any personal characteristics (E. Aust, *Religion der Römer*, Münster, 1899, p. 19). Thus propitiation was only in a limited sense possible for the Romans, who, apart from Etruscan and Greek influences, had no conception of anthropomorphic deities. Varro (*ap. Augustine, de Civ. Dei*, iv. 23) made a very instructive comment on the spirit of the old Roman religion when he stated the remarkable fact that for a period of 170 years, that is to say, up to the time of the building of the temple of Jupiter on the Capitol in the reign of Tarquinius Priscus, the old Romans worshipped the gods without making images of them, and added that the man who first made such images for the people not only destroyed the fear of God, but introduced a source of distraction.

Whatever possibilities of spiritual growth lay in the recurring festivals of the old agricultural communities were conducted in a particular direction by the rapid development of the city-State and the increasing influence of the priestly colleges. The general tendency of Roman religion to place every department of human life under the protection of a separate *numen*, which is displayed in its most conspicuous form in the pontifical classifications of the *indigitamenta*, and the practical and utilitarian outlook of the average Roman, who desired to settle his relations to the gods upon fixed and definite terms, combined to produce that rigid system of formalism which made the *ius divinum* a series of precise regulations adapted to secure the *pax deorum* upon every possible contingency. It has been succinctly stated that the general object of the Roman festivals was so to propitiate the gods as to forestall any hostile intention by putting them under an obligation (C. Bailey, in *EBR*¹¹ xxiii. 578). It was the interest of the State to see that its concord with the gods remained unbroken. This purpose was secured in particular

by the periodical observance of lustrations, which served both to purify their object from all contracted stains and to ensure a renewal of divine protection against the danger of further contamination. The lustration was accomplished by symbolic acts of cleansing with water or fire, or by a procession conducting the sacrificial victim round the area which required purification. The former method was observed at the Parilia (Prop. iv. 4. 75 ff.), the latter at the Ambarvalia (Cato, *de Re Rust.* 141; Verg. *Georg.* i. 343 ff.), and both together at the Lupercalia (Plut. *Rom.* 21). Besides these annual celebrations, lustration was required on special occasions, such as the invasion of an enemy's territory or the departure of a fleet. Above all, it became necessary when special notice had been received by means of extraordinary portents that the *pax deorum* had been broken and the anger of the gods incurred. Among these signs were thunder and lightning, solar eclipses, showers of stones and of blood, and monstrous births, all of which are frequently recorded in the pages of Livy (e.g., xxii. i.). On the announcement of such an occurrence the first duty of the senate was to determine whether the report was trustworthy, and, if so, whether the event had happened within the limits of the public jurisdiction (cf. Livy, xliii. xiii.). If these questions were answered in the affirmative, the duty of *procuratio* fell to the consuls, who would take the advice of the sacerdotal authorities so far as might be necessary. Before the innovations consequent upon the introduction of the *ritus Græcus*, the usual means adopted was the *lustratio urbis* (Lucan, i. 592 ff.), i.e. an additional celebration of the *amburbium* annually held on the 2nd of February (Wissowa, in Pauly-Wissowa, i. 1817). Old-established tradition required that the portent of a shower of stones should be purged by a *novemdiale sacrum* (Livy, i. xxxi. 4). The introduction of the *ritus Græcus* at the suggestion of the Sibylline oracles prepared the way for the employment of new methods in the placation of divine disfavour. The most remarkable of these was the *lectisternium*, or the symbolical entertainment of the six Greek gods, Apollo and Latona, Hercules and Diana, Mercurius and Neptunus, in some public place (Livy, xl. lix. 7) by serving a banquet before their images, each of which reclined on a sacred couch (*puluinar*). It is expressly recorded by Livy that the first institution was due to a severe pestilence in the year 399 (v. xiii. 6). After the disaster at Trasimene in 217, when the altogether exceptional consecration of a *uer sacrum* was vowed, a *lectisternium* of unusual magnificence was celebrated in honour of six pairs of deities who were identical with the twelve great Olympian gods of Greece (Livy, xxii. x.). Another method adopted for restoring the *pax deorum* in times of national crisis was the *supplicatio*. On such occasions the senate had always been accustomed to decree extraordinary *feriæ*, during which the people, clad in suitable garb, passed from temple to temple imploring the assistance of heaven (Livy, iii. v. 14, vii. 7). But the systematization of the practice was a development of the *ritus Græcus*, as is shown by the regular mention of *puluinaria*, by the fact that it was usually the result of an application to the Sibylline books, and by the responsibility for its administration being given to the *decemviri sacris faciundis* (Wissowa, *Religion und Kultus*, p. 358). Among the details of the celebration may be mentioned the wearing of wreaths and the carrying of laurel branches by the participants (Livy, xl. xxxvii. 3) and the public oblation of wine and incense (x. xxiii. 1). The solemn invocation of help (*obsecratio*), a chant led by the magistrates and repeated by the people,

was the climax of the whole proceedings (IV. xxi. 5).

The portent of a monstrous birth at Frusino in the year 207 was made the occasion for a procession of maidens, 27 in number, who marched from the Carmental gate to the temple of Juno Regina, preceded by two white cows, and followed by the *decemviri* crowned with laurel and wearing the *prætexta*. Behind the maidens were carried two images of Juno Regina made of cypress wood. A halt was made in the Forum, while the maidens, all holding to a rope which passed from hand to hand, sang a hymn composed for the occasion by Livius Andronicus and accompanied their singing with appropriate dances (Livy, xxvii. xxxvii. 7-15). The Greek origin of this rite, which in certain of its details is identical with the ceremonies described in Horace's *Carmen Saeculare*, is manifest (H. Diels, *Sibyllinische Blätter*, Berlin, 1890, p. 89 ff.).

The various modes of restoring the former goodwill of the gods which have been enumerated are often described as *piacular*—a nomenclature which was sometimes adopted even by the Latin authorities (Livy, XL. xxxvii. 2). But, according to the strictest acceptance of the term, a *piaculum* is not a prayer for divine protection or renewed favour, but a compensation rendered for a breach of the *ius sacrum*, arising out of a fault either of commission or of omission (Wissowa, *Religion und Kultus*, p. 329). Every sacred ordinance had to be carried out with the utmost precision and accuracy, and even the slightest irregularity in the ritual proceedings, however little deliberate, constituted an offence which might have serious consequences. To avoid such dangers precautions were sometimes taken before the beginning of a festival, as when a *porca praecidanea* was offered to Ceres before the gathering in of the harvest with the object of purging the celebrant from the effects of any offence which might have been previously committed by him in the performance of the funeral rites of any member of his household (Aul. Gell. iv. vi. 7f.). The immediate result of the breach of contract was to give a claim for compensation (*postilio* [Cic. *de Har. Resp.* 20]) to the god whose interests were involved. The occurrence of a portent was a notification to the citizens that the claim must be made good. It followed as a matter of course that the celebration of the rite where even a slight irregularity had occurred became null and void, and it was essential that the whole of it should be repeated. Hence Cicero remarks in reference to the Megalesian games:

'If a dancer halts, or a flute-player suddenly stops, or if the carefully selected youth who drives the sacred car slips from his seat or drops the reins, or if an aedile misses a word or uses the wrong vessel for libation, the whole celebration becomes irregular, the mistake must be expiated, and a renewal is necessary to appease the wrath of heaven' (*de Har. Resp.* 23).

The same circumstances caused Plutarch to marvel at the scrupulousness of Roman piety:

'If one of the horses that draw the chariots in which are placed the images of the gods, happened to stumble, or if the charioteer took the reins in his left hand, the whole procession was to be repeated. And in later ages they have set about one sacrifice thirty several times, on account of some defect or inauspicious appearance in it' (Plut. *Coriol.* 25).

But the public renewal did not exonerate the individual whose fault had made it necessary. If his sin was wilful, he became *impius*, and the favour which he had forfeited could not be restored to him (Varro, *de Ling. Lat.* vi. 30). If the act was inadvertent, or performed at the bidding of an inevitable need, it could be expiated by an appropriate offering, as when the sacrifice of a dog was prescribed as compensation for the performance of pressing agricultural duties during *feriae* (Colum. II. xxii. 4). The particular sacrifice necessary was generally fixed by precedent; but all cases of doubt were referred to the pontiffs for decision (Livy, xxix. xix. 8). In this connexion it may be remarked that there was a noticeable tendency to act liberally in the matter of sacrifices required for expiatory purposes. Thus the complete offering of *suovetaurilia* was reserved for lustrations

(Tac. *Ann.* vi. 37, *Hist.* iv. 53), whereas in the expiation of prodigies *hostiae maiores* were the rule, and often in considerable numbers (Livy, XLIII. xiii. 7, XXII. x. 7). In the case of the failure of an ordinary sacrifice, a second victim of the same kind as the first was required as a *piaculum* (*hostia succidanea* [Aul. Gell. iv. vi. 6]).

LITERATURE.—J. Marquardt, *Römische Staatsverwaltung*, iii. 2, Leipzig, 1885; W. Warde Fowler, *The Roman Festivals of the Period of the Republic*, London, 1899; G. Wissowa, *Religion und Kultus der Römer*, Munich, 1902, *Gesammelte Abhandlungen zur römischen Religions- und Stadtgeschichte*, do. 1904; W. Warde Fowler, *The Religious Experience of the Roman People*, London, 1911; C. Bailey, art. 'Roman Religion,' in *EBR* xxi. 577-580. A. C. PEARSON.

PROSELYTE, PROSELYTISM.—1. Meaning of term.—The term 'proselyte' is usually employed in both a wider and a narrower sense to include one who is attracted by, and inclines less or more to, another form of faith, as well as one who has altogether come over and been incorporated. The half-proselyte, or the quasi-proselyte, who accepts a part but not the whole, is to be distinguished from the full and strict proselyte, who becomes even as one born in the faith. An extremely comprehensive use of the term is recognized by A. C. Lyall:¹

'... if the word proselyte may be used in the sense of one who has come, and who has been readily admitted, not necessarily being one that has been invited or persuaded to come.'

This permits consideration of specific forms of religion whose growth is by agglomeration over and above extension by missionary zeal, and the inclusion of religions non-proselytizing in character as well as those which are admittedly proselytizing.

2. Scope of article.—The scope of this article is restricted by leaving out of account religions that are professedly missionary—e.g., Christianity and Muhammadanism, which have been already treated (see artt. MISSIONS). The proselytism of sects may also be omitted as falling to be dealt with in the numerous articles under this head (see artt. SECTS). Inasmuch as the gain resulting from missionary propaganda is concurrent with loss to the religion or religions forsaken, the converse of proselytism is to be found in apostasy (see art. APOSTASY).²

In this way it is possible to narrow down consideration of the subject to nearly the usual limit of articles on 'Proselyte' appearing in Bible dictionaries, which have treated of proselytism solely as a feature of the Jewish faith. At the same time it is fully recognized that the religion which has given the name (proselyte) to the world has not stood alone in the practice of the thing. Within Judaism itself the period of missionary activity, during which proselytes were sought and found, is comparatively short. It is generally recognized as having ended in the beginning of the 2nd cent. after Christ, when the Jews were forbidden by the laws of Rome to make proselytes, and when they also ceased to desire additions to their number and retreated more and more upon themselves. The rise of proselytism is found in post-Exilic influences, particularly the Dispersion, and the period of its bloom is set in the age of Hellenism.

A great deal of our information regarding proselytes is subsequent to this period of activity, being stored in the Talmud and reflecting the views of the Rabbis upon the past, with or without historical basis. The distinction between 'proselytes of righteousness' and 'proselytes of the gate,' full as opposed to quasi-proselytes, was evolved by the later Rabbis, but is to be regarded as without

¹ *Asiatic Studies*, i. 2, London, 1907, p. 138.

² Cf. Philo, *de Penit.* 2, where proselytes are contrasted with apostates.

meaning for the life of the past.¹ The distinction may be still binding upon the orthodox of the Jewish faith (see art. JUDAISM, vol. vii. p. 592^b; cf. vol. iv. p. 245^a)—although for various reasons the proselytes of the gate have ceased to be recognized in Judaism²—and until recently it won acceptance with most Biblical scholars. To E. Schürer belongs the credit for the discovery of the right historical perspective in this matter. With the fall of such a main prop the greater part of the superstructure collapses. 'Proselytes of the gate,' once employed as a 'convenient anachronism,'³ is now dismissed as a 'misnomer.'⁴

In view of the restrictions imposed both from without (chiefly on account of persecution) and from within (because of insistence upon circumcision) proselytism might be regarded as almost non-existent in Judaism throughout the Christian era from the 2nd cent. onwards. A modern Jewish writer has collected the evidence for the survival of proselytism in spite of adverse circumstances, and he affirms that within the last half-century tens of thousands of proselytes have entered the Jewish fold, notwithstanding the *laissez-faire* attitude of modern Judaism towards the proselyte question.⁵ The strict adherence to the traditions received from the fathers may be judged from the fact that until the last decade of the 19th cent. no official sanction was given to relaxing the bond by which the proselyte was fully initiated to the Jewish (Reformed) faith (see art. CIRCUMCISION, vol. iii. p. 664^a). It is only in a wider sense, therefore, that proselytes have been added. Inter-marriage has accounted for most of the gains,⁶ yet has given occasion for some losses.⁷

3. Materials essential for the study.—Although the term 'proselyte' is now universally employed, we must still seek the materials essential for the study of proselytism in the centuries immediately preceding and following the coming of Christ to earth. An introduction is generally found in a discussion of the position of the *gēr*, the 'stranger,' or rather the 'client' (*ERE* vi. 77^b) of OT. The LXX reproduces this word some 75 times by *προσῆλυτος*, and in a few cases by other Greek substantives, but a detailed examination of all passages would fail to disclose a scientific discrimination on the part of the translators which might in any way be compared with the results yielded by the modern documentary theory. The term *προσῆλυτος* seems to have been already so familiar to the LXX translators that it was made by them to do duty for nearly all occasions, even when the current sense of the term failed to suit past historical circumstances (e.g., the Israelites are called *προσῆλυτοι* in Egypt).⁸ Commenting on the difference between D and P regarding the *gēr*, S. R. Driver states:

'In P the term is already on the way to assume the later technical sense of *προσῆλυτος*, the foreigner who, being circumcised and observing the law generally, is in full religious communion with Israel.'⁹

W. C. Allen concludes¹⁰ that in the LXX a later meaning like that of the Mishna was read into the word. But no strict law can be laid down when it is so evident that the word *προσῆλυτος* was made to do duty for most cases, and it seems better to

regard the LXX usage as on the whole dictated by the freer conditions of the Hellenistic period, when proselytes were recognized in both the wider and the narrower sense. The usage of Philo, Josephus, and NT (Acts) will be found to accord with this.

Those who were in reality but half- or quasi-proselytes are considered by Schürer¹ to be denominated by the phrase *φοβούμενοι* or *σεβόμενοι τὸν θεόν* (Ac 10². 22 13¹⁶. 26. 44. 50 16¹⁴ 17⁴ 18⁷), in which opinion he stands opposed to Bertholet, who endeavours to prove at length that they are equal to *προσῆλυτοι* in the narrower sense.² Apart from the question of a specific term for each, we may admit the existence of two main classes, and we then find the crucial difference to be that the one class adhered to the Jewish theological and moral code, while the other were bound by the ritual also, in particular having submitted themselves to circumcision.³ It is conceivable, indeed, that there were not two but many kinds of proselytes, according to the degree of affiliation and the amount conceded by the one party or required by the other.

In the provinces and among the Jews of the Dispersion the proselytes, or quasi-proselytes, would have laboured under slight disability, but in Jerusalem within the Temple precincts they would have been barred, lacking circumcision. The Greeks of Jn 12²⁰, e.g., seem to have been proselytes in the wider sense, yet they had to stand without the *chēl*, or terrace, like other Gentiles (cf. Ac 21²⁶).⁴ It is not to be supposed that at the very centre of the faith born Jews would have stopped short at any intermediate stage in their efforts to make proselytes, yet in general their own position among the nations was such that they had to content themselves with what they were able to secure.⁵ That there were Judaizers before the time of St. Paul is not to be denied; even Hellenized Jews remained Hebrews, with a zeal for the whole law.⁶ Yet in the main there was a cleavage between Palestinian Judaism, a religion of law, and Hellenistic Judaism, a religion of hope, and, corresponding thereto, there were particularists v. universalists, legalists v. apocalyptists, literalists v. spiritualists.⁷ The atmosphere of Mt 23¹⁵ is suggestive of the one, and of Acts (see reff. above) of the other. A way of reconciling such difference has been sought by supposing that the proselyte of Mt 23¹⁵ is a proselyte to the sect of the Pharisees, not to Judaism in general;⁸ but this is against the meaning of the word *προσῆλυτος*,⁹ or at least is pressing it to an extreme.

The rivalry of the Jewish sects of the period has indeed to be reckoned with, and even the exclusive and separatist Pharisees must be credited with a zeal to win converts, who, it is true, had to come over wholly or not at all. The Essenes secured proselytes notwithstanding a strict and prolonged novitiate, and they even adopted children to ensure additions to their number (see art. ESSENES, vol. v. p. 397 f.). For the methods employed by the sects in order to gain adherents there is but slight evidence, but it is otherwise with regard to the propaganda of Judaism as a whole. The testimony of Josephus as to the outcome of

such efforts is clear,¹ while beneath the contempt in the allusions of classical writers² to the Jews we can detect the measure of their success in making converts. This, it must be remembered, was accomplished in spite of the obloquy to which the convert exposed himself—a point elaborated by Philo.³

With the exception of one short period during the Maccabean triumph, when force was employed to bring over the Idumæans and Ituræans to Judaism,⁴ the propaganda made headway through the inherent merits of the Jewish system of religion and morality. As to the ritual, Josephus specifies that both Greeks and heathen learned to copy the observance of the Sabbath, fasts, kindling of lights, and many restrictions in the matter of food.⁵ These last invite comparison with certain of the decrees of the Council of the Apostles in Jerusalem (Ac 15²⁰) and with the 'Seven Noachian Laws' (see art. NOACHIAN PRECEPTS, vol. ix. p. 379^b), but in neither case can identity be established. None of the items specified by Josephus touches the vital point, which is circumcision, and the conclusion to be drawn is that relatively few of the adherents proceeded to the utmost. The preponderance of female proselytes is taken to indicate the unwillingness of males to fulfil all that the law required of them.

According to the Talmud, three things were required of the full proselyte: (1) circumcision (*mīlāh*), (2) baptism (*tēbilāh*), and (3) sacrificial offering (*harēšā'ath, dāmim, korbān*), all of which may be taken to have been in operation at the time of Christ. (3) fell into disuse with the destruction of the Temple, although substitutes for it were found. (1) has already been referred to as essential at all times for full proselytes. (2) would have passed unquestioned as a requirement of the ceremonial law but for the dispute which arose in the 18th cent. regarding the priority of Christian v. Jewish baptism (see art. BAPTISM, vol. ii. pp. 378^a, 408 f.). It may be assumed that the instruction of proselytes was a necessary preliminary to these ceremonial acts (see art. CATECHUMEN, vol. iii. p. 256^b, n. 3; INITIATION [Jewish], vol. vii. p. 324^b; HILLEL, vol. vi. p. 683^b).

4. **Historical sketch.**—The limits of the period of missionary activity in Judaism have already been assigned. The Rabbis afterwards maintained that the Dispersion was with a view to securing proselytes, but the truth is rather that in the cosmopolitan atmosphere of the Dispersion the Jews first gained the incentive to add to the number of the faithful. The evidence for the existence of proselytes among the Jewish colony at Elephantine in Egypt (5th cent. B.C.) is doubtful.⁶ The nature of the records prevents us drawing any conclusion as to the conditions among the Jews in Babylonia at the time of Ezra.⁷ During the period of Hellenistic influence the development of proselytism was rapid, the influence of Jewish colonists and their synagogue worship in every place being supplemented by literary aids of many kinds: the LXX translation of OT, commentaries on Scripture, philosophical and historical books, apologies and even forgeries after the manner of the Sibylline Books.⁸ The issue of all this is plainly to be seen in the many cities and towns in which proselytes

are expressly mentioned as being found (see ref. to Acts already given). At the time of Christ a keen missionary spirit prevailed among the Jews, their trading proclivities going hand in hand with religious propaganda. Until the destruction of the Temple (A.D. 70) they persevered in their efforts to secure converts.¹ With the Hadrian persecution and the bitterness engendered by the subsequent revolt against Rome, the Rabbis were prompted to change their attitude towards the outside world, and henceforth the terms of conversion were made as difficult as possible.² The missionary epoch may be said to close with the prevalence of Gentile over Judaistic Christianity, or, from another point of view, when Pharisaism conquered Hellenism.³

A remarkable parallel to the general course of the history of Jewish proselytism will be found in the account given of Zoroastrian missions (see art. MISSIONS [Zoroastrian], vol. viii. pp. 749^b, 751^b).

5. **Numbers and outstanding instances.**—The number of proselytes made during the centuries of missionary zeal was doubtless very large—amounting to millions, although there is reason to believe that they were mostly adherents, and not members in the proper sense.⁴ Syria appears to have been the most fruitful field,⁵ but it was in Jerusalem at the time of the feasts that the most striking testimony to the power and results of Jewish propaganda could be obtained (Ac 2⁹⁷).

Outstanding proselytes in the wider sense are to be recognized in the centurions of Lk 7¹⁷. and Ac 10²⁷. and the eunuch of Ac 8²⁷. The most complete triumph of Judaism is to be seen in the conversion of the royal house of Adiabene,⁶ the story of which is instructive as revealing a temporizing spirit among the leading Jews of the time on the question of the chief ceremonial requirement. Among the imperial family there have been reckoned as converts Flavius Clemens, cousin of Domitian, and his wife Flavia Domitilla (see art. JUDAISM, vol. vii. p. 592^b), although most authorities incline to regard them as converts to Christianity.⁷ A historical instance, which might be brought within the Rabbinical category of 'Esther'-proselytes (whose motive in conversion was fear), is forthcoming in the Roman general Metilius.⁸ Instances within the department of literature are Aquila (Onkelos), 2nd cent. A.D., translator of the Scriptures into Greek, and (doubtfully) Theodotion.⁹ Within the realm of Rabbinism are R. Akiba, R. Meir (son of a proselyte), and other Talmudic sages.¹⁰

6. **The ethics of proselytism.**—In judging of the motives which led the Jews to seek for proselytes during the period of their missionary zeal we must believe that they were actuated chiefly by a desire to impart to others that best form of religion which they felt they had received of God. This serves to explain their keenness as missionaries. The agents whom they sent forth to make proselytes were imbued with the same earnestness to convert the world as were the first Christian apostles. Their propaganda succeeded, they believed, because of the inherent power of their laws.¹¹ While they accommodated themselves so far to those whom they sought to win as to present first the most attractive features of their faith, as judged from the outside, they steadily kept in view the ultimate purpose, which was to make the converts as themselves, filled with a zeal for the whole law and willing to make sacrifice of themselves in body

and estate. Being of a subject race and in a hopeless minority among the nations, they were under no temptation to employ violent methods. The proselytes when made were, in theory at least, subject to no disability, save that which must ever attach to the naturalized as compared with the native born. In actual life and practice disabilities must have existed,¹ although these are not brought to light until Talmudic times, when they may no longer have been operative.

It cannot be supposed that there were not disinterested motives present in the seekers any more than in the sought. The gifts of the converts helped to swell the riches of the Temple,² and Josephus openly allows an instance of misappropriation by a Jew and his accomplices of purple and gold made over for this purpose by Fulvia, a Roman convert of great dignity.³ In other ways the Jews doubtless invited others to follow them ostensibly for their soul's good, yet with an actual view to the material advantage to be reaped by themselves and their nation.

Those who were the sought were for the most part in a position to invite themselves, if they felt thus disposed. They were Roman citizens, or under the protection of the conquering power of that time, or else were inheritors of the professedly superior culture of the Græco-Roman world. Yet many of them voluntarily surrendered themselves to Jewish influence, abandoning the gods in whom they had ceased to believe, and finding in the higher morality of Judaism a refuge from the licentious spirit of the age. The latter motive is said to have had special weight with heathen women. The monotheism and moral purity of Judaism held a powerful attraction for minds of a philosophic cast in every province. Considering the obloquy to which the converts were exposed, and the persecution of a later day, which led many to profess the Jewish faith in secret, proselytism must have been attended by a greater or less measure of conviction. Josephus admits that not all who came over continued in the faith; some had not courage and departed.⁴ Yet 'the vast majority of devout Gentiles certainly sought in the synagogue nothing but the true God.'⁵

On the side of the proselytes also certain unworthy exceptions must be allowed for, viz. those who came over to avoid military service (from which the Jews were exempt), those who were actuated by superstitious motives, and those who thought to secure commercial privilege or social advantage through marriage with a noble or wealthy Jewess.⁶

The judgment of the outside world upon the proselyte movement, as conveyed by classical writers (reff. above), counts for little. The most grievous charge they make, viz. atheism, has no foundation, nor yet has the scoffing dictum of Seneca:⁷ 'Victi victoribus leges dederunt.' The references in NT are favourable to proselytes, with the single exception of Mt 23⁸, which after all is more a condemnation of the leaders than of the followers, and that perhaps within a sect only.

The most abundant materials for forming a judgment on the ethical value of the proselyte appear to be found in Talmudic literature, but their worth is discounted by the fact that they are often contradictory (e.g., stories of Hillel v. Shammai),⁹ that they were evolved apart from actual historical conditions, and that in the main they are disparaging.

They 'chiefly serve to illustrate the strong animus which a large section of post-Christian Jews displayed against proselytizing and proselytes.'¹

The judgment of the present day is determined according as one belongs to a religion which considers proselytism, in the modern sense, to be 'an essential and a sacred duty,'² or to a religion, such as the Jewish, which reckons that the fulfilment of its mission does not require the support of numbers.³

Christian opinion is largely moulded by a sense of indebtedness to proselytes, for they, in the wider acceptance, were the feeders of Christianity at the beginning. By this standard of judgment the 'God-fearers,' regarded as proselytes, are superior to those—their number relatively few—who became punctilious in observing all the ceremonial requirements of the law. In the case of these the saying, 'the more converted the more perverted,'⁴ may well have been true. Proselytes in the strict sense formed no link between Jew and Gentile, and did not prepare the way for Christianity.⁵ All that legal Judaism achieved over against Christianity, which came after, has been pithily summed up by Stopford A. Brooke thus:

'A few swallows do not make a summer, nor a few thousand proselytes a regenerated world.'⁶

Modern Judaism is concerned to clear itself of the reproach that by its very constitution the Jewish religion is, and has ever been, hostile to the reception of proselytes. It points to past successes in this respect, to the debt which Christianity owes to Judaism for providing it with universalistic sympathies,⁷ and it further maintains that willing proselytes are still freely received, once their good faith has been proved.⁸ But the missionary zeal has departed from Judaism, and indifference as to increase of numbers prevails. How great the change is between the present and the era of proselytism, which has been considered, appears to be reflected in the following condemnation of the missionary methods of Christianity and Muhammadanism:

'History and experience teach us that the proselytizing spirit, which is bred by the craving after universality, generally engenders a tendency which develops into an indirect negation of human brotherhood.' 'To the Moslem as to the Christian, questions of love or humanity were of little moment in the spread of their religion; the stranger could only become their brother-in-faith, or remain their implacable foe.'⁹

While remitting nothing from the duty to strengthen the confederation of Christians over against the world as still lying in unbelief, the apologist for Christianity is free to admit the presence and operation of an objectionable proselytism, whose root is found in particularism, not universalism.¹⁰

A judicial estimate of the principles and methods governing Christian and Muhammadan propaganda will be found in art. MISSIONS, vol. viii. pp. 743 f., 748^b.

PROSTITUTION.

Greek (W. J. WOODHOUSE), p. 404.
 Indian (W. CROOKE), p. 406.

PROSTITUTION (Greek).—The Greeks had but little notion of moral purity in the modern sense of the term. The virtue of chastity with them was confined within very narrow limits,¹ being obligatory upon the wife (or daughter), while the husband (or son) was required only to refrain from adultery, *i.e.* from violating the family rights of his neighbour. The husband's honour was fully protected by law, but the wife had no legal remedy against her husband's irregularities;² nor did public opinion, capricious and ineffective at best, supplement the law's deficiencies, except in cases of gross neglect and outrage of the forms of respectability.³ Morally, according to the opinion of the day, this sort of indulgence was upon exactly the same plane as any other satisfaction of appetite. The question was one simply of more or less. Self-control,⁴ if not itself carried to undue lengths, was, it is true, something to be admired, and by common consent must be a main element in that careful and worldly-wise balancing of competing desires to which Greek thought and practice reduced the art of correct living (cf. the saying *μηδὲν ἄγαν*).

The philosophers themselves took no higher ground than this (see, *e.g.*, Socrates in *Xen. Mem.* i. iii. 14, and *Sympos.* iv. 83, where he lays down the rule with his accustomed crudeness and simplicity). Even Plato practically goes no farther than to say that a wise man will attach no great value to these particular forms of pleasure (*Phædo*, 64 D); and in his *Republic* he would so far consult the weakness of the flesh as to allow promiscuous intercourse to both sexes when past the age for rearing children for the State—always provided that incest be avoided, and that no child be born of such unions (*Rep.* 461 B: *ὅταν δὲ δῇ, οἶμαι, αἱ τε γυναῖκες καὶ οἱ ἄνδρες τοῦ γεννᾶν ἐκβῶσι τὴν ἡλικίαν, ἀφιστομένην πρὸς ἐλευθέρους αὐτοὺς συγγίγνεσθαι ὥς ἂν ἐθέλωσι, κτλ.*). In the *Lysis* he hopes to be able to restrict such intercourse to persons legally married, or at least to enforce a regulation that in other cases it shall be covered with a decent veil of secrecy (*Lysis*, 841). Aristotle is of the same mind (*Pol.* iv. (vii.) 16. 17=1335b: *τὸ δὲ λοιπὸν ὕψις χάριν ἢ τινὸς ἄλλης τοιαύτης αἰτίας φαίνεσθαι δεῖ ποιομένους τὴν ὁμιλίαν*).

In this matter, then, the Greeks are to be pronounced not so much immoral as non-moral. Their practice was due to the simple directness with which they regarded the facts of life and human nature. There were few facts of human nature for which they felt it necessary to apologize. In a very literal sense they were naked and not ashamed. Not that they interpreted life simply in terms of animalism, though there were among them also plenty of men to whom bodily indulgence was the sole end or the chief end of life; for the average man, as for the better sort also, it meant just the sober exercise of natural faculties and the moderate enjoyment of natural pleasures. Taken in the mass, the Greeks were probably just as far from being sensualists as from being ascetics. Aristotle's somewhat mechanical doctrine of virtue as a mean expressed a deep-rooted instinct of the race.

¹ This is so in Homer also, where Odysseus hangs his incontinent handmaids simply on the ground that their unchastity has dishonoured his family (*Od.* xxii. 418: *αἱ τε μὲν ἄτιμάουσιν*; and 424f.: *ἀναδείξας ἐπέβησαν*, | *οὐτ' ἐμὲ τίονσαι οὐτ' αὐτὴν Πηνελόπειαν*).

² Cf. *Artist. Eccles.* 718f.: *ἐπειτα τὰς πόρνas καταπαύσαι βούλομαι* | *ἀπαξάσας, κτλ.*

³ *E.g.*, the case of Alcibiades (*Andoc.* iv. 14: *οὕτως ὕβριστής ἦν, ἐπεισάγων εἰς τὴν αὐτὴν οἰκίαν ἑταίρας, καὶ δούλας καὶ ἐλευθέρas, ὥστ' ἠγάγεας τὴν γυναῖκα σωφρονεστέραν ὅσων ἀπολείπειν, ἐλθούσαν πρὸς τὸν ἄρχοντα κατὰ τὸν νόμον*). It is evident from the sequel that his wife had no legal remedy.

⁴ Cf. *Xen. Mem.* i. v. 4: *ἀρά γε οὐ χρὴ πάντα ἄνδρα ἡγήσασθαι τὴν ἐγκράτειαν ἀρετὴς ἐναι κρητῖνα, ταύτην πρῶτον ἐν τῇ ψυχῇ κατασκευάσασθαι*; κτλ. and *Mem.* iv. v. 5: *τὴν κακίστην ἀρετὴν ἡ ἐγκράτειαν οἱ ἀκρατεῖς δουλεύουσιν*, κτλ.

Roman (W. J. WOODHOUSE), p. 408.

Semitic.—See CHASTITY (Semit.-Egyptian),
 HIERODOULOI (Semitic and Egyptian).

This purely naturalistic or humanistic attitude of the Greeks towards life was reinforced not only by their ingrained selfishness but by certain facts of political and economic significance. The net result was that, from the point of view of morality and social institutions, and the place held therein by women, two distinct types of life were found among them. Without, of course, asserting an absolute and rigid distinction, we may recognize, on the one hand, a Dorian or Achæan (Æolian) type, in which women enjoyed a relatively large degree of freedom, and, on the other hand, an Athenian (Ionian) type, in which women were mostly restricted, if not to the *γυναικωνίτις*, at any rate to the house and its precincts,¹ with but rare opportunity of mingling with external life, and none at all of social significance (cf. the question put to Critobulus in *Xen. Ec.* iii. 12: *ἔστι δὲ ὅψω ἐλάττωνα διαλέγει ἡ τῇ γυναικί*; and his reply—*εἰ δὲ μή, οὐ πολλοὶς γε*).

Typical of the one sort are Sappho and Corinna, the latter five times the successful rival of Pindar; the spirit of the other mode breathes in the oft-quoted words put by Thucydides in the mouth of Pericles:² 'Hers is the greatest glory, of whom men speak least whether for good or bad' (*Thuc.* ii. 45: *μεγάλη ἡ δόξα, καὶ ἥς ἂν ἐπ' ἐλάχιστον ἀρετῆς πέρι ἡ ψόγον ἐν τοῖς ἀρσεσὶ κλέος ᾖ*)—words which must surely have sounded strangely, coming from the lips of the professed lover of the most noted courtesan of the day! Within each of these types of society irregular sexual intercourse, in different forms, exercised a most profound and far-reaching influence. The actual physical facts of that intercourse were necessarily the same then as to-day, but their relation to public and private life was to a large extent peculiar to the Greek people, and has in fact never been reproduced in the world in quite the same colour. The low standard of intellectual attainment of Athenian women (due to a defective education,³ which was itself but one consequence of a defective social system), standing as it did in startling contrast with the multifarious and hyperpoliticized interests of masculine life, no doubt partly explains and partly excuses the reluctance and inability of men to find satisfaction in the home circle. We must, however, be on our guard against attaching too much importance to this excuse, for after all it is a fact that the majority of the *εταῖραι* with whom a man associated were, apart from their superficial accomplishments, just as uneducated as his own wife or sisters. The sensuous appeal was, then as now, primary. The main reason for the failure of home life to hold men was that the social code did not permit a man to entertain his male friends in his own house, at any rate in the bosom of his family.

In Athens comparatively few native-born women had to earn their own living, the system of dowry and marriage making them, generally speaking, economically independent (see art. MARRIAGE [Greek]), though there were of course instances in which the ravages of war or other disaster had driven native Athenian women to rely upon their own industry.⁴ The case of alien women

¹ Cf. *Menand.* in *Koch*, iii. 546: *τοὺς τῆς γαμετῆς ὄρους ὑπερβαίνειν, γυναι, | τὴν αἰλίαν πέρας γὰρ αἰλίας θύρα | ἐλευθέρῃ γυναικὶ νενύμιστ' οἰκίας*; | *τὸ δ' ἐπιδικᾷκεν εἰς τε τὴν ὁδὸν τρέχειν*, | *εἰτε λαιδορομένην, κυνὸς ἐστ' ἔργον*, *Ῥόδῃ*. In the same strain Lykurgus, describing the panic in Athens after Chæroneia, says (*c. Leocr.* 40): *ὁρᾶν δ' ἦν ἐπὶ μὲν τῶν θυρῶν γυναῖκας ἐλευθέρas περιφόρους κατατηχυίας*.

² Cf. *Æsch. Sept.* 132f.: *μέλει γὰρ ἀνδρὶ, μὴ γυνὴ βουλευέτω | τᾶςωθεν ἐνδον δ' ὅσα μὴ βλάβῃν τῇῃ—where Etæocles is made to speak quite in the manner of a 5th cent. Athenian, and even to repeat the stock gibe at the sex in line 242.*

³ Cf. here the curious symptom of the way in which women lagged behind the intellectual standard of their men-folk, in *Plato, Crat.* 418: *οὐχ ἥκιστα αἱ γυναῖκες, αἵπερ μάλιστα τὴν ἀρχαίαν φωνὴν σωσύναι*. See also the intolerable condescension and griggishness of Ischomachus, the model Greek gentleman (*καλὸς τε καὶ ἀγαθὸς*), in *Xen. Ec.* vii. 1f.

⁴ See the inscriptions published in *BSA* viii. [1901-02] 197f.; *Dem.* lvii. 30f.: *παρὰ τοὺς νόμους, οἱ κελεύουσιν ἐνοχον εἶναι τῇ κακιορίᾳ τὸν τὴν ἐργασίαν τὴν ἐν τῇ ἀγορᾷ ἢ τὸν πολιτῶν ἢ τὸν πολιτῶν δυνειζόντῃ τινι ἡμεῖς δ' ὁμολογοῦμεν καὶ ταῖνας πωλεῖν, καὶ ζῆν οὐχ ὅτινα τρόπον βουλευέμεθα—an important passage (the speaker is a lone woman) as showing the suspicion*

resident in Athens was very different. Coming, as most of them did, from Asia Minor, traditionally accustomed to a larger measure of freedom than the native-born women, they for a time bade fair to bring about a radical alteration in the attitude of Athenians towards women and the question of their place in society. Suddenly this normal development of liberalism received a rude check. The purifying Acts of 451 B.C. (Plut. *Per.* 37; Ar. *Ath. Pol.* 26. 4), rigidly defining the conditions of Athenian citizenship, had the further effect of drawing a sharp line between alien and native-born, making it impossible for the children of mixed unions to attain citizenship. This vitally affected the general relationship of alien women to Athenian male citizens, and virtually compelled a large number of women to rely upon their own physical and mental endowment as a means of livelihood.¹ From this period, then, dates the beginning of the enormous expansion and social importance of the class of *εταίραι* in Athens, and through Athens in Greece generally. For the main profession henceforth open to such alien women was, in fact, that of 'companion' (*εταίρα*). From this time on the professional 'companion' played a definitely recognized and accepted rôle in Greek society, and one thoroughly in accord with the economic and spiritual factors of the age. Hence there is nothing surprising in the naive and striking definitions expressed by Dem. lix. 122:

τὰς μὲν γὰρ *εταίρας* ἡδονῆς ἔνεκεν ἔχουμεν· τὰς δὲ παλλακὰς, τῆς καθ' ἡμέραν θεραπείας τοῦ σώματος, τὰς δὲ γυναῖκας τοῦ παιδοποιεῖσθαι γυναικῶς καὶ τῶν ἐνδόν φύλακα πιστὴν ἔχουμεν—

definitions which ought to preserve us from illusions as to the real nature of the demands which the class of *εταίραι* existed to satisfy.

By Sappho the word *εταίρα* is used without any opprobrious significance (cf. the similar fate of the English word 'mistress'), just as even in the days of Athens (end of 2nd cent. A.D.) girls applied it to their female friends (Athen. 571 D: καλοῦνται γυναικῶν καὶ αἱ ἐλευθερά γυναικῆς ἐπὶ καὶ τῶν καὶ αἱ παρθένοι τὰς συνήθεις καὶ φίλας *εταίρας* ὡς ἡ Σαρφώ). As early as the time of Herodotus, however, it was applied by way of euphemism to a woman who followed a life of promiscuous intercourse for gain, for whom the proper word was *πόρνη* (πορνίδιον), 'whore' (Herod. ii. 134 f., where he sketches the history 'Ποδῶπιος *εταίρας* γυναικός, with whose fame Hellas rang').² A long list of synonyms for the class is to be gathered from Hesych. and Pollux, vii. 201. In this sense the word *εταίρα* had a wide range, from the concubine (properly παλλακή), who was wife in all but legal status (like Aspasia), through the *εταίρα* πολυτελεῖς (μεγαλόμισθοι) to the lowest prostitute that was κοινὸν ἀπασί, for which the Greek language, rich in opprobrious epithets, had a great variety of terms of terrible significance. These were doubtless appropriated to infinite fine gradations of the profession.³

attaching to such cases. See also the interesting experiment in domestic production, suggested by Socrates, in Xen. *Mem.* ii. 7 f.; cf. Hom. *Il.* xii. 433 f.: γυνὴ χερσὶν ἑλπίς . . . ἵνα παῖσιν ἀεικέα μισθὸν ἄρῃται, and Aristoph. *Thesm.* 445 f. (a widow with five children who earns her living στεφανηπολοῦσα ἐν ταῖς μυρρίαις).

¹ Cf. Amphip. in Meineke, *Frag. Com. Gr.*, Berlin, 1839-57, iii. 301=Athen. 559 A (contrasting the *εταίρα* with the γυνὴ γαμετή): ἡ μὲν νόμος γὰρ καταφρονέουσα ἐνδὸν μένει, ἡ δ' οἶδεν ὅτι ἡ τοῖς τρόποις ἀνθρώπων | ἀνθρώπος ἐστὶν ἡ πρὸς ἄλλων ἀπαιτεῖν— which puts the matter crudely, as simply one of supply and demand and market competition.

² Rhodope (or Rhodopis), a Thracian slave at Naukratis in Egypt, was ransomed by Charaxus, brother of Sappho, who 'roundly rebuked him in a poem' (Herod. ii. 135). According to Strabo, p. 808, the name of the *εταίρα* to whom Charaxus fell a victim was Doricha, and, according to Athen. 596, it was Doricha whom Sappho attacked, and not her brother, Doricha and Rhodopis being two different persons. The poem first published in *Oxyrh. Pap.* i. [1898] 10 f. (see also J. M. Edmonds, in *Class. Quart.* iii. [1909] 249) must allude to this. Herodotus (ii. 135) mentions also a courtesan Archidice who became αἰδομένη ἀνὰ τὴν Ἑλλάδα. He was evidently interested in the subject, and in this respect is a forerunner of a large number of writers who afterwards wrote many books περὶ *εταίρων*, or περὶ τῶν Ἀθήναιων *εταίρων*, which were the sources from which Athenaeus gathered the material of his own 13th book on 'Courtesans.'

³ Cf. what Antiphanes says in his *Hydria*, frag. 1 (Meineke, iv. 124), speaking of an ἀστὴ turned *εταίρα*: ἦδος τι χρυσοῦν γῶς ἀρετὴν κεκτημένης, | ὅπως *εταίρας*: αἱ μὲν ἄλλαι τούνομα | βλαπτοῦσι τοῖς τρόποις γὰρ ὅπως ὃν καλόν.

Athens, as a centre of maritime trade, was probably from the earliest times familiar with women of this class. Drakon (Athen. 569) seems to have legislated against them, but after his time the State not only tolerated and protected, but even to a certain extent exploited, them. The change was traditionally fathered upon Solon, who is said to have established State houses of prostitution, and to have built a temple of Aphrodite Pandemos from the profits:

στῆσαι πριάμενόν ποτε γυναῖκας κατὰ τούτους κοινὰς ἀπασί καὶ κατεσκευασμένας (Athen. 569).

However this may have been, it is the fact that in post-Solonian Athens those who followed this profession paid a licence fee to the State, which was farmed out in the usual way to τελῶναι (also πορνωτελῶναι).¹

The superintendence of this tax was one of the duties of the ἀστυνόμοι.² The non-existence of contagious disease for which they were responsible made the policing of prostitutes in ancient times a comparatively simple problem.

The vase-paintings of the early 5th cent., and later, indicate the great importance of the *εταίραι* in the social life of the time,³ and furnish a score of names of courtesans then flourishing (see W. Klein, *Die griech. Vasen mit Meisterinschriften*, Vienna, 1887, *passim*, or P. Hartwig, *Die griech. Meisterschalen*, Berlin, 1893, *passim*). Sparta naturally stood in great contrast, because her men had little time and little money to spend on such things (Plut. *de Fort. Rom.* 4: ὥσπερ οἱ Σπαρτιάται τὴν Ἀφροδίτῃν λέγουσι, διαβαίνονταν τὸν Εὐρώταν, τὰ μὲν εὐσπῆρα καὶ τοὺς χλιδῶνας καὶ τὴν κεσθὸν ἀποθόσθα, δόου δὲ καὶ ἀσπίδα λαβεῖν κοσμονομένην τῷ Λυκούργῳ); and Keos boasted, or others did for her, of her poverty in this respect (Athen. 610: ἐν ταῖς Κεῖων πόλεσιν οὐτὲ *εταίρας* οὐτὲ αἰλητρίδας ἰδεῖν ἐστι). On the other hand, Corinth was notorious throughout the Greek world for her *εταίραι*, most of whom were in the service of the great temple of Aphrodite there (cf. the saying, οὐ παντὸς ἀνδρὸς ἐς Κόρινθον ἐστὶ ὁ πλοῦς; see art. HERODOULOI [Græco-Roman]).⁴

Among the Athenian *εταίραι* two main classes must be distinguished. Probably by far the greater number were slaves⁵ bought or otherwise obtained by owners, male and female, who as πορνοβοσκοί kept them in a πορνεῖον (also οἰκῆμα, ἐργαστήριον, and many other terms)⁶ ἐργαζόμεναι ἀπὸ τοῦ σώματος. These would be under the general conditions

¹ Cf. Æsch. i. 119: ἀποθαυμάζει γὰρ εἰ μὴ πάντες μνήμῃσ' ὅτι καθ' ἑκάστον ἐνιαυτὸν ἡ βουλὴ πωλεῖ τὸ πορνικὸν τέλος, κτλ.

² So also apparently in Corinth; cf. Justin xxi. 5: 'apud aediles adversus lenones iurgari.' As regards Athens there is some confusion. Speaking of the Astynomoi, Aristotle says, in *Ath. Pol.* 50: καὶ τὰς γε αἰλητρίδας καὶ τὰς ψαλτρίδας καὶ τὰς κιθαρίστριας οὗτοι σκοποῦσιν ὅπως μὴ πλείονος ἡ δυνεὶ δραχμῶν μισθωθῇσονται, κτλ., but he does not mention prostitutes. According to Suid. s.v. διάγραμμα: διαγράφων γὰρ, ὅσον εἶδε λαμβάνειν τὴν *εταίρα*ν ἐκάστην, τὴν ἀγοράνομον (sic) ἔδει τὸν τῶν ἐκτελεσθέντων πορνείων: this must surely be a mistake (λαμβάνειν for καταβάλλειν) for the amount of tax to be paid by them—if, indeed, the notice refers to Athens at all. There was a similar tax in Roman Egypt (B. P. Grenfell and A. S. Hunt, *Gr. Pap.* ii. [Oxford, 1897] 67 f.).

³ Cf. Athen. 576, where Theophrastus is said to have driven through the Athenian Agora with the courtesans Lamia, Nannion, Satyra, and Skione. See also Athen. 533: ὅπως Ἀθηναίων μεθυσκομένων οὐδ' *εταίρας* χρωμένῳ, ἐκφανὸς τέττιριποι ζευγὰς *εταίρων* διὰ τοῦ Κεραμικοῦ πληθύνοντος ἐκθνὸς ἦλασεν—a fact vouched for, he says, by Idomeneus, who, however, did not make it quite clear whether the *εταίραι* were on the car or were themselves yoked to it!

⁴ Although the information about it comes to us through Greek sources, and the practice prevailed among many who doubtless counted themselves genuine Greeks, we do not here treat of what may be called 'sacred' prostitution, in which before marriage, or for a season, respectable women must give themselves up to promiscuous intercourse (e.g., in Cyprus [Herod. i. 199]; in Lydia girls earned their dowry by this means, though that was probably not the *raison d'être* of the practice [ib. i. 93; Athen. 515]). Cf. W. M. Ramsay, *Cities and Bishoprics of Phrygia*, Oxford, 1895, i. 94 f., and J. G. Frazer, *GB* 3, pt. iv., *Adonis, Attis, Osiris*, London, 1914, i. 38 f., 57 f.

⁵ Hence in Aristoph. *Ecol.* 721 f.: καὶ τὰς γε δοῦλας οὐχὶ δεῖ κοσμονομεῖν | τὴν τῶν ἐλευθέρων ὑφαρπάζειν Κύπριν. The temple prostitutes were simply a variety of this class, for the most part—certainly all those in Corinth.

⁶ Akin to these places were the taverns (καπηλεῖα) in which also πόρναι were to be found. Cf. Sanger, *Hist. of Prostitution*, p. 560. In Strabo, p. 678, at Karoura in Asia Minor φασὶ πορνοβοσκὸν αἰλισθέντα ἐν τοῖς πανδοχείοις σὺν πολλῇ πλήθει γυναικῶν νύκτωρ γενόμενον σεῖσμον συναφανισθῆναι πάσαις. But perhaps this was an itinerant company.

governing the institution of slavery in Athens and elsewhere (see art. SLAVERY). This class must have been largely recruited from the number of female infants 'pot-exposed,' i.e. cast out to their fate by fathers unwilling to rear them.¹ Of this sort, perhaps, were the seven *παιδοσκαί* brought up by the freedwoman Nicarete to stock her brothel (Dem. lix. 18 f.), she being *δευτὴ φύσιν μικρῶν παιδῶν συνιδεῖν εὐπρεπῆ, καὶ ταῦτα ἐπισταμένη θρέφει καὶ παιδεύσει ἐμπείρως, τέχνην αὐτὴν κατεσκευασμένη καὶ ἀπὸ τούτων τὸν βίον συνειλεγμένη*. She called them her daughters, apparently a common deception—to enhance the price.

Often such slaves were instructed in accomplishments, and were then hired out as flute-girls, harpists, dancers, etc., at banquets, where, as we see from countless vase-paintings and literary references, ample opportunity was as a matter of course given for other services. This species of more or less educated prostitute trenches upon the second great class, and, indeed, under the conditions of Greek slave life, it was possible to rise from the one class to the other. This higher class consisted partly of freedwomen, partly of free-born aliens, more rarely of native-born Athenians,² who for various reasons adopted this profession on their own account. The story told by Sino in Terence (*Andria*, 69 ff.: 'ita ut ingenium omnium hominum ab labore proclive ad lubidinem' [77]) was doubtless as familiar then as now; and that of Corinna, daughter of Crobyle, forced by her mother into a life of shame (Luc. *Dial. Mer.* 6), perhaps not less common. These independent courtesans, again, fell into varieties—from the *τριάντος πόρνη* of Hesychius to the *ἐταῖραι μεγαλόμισθοι* (Athen. 569) at the head of the profession in the hey-day of their charms (cf. the story of Demosthenes and Lais, in Aul. Gell. *Noct. Att.* i. 8).

In spite of her would-be apologists, Aspasia (of Miletus?) the concubine (*παλακή*) of Pericles, must still be taken as a type of this higher grade of *ἐταῖρα* in the 5th century. The most absurd claims have been made on her account, both in ancient and in modern times (e.g., in the *Mensceus*, generally ascribed to Plato, she is a rhetorician, instructress of both Socrates and Pericles. Cf. Xen. *Mem.* iii. 14: *συστήσω δὲ σοι ἐγὼ καὶ Ἀσπασίαν, ἥ ἐπιστημονώτερον ἐμοὶ σοι ταῦτα πάντα ἐπιδείξει*, says Socrates, referring to the subject of female education—but surely he is speaking with his accustomed irony). She was doubtless highly gifted and highly educated, but withal an adventuress with a very practical turn of mind; but that does not imply our acceptance of the gross stories and epithets applied to her by the comedians and others (e.g., Aristoph. *Acharn.* 524 f.; Plut. *Per.* 24 f.). Far more illuminating as to this whole class of what may be called 'respectable' *ἐταῖραι* is the conversation of Socrates with the *ἐταῖρα* Theodote, in which he discourses with her pleasantly and quite as a matter of course upon the rationale of her profession (Xen. *Mem.* iii. 11. 1 ff.). But not all interviews with *ἐταῖραι* were of so innocent a sort.

It is to the 4th cent. B.C., and later, that the most famous names of *ἐταῖραι* belong—e.g., Phryne (story of the orator Hyperides unveiling her bosom before the jury, and so securing her acquittal as *τὴν ὑποφῆνιν καὶ ζάκορον Ἀφροδίτης*, in Athen. 590, where also are other examples of her insolence and extravagance); Thais, the evil genius of Alexander the Great at Persepolis (burning of the palace at Persepolis at her suggestion [Athen. 576]); Lamia, who for years held Demetrius Poliorcetes in thrall; Pythoneice and Glycera, who went to Babylon to Harpalus, Alexander's treasurer, who

decamped with over a million and a quarter in gold; these and scores of other courtesans were, for the most part, products of Athens, who in this way repaid her long-standing debt to Asia; for in this age Athens 'became to Hellenistic potentates what Miletus and the Ionian towns had been to the Lydians and the Persians—the most popular source of their supply of "pleasure women"' (W. S. Ferguson, *Hellenistic Athens*, London, 1911, p. 70).

'There was perhaps no business more capitalistic in its organization and international in its scope than the traffic in courtesans, so that, despite its losses, the Athenian *demi-monde* maintained its lead and its reputation' (*ib.* p. 71).¹

Into this world of superficial accomplishment, tawdriness, vulgarity, and heartlessness, in which men and women frankly preyed upon each other for what each could offer, Athenæus in his 13th book gives us more than a glimpse. In a sense it is true that the *ἐταῖρα* was the one free woman in Athens; moreover, it is probable that the general simplicity of ancient life was itself a check upon the *descensus Averni* which inevitably characterizes this class in modern times. The comparative feebleness, and almost non-existence, of the sense of degradation in the career of the *ἐταῖραι* must also have tended to keep them individually upon the social plane to which their respective intellectual and physical qualifications, that is to say, their true economic measure, raised them; so that the more terrible issues of prostitution remained unrevealed to the Greeks. To the Greek *ἐταῖρα* Lecky's famous phrase is thus only partially applicable; 'eternal priestess of humanity' she was, it is true, but hardly 'blasted for the sins of the people' (*Hist. of European Morals*², London, 1890, ii. 283).

LITERATURE.—K. Schneider, art. 'Hetairai,' in Pauly-Wissowa, is very complete on the archaeological side; W. W. Sanger, *The Hist. of Prostitution*, new ed., New York, 1913 (uncritical and superficial in dealing with the ancient material); W. A. Becker, *Charicles*, tr. F. Metcalf, London, 1845, is still perhaps the most complete collection of material, outside the 13th book of Athenæus, our chief source of information. Nothing very recent seems to have been written on the general subject, which requires investigation from the point of view of economics and female industries.

W. J. WOODHOUSE.

PROSTITUTION (Indian).—I. Early history of prostitutes.—As was the case in other parts of the world, the trade of the prostitute has been practised in India from a very early period.

(a) *The Vedic period.*—Prostitution is found in the *Rigveda*, but its extent is disputed. Brotherless girls were frequently compelled to earn their livelihood in this way, and the putting-away of an illegitimate child is mentioned (i. cxiv. 7, iv. v. 5, ii. xxix. 1). Terms like *pumścali*, *mahānagnī*, and *rāma* clearly mean 'harlot,' and there are unmistakable references to the trade. Expressions like *kumārī-putra*, 'son of a maiden,' and *agrū*, 'son of an unmarried girl,' point in the same direction. The *Vājasaneyi Samhita* seems to recognize prostitution as a profession; but the exact meaning of the references collected by R. Pischel and K. F. Geldner (*Vedische Studien*, Stuttgart, 1888–89, i. xxv. 196, 275, 299, 309 ff., ii. 120) is not certain (A. A. Macdonell and A. B. Keith, *A Vedic Index of Names and Subjects*, London, 1912, i. 395 f., ii. 480 ff.). In the case of a widow the custom of *sati* seems to have been in abeyance; in some cases she was burned with her dead husband (*Atharvaveda*, xviii. iii. 1), but in other cases the levirate prevailed and, as she married the brother of her late husband, this

¹ Cf. Aristoph. *Frogs*, 1190: *ἐξέθεσαν ἐν δορῶντι*, and *Clouds*, 531: *παῖς δ' ἐτέρα τῆς λαβοῦσ' ἀνέλετρο*. Opinions differ widely both as to the probable number of children thus exposed and as to the proportion of those who were rescued from death as a speculation. Naturally, no conclusion at all, beyond the bare fact that such rescue sometimes took place, can be drawn from the frequency of this motive in the New Comedy.

² That native-born Athenians did sometimes sink into the class of *ἐταῖραι* is certain, from Antiphanes, *Hydr.* frag. 1 (Meineke, iv. 124): *ιδὼν ἐταῖρα τὴν ἑωρ' ἀφίκετο, | αὐτῆς ἐρήμον δ' ἐντροπὸν καὶ συγγενῆν*, as well as from the apologies put forward in Dem. lvii. 34 f., already quoted—even if we were not told that one famous *ἐταῖρα*, Lamia, a mistress of Demetrius Poliorcetes, was daughter of Cleonor an Athenian, and presumably therefore herself of free birth (Athen. 577).

¹ But the predominance of the courtesan in the New Comedy must not destroy our sense of proportion. It was, in part, a necessary outcome of the convention which laid the scene always in the street, into which respectable women could not venture, except under escort and upon rare occasion. Hence the plays mirror social, but not domestic, life, and work threadbare a few stock motives.

source of prostitution may have been generally closed (Macdonell and Keith, i. 488).

(b) *In the law-books.*—Manu (*Laws*, ix. 259) directs that harlots are to be punished, and a Brāhman is forbidden to touch food given by harlots, which excluded him from the higher worlds (iv. 209, 219). The same prohibition applies to food given by an unchaste woman, and libations of water are not to be offered to women who through lust live with many men (iv. 211, 220, v. 90).

(c) *In the Buddhist age.*—A Brāhman was forbidden to witness dancing or hear music, the trade of the *śraṭpa* (T. W. Rhys Davids, *Buddhist India*, London, 1903, p. 185 f.). But numerous references to prostitutes in the *Jātaka* show that they were tolerated and to a certain degree held in respect. The fees paid to some of them were exceedingly high (*The Jātaka*, Eng. tr., Cambridge, 1895, ii. 40, 261, iii. 283, iv. 157); 700 courtesans are found in the palace of a king (vi. 145). Sakka, after giving money to a harlot, does not visit her, but rewards her continence by filling her house with jewels of seven hoards (ii. 259 f.). One of this class is said to keep the five virtues (ii. 251). On the other hand, the roguery and rapacity of prostitutes are referred to, and it is regarded as a misfortune for a virtuous man to be reborn in a harlot's womb (vi. 117). Somadeva, who used much Buddhist material, writes:

'Thus, O King, even hetairai are occasionally of noble character and faithful to kings as their own wives, much more than matrons of high birth'; he also speaks of the famous *śraṭpa* of Ujjayini, Devadattā, who had a place worthy of a king (*Kāthāsarit-sāgara*, ed. O. H. Tawney, Calcutta, 1880, i. 354, ii. 621).

In the Buddhist legends we read of Ambāpatā, the famous courtesan of Visala, and the princess Salawati takes this profession (R. S. Hardy, *A Manual of Buddhism*, London, 1853, p. 244). An inscription of the W. Chalukya dynasty of Bādāmi, early in the 8th cent. A.D., records gifts made by a prostitute to a temple (*BG* i. pt. ii. [1896] 372, 394).

At the present day prostitutes are tolerated in India to an extent which can hardly be paralleled in any other part of the world. It is considered lucky to meet a prostitute at the beginning of a journey, probably because she can never become a widow, whose appearance is an evil omen (E. Thurston, *Castes and Tribes of S. India*, Madras, 1909, ii. 139). One class of dancing-girls, known as *mātangi*, are held in much respect, and among those castes in which girls are prostituted this is done after a regular session of the council (below, § 3).

(d) *Under Muhammadan rule.*—The Muhammadans kept prostitutes under supervision.

Under Akbar 'the prostitutes of the realms (who had collected at the capital, and could scarcely be counted, so large was their number) had a separate quarter of the town assigned to them, which was called Shaitānpura, or Devilsville. A Dāroghah [superintendent] and a clerk were also appointed for it, who registered the names of such as went to prostitutes, or wanted to take some of them to their houses. People might indulge in such connexions, provided the toll collectors heard of it. But, without permission, no one was allowed to take dancing-girls to his house. If any well-known courtier wanted to have a virgin, they should first apply to His Majesty, and get his permission' (Abul Faḍl, *Āin-i-Akbari*, tr. H. Blochmann, Calcutta, 1873-94, i. 192).

Khāfi Khān (*Muntakhabu-l-lubāb* [H. Elliot, *Hist. of India*, London, 1867-77, vii. 283]) states that 'the minstrels and singers of reputation in the service of the Court were made ashamed of their occupation, and were advanced to the dignity of *mansabs*. Public proclamations were made prohibiting singing and dancing. It is said that one day a number of singers and minstrels gathered together with great cries, and having fitted up a bier with a good deal of display, round which were grouped the public wailers, they passed under the Emperor's *jhārokha-i-darshan*, or interview window. When he enquired what they intended by the bier and the show, the minstrels said that Music was dead and they were carrying his corpse for burial. Aurangzeb then directed them to place it deep in the ground, that no sound or cry might afterwards arise from it.'

According to Manucci (*Storia do Mogor*, ed. W. Irvine, London, 1907, ii. 9), 'in the reign of Shāhjahān dancers and public

women enjoyed great liberty, and were found in great numbers in the cities. For a time, at the beginning of his reign, Aurangzeb said nothing, but afterwards he ordered that they must marry or clear out of the realm. This was the cause that the palaces and great enclosures where they dwelt went to ruin little by little; for some of them married and others went away, or, at least, concealed themselves.'

The elaborate organization of the brothels at Vijayanagar in the 15th cent. is described by Abdur-razzāk, *Matlā'us-salā'in* (Elliot, iv. 111 f.).

2. *Temple-dancers.*—The appointment of women as dancers and courtesans in connexion with the greater Hindu temples is not peculiar to India (*GB*³, pt. iv., *Adonis*, *Attis*, *Osiris*, London, 1914, i. 57 f.). Such women are known in India as *dēvadāsī* or *devaratīāl*, 'slaves of the gods,' or in Travancore as *kudikkār*, 'those who belong to the house.'

'The rise of the caste and its euphemistic name seem both of them to date from about the 9th and 10th centuries A.D., during which much activity prevailed in S. India in the matter of building temples and elaborating the services held in them. The dancing-girls' duties, then as now, were to fan the idol with Chāmara, or Tibetan ox-tails, to carry the sacred light called Kumbhārti, and to sing and dance before the god when he was carried in procession. Inscriptions (*South Indian Inscriptions*, ed. E. Hultzsch, Madras, 1890-1902, ii. pt. iii. p. 259) show that in A.D. 1004 the great temple of the Chola king Rājārāja at Tanjore had attached to it 400 *taik'cheri pendugul*, or "women of the temple," who lived in free quarters in the four streets round it, and were allowed tax-free land out of its endowments. Other temples had similar arrangements. At the beginning of the last century there were one hundred dancing-girls attached to the temple at Conjeevaram' (F. Buchanan, *Journey from Madras*, London, 1807, i. 12 f.), and at Madura, Conjeevaram and Tanjore there are still numbers of them who receive allowances from the endowments of the big temples at those places. In former days the profession was countenanced not only by the Church but by the State. Abdur Razāk, a Turkish Ambassador to the Court of Vijayanagar in the 15th cent., describes women of this class living in State-controlled institutions, the revenue of which went towards the upkeep of the police. [A similar account of the State regulation of prostitution at Golkonda is given by J. B. Tavernier, *Travels in India*, ed. V. Ball, London [1889], i. 157.] At the present day they form a regular caste, having its own laws of inheritance, its own customs and rules of etiquette, and its own panchayats [caste councils] to see that all these are followed, and thus hold a position which is perhaps without a parallel in any other country. Dancing-girls dedicated to the actual profession are generally married in a temple to a sword or a god, the *taik* [gold trinket worn round the neck as a symbol of marriage] being tied round their necks by some man of their caste' (*Census of India*, 1901, xv., 'Madras', Madras, 1902, i. 151 f.; for full accounts of the *dēvadāsīs* see Thurston, ii. 125 f.; J. A. Dubois, *Hindu Manners, Customs, and Ceremonies*, Eng. tr.³, Oxford, 1906, pp. 337, 584 f.; *Census of India*, 1901, xxvi., 'Travancore', Trivandrum, 1903, i. 276 f.; V. Nagam Aiyar, *Travancore State Manual*, do. 1906, ii. 383 f.; R. V. Russell, *TC Central Provinces*, London [1916], iii. 374 f.; for other references see *GB*³, pt. iv., *Adonis*, *Attis*, *Osiris*, i. 61 f.).

In W. India this class of women is known as *bhāvin* (Skr. *bhāvinī*, a handsome, wanton woman), *devī* (Skr. *devatā*, an attendant on an idol), or *nāikin*, 'mistress,' 'procuress.' They are said to be descended from the female servants of the Sāvant-vādī or Mālvan chiefs, but some of them are of earlier origin, and their ranks have been recruited from the households of the chiefs—women of other Sūdra castes, besides Marāṭhas and Bhandāris, who may become *bhāvins* by pouring water from the god's lamp in a temple over their heads.

When a *bhāvin* girl attains puberty, she undergoes a form of marriage with the god, the rite being performed both at the girl's house and in his temple by the officiant (*gurav*, *rāut*). These and other servants of the temple go in procession to the house of the girl, taking with them a dagger and the mask of the god. The marriage rites are performed in the usual way, with the lighting of the sacred fire (*homa*), the mask taking the place of the bridegroom. The rite involves considerable expenditure, and in some cases, with a view to economy, the girl worships Ganaapati or Gapeśa, god of enterprises, and goes to the temple accompanied by a party of her own caste and temple servants, taking in her hand a coco-nut and a packet of sugar. She places these things before the image of the god and bows to him. The *gurav* and other temple servants then invoke on her the blessing of the god, and the ceremony ends.

The *bhāvin* practises prostitution, and differs from common prostitutes only in being dedicated to the god. From her children she chooses two or three to succeed her as temple servants. In the social scale she ranks below the *kuḷāvant*, the

¹ See art. KANCHIPURAM

higher class of courtesan, who is not allowed to sing and dance in public. Her duties in the temple are to sweep and purify the floor by washing it with cow-dung and water, and to wave a fly-whisk before the god. The male members of the caste, known as *devli*, blow the temple horns and trumpets to wake the god from his slumbers. They are paid partly in cash and partly by a share of the offerings (*Ethnographic Survey, Bombay*, monographs 60, 92, Bombay, 1907-09; BG x. [1880] 128). In Mārwar a class of dancing-girls and prostitutes is known by the ironical title of *bhagtan* or *bhagtāni*, 'wives of a *bhagat*, or holy man.'

'It is necessary for a daughter among them to be nominally married before she enters on her profession, as it is considered a sin to allow their maiden girls to offer themselves to their infamous employment before the ceremony of marriage is performed. No betrothal takes place in such cases, and the girl is only nominally married to a Sādhū [one of the Hindu ascetic orders], who is always prepared to give up every connection with his bride on payment of a rupee and a half. If, however, no Sādhū is available, the ceremony of *phera* [circumambulation round the sacred fire] is performed by procuring the portrait of Ganesha, a Hindu divinity, invoked at the commencement of every affair' (*Census Report Mārwar, 1891*, Jodhpore, 1894, ii. 124).

3. Prostitutes under British rule.—Since the abolition of the Contagious Diseases Act there has been no regular supervision of prostitutes, and, as it is impossible to draw the line between those who practise the trade as profession and those who prostitute themselves in a surreptitious way, no statistics are available. At the last census they were included in the class of unproductive labour, with beggars, vagrants, receivers of stolen goods, and cattle poisoners (*Census of India, 1911*, i. 'India,' pt. ii. [Calcutta, 1913] 432). At the present day prostitutes in N. India are known as *tavāif* (pl. of Arab. *tāifa*, 'troop,' 'band'), *pātar*, *pātur*, *pāturiya* (Skr. *pātra*, 'an actor'), *kanchan*, 'golden,' *randī*, 'widow,' or *kasbī* (Arab. *kasb*, 'acquiring,' 'earning'), while those who practise the trade secretly are called *khanagi*, 'those of the house,' or *harjāi*, 'gadabout.' They are often recruited from widows or women expelled from caste for immorality or other misconduct. In the port towns, like Calcutta and Bombay, they are sometimes Eurasians or foreign women, mostly French or Austrians. Native prostitutes often live in brothels managed by a procuress (*nāika*, *sāgin*, *bhangerin*) who treats her customers to tobacco and various compounds of opium or hemp (W. Hoey, *Trade and Manufactures in N. India*, Lucknow, 1880, p. 176). Many of the gypsy-like nomadic tribes in N. India prostitute their girls. Thus, the Bediās of N. India reserve nearly all their girls for prostitution, and the men keep concubines drawn from other castes; in some places, if a man marries a girl of the tribe, he is expelled, and if he marries a girl who has been reserved for prostitution, he is fined by the council (Crooke, *TC*, Calcutta, 1896, i. 245). The Kolhātis of Bombay are to a large extent dependent on the prostitution of their women, a girl on attaining puberty being allowed to choose between marriage and prostitution; if she chooses the latter occupation, she appears before the caste assembly, and, with the consent of its members, becomes a prostitute; the tribe is now kept under supervision, as they sometimes kidnap high-caste girls to bring them up as prostitutes. The same is the habit of the Harnis, Berads, and Māng Gārudas of the Deccan (M. Kennedy, *Notes on the Criminal Classes of the Bombay Presidency*, Bombay, 1908, pp. 13, 122, 274, 283). The Dombars, a caste of acrobats in Mysore, are notorious for dedicating their smart and good-looking girls as prostitutes. In a troupe one girl is generally reserved for this trade.

The dedication is made when the girl comes of age, when, on an auspicious day, the caste people assemble by invitation. The girl is bathed and seated on a rice-pounder before the

assembled caste people. Married women or dedicated prostitutes smear her with red powder and turmeric, pour rice over her, and fill her garment with coco-nuts, rice, and other lucky substances. On rising, she bows to the elders of the caste and receives their blessing. She is then taken in procession to the temple of Anjaneya or Yallammā, a man beating a drum and the women singing. She is given holy water (*tirtha*) by the priest, and she is again seated on a rice-pounder in the midst of her caste people. Rice is poured over her by *basavi* prostitutes and married women, and the ceremony ends with a feast. She is then made over to her first lover.

Such women are said to remain faithful to their protectors when kept as concubines, and it is asserted that they may be flogged and fined by the castemen if they prove false. A woman who does not enter into a connexion more or less permanent with a man is free to consort with other men, provided her lover be not of a caste lower than her own. A *basavi*, or dedicated prostitute, if she wishes to live a chaste life, can be married, and she then ceases to perform acrobatic feats in public. Her children born before the marriage are left with her relatives (monograph 13, *Ethnographic Survey, Mysore*, Bangalore, 1908, p. 12 f.). In the same province the Bedā, Gollā, Kurubā, Mādīgā, and other castes often dedicate their eldest daughter, in a family where no son has been born, as a *basavi* prostitute; and a girl falling ill is likewise vowed to be left unmarried, with the usual result (B. L. Rice, *Mysore*, rev. ed., Westminster, 1897, i. 256).

LITERATURE.—The authorities have been quoted in the article; see also Al-Birūnī, *India*, ed. E. C. Sachau, London, 1910, ii. 142 ff.

W. CROOKE.

PROSTITUTION (Roman).—The difference between Roman and Greek views on this subject flows not so much from a deeper appreciation of the family¹ on the part of the former as from a deeper conception of personality and of the value of the individual citizen as such, independent of sex. Doubtless there was hence reflected back upon the family a sentiment that contributed much to the enhancement of its dignity and authority; but the primary result was to create an attitude of mind, on the part of men, towards free Roman women in general, and especially towards them as wives, entirely different in quality from that exhibited among the Greeks. This is not to say that the legal position of the Roman woman was actually very different from, though it was certainly superior to, that of her Greek sisters. Especially as wife and mother (*materfamilias*), her position was one of dignity and esteem; she was not servant, but mistress ('ubi tu Gaius, ego Gaia,' ran the old marriage formula). She was denied neither freedom of movement nor share of social intercourse, within or without the house.² Custom debarred her from direct access to public affairs, but her position was free from any suggestion of intentional personal abasement, though it was true that in the older Roman system she was subject in law in the strictest degree to her husband or other male *tutor* (see T. Mommsen, *Hist. of Rome*, Eng. tr., new ed., London, 1901, i. 74 f.).

The Greek influence, when it was finally brought to bear upon Roman society, proved one of its

¹ Cf. Cic. *de Off.* i. 54: 'nam cum sit hoc natura commune animantium, ut habeant libidinem procreandi, prima societas in ipso coniugio est, proxima in liberis, deinde una domus, communia omnia; id autem est principium urbis et quasi seminarium rei publicae.'

² Cf. Corn. Nepos, *Prasut.*: 'Contra ea pleraque nostris moribus sunt decora, quae apud illos turpia putantur. Quem enim Romanorum pudet uxorem ducere in convivium? aut cuius materfamilias non primum locum tenet aedium, atque in celebratitate versatur? quod multo fit aliter in Graecia. Nam neque in convivium adhibetur, nisi propinquoque; neque sedet, nisi in interiore parte aedium, quae *gynaecoonitis* appellatur, quo nemo accedit, nisi propinqua cognatione coniunctus.' For freedom of social intercourse see Cic. *pro Cael.* 20: 'qui dicerent uxores suas a cena redeunte atretractas esse a Caelio'; cf. Plut. *Rom.* 20: 'Ἄλλα μέντοι πολλὰ ταῖς γυναῖξιν εἰς τιμὴν ἀπέδωκαν . . . ἐξίστασθαι μὲν ὁδοῦ βαδίζουσας, κτλ.; Cic. *Verr.* i. 94.

most powerful solvents, so that the tone of those grades of society which find expression in the literature of the Empire was in complete discord with that of the early Republic. It is, in fact, a striking phenomenon that, while the Greeks, on the one hand, made no pretensions to any loftiness of principle in reference to the intercourse of the sexes, but maintained upon the whole a high degree of outward decency, the Romans, on the other hand, whose principles, and for a long time their practice, were upon a higher plane, exhibited a declension which apparently reached a depth far below that ever attained by the Greeks, save in isolated cases. This difference must, in part, be explained by the existence in the Roman of some deep-lying coarseness of instinct, due perhaps to some early racial (Etruscan?) infusion. A curious result was that in Greece it was the free lances of love (the *ἐραῖποι*) who in individual cases attained to great wealth and to social and political influence; in Rome the class of professional prostitutes remains throughout in the shadows of the background,¹ the adventuresses whose charms make them a power in politics being drawn exclusively from the ranks of free-born Roman society ladies (e.g., the fascinating Clodia, the notorious sister of Cicero's enemy, P. Clodius; see G. Boissier, *Cicero et ses amis*², Paris, 1884, p. 174f.). The economic emancipation of Roman women, the relaxation of the family tie, and the vogue of the laxer forms of marriage are symptoms of a moral disintegration that has no parallel in the history of society in Greece, and one all the more grave as it was for the most part independent of economic pressure.

As a matter of strict principle, then, among the Romans prostitution was *per se* shameful (*flagitium*)—for both parties. That this was the Roman sentiment, at its best, is clear enough even from the passage in which Cicero, with his usual verbose insincerity as an advocate, denies it (*pro Cal.* 48: 'Verum si quis est, qui etiam meretricis amoribus interdictum iuventutis putet, est ille quidem valde severus—negare non possum—sed abhorret non modo ab huius saeculi licentia, verum etiam a maiorum consuetudine atque concessa. Quando enim hoc non factum est? quando reprehensum? quando non permittum? quando denique fuit ut quod licet non liceret?').³ Perhaps from the earliest times there was in use in Rome a system of police registration analogous to that found now in most European countries. Women adopting the career of a prostitute (*meretrix, scortum, prostibulum, amica*) were required to register themselves at the aedile's office, and to take out a licence upon payment of a tax. The register gave full personal details of the licensee, with her professional name and price, etc. Once placed upon the register, the name could never be erased, but remained as a perpetual memorial of shame. That is to say, the moral turpitude of the act of prostitution itself (*quaestum corpore facere*) was felt to override completely all other aspects, so that recovery of status was for ever foreclosed. The unwillingness of the Roman mind to draw upon its own facility of legal fictions in order to open a way to repentance and recovery for the prostitute is in startling contrast to the humane and reasonable attitude of the Greeks towards this class. From this same thoroughgoing attitude of the Romans sprang also the minute regulations which imposed upon prostitutes a distinctive dress,⁴ dyed hair, or yellow wig, and other civil disabilities, designed to mark them out for public reprobation and to penalize their profession.

As wealth and luxury increased, and the spiritual strength of the Republic decayed, while Greek, and especially Oriental, models of profligacy, springing from a quite different religious and social conception, poured into Italy in an ever-swelling flood, these repressive regulations were of no avail to prevent the recruiting of the ranks of open or

secret prostitutes from even the upper strata of society. Amid the general depravity prostitution ranked merely as one form, and that not the gravest, of immorality. As emperor, Tiberius tried to check it by more stringent enactments,⁵ but his own *libido effrenata et indomita*, real or suspected, made it impossible for him to exercise any authority over the licence of the age.⁶ Caligula even exploited the registered prostitutes as a source of revenue.⁷ The prostitute's tax continued to be levied until the time of Theodosius in the 4th cent., and was not finally abolished until a century later, by Anastasius I., when the old registers of the prostitutes were also consigned to destruction. Justinian, in the 6th cent., removed some of the civil disabilities of prostitutes (possibly only to enable himself to marry the reformed prostitute Theodora; see E. Gibbon, *Decline and Fall*, ed. J. B. Bury, London, 1898, iv. 215).

Probably the influence of Theodora is to be seen in the interesting experiment made by Justinian, who converted a palace on the Asiatic side of the Bosphorus into a monastery as a rescue home for 500 reclaimed prostitutes of the capital. Here, to be saved from themselves, they were kept in a perpetual seclusion, to which many preferred suicide, so that the experiment was a failure. It marks, however, an approach to the modern attitude of charity and sympathy in dealing with the class, as contrasted with both its theoretical repudiation by the Romans and its frank acceptance by the Greeks. So far as our scanty knowledge goes, neither the Greeks nor the Romans had to face the problem of dealing with prostitution in the interests of national hygiene. The Roman system of registration and public supervision is of interest in that it represents practically the utmost that, as yet, appears possible in dealing with this problem. With the exception that there is no tax, and that the door to recovery is not legally closed, the procedure of most of the Continental peoples is simply a reversion to the Roman system. The object of both is the same, namely, outward control of the phenomenon in the interests of public order and decency; to this, for modern societies, the protection of public health falls to be added as a further complication, towards the solution of which the ancient procedure can offer no suggestion.

LITERATURE.—Save for incidental references, mainly upon the general subject of social morality under the Republic and the Empire, nothing dealing with this specific topic is known to the present writer. W. J. WOODHOUSE.

PROTAGORAS.—Protagoras was the most famous of the Greek sophists of the 5th cent. B.C. (see SOPHISTS).

1. Life and writings.—Protagoras was a native of Abdera in Thrace. Plato, our best authority, tells us that he was seventy years old when he died, and that he had spent forty years in the practice of his profession (*Meno*, 91 E), and he visited Athens not for the first time after the production (in 420 B.C.) of a play by Pherecrates. With such data as we have, his birth seems to fall between the limits 490 and 480 B.C. The subjects

¹ Of course they are frequently alluded to, especially by the poets, but not in such a way as to reveal any specifically Roman details, or to make it necessary here to multiply quotations which do little more than prove the existence and wide prevalence of vice in Roman brothels and other meeting-places.

² When it suits his purpose, his language is very different; e.g., *pro Mil.* 55: 'ille, qui semper secum scorta, semper exoletos, semper lupos duceret,' and cf. *Cat.* ii. 10.

³ Prostitutes might not wear the matron's stola, but must wear a toga of sad stuff (*toga pulla*): cf. *Juv. Sat.* ii. 69 f.: 'talem non sumet damnata togam'; *Hor. Sat.* i. ii. 63: 'quid interest in matrona, ancilla peccesne togata?'; and cf. *Cic. Phil.* ii. 44: 'qui te a meretricio quaestu abduxit et, tamquam stola dedit, in matrimonio stabili et certo collocavit.'

⁴ *Tac. Ann.* ii. 85: 'gravibus senatus decretis libido feminarum coercita cautumque, ne quaestum corpore faceret cui avus aut pater aut maritus eque Romanus fuisset. Nam Vestigia, praetoria familia genita, licentiam stupri apud aediles vulgaverat, more inter veteres recepto, qui satis poenarum adversum impudicas in ipsa professione flagitii credebant'; cf. *Suet. Tib.* 35: 'feminae famosae, ut ad evitandas legum poenas iure ac dignitate matronali exsolverentur, lenocinium profiteri coeperant.'

⁵ Cf. W. E. H. Lecky, *Hist. of European Morals*³, London, 1890, ii. 803: 'There have certainly been many periods in history when virtue was more rare than under the Caesars; but there has probably never been a period when vice was more extravagant or uncontrolled.'

⁶ *Suet. Cal.* 40: 'ex capturis prostitutarum quantum quaeque uno concubitu mereret,' etc.

that he taught included oratory, grammar and the right use of words (Plato, *Phædr.* 267 C; Diog. Laert. ix. 53), the interpretation of the poets (Plato, *Protag.* 339 A ff.), and, generally, those accomplishments which enabled a Greek to take a prominent part in the politics of his native city (*ib.* 319 A). His popularity was unbounded (*ib.* 309 C, *Theæt.* 161 C): Plato even pits him against Homer as an authority on the education and improvement of mankind (*Rep.* 600 C). At the same time, like Socrates, Protagoras incurred the dislike of certain sections of society typified by the demagogue Anytus (*Meno.* 91 B-92 C). The publication of a work on the gods is connected with the traditional story which we find in Cicero (*de Nat. Deor.* i. 63) and earlier still in Timon (Sext. *Emp. adv. Math.* ix. 55-57), that the Athenians condemned Protagoras and publicly burnt all the copies of his book which they could collect; and that he saved himself by flight, but on the voyage to Sicily was drowned at sea. This account receives some slight support from the words ἀνακρίψετε . . . κατάδύς in Plato (*Theæt.* 171 D).

A few fragments, or at least the titles, survive of some sixteen works attributed by the ancients to Protagoras (Diog. Laert. ix. 55; H. Diels, *Die Fragmente der Vorsokratiker*², Berlin, 1906-10, p. 536). They dealt mostly with literature, rhetoric, or education. The title of the work, which contained the famous maxim that man is the measure of all things, is quoted by Sext. *Emp. (adv. Math.* vii. 60) as καταβάλλοντες (*sc. λόγοι*), but the reader of Plato is forced to infer from many allusions that the work was commonly known as the *Truth* of Protagoras (J. Bernays, *Gesammelte Abhandlungen*, Berlin, 1885, i. 117-121). Considering his great fame, it would be interesting to recover some specimens of his style; Gomperz conjectured that the apology for medicine, one of the tracts in the Hippocratean corpus, is by Protagoras. With greater certainty peculiarities of his stately method can be inferred from Platonic imitations (*Protag.* 316 C ff., 320 C-322 D, 333 D ff., 339 A-D, perhaps even 342 A ff., *Theæt.* 165 E-168 C) and from the unmistakable allusions of Aristophanes in the *Clouds* (112-114, 658-671, 677-679), though the sophist is not named in that play.

2. *Doctrine.*—In the dialogue of Plato named after him Protagoras appears as an exponent and champion of customary morality—Plato's δημοτική ἀρετή. The human instincts of reverence and right (αἰδώς, δίκη) are the weapons by which helpless man has been protected against the teeth and claws of other animals (*Protag.* 322 C, 329 C). Man's history is a record of progress; the criminals of a civilized society would be virtuous if compared with down-right savages (*ib.* 327 D). Hence the aim of legislators and educators is to displace harmful opinions by wholesome and profitable ones (*Theæt.* 167 A ff.). Hence, too, the aim of punishment should be to reclaim the offender and to deter others from his offence (*Protag.* 324 A ff.). Virtue is inculcated in an enlightened community by public opinion, by good laws and institutions, forces working silently (*ib.* 324 D ff.). Of the vagueness and contradictions of this unwritten code the sophist has little conception. Indeed, when the Platonic Socrates offers him a foundation in the shape of a hedonistic first principle (*ib.* 351 C ff.), he declines to accept it, and even argues against it. The same vagueness is shown in the sophist's claim to turn the 'weaker' into the 'stronger' case (τὸν ἥττω λόγον κρείττω ποιεῖν). The desire to excel was a passion with Greeks, especially to win forensic honours; why should the pursuit of this branch of excellence impair another—a scrupulous regard for right? Absolute inability to see where the Socratic elenchus will

land him is a main feature of comic relief in Plato's presentation of Protagoras, as of other early sophists. Among other tendencies of his time, Protagoras took part in the protest of philosophers against the theological opinions of the poets. His famous utterance runs thus:

'Of the gods I cannot say whether they exist or not, nor of what nature they are. For there are many obstacles to inquiry, especially the obscurity of the problem and the shortness of life' (Diog. Laert. ix. 51).

Here the nature of the gods is obviously the real problem, and frank agnosticism, however provocative of odium, was in keeping with the highest thinking of an era of 'enlightenment.' The most original opinion ascribed to Protagoras is of course that man is the measure of existence and non-existence. Ever since its publication this maxim has been a subject of controversy, as Plato's *Theætetus* proves. It seems to be an affirmation of the subjective element in all experience, all thought and language. There may have been need for such emphasis in Greece, but in Rome the very forms of giving evidence (*arbitror, videtur mihi*) were a perpetual reminder that in the law-court, at any rate, in the investigation of facts, it was impossible to go behind the individual. Some say that the maxim amounts to a recognition of the relativity of knowledge. It should rather be 'of opinion.' There is nothing in it to forbid the conclusion that absolute knowledge is impossible, but that opinions are relatively true; and so Plato seems to have understood it. That its author never intended it to bear any destructive practical consequences is admitted by Plato (*Theæt.* 165 E-168 C). Nor would it be fair to link it up, as Plato has done, with Heraclitean doctrine—'all things are as they seem to all,' for 'all things flow like a stream'—or with a subtle theory privately imparted to disciples (*Theæt.* 155 ff.); and, though Sextus fathers this theory on Protagoras (*Pyrh. Hypotyp.* i. 217), he cites no authoritative work, and may therefore be presumed to bedevil upon Plato. Lastly, the brilliant defence put into the mouth of Protagoras by his critic (*Theæt.* 166 C ff.) suggests that the author of the dialogue had become conscious that his handling of the maxim had been somewhat too free, and that he wished to redress the balance. Generally speaking, it is most improbable that the first framer of such a maxim could have foreseen, much less intended, all that acute metaphysicians like Plato and Aristotle have deduced from it. Even the psychological implications of the doctrine were but imperfectly understood at a time when no one could explain why perceptions of tastes and flavours were variable, while men agreed in their perception of weight. It seems safest, therefore, to make of Protagoras neither a positivist nor a pragmatist, whatever superficial analogies to these later doctrines may be ingeniously read into his maxim.

PROTECTION.—See ECONOMICS.

PROTESTANTISM.—1. *Derivation and definition.*—The Lat. *protestari*, a post-Augustan word found in Quintilian and frequent in law, means 'to profess,' 'bear witness (or declare) openly,' so that it is nearly equivalent to *proferri*; in both cases the preposition adds the idea of openness or publicity to that of witness or declaration. It has no inherent negative force as a protest against

something, though it is often used in law as a declaration that the speaker's meaning has been misunderstood.

Of the cognate English words, we find 'protestation' in Hampole (c. 1340), and thenceforth they imply, like the Latin, an open declaration.

Thus in Shakespeare, *Much Ado about Nothing*, v. 1. 149: 'Do me right, or I will protest your cowardice'; *Macbeth*, v. ii. 11: 'Youths that even now protest their first of manhood.'

The negative meaning common in modern English came in later. Thus a bill might be 'protested' (from 1622), i.e. an open declaration made that it had been presented and not paid. There were also 'protestations' (later 'protests') in the Lords from 1626 and in the Civil War, though they were not common till after the Restoration. Johnson, however (1755), still defines 'protestation' as 'a solemn declaration of resolution, fact, or opinion,' though he notices the negative meaning under the noun 'protest.'

2. **Theological meaning.**—The word received a technical meaning in theology from the protest made by the Lutheran princes and some free cities before the Diet at Speyer in 1529. An earlier Diet at Worms in 1521 had put Luther to the ban of the Empire and ordered the suppression of heresy. But the heresy spread nevertheless, and, when another Diet met at Speyer in 1526, it was supported by strong princes, and a compromise had to be made on the principle of 'Cujus regio, ejus religio.' It was decided, and that unanimously, that, till a General Council met, every prince should be free to make religious changes if he thought fit. But by a second Diet at Speyer in 1529 the compromise was annulled; all further innovations were forbidden to Lutheran princes, and the Zwinglian doctrine was made unlawful. Hereupon (19th April) the 'protestation' was drawn up. In it the princes (of Saxony, Brandenburg, Brunswick-Lüneburg, Anhalt, Hesse) and fourteen cities (some of them Zwinglian) declare that they will not carry out the new edict or tolerate the Mass in their dominions, further maintaining that the unanimous decision of one Diet could not be reversed by a mere majority in another, and that, as they had acted according to Scripture and conscience, they could not in any case admit the right of a majority to control them. There is no question here of any particular doctrines—only an assertion of the liberty of particular churches; the actual doctrines of the princes were set forth next year in the Confession of Augsburg.

3. **Lutherans and Calvinists.**—Thus 'Protestants' at first meant Lutherans as opposed alike to Papists and Zwinglians. The word was convenient from a political standpoint, and came into use in spite of Luther's own dislike of it, so that it soon became the current name for Lutherans in Germany and England. Then came a double development. On one side the Romanists persisted in stigmatizing the heretics of the Reformation all over Europe as Lutherans; on the other the heretics themselves came to adopt from the Lutherans the common name of Protestants. The unifying force was the consciousness of a common cause against Rome; but it worked slowly. The breach between Luther and Zwingli in 1529 was never made up. So four of the fourteen cities presented a separate Confession (*Tetrapolitana*) at Augsburg, and Zwingli sent a third. Calvin some years later signed the Augsburg Confession of his own accord; but all through the second half of the 16th cent. Lutherans and Calvinists hated each other almost as they hated Rome. The Lutherans established their principle of 'Cujus regio, ejus religio' at the Peace of Augsburg in 1555, and henceforth were (so to speak) respectable heretics, but the Calvinists had no protection. They bore the brunt of

the battle with Rome, and they gained on the Lutherans in Germany. So the quarrel was bitter, and the misfortunes of the first period of the Thirty Years' War (1618-24) were in great part caused by the unwillingness of Lutheran princes to help Calvinists, and it was only under the pressure of the calamities which followed that they learned to sink their differences under the common name of Protestants.

4. **Anglican usage.**—In England the Lutherans had little influence after the time of Henry VIII., and their consubstantiation is repudiated in Art. xxviii. ('only after an heavenly and spiritual manner'). The Reformers looked to Bullinger and Calvin, rather than to Melancthon and Chemnitz. In doctrine, then, the Church of England leaned more to Calvin; but it had a political tie with Lutheranism. Among the ever-changing phases of Elizabeth's policy in her early years was the idea of gaining something from the Peace of Augsburg, by trying to pass herself off as substantially a Lutheran ruler ordering the religion of her own people like the German princes. The strange tricks in her private chapel indicate this policy rather than any leaning to Romanism. Moreover, she appreciated the Erastian obedience of the Lutherans, and detested the ecclesiastical independence of Calvinism. Thus there was a true affinity between the Erastian church of Elizabeth and the Erastian churches of N. Germany, and English Churchmen of the official sort learned to call themselves Protestants like the Lutherans, while the Puritan section clung to Geneva, and was not forward to adopt the name. It is not found in any revision of the Book of Common Prayer, nor in Jewel's *Apology* (London, 1567), and even the Canons of 1604 only claim that the Church of England is 'a true and apostolical church.' But by 1608 we find mention of 'Papists, Protestants, Puritans, Brownists,' where the word is used strictly of the Church in opposition to Puritans as well as Romanists. In this sense it became a watchword of the Caroline divines, and was frankly adopted by Laud himself. Even Chillingworth's *Religion of Protestants a Safe Way to Salvation* (Oxford, 1638) has the Church in view, and forms a transition to a wider meaning only because the supremacy of Scripture is the doctrine of all the Churches of the Reformation. So, too, when Charles I. declares his attachment to the Protestant religion, he is disavowing Popery and Puritanism together. So also Laud. But what the Thirty Years' War did for Germany was done for England by the Puritan policy of the Commonwealth and the Protectorate and by the Romanizing policy of the Stuarts. In different ways both brought the Nonconformists nearer to the Church in a common consciousness of antagonism to the common enemy, so that they began to be known as Protestant dissenters in contrast with Popish recusants and some of the extreme sectaries. Thus Protestantism became a general name for every sect sprung from the Reformation which could be considered passably orthodox. The Quakers were included, but the claim of Socinians and Deists was more doubtful. They are not among the Protestant dissenters relieved by the Toleration Act. We find 'Protestant dissenters' in a bill of 1672, and constant mention of the Protestant religion or the Protestant interest. At the Revolution the Prince of Orange declares (10th Oct. 1688) that he comes over because the Protestant religion is endangered; Delamere in Cheshire rises in defence of it; and the Bill of Rights limits the Crown to such persons as 'being Protestants' shall make the declaration imposed on members of Parliament in 1678 denying transubstantiation and disavowing the worship of the

Virgin Mary or any other saint and the sacrifice of the Mass as 'superstitious and idolatrous.' By the Act of Settlement the sovereign must be a Protestant—perhaps a Lutheran like George I.—but he must 'join in communion with the Church of England as by law established.' So the law still remains, except that the declaration of 1678 was abolished for members of Parliament in 1829, and softened for the King in 1911, though he is still required to be a Protestant.

5. The modern view.—The word has undergone no serious change of meaning since the end of the 17th century. But, being now opposed to Romanism instead of to Puritanism, it was disliked by some of the High Churchmen a century ago, such as Alexander Knox; and it is now cordially detested by the Tractarians and their successors, not only as summing up most of the things that they chiefly hate, but even more as linking the Church of England with Churches of Christ which they count no better than unlawful assemblies. But, if we look at the general position—at things instead of words—there can be no doubt that the official doctrine of the Church of England is as definitely Protestant as it can well be. To sum up in the words of Bishop Stubbs of Oxford:

'While, however, I distinctly claim for our Church her full Catholic character unembarrassed by any such committal [to the dogmatic utterances or disciplinary machinery of any of the communities that have called themselves Protestant], I would in the strongest way condemn the idea that would repudiate the name of Protestant as a mere name of negation, as well as the notion that the maintenance of Protestant negation is the whole or the most important part of our religious work and history. I should unhesitatingly reject the theory that regards Protestantism by itself, either at home or abroad, as a religious system devoid of spiritual constructive energy' (*Visitation Charges*, London, 1904, p. 342).

LITERATURE.—It will be enough to name *OED* vii. 1504 f.; W. Wace, in *Church and Faith* (Essays on the teaching of the Church of England by various writers), Edinburgh and London, 1899; the ordinary histories of the Reformation, and for the Continent the elaborate art. by F. Kattenbusch, in *PRE³* xvi. 136 ff.

H. M. GWATKIN.

PROVERBS.—1. Definition.—While the formal definition of a proverb is difficult to frame, and every authority attempts to give his own, there is a general agreement as to the chief characteristics of proverbial sayings. Four qualities are necessary to constitute a proverb: brevity (or, as some prefer to put it, conciseness), sense, piquancy or salt (Trench), and popularity. Aristotle, in writing of proverbs, embodied three of these properties in defining them as 'remnants which, on account of their shortness (*συνοπλῆς*) and correctness (*δεξιότης*), have been saved out of the wrecks and ruins of ancient philosophy.'¹ More modern definitions, such as 'a short pithy saying in common and recognized use,'² or 'much matter decocted into a few words,'³ or 'the wisdom of many and the wit of one,'⁴ set forth the same elements in slightly varying phraseology. Mere brevity, however, will not give an expression the force of a proverb; it must in every case present a serious thought, and expressions dealing with trivialities can never gain the force and prestige of proverbial sayings. By piquancy or salt we understand the wit that is embodied in a genuine adage. In its wit the proverb expresses a pungent criticism of life which frequently has a flavour of cynicism about it. On this quality depends the power of a proverb to do more than amuse the hearer. Its wit, like the barb of an arrow, makes the maxim

stick in the memory. There are many sayings in all literatures which are not recognized as proverbs because they lack the element of popularity. To attain the rank of a proverb, a saying must either spring from the masses or be accepted by a people as true. In a profound sense it must be the *vox populi*. Eiselein, a German collector of proverbs, has emphasized this element in his definition: 'A proverb is a sentence coined with the public stamp, current, and of acknowledged value among the people.'¹ To put it more briefly, a proverb is a household word of the people. James Howell, an English paræmiographer, incorporated in his collection 500 proverbial sayings which he himself invented, but, as they were not coined with the public stamp, they have never been used or quoted.² A true proverb, then, is a spontaneous growth out of the soil of national character; it is in a sense autochthonous, and among the people who gave it birth it possesses a finality from which there is no appeal. This popular element is implied in the etymology of both the Latin and Greek terms. In the former language the term was *proverbium*, signifying 'a word uttered in public.' The synonym *adagium*, which is usually traced to the phrase *ad agendum aptum*, and from which we get our English 'adage,' besides suggesting this popular origin, also suggests a moral tone and brings out the practical nature of the proverb. The Greek correlative is similar in import, *παροιμία*, signifying a trite roadside expression.

The stamp of public approval gives proverbs a profound influence even when they convey a false morality. A genuine proverb may not embody a true ethical principle, yet it is an index to what the people regard as true, and presents their ideals of life and conduct. Certain groups of proverbs have a peculiar authority for a special, and in a sense an artificial, reason. All the sayings of the canonical book of Proverbs among Jews and Christians, those of the Vedic writings among the Hindus, and those that are embedded in the Qur'an among Muslims have wielded a tremendous authority, on account of the inspiration claimed for these books. Many of the sayings of Jesus are in the form of proverbs, and He frequently used proverbs to make His teaching impressive. He took some from Jewish literature and others from the current speech of the people; still others He coined Himself. The authority of these and their influence on ethics and religion are due to the unique position of authority in which the Founder of Christianity is acknowledged to stand. In the sphere of religion the proverbial sayings of Jesus have exercised the widest and most pervasive influence of any group of proverbs.

2. **Origin.**—In discussing the origin of proverbs it is necessary to make a sharp distinction between the popular proverbial saying and the literary proverb, or gnome. The latter is the product of reflection, and its final form is likely to be the result of considerable literary polishing, while the former is naive and was originally uttered spontaneously and in connexion with some occasion or event that stirred the imagination. It is in keeping with its popular origin that the author of a genuine proverb is unknown; it is a spontaneous utterance which has been called forth by an unusual and stirring incident or experience. It originated with the people and has gained circulation and authority through universal acceptance of its

¹ According to Aristotle, proverbs are important for the following reasons: ὅτι παλαιὰ εἰσι φιλοσοφίας ἐν ταῖς μεγίσταις ἀνθρώπων φθοραῖς ἀπολομένην ἐγκαταλείμματα περισωθέντα διὰ συνοπλίαν καὶ δεξιότητα (ascribed to Aristotle by Synesius, *Encomium Calvitii*, ed. 'Turneh,' p. 59).

² *OED*, s.v.

³ Thomas Fuller, *Gnomologia, Adagies, and Proverbs*, 2 vols., London, 1732, pp. 1723-31.

⁴ Lord John Russell (1792-1878).

¹ J. Eiselein, *Sprichwörter des deutschen Volkes*, Freiburg, 1840, p. x: 'Das Sprichwort ist ein mit öffentlichem Gepräge ausgemünzter Satz, der seinen Curs und anerkannten Werth unter dem Volke hat.' In this connexion the famous definition of Erasmus (*Adagiorum Chiliades tres*) may be given: 'Celebre dictum, scilicet quaplam novitate insignit.' The second part of this definition is not generally accepted by recent investigators.

² *Proverbs and Old Sayed Savos and Adages*, London, 1659.

truth. The sages of Israel may have started with the popular proverb as the basis of their work, but their finished product shows evidence of careful literary workmanship. The literary flavour of the gnome is unmistakable, and its lineage can very frequently be traced. If this distinction is maintained, the polished gems of the canonical book of Proverbs are gnomes. They are fruits of long reflexion.

The genuine popular proverb takes us back to the infancy of races and civilizations; in their origins they belong to the age which gave birth to the folk-song and the ballad. The OT reveals the manner of the genesis of the folk-proverb. An impressive event called it forth. The incongruity of the situation when Saul fell under the influence of the prophetic ecstasy produced such a profound impression on the popular mind that it led to the utterance of the proverb, 'Is Saul also among the prophets?' (1 S 10^{9a}). We also know an ancient Egyptian proverb which owes its origin to some historical event. Alluding to Merenptah's fame in Libya, it runs: 'The youth say to youth, concerning his victories, "It has not been done to us before since the time of Re."' Freytag thinks that many of the oldest Arabic proverbs arose in connexion with some notable event in the history of a tribe or some striking personal experience.² The historical occasion that gave birth to famous popular proverbs is more easily traced in the Greek and Latin literatures. With the words, 'Don't move Camarina' (*μὴ κινεῖς Καμάρινα*), the Greeks were accustomed to caution each other to give questions fraught with uncertain issues a wide berth. The allusion is historical and refers to the draining of the lake north of Camarina contrary to the advice of the oracle, thus weakening the defences of the city. The famous Latin adage, 'Romanus sedendo vincit,' sprang from the effective tactics of Hannibal's opponent, Fabius Maximus. The popular proverb, 'When you go to Rome, do as Rome does,' is an interesting instance of how an aphorism may grow out of an incident which was subsequently forgotten. Few who use it know that it had its origin in connexion with Monica, the mother of St. Augustine. As the Sabbath was a feast day in Milan according to prevailing Roman usage, but a fast at her native place of Tagaste, Monica was perplexed as to her course and her conscience troubled her. St. Ambrose settled the case of conscience by uttering this oft-quoted adage.

Another group of proverbs were derived from riddles (*q.v.*), and it may well be that many of the maxims of the OT canonical collection originated in this way. The adage of Pr 22¹, 'A good name is rather to be chosen than great riches, and loving favour than silver and gold,' is probably the finished form of an answer to a riddle. The riddle was probably propounded as follows: 'What is worth more than gold?'; the answer would be, 'A good name.'³ Again, a proverb may be the condensation of a fable or parable into a single phrase. Thus arose the popular Greek adage, 'To play the fox to another fox' (*ἀλωπεκίζειν πρὸς ἑτέραν ἀλώπεκα*). A popular maxim even in modern times, 'Every cock on his own dunghill,' can be traced back to Seneca, who thus summed up the quintessence of one of Æsop's fables ('Gallus in suo sterquilinio plurimum').⁴ This process accounts for the genesis of English aphorisms like 'sour grapes' and 'dog in the manger.'

Famous proverbs which owe their popularity to their well-balanced symmetrical phraseology have long individual histories behind them. This literary development frequently cannot be traced in the languages of antiquity. But the process by which a popular saying was cut and polished into a gem by a succession of artists may be seen in the case of Sterne's famous adage, 'God tempers the wind to the shorn lamb.' Sterne found it in the writings of George Herbert (1640) in the form, 'To a close-shorn sheep God gives wind by measure'; Herbert in turn borrowed it from the French, and it has been traced back to the Latin.

3. Form.—While the folk-proverb, when it originates, may not circulate in poetic dress, yet well-established proverbs and gnomes are almost invariably expressed either in rhythmical language or in poetry proper. The Hebrew proverbs of the OT canon, as well as those of Sirach,¹ possess all the characteristic features of Hebrew poetry, the most notable of which is parallelism. Sumerian proverbs, among the most ancient that have come down to us, display the same characteristic. Arabic proverbs are couched in the various rhymes of Arabic poetry. Gnomie poetry forms a large section of the ethical side of Sanskrit literature. The Chinese proverbs are in the form of couplets. With this people it has been a favourite practice in the schools for the teacher to give one line and the scholar to furnish the second.² The majority of Greek proverbs are metrical in form. The Greek gnomie poets, like Theognis and Solon, did for Greek literature what unknown poets did for the Hebrew—gave many of the popular proverbial sayings a literary setting and thereby invested them with a permanent influence. The usual metres of Greek proverbs are the anapaestic, iambic, trochaic, and dactylic.³ In modern literatures proverbs usually assume poetical form, for rhyme and alliteration lend charm not only to English proverbs but also to those of all modern nations. A few samples must suffice: 'A king's face should give grace'; 'Slow help is no help'; 'Who goes a-borrowing goes a-sorrowing'; 'Qui prend, se rend'; 'Chi va piano va sano, e va lontano'; 'Gutes Wort find't gute Statt'; 'Wie die Arbeit, so der Lohn.' A popular Italian proverb combines the three qualities of brevity, rhyme, and alliteration: 'Traduttori, traditori,' 'Translators, traitors.' Proverbs abound in certain figures of speech which add to their impressiveness. The two most characteristic of these figures are hyperbole and paradox. The forcefulness of the proverb is largely due to the employment of these figures of speech, which the Oriental especially affects. As an example of hyperbole let us cite an Arabic proverb: 'Fling him into the Nile and he will come up with a fish in his mouth,' or the German 'Wer's Glück hat, dem kälbert ein Ochs' ('The lucky man's ox calves'); as a paradoxical proverb, note 'No answer is also an answer.'

4. Occurrence.—Proverbs are of universal occurrence; there is no speech or language in which they are not found. Going back to the remotest antiquity, we discover them embedded in the literary remains of Babylonia and Egypt. The oldest are found in a Sumerian text. Rawlinson, ii. 16, is the copy of a tablet inscribed with examples for instruction in Sumerian grammar, and a number of these examples consist of ancient Sumerian proverbs. In all, this tablet has preserved eighteen proverbs and riddles, some of which are very

similar in structure to those of the OT.¹ Among the Egyptians the viziers Kegumne, Imhotep, and Ptahotep, of the VIth dynasty, put their wisdom into the form of proverbs. As these officials belong to the Old Kingdom, i.e. prior to 2500 B.C., some conception may be gained of the antiquity of proverbial literature among the Egyptians. Long before the days of Confucius the Chinese had embodied their wisdom in gnomes, and they were a favourite vehicle for moral instruction with that sage. The proverb had reached a position of commanding influence among the Greeks prior to the great gnomie poets, Solon, Phocylides, and Theognis. The great lyric poets who preceded them, and the seven so-called wise men who followed, put into literary form the popular wisdom of preceding generations. An adequate testimony to this fact is the famous anthology, *Sarnagadhara-Paddhati*, of the 14th cent., containing 6000 verses culled from 264 different writers.² Böhlingk collected 7613 verses of Sanskrit gnomie poetry and published them under the title *Indische Sprüche* (Leipzig, 1870-74). Aphoristic ethical poetry was zealously cultivated among the Hindus. Turning to one of the standard collections of proverbs, such as *La Sapienza del Mondo* by G. Straforello, a monumental Italian dictionary of proverbs, we find catalogued in it proverbial sayings from every nook and corner of the world. No race, whether high or low in the scale of civilization, has been without them. Nations renowned for the cultivation of literature have treasured their proverbial inheritance and have polished their adages until they have become gems. Non-literary people, the savages of primitive culture, have had their proverbs, which have been learned only through direct intercourse with the people. The missionary and the adequately equipped traveller have collected these for us. A notable anthology of this kind is R. F. Burton's *Wit and Wisdom from W. Africa* (London, 1865). C. M. Doughty, in the classic *Travels in Arabia Deserta* (Cambridge, 1888), records a few that he heard in conversation with the Bedawin. While proverbs are universal in their occurrence and are found to take local form and colour even in the dialects of modern languages, yet they are especially beloved by Oriental peoples, and it is among them that they were seriously cultivated. In the modern world of Europe and America the folk-proverb still wields a potent influence among the masses, while the gnomie saying which has behind it the authority of great literary genius is often quoted by the cultivated.

5. Value and significance.—Proverbs and gnomie literature are worthy of serious study for two principal reasons: (1) they have had a subtle and pervasive influence on popular opinion; (2) they are trustworthy witnesses to the social, political, ethical, and religious ideals of the peoples among whom they originated and circulated. Gerber says:

'The significance of the proverb in its influence on the formation and preservation of the modes of thought is to be rated very high. Its influence on the civilization of nations is exceedingly far-reaching. With silent guidance it moulds public opinion as powerfully and as manifoldly as the estimate of the relations of private life, indeed even the reflections of the highly cultured' (*Die Sprache als Kunst*, ii. 405).

The greatest literary geniuses have set the seal of their approval upon popular proverbs and made them household words by quoting them or placing them in the mouths of their characters. Among the Greeks many of the earliest proverbs were responses of oracles; their poets were fond of quoting and coining maxims and proverbial sayings. All the great writers of Hellas affect them.

They are found in the verses of Hesiod and Homer, among the lines of the lyric Pindar, the gnomie poets Solon and Theognis, the great tragedians and comic poets.¹ The moral of many of the stories of the Homeric poems was summed up in a single line which gained currency as a proverb. The great Latin poets loved the proverb, and many proverbs that are common in the modern world go back to Horace, Juvenal, or Terence; e.g., the Frenchman characterizes the favourite of fortune as 'le fils de la poule blanche,' a phrase which can be traced to Juvenal's 'gallinæ filius albæ.'² Shakespeare has given popularity and authority to many a striking sentence which has become a proverb in cultivated circles. Two may be mentioned: 'Something is rotten in the state of Denmark,' and 'All's well that ends well.' Dante's 'Lasciate ogni speranza,' Molière's 'Vous l'avez voulu, George Dandin,' and Schiller's 'Die schönen Tage in Aranjuez sind nun zu Ende' are examples of proverbial sayings which have become household words through the popularity of national poets.

The great philosophers of antiquity did not disdain proverbs. The pages of Aristotle and Plato are liberally sprinkled with terse, pithy sayings, and Cicero's writings teem with proverbs. More than this, proverbs and gnomie literature were two of the seed-plots of Greek philosophy. The political and moral philosophy of the Hellenic race had its origins in the isolated maxims and gnomes of the seven sages of Greece and the gnomie poetry of Theognis and his contemporary, Phocylides (6th century B.C.).³

While Greek philosophy outgrew these humble beginnings and developed into an elaborate metaphysical system, the spirit that produced the proverbs of Solomon and Sirach reached its full development within the pale of later Judaism. The number of proverbs was legion, and they were used by the learned rabbis, were current in social intercourse, and were the favourite means of imparting ethical instruction to the youth. The two Talmuds, Jerusalem and Babylonian, the Mishnâh, and the Midrâshim, as well as the Targums, are rich in proverbs and proverbial sayings. They occur both in Aramaic and in Hebrew, touch upon almost every conceivable subject, and extend over a period of more than 800 years of Jewish history, from Simon the Righteous (high priest, 310-291 B.C.) down to Rabbi Asher. The best known and most popular collection of Jewish proverbs is found in the Mishnic tract entitled *Pirgê Abhōth* ('Sayings of the Fathers').⁴ Another famous collection is the *Abhōth de R. Nathan*. The former, usually bound with a Jewish prayer-book, contains the sayings and proverbs of 63 rabbis and teachers arranged chronologically and covering a period of 500 years, from 300 B.C. downwards. Its importance may be judged from the rule requiring a reading of one of its sections each Sabbath. The *Abhōth de R. Nathan*, a Tôseftâ or Haggadâ of the Mishnic tract *Abhōth*, consisting of 41 chapters which contain proverbs and their explanations, reached its final form in the 8th century A.D.

The Jews of this period delighted in gnomes. A quotation from the *Midrâsh Rabbâh* to Canticles will give an idea of the esteem in which they were held:

'Let not a proverb be despised in thine eyes, for by means of a proverb one is able to understand the words of the Torah (*Midr. Cant.* 1b).

It was all the more highly esteemed if it could be supported by a proof text from the OT. In this

¹ Menander's collection entitled *Sententiæ Monasticæ* was famous in antiquity.

case it was introduced by one of two formulæ: (1) 'There is for it a proof text' (יש לי קטקא), or (2) 'Lo! it is a verse of the Scripture' (היא קראתה). So popular was it, and so highly esteemed, that it was used to elucidate problems in almost every sphere and circumstance of life. Proverbs were considered efficacious in removing doubts and difficulties; they were quoted to elucidate names and obscure passages of Scripture; amid sorrow they shed comfort, and in social gatherings they increased the good cheer. With a *māshāl* it was customary to speed the parting guest, and with one a literary man found an appropriate close for his book.

In this period of Jewish history a careful distinction was drawn between the proverb of the scholar and the folk-proverb, and a distinctive formula was used to introduce each kind. To the former was prefixed one of the following formulæ: 'a proverb in the mouth of the rabbis,' 'the rabbis teach,' 'they teach,' or 'some say'; to the latter: 'according to the words of the people,' 'so speak the people,' 'the Judæans say,' 'the Galileans say.' If the proverb happened to occur in Scripture, there was a special introductory formula: 'the proverb runs' (תפוסל אומר). To the folk-proverb belong the maxims of the trades and guilds, for each such organization or profession had its own special proverbs; to the former belong the gnomes of the collections mentioned in the preceding paragraph. To gain an adequate idea of the scope of the topics embraced in Jewish proverbs and to form an estimate of their influence, one must turn to J. R. Fürstenthal, *Rabbinische Anthologie* (Breslau, 1835), L. Dukes, *Rabbinische Blumenlese* (Leipzig, 1844), or J. Fürst, *Perlen-schnüre Aramäischer Gnomon und Lieder* (do. 1836).

It is worthy of note that, among the Chinese, proverbs and proverbial sayings enjoy a similar position of high esteem and a far-reaching influence. The classics of the Chinese abound in them, and ignorant peasants are said to coin them. We have noted above that the schoolboy is furnished with one line and, as an exercise, is required to complete the couplet. Every class of society takes delight in the proverb, from the emperor on his throne to the beggar in his hovel. There is no conceivable situation in life for which the proverbial wisdom of the Chinese cannot furnish some apposite citation.

Among the nations of the Occident gnomic poetry does not flourish, and proverbs are not used in the formal instruction of the philosophical schools, yet the popular proverb has been of importance in the formation of the standards of public morality. Proverbs like the following are valuable ethical precepts which have kept high ideals before the masses: 'A lie has no legs' (the Spaniard says: 'A lie has short legs'; the Swiss: 'It takes a good many shovelfuls of earth to bury the truth'; a Spanish parallel runs: 'Tell the truth and shame the devil'). On the other hand, there are proverbial sayings accepted by the masses as current coin of the moral realm which have been very pernicious in their influence. Trench strikingly terms them 'scoundrel maxims' (*Proverbs and their Lessons*, p. 102). They are frequently quoted to justify sin and immorality. Outstanding examples are: 'Every man has his price' (Dutch: 'Self's the man'); the German 'Einmal keimmal,' which has had a very vicious influence in defence of sin; similar to it is the Italian: 'A sin concealed is half forgiven.'

Some proverbs are distinctly Christian and reach the heights of evangelical morality: 'Love rules his kingdom without a sword' (Italian); 'The way to heaven is by Weeping Cross' (English); 'God never wounds with both hands' (Spanish); 'Every cross hath its inscription' (English).

Our investigation leads to the conclusion that among Orientals and peoples of primitive culture a gnomic literature forms the foundations of moral and political philosophy. In races of advanced civilization and culture it plays no part in the teaching of formal schools, but continues to exercise a potent influence on popular ideals of conduct and conception of character. Proverbs continue to be employed by poets and religious teachers to impress upon the minds of the masses fundamental principles of morality and noble living. The authority of proverbs is acknowledged by the people generally because they constitute the hoard of a nation's wisdom, the silent unconscious accumulation that grows up in a long lapse of time.

LITERATURE.—R. C. Trench, *Proverbs and their Lessons*, London and New York, 1906 (the best general work in English, with a valuable bibliography including a list of proverbial collections in various languages); G. Gerber, *Die Sprache als Kunst*, Berlin, 1885 (the author discusses the proverb as a literary form, ii. 397-442); Erasmus, *Adagiorum Chiliades tres*, Venice, 1508 (a great treasure-house of classical proverbs from which all subsequent writers and collectors have borrowed); G. Strafforello, *La Sapienza del Mondo*, 3 vols., Turin, 1883 (an elaborate collection of proverbs from every quarter of the globe translated into Italian); H. Bois, *La Poésie gnomique chez les Hébreux et chez les Grecs*, Toulouse, 1886. Other important works have been mentioned in the article and notes.

JAMES A. KELSO.

PROVIDENCE.—I. USE OF THE WORD.—

The English word 'providence,' meaning by derivation foresight, is in practice applied to thoughtful preparation for future needs. As used in religion, Providence is understood in a theistic sense to denote the care of God for His creatures, His general supervision over them, and the ordering of the whole course of things for their good. There is no corresponding word in Hebrew, though the thought is present throughout the OT. In Greek *πρόνοια* is used freely in classical literature for forethought, human and divine. It is employed absolutely in Xenophon and Plutarch for the watchful care of the gods, and it forms one of the names under which Athens was worshipped at Delphi. It occurs twice in Wis (14²: 'Thy providence, O Father, guideth' the vessel amidst the waves, and 17²: lawless men are said to be 'exiled from the eternal providence'). In the NT *πρόνοια* is found twice only (Ac 24², Ro 13¹⁴), in both cases to describe human prevision. But the doctrine of the Divine ordering of the affairs of the world pervades all the NT writings. In a very wide sense some such idea would seem to be indispensable to religion, although—as in Buddhism and some forms of pantheism—the word 'providence' cannot be legitimately used as of a relation between 'God' and 'the world.' In popular parlance it has too often included superstitions and unworthy ideas of deity, which responsible teachers would not countenance.

In the more restricted area of Christian theology Divine Providence is theoretically distinguished, on the one hand, from God's preservation of all His creatures, including man; and, on the other, from His moral government. The latter is said to concern the character and education of men as moral creatures, their welfare and destiny, while Providence is concerned with the affairs and events of life and the way in which a Divine purpose is accomplished in and through them. The two are, however, almost inseparable even in thought. The Christian doctrine is one of faith, resting upon the attributes and character of God generally, but especially as made known in Christ. Providence implies a God of unbounded wisdom, power, and goodness, who unceasingly directs human affairs, great and small, for the accomplishment of the highest spiritual ends. Divine action depends on a Divine purpose; and this perfectly expresses the Divine nature and perfections. Christian faith holds that God rules and overrules all that

takes place in the universe, so as ultimately to realize His own eternal purposes. It is always to be understood, however, that such language implies a measure of symbolism. As in creation God is not a Divine 'artificer,' though the phraseology employed may seem sometimes to imply this, so in Providence He does not need to 'plan' and scheme as men do; He views all things *sub specie aeternitatis*. But, allowing for the imperfection of human speech, the truth as to the relation between God and the world is best conveyed by some such phraseology.

II. HISTORICAL. — 1. Introductory. — Beliefs implying some kind of living relation between divine and human beings are found in all religions; in proportion as these die down, the character of the system changes from a religion to a philosophy. Even in fetishism, or in Caliban's description of Setebos, some kind of purpose is discernible, some measure of protection is granted to worshippers who take the steps necessary to propitiate the ruling powers. In polytheism, with its 'gods many and lords many,' such a word as 'Baalim' may stand simply for unknown forces in nature or for particular deities who quite arbitrarily reward their favourite devotees. But, as in Greek mythology, an order may be discernible in the pantheon. Such a measure of superiority may be assigned to Zeus that his decrees may run, and his rewards and punishments be distributed, as those of a kind of secondary Providence. Above him may stand, or hover, a dim figure—*Μοῖρα*, *Θέμυς*, or *Ἀνάγκη*—so that it is often difficult to say whether the rudimentary control of all things, as thus outlined, is blind or intelligent. The Buddhist idea of *karma*—the inexorable linking of all acts with their consequences—excludes Providence. *Karma* does not indeed, as has been said, necessarily lie outside the pale of religion proper. A moral order may be bound up with it; a saviour of a sort may appear, and there may be, in other ways than by *nirvāṇa*, an end beyond the end. But in none of these cases can the word 'Providence' be applied in its usual acceptance, since this implies intelligent purpose and an end presumably good and beneficent, together with active and constant operation for the attainment of clearly conceived designs.

2. In the OT.—The OT conception of life is dominated by the thought of Divine Providence in some sense, but progress is discernible in the ideas entertained of God's purposes and methods and of man's relation to them. In the early stages of Israel's history these were necessarily crude and partial. Tribal and national ideas of deity prevailed, and only after the Exile was the God of Israel identified with the God of the whole earth. Without attempting in this sketch accurately to distinguish the stages of development, it may be said that, throughout the whole, God is recognized as accomplishing His purposes for men (1) in the ordinary course of nature, and (2) by means of special interventions, or miracles. Ps 104 gives a striking illustration of the belief that God in nature works for the benefit of all His creatures, making winds His messengers and flames of fire His ministers. In Jer 31³⁵ 33²⁰ the succession of day and night is viewed as part of a beneficent Divine 'covenant' with man, which cannot be violated or modified. The great symbolic picture of the chariot in Ezk 1 portrays the glory of sovereign Providence. Miracles are special proofs that God, who can do whatever He wills, makes all forces to subserve His designs, especially for His own people. He works, however, not as fate, nor as mere abstract law. Man's power of choice and voluntary action is presupposed; appeals are made for obedience, and disobedience will be punished. Ultimate control, however, lies with

the All-Sovereign, who moulds His material as a potter the clay; in dealing with the headstrong wills of men God rules—and overrules. The story of Joseph shows how actions intended for evil were made to accomplish good. The moral of this and nearly all OT stories is summed up in Pr 16⁹ 'A man's heart deviseth his way: but Jahweh directeth his steps.'

Even where exceptions arise so serious that it would appear either that the idea of superintendence is a mistake, or that God has forgotten, or that 'my way is hid from Jahweh,' the godly man will not lose his confidence. In the later history certain standing riddles of Providence were explicitly raised—e.g., the visiting of the sins of the fathers upon the children, the sufferings of the righteous, and the prosperity of the wicked. These problems were faced by the prophets Jeremiah and Ezekiel, in certain Psalms, and in the book of Job, more or less unsuccessfully. The book of Ecclesiastes stands by itself, and its main drift has always been disputed. Its presence in the canon is probably due to the view that the awkward knots presented in earlier chapters were cut by the sharp knife applied to them all in 12³⁴. But some of the sceptical suggestions made in Qoheleth were recognized in passing moods by the writers of such Psalms as 49, 73, 77, and 88, who nevertheless did not abandon their belief in a Providence both wise and kind.

3. In the extra-canonical writings.—In the extra-canonical writings of the 1st and 2nd centuries B.C. Greek and other external influences are occasionally manifest, but they show no weakening of belief in God's righteous government of the world. Anthropomorphic expressions become less frequent, and the transcendence of God is emphasized, but the moral qualities of the Deity—righteousness and loving-kindness—are as fully maintained as in the canonical books. In Wis 8¹ Divine wisdom is identical with Providence, which 'ordereth all things graciously,' and in 11²⁰ the same power is said to have 'ordered all things by measure, number and weight.' Delays in the execution of judgment are due to the fact that 'Thou, being sovereign over thy strength, judgest in gentleness, and with great forbearance dost thou govern us' (12¹⁹). A power of choice is given to man, for the Lord who made him 'left him in the hand of his own counsel,' so that 'before man is life and death; and whichever he liketh, it shall be given him' (Sir 15¹⁷). The language of Josephus in a much-quoted passage is not quite clear, but he seems to ascribe to the Pharisees a belief in 'fate, which co-operates in every action,' while the Sadducees 'ascribe all evil to man's free choice' (BJ II. viii. 14, Ant. XIII. v. 9). The chief differences, however, in the Jewish doctrine of Providence during this period are due to a growing belief in a future life and in judgment beyond the grave, as well as to the general tenor of Apocalyptic teaching concerning the relation of the present and the coming age. In 2 Mac 7 the hope is several times reiterated that 'the King of the world will raise up those who have died for his laws unto an eternal renewal of life' (vv. 2, 36 etc.).

4. In the NT.—The NT is continuous with the OT, but its doctrine of Providence is more minute, more personal, more tender. The teaching of Jesus in the Sermon on the Mount strikes the key-note. Not the Lord of heaven and earth, mindful of Israel alone among the nations, is there celebrated, but 'your Father which is in heaven,' who clothes the lilies with beauty, and without whom not even a sparrow falls to the ground. The Lord's Prayer is addressed to a Father who can and will care for both the bodies and the souls of His children. The impartiality of the Creator

under a 'reign of law' is recognized in Mt 5⁴⁶, as well as the special response which He makes to the believing prayer of true disciples (Mk 9²³ 11²²⁻²⁴). Rash conclusions concerning the character of those upon whom grievous calamities have fallen are condemned (Lk 13¹⁻⁵); the anomalies and inequalities of earthly conditions will be rectified at the great Judgment that is to come, by the rewards and punishments then to be allotted. The parables of the Tares, of Dives and Lazarus, and those recorded in Mt 25 are sufficient indications of this.

The Apostles in their teaching follow the lines thus laid down. St. Paul occasionally affords a glimpse into his philosophy of history, as in Ro 9-11 and 1 Co 15²⁰⁻²⁸. The teaching of 1 Peter on suffering, of Hebrews on the two Covenants and their issues, of 2 Peter on Divine forbearance, and of the Apocalypse on present and future judgments shows how largely the early Church in times of severe persecution found its theodicy in expectations of a coming age. The OT teaching concerning the Divine purposes in ordering the course of this world is for the most part preserved in the NT with special emphasis on the redeeming love, as well as the judicial righteousness, of God. But nothing less than a revolution was created by the revelation of a future life and the Resurrection and Second Coming of Him who had 'abolished death and brought life and immortality to light through the gospel.' Whilst the same elements are preserved in the spiritual landscape, the focus of the picture is so altered, and its proportions and values are so different, that the effect is wholly new. Problems of Providence almost disappear in the light of grace and the glory which shines into the present life from beyond the grave.

5. In Græco-Roman teaching.—Græco-Roman teaching on what corresponds to a doctrine of Providence is chiefly represented in the Stoic schools. Earlier traditions are found in popular mythologies, which present for the most part a superficial view of life and human affairs. The schools of philosophy represented by Herakleitos and Anaxagoras inculcated a belief in the Eternal Reason, while lofty views of justice and retribution appear in the great Greek dramatists. Plato stands for the supremacy of the Right and the Good, for a World-Reason, and a World-Process, the teleological character of which he maintained. But he taught no doctrine of the personal care of a personal God. Aristotle followed on similar lines, and may be said to have taught monotheism without God. He believed in order, harmony, unity of control in the course of the world, but the fact that his interpreters still debate concerning the connotation of the term 'God' in his writings speaks for itself. Cicero represents the best side of paganism when he makes Balbus say that, granted the existence of the gods, it must be acknowledged that the administration of the world is carried on 'eorum consilio' (*de Nat. Deor.* ii. 30).

Epicurus and Zeno represent opposite poles of thought. The Epicurean held that fear of the gods was servile, that those who wish to live in serenity care nothing for the gods, as the gods, if there be such, care nothing for them. The Stoic, on the other hand, emphasized the unity of life and often spoke of Providence, though without theistic implications. His doctrine was a philosophic monism, the world being a single substance, a kind of self-evolution of the Deity. God was but a mode of matter, or matter a mode of God. The resemblance between Stoicism and Christianity is superficial and largely a matter of phraseology, though the coincidence of words and phrases is often very striking. Lightfoot, in his essay on

Paul and Seneca (*Philippians*⁴, London, 1878, pp. 270-328), has illustrated this subject at length. Parts of Cleanthes' *Hymn to Zeus* might be used by a theist believing in Providential government. But the God of Stoicism is synonymous with nature, necessity, fate, the all. The Stoic said 'God is spirit,' but his *πνεῦμα* was an etherealized form of matter, and for him the universe itself is alive. The Providence of the Stoics was a kind of causal nexus running through the whole universe. All that happens is through determination, *ἐλαφ-μὲν*, that which is fixed by fate. The glorification of *ἀνάγκη*, which was characteristic of the school, shows that no personal interest or care was ascribed to the abstraction called God. To 'live according to nature' meant that each man formed part of a mighty and orderly system, in harmony with which it was his duty to live, submissive to that *universum* of which Marcus says:

'O Nature! From thee are all things, in thee all things subsist, and to thee all tend' (*Meditations*, iv. 19).

Neo-Platonism exhibits more affinity with Christianity on the mystical side, but its speculative doctrine of an ineffable and absolute deity stands diametrically opposed to such a relation between God and the world as is implied by a fatherly Providence.

6. Patristic and Scholastic.—In the Patristic and Scholastic periods of the Christian Church interest, so far as our subject is concerned, circles chiefly round the great standing problems of the existence of evil and of predestination *versus* free will. A general doctrine of Providence is assumed by Christian teachers as essential to belief in God. The Greek Fathers from Clement and Origen onwards taught human freedom and responsibility, and were disposed to explain the presence of evil in the world by describing it as negative, not a substance. The teaching of predestination in the West was in practice held side by side with a belief in Providence, Augustine furnishing a striking example of this. In a famous passage (*Conf.* bk. vii. chs. 11, 13) he describes God as the only reality, evil being at the same time 'unreal' or 'partial good' (see also *Soliloq.* i. 2f.). But, combined with these distinctly Neo-Platonist elements, Augustine taught a clear and elaborate doctrine of Providence as controlling events in their utmost details. His treatise *de Civitate Dei* formulates a philosophy of history based on this fundamental conception. Scholasticism, by its intimate blending of philosophy and theology, did much to develop Christian doctrine on the relation between God and the world. Thomas Aquinas brought all his resources to bear on questions of this kind. His position is that of a modified predestinarianism. The Divine foreordination which he teaches leaves room—at the expense of some inconsistency—both for human free will and for a doctrine of Providence which theoretically embraces all details in human history. Roman Catholic doctrine as formulated at Trent is based on Aquinas, and exhibits God as Ruler and Guardian of men in the minutiae of individual life, as well as in the broad outlines of national history.

7. Protestant.—Protestantism manifested little divergence on the great fundamental questions of natural theology. Luther, Calvin, and Zwingli alike understood by Providence a Divine foreordination, which included the operations of man as well as the course of nature. They believed that the actions of wicked men are so overruled by Divine wisdom and power that the presence of evil in the world is no blot upon God's character and government. Few attempted to work out these general theories in detail. The 'occasionalism' (*q.v.*) of Malebranche, which implied the continuous interposition of the Deity and treated finite things as

affording only 'occasions' for Divine operations, may be mentioned as one hypothesis. It was not accepted by many, and was obviously open to the charge of implying a kind of perpetual miracle. It made way for the more reasonable theory of 'concurrence' (see below). The rationalism (*q.v.*) of the 18th cent. produced both the *Theodicée* of Leibniz, with its picture of the world as, in spite of all its imperfections, the best of all possible worlds, and the caustic scepticism of Voltaire, who in *Candide* satirized an optimism which could accept the earthquake of Lisbon with a light heart. It was left for the 19th cent. to show that neither the faith of the optimist nor the sneer of the cynic was adequate to deal with the facts of life and history.

III. *MODERN CONCEPTIONS.*—1. 19th cent. theology.—The changes discernible in the course of the 19th cent. were produced in the main by the following causes, themselves more or less closely connected: (1) a change in the conception of God, which may be described as a passing from deism to theism, from a belief in a transcendent Deity, set over against the world which He originally created, to a God immanent as well as transcendent, informing and sustaining a created universe, which continues to be entirely dependent on His indwelling power; the cold rationalism which was satisfied with a mighty absentee Deity was displaced by belief in One who meets the craving of the human spirit for union and communion with the living God; (2) the influence of modern physical science, which in the first instance attempted a mechanical explanation of the universe, but which ultimately, through its doctrine of evolution, revealed the world as an organism developing under the influence of indwelling life; (3) philosophical tendencies of an idealistic type, operative mainly at the close of the century. These affected very deeply the view taken of the relation between God and the world, and consequently the meaning of Providence. As a matter of fact, in the Christian theology of the period the name 'God' covered various undefined meanings, ranging from bare theism to views which approached pantheism. The prevalent orthodox opinion was described by the term *concursus*, adapted from the Schoolmen, implying a joint activity of God and man, so that the effect of every act is produced not by God alone, nor by an independent creature. There is one efficiency of God and the creature, the evil in sinful deeds being due to man alone.

2. The crucial question of to-day.—The significance and bearings of 'concurrence' had certainly not been thought out. The scientific discoveries and philosophical activities of the 19th cent. forced upon theologians a number of questions which they were only partly prepared to answer. The worlds of theology, philosophy, physical science, and ordinary practical life had been so far apart that what may be called the necessary exosmosis and endosmosis of ideas was not effected. Such intercommunication is still far from complete, but the process has been carried far enough to show that the complex questions raised by the term 'Providence' can be answered only by a deeper understanding of the relations between God and man.

Hume, among other questions which roused men from dogmatic slumber, put this very searching one—Is the philosophy of the universe to be wholly empirical? If so, all depends on the definition of 'experience.' What are the facts on which an inquiry into Providence—in the sense of belief in an Orderer of human life, both omnipotent and benevolent—is to be based? Physical facts are clearly insufficient. The whole experience of man must be taken into account, and mere colligation of happenings will not suffice. Their interpreta-

tion is all-important, and in the process postulates are employed concerning which fundamental differences of opinion exist. The hypothesis of blind force as the originating and sustaining cause of the universe may be read into what are called facts, as well as the hypothesis of a celestial Artificer, or of an indwelling as well as overruling Deity. Issue between them can be joined only on the question, Which of these theories best accounts for all the facts of human experience, and what doctrine of Providence, or the maintenance of a Divine purpose in human affairs, is warranted in the light of the best modern knowledge? Granted that the doctrine is one of faith, is the faith reasonably based upon all the facts, physical, moral, and spiritual, of human life? It is from this standpoint that the subject has been approached during the close of the 19th and the opening of the 20th century.

Does the theory of an overruling Providence, all-wise, almighty, and all-good, 'work'? That is, does it give a permanently satisfactory account of the facts of life, and result in a permanently satisfying explanation of them from a moral and spiritual point of view? If it be granted to the theist that there is a God, who operates within, as well as over, the existing order, do the facts warrant a belief that He has power and wisdom enough to co-ordinate the whole and accomplish a purpose beneficent enough to bear out the statement that He is as gracious as He is powerful and wise? No doctrine of Providence can satisfy the modern mind which cannot frankly meet this question. But the issues raised are so vast and complex, and they are so distinctly personal and ethical, rather than philosophical and scientific, that they are, as they always have been, differently determined by different inquirers.

3. 'General Providence.'—The answers given by the best representatives of modern Protestant theology may be described under two headings—general and special (or particular) Providence. Certain general principles in the ordering of human affairs which imply a controlling Deity are such as these: (1) God works by law, *i.e.* by a regular and uniform, not by an irregular and arbitrary, method; and this recognized order, while it raises serious difficulties in particular cases, is obviously advantageous to the welfare of the whole. But the Divine operation in question is exerted not upon a plastic material substance, but upon the partially independent and largely recalcitrant wills of men. Hence conflict is discernible, contradictions appear, and at best delay arises in the accomplishment of results. The principles of (2) solidarity and (3) sacrifice are also discernible. These imply that men as a race stand or fall together; that, in the family, in society, in the nation, and as time advances in the history of the race, individuals are made to realize the importance of self-denial, self-suppression, and it may be self-surrender, for the good of the whole. The relation between the parts and the whole in the organism, imperfectly understood at first, and still ignored in thought and practice by many, becomes increasingly clear as the knowledge and experience of mankind extend. And the twin principles of solidarity and sacrifice are pillars upon which any doctrine of Providence must ultimately rest. (4) While advance in the accomplishment of Divine purposes is slow and is retarded by only too obvious retrogression, progress is on the whole discernible, though the goal which by hypothesis is being aimed at can be reached only by advance of an admittedly gradual and imperfect kind. The above considerations belong to natural theology. (5) The believer in a special Christian revelation turns naturally to that as normative and determin-

ative amidst the baffling complexities of human history. Faith in Christ holds a clue to the labyrinth which unaided reason disdains to use. Whether Christian faith can be proved to be in itself reasonable or not depends upon the extent to which the Christian solution, resting upon the Incarnation, the Cross, and the Resurrection, can be shown to meet the demands made upon it.

4. 'Special Providence.'—The term 'special Providence' dates from the time of the Schoolmen, who distinguished between Providence universal, general, particular, special, and most special. Discredit has been brought upon the idea by the way in which it has been interpreted and the inferences drawn from supposed Divine intervention in particular cases. But it is obvious that the Providence which does not concern itself with *species* and *genus* as well as with *universum*, and with the individual as well as with the race, is none at all. A deity who is 'careful of the type' and 'careless of the single life' does not exercise providence in the usual acceptation of the word. The doctrine of special Providence means that God is able and willing, not only to promote general well-being, but also to secure to every one who trusts and obeys Him that all things shall work together for his true personal welfare. God does not generalize without particularizing. Such a process is as meaningless in the realm of intellect as it is iniquitous in the realm of morals. The Father in heaven makes His sun to shine on evil and good alike; He operates by general laws. But He also so orders their working in the natural and spiritual worlds taken as one whole that all things are made, sooner or later, to contribute to the abiding welfare of the faithful servant of God. In this ordered whole there is no distinction of small and great, as the words are often understood. The criterion of magnitude and importance is to be found in the spiritual world. The care for the welfare of the individual does not abrogate general laws. A doctrine of special Providence does not imply the deliverance of the individual from specific dangers or the granting to him of specific advantages. The same event has a totally different significance for different men. Opportunities proverbially come to him who is ready to use them. And all things may 'work together for good to them that love God' in a sense that is not, and cannot be, true for those who are not found in union with Himself and in harmony with His great designs.

It may be said that some belief of this kind is essential to a theistic religion. It is tested in practice by a belief in the efficacy of prayer and by a corresponding doctrine of values in personal, social, national, and racial life. It cannot be proved by *a priori* reasoning or established by a complete induction from the events of experience, especially as understood by those for whom the word 'spiritual' has little or no meaning. But it represents a reasonable faith, not a credulous or superstitious attitude towards the universe, because it is open to receive all well-attested facts and furnishes the best explanation of experience as a whole, when studied from a moral and spiritual point of view.

IV. PROBLEMS RAISED.—The difficulties in the way of the acceptance of a doctrine of Providence are in the main those raised against theism (*q.v.*). Theists maintain their view of God and the world in spite of the prevalence of pain, failure, death, and other factors of existence, of which under the rule of a perfectly good God only partial explanations can be given. The doctrine of Providence is the feature of theism most frequently assailed and most difficult to defend, making, as it does, the lofty claim that all human activities are subordi-

nated to the accomplishment of the Divine will and to purposes of perfect benevolence. Some of the problems raised are metaphysical and concern the relation of the One to the many, or the compatibility of Divine foreknowledge with human free will. Others are ethical and can be satisfactorily dealt with only as parts of a complex whole (see art. GOOD AND EVIL). Others can only be described as standing difficulties, which must always attach to what Butler described with characteristic caution as 'a scheme imperfectly understood.' To relegate a portion of the problems of Providence to this category is not an unworthy evasion, because these proofs of human ignorance remain on any alternative theory of the universe and are—as the theist holds—far less satisfactorily dealt with on the hypotheses (say) of naturalism, deism, or pantheism. The essential conditions of human existence make a measure of ignorance concerning what may be called the plans and methods of Providence to be inevitable, and all reasonable theories of the universe allow for it. None the less, no doctrine of Providence can be defended, or is likely to be generally accepted, which does not find a place for great catastrophes—the earthquake of Lisbon, the eruption of Krakatoa, the Black Death, or the colossal world-war of 1914— . It does not come within the scope of the present article to do more than indicate some of the ways in which outstanding problems of Providence may be, not solved, but reasonably met.

1. Evolution and design.—Evolution as part of the Divine method in the genesis and history of life is not inconsistent with teleology. Mode does not exclude purpose. The study of processes need not interfere—though in practice it may often do so—with a belief in ends. The principles of evolution as traced in the lower organisms can be applied to human society only with very important modifications; but, so far as evolutionary methods are discernible, they do not interfere with design. Though they may destroy the evidence for certain separate and specific designs and ends, they help greatly in building up a conception of one vast purpose, which as yet only dimly looms in view. Man is on this planet the consummation of life, and it is quite consistent with all that is known of his development to hold that by the operation of Providence the history of mankind is being so ordered that the race may realize its highest conceivable capacity.

2. Immanence and transcendence.—The idea of Divine immanence, which has gained such hold of recent years, may seem to undermine belief in Providence—a doctrine essentially dependent on Divine transcendence. The theist claims to maintain both doctrines side by side. If immanence is accepted as sometimes taught, it approaches pantheism, and the possibility of Providence proportionally disappears. A professed theist, who yet ignores or denies the transcendence of a personal God, has no real belief in Providence. But even Matthew Arnold's 'The Eternal, not ourselves, that makes for righteousness' at least prepares the way for a doctrine which Shakespeare's 'divinity that shapes our ends, rough-hew them how we will,' carries a stage further. Also, 'immanence' is a word only recently adopted to express, not quite happily, the fact that the Divine relation to the creature, and especially the course of human history, is not purely external. This may, and in contemporary writers frequently does, imply movement in one or more of the following directions: (a) a protest against undue reliance on Divine intervention from without, especially on miracle, as the chief evidence of Divine action; (b) the acceptance of self-limitation on the part of the Deity as beginning in creation and continuous

throughout in His relation with the creature; (c) hence the admission that the course of human history, whilst ordered for good, is not the best possible or conceivable. Man has a measure of power to delay, or mar, a Divine work which he cannot ultimately prevent. If the action of Providence is discernible in the destruction of the Armada or the banishment of Napoleon to St. Helena, account must also be given of the murder of Lincoln at a critical moment in the history of the United States and the cutting short of the career of the German Emperor Frederick III. and the succession of so different a ruler as William II. (d) Arguments for or against a belief in the Divine control of human affairs can never be satisfactorily based on isolated events. It is the power to compel all seeming and real discords into ultimate harmony that is asserted; and this by means of an indwelling life, rather than a merely external control and mastery.

3. Divine omnipotence.—Discussions concerning the nature of Divine omniscience and omnipotence, and the relation of these to man's freedom of choice, cannot be dealt with here (see FREE WILL, GOD, PREDESTINATION). It may be said, however, in a word that the doctrine of omnipotence has often been seriously misunderstood; that the creaturely will may be real and operative within limits without impugning the doctrine of Divine control. As Herbert puts it,

'Either thy command, or thy permission,
Lay hands on all: they are thy right and left'
(*The Temple*—'Providence').

A line in the context of the same poem puts the truth still more succinctly,

'All things have their will, yet none but thine.'

4. Some moral problems.—One large class of perpetually recurring problems arises from the constitution of nature as a whole, man forming only a part of this, and sometimes a distinctly subordinate part. The phenomena of physical pain and death fall to be considered under this heading. The theistic contention is that the facts point not to essential dualism in the order of nature, but to the development of designs which include the welfare of the human race as a whole, but as a relative rather than as an absolute end. The existence and course of moral evil in the world constitute a still graver difficulty, which is discussed in art. GOOD AND EVIL, but which does not necessitate either, on the one hand, an explanation of sin as mere negation or, on the other, a denial of the holy love of God.

5. Immortality.—No doctrine of Providence can be complete which does not deal with the question of immortality. If life beyond the grave is wholly denied, our estimate of human nature and the significance of human life is altogether changed. Natural theology cannot prove immortality, but it can build up a strong argument in its favour, 'since a contrary supposition is negated by all that we know of the habits and methods of the cosmic process of Evolution' (J. Fiske, *Life Everlasting*, London, 1901, p. 86 f.). But, at the best, strong and confident hope is all that can be reached on the basis of natural theology, and hope cannot be used to establish a doctrine of Providence. If, however, the Christian revelation is to be trusted, the solution of the most perplexing problems in relation to the Divine government of the world may be postponed until the dawn of a future life illumines them. Enough if it be true concerning God as revealed in Christ that 'of Him, through Him, and unto Him are all things,' and that the 'one far-off Divine event to which the whole creation moves' will be realized in the End beyond the end, when the Son has delivered up the Kingdom to the Father and God is all in all.

LITERATURE.—For the OT the well-known handbooks of G. F. Oehler (*Theol. of the OT*, Eng. tr., 2 vols., Edinburgh, 1874-75), H. Schultz (*OT Theol.*, Eng. tr., 2 vols., do. 1892), and A. B. Davidson (*The Theol. of the OT*, do. 1903). For the later Jewish period E. Schürer, *HJP*, 5 vols., do. 1886-90; also H. J. Wicks, *The Doctrine of God in the Jewish Apoc. Literature*, London, 1915; W. Bousset, *Die Religion des Judentums in NT Zeitalter*, Berlin, 1903. For NT theology the text-books of B. Weiss (*Biblical Theol. of the NT*, Eng. tr., 2 vols., Edinburgh, 1882-83), W. Beyschlag (*NT Theol.*, Eng. tr., 2 vols., do. 1895), and G. B. Stevens (*The Theol. of the NT*, do. 1899). For pagan thought Cicero, *de Nat. Deor.* ii., *de Finibus*, iii.; Seneca, *de Providentia*.

For the history of Christian doctrine R. Seeberg, *Lehrbuch der Dogmengeschichte*, 2 vols., Leipzig, 1895-98; Leibnitz, *Essais de Theodicée*, Amsterdam, 1710; S. Charnock, *Treatise of Divine Providence*, London, 1683; J. Martineau, *A Study of Religion*, Oxford, 1888; A. B. Bruce, *The Providential Order of the World*, London, 1897, *Moral Order of the World*, do. 1899; S. Harris, *God the Creator and Lord of All*, Edinburgh, 1897; W. N. Clarke, *The Christian Doctrine of God*, do. 1897; W. Adams Brown, *Christian Theology in Outline*, do. 1907 (see ch. xiv. 2); A. C. Fraser, *Philosophy of Theism*, Edinburgh and London, 1909; W. L. Walker, *Christian Theism and a Spiritual Monism*, Edinburgh, 1906; J. Oswald Dykes, *The Divine Worker in Creation and Providence*, do. 1909; J. Le Conte, *Evolution in Relation to Religious Thought*, London, 1901; V. F. Storr, *Development and Divine Purpose*, do. 1906; R. Otto, *Naturalism and Religion*, Eng. tr., do. 1907; J. Telford, *Man's Partnership with Divine Providence*, do. 1908; J. Ward, *The Realm of Ends; or Pluralism and Theism*, Cambridge, 1911; C. C. J. Webb, *Problems in the Relations of God and Man*, London, 1911, *Studies in the Hist. of Natural Theology*, Oxford, 1915; C. F. D'Arcy, *God and Freedom in Human Experience*, London, 1915. Useful essays on the subject are found in *The Faith and the War*, ed. F. J. Foakes-Jackson, do. 1915.

PRUSSIANS.—See OLD PRUSSIANS.

PSALMODY.—See HYMNS, MUSIC (Christian).

PSYCHICAL RESEARCH.—During the ages of universal belief in ghosts and spirits unusual phenomena were commonly attributed to their agency. In antiquity visions, haunted houses, and clairvoyance were, as a matter of course, referred to spirits. The old Romans practised crystallo-mancy and hydromancy, i.e. clairvoyance by gazing in crystals and at the surface of still water. They knew also the 'divining rod' in the form of the *pendule explorateur*. The forked rod has for centuries been used to discover treasures, and even to trace criminals to their hiding-places; and the belief in premonition, received in dreams or in apparitions of waking life, was current ages before Gurney's 'Census of Hallucination.'

But these and other unusual phenomena, real or alleged, readily explicable through spirits while the belief in their existence was unshaken, grew mysterious in the extreme as soon as that simple form of explanation became open to suspicion. Scepticism regarding the existence of spirits led in 1882 to the foundation of the now well-known Society for Psychical Research (S.P.R.), the purpose of which was officially expressed as the investigation of 'various alleged phenomena apparently inexplicable by known laws of nature and commonly referred by Spiritualists to the agency of extra-terrene intelligence, and by others to some unknown physical force.' And Andrew Lang could state in a presidential address that 'the Society, as such, has no views, no beliefs, no hypothesis, except, perhaps, the opinion that there is an open field of inquiry; that not all the faculties and potentialities of men have been studied and explained up to date, in terms of nerve and brain.'

The society counts among its leaders men of the first rank; in science William Crookes, Oliver Lodge, W. F. Barrett, and Charles Richet; in philosophy and letters Henry Sidgwick, William James, A. J. Balfour, Andrew Lang, and F. W. H. Myers. These names are sufficient warrant that its work is carried out with great seriousness and ability. The 27 volumes of its *Proceedings* already

issued contain extensive reports upon telepathy (thought- and feeling-transference), automatism of various sorts (divining-rod, table-moving, automatic writing, slate-writing, etc.), clairvoyance, haunted houses, premonitions, spirit-communications, and other topics.

For convenience' sake the facts studied may be roughly classified as physical and psychical. The first class includes levitation and translation (of tables, chairs, human bodies, etc.) and materialization (of ghosts and other objects), the production of noises, music, etc. To the second class belong premonitory or otherwise significant visions (crystal-gazing, apparitions), the discovery of objects by means of the divining-rod or the pendulum, slate-writing, and the alleged 'messages' from spirits expressed through a 'medium.'

The outcome of the work of the S.P.R. with regard to the physical phenomena may be conservatively summed up as the establishment of the improbability of there being anything in them but conscious or unconscious fraud—unconscious when the medium performs while in a trance. The evidence for this unfavourable verdict cannot be adequately given here. But, in order to illustrate the conditions under which the performances of 'physical' mediums are conducted, the difficulty of obtaining their consent to satisfactory test-conditions, and what happens when those conditions are accepted, we shall consider briefly the case of the latest and best studied great claimant to the possession of mysterious power, Eusapia Palladino.

Palladino, an Italian peasant woman, who had from her early youth shown mediumistic powers, became widely known by the report in 1913 of a series of sittings held in Milan before a number of distinguished scientists. She submitted thereafter to numerous investigations conducted in several countries by men of international reputation. Already, in Milan, fraud had been shown to be the probable explanation of some of her feats. Placed on a balance, she would gradually lose 17 lbs. of her weight (a more accurate balance decreased considerably the loss of weight), and then recover it, also gradually. This startling fact lost much of its mysteriousness when it was observed that, whenever her dress was prevented from touching the floor beyond the balance, no change in weight occurred.

Palladino's performance before a committee of the Institut Général de Psychologie uncovered not only a number of tricks, but also her rooted aversion to really scientific control, and the impotency to which she is reduced when she submits to conditions satisfactory to the investigators. One of the interesting discoveries of this committee was made by means of a device recording, unknown to the medium, the weight of the chair in which she sat during the table-levitation performances. It was found that, whenever the two feet of the table nearest to her, or three, or all four feet were lifted, there was an increase in her weight, corresponding to the weight of the table; and, whenever the two feet opposite the end at which she was seated were lifted, a decrease in her weight was recorded by the apparatus. This is just what would be expected on the supposition that in the former cases the weight of the table rested on her body, and in the latter she pressed upon the near end of the table in order to cause the raising of the opposite end. Her success in deflecting 'without contact' a delicate balance gave way to complete failure when it was protected in various ways. It was, moreover, discovered that a long hair and a pin were among the apparatus apparently required for the performance of this feat.

These and similarly suspicious or condemnatory tests might, it seems, have convinced the committee that they were investigating merely a very clever prestidigitator; yet their report admits the possibility of Palladino's possession of an unknown power. It is argued that deception in a medium does not preclude the possession of supernormal power, and that the detection of occasional or even frequent deception is not sufficient warrant for judging all the feats to be tricks. The answer to this argument is that a combination of frequency of deception, kinds of performance, and nature of the required conditions may be realized which would decrease to the vanishing point the probability of the presence in the medium of a supernormal force. This combination of factors is realized in Palladino's case.

Before the French investigators she operated under the following conditions. The room in which the experiments were made was darkened, and, at times, quite dark. The darker the room, we are told, the more remarkable the performance. The control of the medium's hands was theoretically secured by two persons, each holding one of hers; but in practice she insisted, when she chose, upon the right to place her hands on those of the controllers, and even, at times, to give them gentle taps instead of remaining in uninterrupted contact with

them. Corresponding conditions existed as to the control of her feet. During the sittings her hands were in motion carrying with them those of the controllers. She refused to have pieces of tape seven centimetres long sewed between her sleeves and those of the controllers. She refused to allow observers to be stationed in the room elsewhere than around the table. After the first flash-light photograph had been taken, she refused to permit any to be taken without warning, on the ground that it caused her a most painful shock. She did not propose to wear dark glasses, but expressed a willingness to give the signal herself, 'Faccio!'

Together with these facts must be weighed two important considerations: (1) the performances in which she was not caught at tricks are of the same sort as those in which she was; (2) every one of the conditions that she maintained against the wish of the investigators favours deception. Why is it so? Why must there be a cabinet closed in front by a curtain? Why must the stand, the clay, and other objects be within reach of her hands or feet? Why the poor illumination? Why was she not willing to suffer the annoyance of an unexpected flash of light and of a safe control of her hands and feet? Were she occasionally honest, she might, it seems, occasionally dispense with some or all of these suspicious conditions. That certain requirements must be observed in order to make possible the manifestation of any power is not disputed. But why is it that those demanded here are precisely those that would afford the medium a chance to deceive?

We need not be deterred from a negative conclusion by the sitters' declaration that they cannot possibly understand how, in light sufficient for observation and with her hands and feet under control, Palladino could by normal means accomplish certain of the things which they have seen her do. Photography shows how unable they were to realize what was going on. In the only photograph taken without warning Palladino is seen actually lifting the table with her hands, while the controllers have theirs upon hers, and yet they were not aware of her action. In another photograph the stand which they thought they had seen floating freely in the air appears supported on the medium's neck and head. Their judgment as to the sufficiency of light and the occupation of the medium's hands while under control can evidently not be relied upon.

What is true of Palladino is true in substance of all mediums, so far as the production of physical phenomena is concerned. Every one of them, with the single exception of Daniel Dunglas Home, has been detected in deception. The distinguished personality of this famous medium inspired too much respect among the small and carefully selected circle before whom he performed to permit of the suspicion of trickery. He was, therefore, spared the humiliation of an investigation implying the possibility of fraud.

Certain of the wonder-exciting phenomena recently subjected to scientific study are complicated by automatism and by the possible presence in the agent of unusual susceptibility to certain sensory stimuli. It has been established, e.g., that the movement of the rod which indicates the presence of water is unconsciously imparted to the rod by the dowser; and that the finding of a hidden object, by a person in contact with one knowing its location, is achieved by the 'reading' of slight unconscious movements. But automatism is only the beginning of an explanation of these phenomena. Why should the hands of the dowser move when over water, and how is it that movements seemingly too slight to offer any guidance are, nevertheless, in the experiments referred to, sufficient to lead the percipient to the hidden object? The existence in the percipient of an extraordinary delicacy of sensory perception is, in most cases of the kind, the pertinent explanation. Should cases occur which this explanation does not fit, the possibility of telepathic communication between the persons in contact, or even perchance between the percipient and some one else than the person in contact with him, would have to be considered. Neither one nor the other of these explanations is applicable to the dowser. Vision, or another kind of perception of the water or the ore, through the intervening opaque media, has been suggested as a possible explanation; but, before recourse is had to clairvoyance, it may be demanded that the fact itself be more firmly established than it now is. The doubter must, however, admit that the reported experiments (W. F. Barrett, 'On the so-called Divining Rod,' *Proc.*

S.P.R. xiii. [1897] 2-280, xv. [1900] 130-383) establish at least a presumption in favour of the possession by certain persons of a peculiar aptitude for this sort of discovery—an aptitude not dependent upon knowledge of an acknowledged kind.

The greatest achievement of the psychical researchers is the well-nigh unquestionable demonstration of occasional communication between living persons without any known intermediary (telepathy). The evidence is now of such quality and quantity that even particularly sceptical investigators find it impossible to deny its adequacy. The evidence consists of experimental and of spontaneous communications. Among the notable experiments are those conducted by Prof. and Mrs. H. Sidgwick, in which a percipient named numbers of two digits taken out of a bag by the former. Of 644 trials 133 were entirely successful—i.e. the two digits were correctly given; and in 14 trials the right digits were given, but in the reverse order. None of the tricks known to the professional prestidigitator could apparently find application in this, or in several other instances of the same sort.

In *Phantasms of the Living* Edmund Gurney has published over 200 well-attested instances of spontaneous communications. His 'Census of Hallucination' and the subsequent more elaborate census of a committee of the S.P.R. apparently prove that the number of veridical hallucinations is much greater than is indicated by the rule of chance (*Proc. S.P.R.* x. [1894] 393). It must, moreover, be acknowledged that, when hallucinations include several veridical incidents not logically connected, none of which is ordinary or to be naturally expected by the percipient, a small number of them seems sufficient to exclude coincidence as an explanation.

But, even were it possible to dismiss these spontaneous, premonitory hallucinations as due to coincidence, mistake, or deceit, there would yet remain the weighty experimental evidence for thought-transference. Nevertheless, the critical investigator may well stop short of complete assurance when he considers that these experiments are only sporadically successful. The only persons able to produce, whenever desired, alleged telepathic feats either are definitely known to be deceivers or are open to serious suspicion. No fact may be incorporated in any science unless the conditions of its appearance are known sufficiently to make possible either its reproduction or the circumstantial prediction of its reappearance. Conviction of the reality of telepathy will not become general among men of science until one or the other of these conditions is realized.

As to the tentative explanation of telepathy, we may say here merely that the dominant tendency is to seek for a physical explanation on the analogy of the wireless transmission of electric energy. Vibrations of some sort, produced by a brain in a particular physiological state, are supposed to be transmitted to another brain in a condition that makes it an appropriate receiver. The main difficulty in the way of this theory seems to be the distance (half the circumference of the earth) through which these waves would at times reach the receiving brain. But, until we know more about this supposititious brain-energy, there is little force in the objection that its energy is insufficient.

Clairvoyance, or, as it is also called, telæsthesia, is commonly produced by gazing in a crystal or at other polished surfaces (cf. art. CRYSTAL-GAZING). The percipient sees, often with great clearness of detail, objects and happenings at practically any distance. This very old belief has been neither placed on a secure scientific foundation nor discredited by the labours of the S.P.R. If the

numerous well-authenticated reports of telæsthesia are to be accepted at their face value, we are in the presence of a problem the solution of which is clearly beyond our present knowledge. This remark is applicable also to the preposterous accuracy in the estimation of time-intervals displayed by some persons, either in the normal condition or in hypnosis (see the experiments of J. Milne Bramwell, *Hypnotism: its History, Practice, and Theory*, London, 1903, pp. 119-139).

The wonderful physical phenomena to which we have referred, the no less wonderful clairvoyance, supernormal time-estimation, and telepathy might all be what they seem, and yet the problem of survival after death remain untouched. But there is another class of phenomena—the alleged 'spirit-messages'—which are not so easily detached from the spiritistic hypothesis. The most famous of the living spirit-mediums is doubtless Mrs. Piper of Boston. No other medium has been so long and carefully studied by so many able investigators, and none has contributed so much that seems beyond the ingenuity of any one to explain. The stage-setting of these séances is somewhat complicated. The medium passes into a trance and speaks or writes automatically messages purporting to come from some spirit; but this communicating spirit is introduced and superintended by a familiar spirit called the 'control.' Mrs. Piper's reputation for honesty has never been shaken.

We need not enter into a critical analysis of Mrs. Piper's utterances, but pass on to the more decisive experiments in cross-correspondence, the latest and most promising of a settlement of the question of survival after death. The theory of cross-correspondence is that, if several persons receive messages which are singly unintelligible, but have meaning when combined, we ought, it seems, to admit—on the supposition that fraud is excluded—that these messages have been suggested to the percipients by a single mind. If, moreover, the thing communicated does not seem to have been possibly within the knowledge of any one of the percipients; and if it is discovered that some dead person possessed that knowledge when on earth; and, finally, if that person is mentioned by name as the communicator in one or several of the unintelligible parts of the message, then at least a strong presumption in favour of the existence of that spirit may be regarded as having been established.

The experiments in cross-correspondence (*Proc. S.P.R.* xx. ff. [1906 ff.]) have been conducted chiefly through three English ladies, one of them residing in India, and Mrs. Piper. Chance coincidence is absolutely insufficient to account for the results secured, and collusion is rejected by all those who know something of these persons and of the conditions of the tests. There is apparently no escape from the conclusion reached by that acute critic and tenacious sceptic, Frank Podmore:

'The automatists unquestionably show that they possess information which could not have reached their consciousness by normal means' (*The Newer Spiritualism*, p. 302).

Whether the explanation of these mysterious cross-correspondences will be found in telepathy acting at any distance, taken together with the well-known fact of the reappearance in certain mental states (e.g., in trance-consciousness) of things once known but long forgotten, even of things of which we never had more than an imperfect knowledge and should at no time have been able to reproduce correctly, remains for future investigations to disclose. As long as we can affirm with Podmore that 'the trance personalities have never told us anything which was not possibly, scarcely anything which was not prob

ably, within the knowledge of some living person' (p. 312), telepathy will appear the more plausible and the less revolutionary hypothesis. But who will venture to formulate the test which will mark particular messages as not within the 'possibly known' to some one living anywhere on the surface of the globe?

The telepathic hypothesis of spirit-messages receives support from the unexpected meaninglessness of the 'revelations' made by the alleged spirits regarding their state and the circumstances of their existence. They have been fairly loquacious; yet none of them, not even those from whom much could have been expected, have revealed anything at all. More significant still than the insignificance of their remarks concerning the other life is the pertinacious effort of these alleged spirits to avoid answering the many and pointed questions addressed to them on that subject. From Richard Hodgson, the late secretary of the S.P.R., nothing enlightening has been learned, despite his haste in giving sign of his existence. For several years after his death Mrs. Piper scarcely held a sitting without some manifestation of what professed to be Hodgson's spirit. Of trifling incidents which may be useful in establishing his identity he talked abundantly; but, when questioned concerning the circumstances of his existence, he either drivelled or excused himself clumsily and departed. Frederic Myers and William James have been equally disappointing.

It has been urged that the spirits may find it difficult to work with the muscular mechanism of the medium; a disincarnate soul may be inefficient in the matter of bodily control; he may also be for a time not fully conscious and muddled. The fact is, however, that spirits do communicate a great many things; it takes volumes to record their utterances! The difficulties are apparently of such peculiar nature that nothing concerning the other life, and only things that have taken place on this earth, transpire. None of the hypotheses offered accounts for this puzzling aspect of the communications—not even the latest suggestion which would shift the blame from the spirit to the medium. Here we are asked to admit that, because of the peculiar condition of spirit-existence, the spirit's mental content is transmitted whole to the medium—in a lump, as it were—instead of coming out in the organized and selected form which is ensured by normal speech. Were it so, it would be small wonder that the medium should grow confused, contradict himself, and speak irrelevantly. But why, when he knows that the sitter seeks information on things above, does the medium not succeed once in a while in choosing in the total consciousness of the spirit something which would gratify the sitter's curiosity? Why are the things picked out always trifling, meaningless, or ridiculous? To this pertinent question no satisfactory answer has ever been given. The limitation of the knowledge of the alleged spirits to earthly facts points to an earthly origin of the medium's information.

One may, perhaps, venture to quote William James as a fair representative of those among the well-informed who regard the mystery of death as unsolved. Shortly before his death he wrote:

'For twenty-five years I have been in touch with the literature of Psychical Research, and I have been acquainted with numerous Researchers . . . yet I am theoretically no further than I was at the beginning' (*American Magazine*, lxviii. [1909] 580).

As to those who regard the results of the S.P.R. as proving survival, they must admit that no amount of optimism and ingenuity in explanation can hide the repulsiveness of such glimpses of the future life as they think they have caught and its lack of the essential features of the Christian con-

ception. In any case, then, the belief in the Christian hereafter, elaborated by humanity under the pressure of exalted desires, remains entirely unsubstantiated.

If, after thirty-four years of activity, many of the mysteries which the S.P.R. set out to explore are still unfathomed, much has, nevertheless, been explained. Thus the mischief which mystery works upon credulous humanity has been decreased by the extension of the field of scientific control. This is particularly true with regard to the various forms of automatism. But the greatest accomplishment to record is the approximate demonstration that, under circumstances still mostly unknown, men may gain knowledge by other than the usual means, perhaps by direct communication between brains (telepathy) at practically any earthly distance from each other. This dark opening is indeed portentous. It may at any time lead to discoveries which will dwarf into insignificance any of the previous achievements of science.

LITERATURE.—Among the important literature may be mentioned: *Proceedings of the Society for Psychical Research*, London and Glasgow, 1883 ff.; *Proceedings of the American Society for Psychical Research*, New York, 1907 ff.; E. Gurney, F. W. H. Myers, and F. Podmore, *Phantasms of the Living*, 2 vols., London, 1888; F. Podmore, *Apparitions and Thought Transference*, do. 1894, *Modern Spiritualism: a History and a Criticism*, 2 vols. do. 1902, *The Newer Spiritualism*, do. 1911; T. Flournoy, *Des Indes à la planète Mars*, Geneva, 1910 (a very interesting account of a case of somnambulism and glossolalia); F. W. H. Myers, *Human Personality*, 2 vols., London, 1903; Oliver Lodge, *The Survival of Man?*, do. 1909.

JAMES H. LEUBA.

PSYCHOLOGY.—I. DEFINITION AND SCOPE.
—1. **Psychology the study of the world of experience.**—A cursory survey of the literature of this subject shows that it deals chiefly with the direct impressions of sense, such as colours, sounds, tastes, and smells; with their complex integrations, such as visual forms in one, two, or three dimensions, groups of consonant and dissonant tones, tonal intervals, melody, and the localization of these sensory experiences; with our apprehension and appreciation of space; with our perception of objects and our general notions regarding them; with memory, imagination, thinking; with feeling, emotion, and sentiment; with voluntary activity of all kinds, whether ideational or practical; and with a number of general questions arising out of these topics. It does not deal with the parts and processes of the material world, but with all our awareness of, and our activity and interest in, the world. Or, if the difficulty of separating the material objective world from our activity with it is pointed out, we may say that psychology deals with all of the world that is immediately or directly before us; or with the world in so far as it is momentarily dependent upon our own activity; if we shut our eyes, all colours and their forms and localizations vanish from us as actualities; if we cease to remember, the things of the past are no longer with us; when love takes the place of hate, the incompatibility of another person with us vanishes like a frown and there is only agreement and harmony. But we do not therefore suppose that the things that appeared coloured, or the past, or our neighbour, have momentarily vanished or have been replaced by others.

This obvious distinction between the world in so far as it is dependent upon itself and upon us is commonly expressed by saying that, whereas the natural sciences study the world of nature, psychology studies the world of experience. The objects which psychology studies are known as experiences. There are many other special sciences that deal with experiences; but psychology is the fundamental one. It holds the same place in the world of mind as physics does in the world of nature. It is the basal mental science.

In such a statement of the subject-matter of psychology as this three terms inevitably emerge into prominence: 'nature,' 'experience,' and 'self.' The world appears to us in experience. Experience is that aspect of the world that is (momentarily) dependent upon *our* activity. The world is that mass of implications of experiences that is not momentarily dependent upon *our* activity. We are that which, over against the fleeting medium of experience, partakes somewhat of the permanence of the world.

Now, if it is commonly admitted that the primary object of psychology is the study of experience, the further question must arise as to what concern psychology has with the relation of experience to the world and to the self.

2. Relation of experience to the world.—(a) *Psychology and epistemology.*—In its broadest form the relation to the world is the problem of epistemology—not, How in actual fact do we become aware of the world? (that is a purely psychological problem), but, By what right do we assert the existence of a world independent, to whatever extent, of experience (and of the self)? It might well be asserted that the only possible answer to the question of right is the correct answer to the question of fact. But an artificial distinction is often made to the effect that psychology can have no legitimate concern with truth or error. It is the business of logic to establish correct conclusions, and perhaps to classify fallacies; psychology will record and describe with impartiality the correct conclusion drawn by one man and the wrong conclusion drawn by another. Because the problem of psychology includes both the 'correct' and the 'false' process, it will make generalizations valid for both, and therefore invalid for what is logically true or rational. And in any case it requires a separate, not descriptive but normative, discipline to distinguish between the true and the false. That seems to be the line of argument taken by those who hold this view. They often give further support to their view by reference to the unconcern of natural science for truth, beauty, good, or evil. Two stars disrupt each other—it is a case of impact or tidal motion. The beauty of a rose is a problem in the minute chemistry of coloured compounds. The woe of mortal disease may be the struggle of two forms of life-force equally valid as biological energies.

That is all quite true, of course. But, though the sciences of medicine study health and disease impartially—if not indeed disease rather than health—and make generalizations valid for both, do they not also strive to win a special body of generalizations valid for health alone? Similarly, though the psychology of cognition will speak of the forms common to both truth and error, will they not also separate the variations peculiar to truth from those peculiar to error? If there is none such, how then does the other discipline proceed to distinguish between truth and error? If a general, reflective method, not regulated by the general methods of scientific procedure, can gain knowledge of the ways of truth, will not a special, introspective, experimental method that looks microscopically through the experience of single thinkers, fulfil the required task better in the end? If a man by introspection cannot discern the forms of truth, how will they ever be discerned? And, if the method is introspective, will it not be improved as much by the exact methods of psychology as other special problems of psychology have been? The discipline that distinguishes between the true and the false does not *make* or create the truth any more than it makes the falsehood or than a chemist makes or creates new organic compounds. And yet this, of course, does

no prejudice to the possibility that there may be many aspects of knowledge that are much broader in their scope and relations than are the minute aspects of knowledge, such as come within the range of a few seconds' duration. These broad aspects may be studied by special broad methods, just as certain broad aspects of health are studied by certain broad (statistical) methods which ignore the single individual. But the broad aspects rest in the end scientifically upon the narrow ones in all regions.

Psychology, therefore, has full right to all that it can accomplish regarding the relation of experience to the world, and no discipline that concerns itself with that relation can afford to ignore the relevant work of psychology.

(b) *Psychology and physiology.*—In so far as psychology is concerned with the *proximate* relation of experience to the world—the relation to the body and specially to the nervous system of the individual—its science merges into that of psychophysics. The science which holds the other end of the relation is physiology. Much obscurity prevails regarding the relation of physiology and psychology, so that it is necessary to review it here in spite of its essential simplicity.

Psychology is the scientific study of experience; physiology that of the functions or activities of the body. Whatever asserts the existence, the time, the manner, the properties, or anything whatever, directly about an experience is an item of psychological science. Whatever asserts anything about the body or a part of it other than its topography and morphology is an item of physiological science. Consequently, the work of psychology consists in the increase of psychological science, in the increase of statements about experiences. An assertion regarding a touch-organ, an eye, an ear, or a nerve is an item of physiology, no matter how it was gathered, whether by the microscopical examination of the organ, or by inference from the observation of sensations of vision or of sound, or of loss of memory, or what not.

This obvious distinction is not in itself important in an exposition of psychology. Most people would agree to it at once. But they generally omit to draw the equally obvious deductions from it, and so to dispel their favourite prejudices. It is, e.g., a common prejudice of scientists especially interested in physiology that psychology claims to be able to do what they already know they cannot yet do. It tries to show how consciousness arises, how the brain senses, feels, thinks, and acts; but with flimsy, superficial methods, such as the asking of questions, the recording of reaction times; ignoring all the while, e.g., such a flagrant fact as that the occurrence of intelligence is dependent upon the proper functioning of the thyroid gland, and so on. It is in face of such a mistake that it is so necessary to point out that the fact regarding the thyroid gland belongs to psychophysics, and that it does not add anything to our knowledge of experience as such. Many physiologists have definitely excluded any consideration of experiences from the scope of reference of their science. That is all the more reason why they should admit the scientific study of the field of experience as the task of others.

Another application: experimental psychologists are rightly highly impressed by the importance of physiology. The first foundations of the physiology of the senses are easier of access than are the foundations of a psychology of the senses. This difference of bulk and systematic coherence in the two spheres of knowledge relating to sensory life creates a prejudice in their minds, so that, when they proceed to study sensory experiences, they apply their own psychological methods to the

gathering of facts of observation, but, when they come to the problem of explanation, they are often completely diverted to the terms of physiological explanation, ignoring, it may be, altogether their duty of giving a psychological systematization of the facts gathered—in other words, a psychological explanation. This prejudice commonly governs professed psychologists even in dealing with questions relating to higher experiences, such as memory, feeling, emotion, etc. In the field of sensory experience it is almost universal.

The physiologist is correct in holding that, if he, specially active in the direct study of the functions of the body, and not ignorant of the indirect sources of physiological knowledge, cannot advance a true theory of neural action in some special department, such a theory will hardly be deduced solely or chiefly from indirect sources. On the other hand, the psychologist, who is specially active in the direct study of experiences, is more likely to be able to systematize these completely in his special department, and so to explain them psychologically, than he is to be able to deduce from them, in their unsystematized and therefore unregulated and perhaps incomplete form, a scheme for the completion of the knowledge and for the systematization of a neural field that has not been specially the object of his direct study. All this is, of course, without prejudice to the fact that one man may be equally fitted for, and may do equally complete, work in some field of both psychology and physiology. If so, he is merely formally two scientists in one, and must in both capacities work as perfectly, without prejudice, in the interests of each science as he would if he were a specialist in one only.

Psychology, then, is primarily a pure psychology, the scientific study of experiences in terms of experiences, involving their complete description, analysis, classification, and systematization. In the connecting science of psycho-physics it has equal rights with physiology. In the connecting science of epistemology it has equal rights with any philosophical discipline which may concern itself with that science—and so on for all other sciences through which psychology may be related to other sciences.

3. Experience in relation to the self.—Having dealt thus with experience in itself and in relation to the world, we have now only to deal with experience in relation to the self. But there is this difference between the world and the self, that, whereas there are highly developed sciences other than psychology that deal with the world, there is no other distinct science than psychology that deals with the self. In fact, psychology is by name the science of the soul, or self, that which is of the nature of experience perhaps, but certainly transcends the single, momentary, fleeting experience. We might, then, expect psychology to include a special field devoted to the study of the self. A survey of psychological literature, however, will hardly reveal this field. In fact, there are many who flatly deny that there is any such thing strictly as a self, distinguishable from the sum total, or field, or stream, of experiences. And, where there is no dispute as to the existence, there is frequent difference of view as to the nature, of the self.

About the popular view there is no doubt. The self is something more than the experience of any moment. Though in sleep its activity is temporarily suspended, yet it persists in consciousness of itself through years, and it is the leader of all the mind's activity. It thinks, observes, feels, and senses. And yet common sense in this region often gets into difficulties; it has to distinguish between the true and false, better and worse, selves. Its doubts about the independent nature of the self

reveal themselves in frequent scepticism as to the survival of the self beyond the life of the organism.

The popular self, then, is quite problematical. After Hume's leading it is commonly agreed that no unitary self is distinguishable among the objects of introspection. What we mean by the self may therefore be the unity of experience in detail, or the continuous unity of it throughout life, or a certain logical or real implication of experience.

(a) *Self as the fount of unity.*—It is a common argument against the view that the self is to be identified either with the sum total of experience or with the stream of experience that by no conceivable means could a mere series of experiences turn into a consciousness of that series as a unity. Hence the sum total of experience simply could not exist as a sum total, unless we suppose that some miracle of unification is perpetually happening. The stream of experiences can be unified only in so far as it is a stream-for-a-self. It is only through the presentation to one self, through the common relation to one self, that the mass becomes individual.

It is true that we cannot rationalize the process of unification or synthesis that we find broadcast throughout our experience; nor can we rationalize the synthesis of atoms to a molecule, of molecules to a cell, or of cells to an organism. But, admitting that, we have the strength to perceive that a reference to one subject is impotent and irrelevant. It is irrelevant because it blandly begs the question. How do experiences ever arrive before one subject's gaze? And what is this gaze? It is impotent, because no amount of reference to one subject will explain the great variety of forms in which experiences integrate to unities, or the laws of their integration. If it is difficult to conceive of an experience by itself having an object, it is just as difficult to conceive the rationality of a subject thinking objects through experiences. In short, the hypothesis of the self as a unifying form, though it undoubtedly gives a sense of great comfort and satisfaction to many minds, is nevertheless useless. It is of no service whatever in a scientific sense, and that must be the final test in a science of psychology. Its acceptance cannot be advocated on this ground.

The doctrine is really an inheritance from Kant. The leading idea of his philosophic reconstruction of experience was the postulation, not of one single-all-important synthesis (Hume), but of a whole hierarchy of them, forming an easily exhaustible system. But Kant failed to draw the proper inferences from this idea and from what success he achieved in applying it in detail. He failed especially to see that the data of experience and the forms that emerge from them must synthesize themselves *from below upwards* according to common laws. In the search for a source of synthesis he then looked upwards in experience instead of downwards, and found the synthetic unity of apperception, the consciousness of 'I think.' The efficacy of that notion, however, is nothing but the notion of synthesis itself; and so nothing was gained by his whole procedure. At the same time, almost everything was lost. For the confusion into which Kant worked himself in his various deductions left the almost indelible impression that all such deductions are hopeless undertakings. So the very valuable idea with which Kant started was emasculated beyond further usefulness. In his successors, and especially in Hegel, it was degraded to a scheme of purely fanciful and imaginary forms, whose only claim to actuality was the vague atmosphere of logical connexion that pervaded them. At the same time, the universal function ascribed by Kant to the synthetic unity of apperception was exaggerated until the real world seemed to fade utterly away and only

the self remained in its universe of experience. Had Kant succeeded in solving the problem of the scheme of synthesis in experience from below upwards, there is no doubt that he would never have developed his phenomenalism, nor would the idealistic extravaganzas of his successors ever have been propounded.

(b) *The metaphysical Ego.*—So much, then, for the self as the fount of unity in experience in its details. There is, of course, just as little reason for assuming the existence of a self in order to give unity to the data of experience of a lifetime. If experience cannot raise its own unity upon its own foundations and upon the hierarchy of special integrations just discussed, no notion of self will ever inspire the data of experience, which are as the sands of the sea for number, into one coherent whole. All this mysticism of the self is nothing but a failure to grasp the problem of the system of experience positivistically and scientifically. As it stands, and is expounded still, it is a distinct barrier to proper progress in psychology. For it cannot yield any fruit of detail problems, and so it clogs the minds of those who hold it.

As to the implications of experience, they are rather the result of psychological study than a part of its subject-matter. If the psychologist is concerned to draw all legitimate inferences from his data, implications regarding the self, whether they be logical or real, will follow of themselves. There is no fear of anything being ignored here. The intensity of the individual's struggle for existence and his desire to survive indefinitely will coerce him into probing for all possible reasons for believing in the perpetuation of his self. Every possible reason, however improbable, will be hopelessly contemplated and appraised.

It is, finally, sometimes said that psychology does not fulfil its duty, which is to study the self and its states, not to study the objective contents of experience, such as colours, sounds, concepts, thoughts, and memories. Quite possible; but the other things are more clearly there, and call for study. They are what most psychologists now study chiefly. If any one can develop a method of demonstrating the existence of the self, in some sense clearly distinguishable from experience and its syntheses, of studying its states, and of making our knowledge of it progressively larger, his success will surely be highly acclaimed. Thus far, however, in the opinion of the writer, no one has done so. The field of psychology, therefore, is properly described exclusively as a study of experiences in the systems in which we find them and of the relations of these experiences and their systems to the fields which in the universe surround experience or rest in part upon it. These are, apart from the biological (process) sciences already referred to, the (product) sciences of history, linguistics, aesthetics, and the like, and the social sciences of political philosophy, and economy, social economics, etc. (cf. art. CONSCIOUSNESS for fuller discussion from opposed point of view).

II. *THE SENSORY-COGNITIVE SYSTEM.*—1. Theories as to the constituents of experience.—The task of psychology, as Ward has said,¹ is to ascertain the ultimate constituents of all experiences and to determine the laws of their interaction. The matter is still under dispute, but it is possible to maintain with perhaps increasing show of probability that the ultimate constituents of all experiences are sensations. Where this theory goes upon the assumption that all experiences that do not directly reveal themselves as sensations are in some subtle way aggregates of more or less obscure and attenuated sensations, we have the ancient doctrine of sensualism. That

doctrine is now commonly held either to be insufficient to account for the facts or to involve too great assumptions regarding the variability of appearance of sensations in aggregations. Obviously, too, the proof of the presence in all experiences of a complement of sensations, approximately co-extensive with the experiences discerned in aggregate—which is the chief line of proof followed by sensualists—does not exclude the alternative theory that all experiences are either single or multiple sensations, or special integrative complexes of sensations. Here the only interest in the sensation is that it is the lowest rung on an indefinite ladder of integrative processes, one that cannot be further resolved by us.

Another line of theorists hold that there are other ultimate, irreducible constituents of experience than sensations—feelings, thoughts, etc. But this type of theory need not be taken to have proved anything more than that feelings, thoughts, and the rest are special points, units, or parts of a certain range of experience, just as cells are special and, in many senses, unique parts of the body, and are held by many to be irreducible wholly to the next lower units of matter—molecules and their laws. The burden of proof lies heavy on any school that draws such limits. For it has for its task a negative proof. The best policy for united work is obviously the plea that, while feelings and thoughts may be reducible to lower grade units, this reduction has not yet been satisfactorily accomplished. Thus all theorists may work forward together, each supplementing the other's outlook, observation, and interpretation. Whatever the outcome may be, the theoretical work of psychology may well be set up as if it would ultimately converge on the sensationalistic ideal, when that is re-animated by the substitution of integration for aggregation.

Certain other theories refuse to consider any such analytic, dissecting, and devitalizing outlook as these. They stand fast by the indivisibility and qualitative unity of experience, its ever changing and developing wholeness and completeness, which are only brought to the inert forms of the above theories by the destructive work of the abstracting intellect. In its older form this group of theories made great use of the earlier notions of the biologists. The organic unity of experience was constantly emphasized. Experience is an organism in which every part detectable by abstraction stands in living, moving interaction with every other, and is inseparable from it without the destruction of the (spirit of the) whole. Doubtless; but modern biologists are not deterred by this thought from a progressive analysis and synthetic reconstruction of the wonderful life of the organism. They do not allow themselves to be held up in their progress by the contemplative admiration of completeness and unity. A recent form of this type of theory clothes itself anew in biological terminology, taking as its prototype of action the mystic unity and the insight-without-intellect of the instinct—a very fine doctrine for those who love to linger on the hill-tops of philosophy, chanting the wonders of the stars, the clouds, the trees, and the clover, and yearning to embrace the universe in a great wave of life, and very refreshing to the tired mind, but hardly the way of progress. The world, no doubt, is full of wondrous forces; but we happen to be soldiers of the intellect and must do what we best can.

A third group of theories, which also lie somewhat aside from the main drift of psychological work, looks upon experience as not ours, not subjective or mental, coming between our self and a real world; but as really of the world, objective, physical, the same in stuff as the things that we

¹ *EBR*11, s.v. 'Psychology,' xxii. 548b.

call material. In a certain sense the difference is only a matter of words, and, provided such a theory has the interest to study experiences or objects in detail, the same results will emerge as are found by the more 'orthodox' psychologist, so to speak. But in its older form of objective idealism this line of doctrine acted almost as an excuse for not investigating the minute, systematic build of objects (experiences). If the alleged experiences were really objects, the study of them might well be left to the scientists. And, if there were a science that might be called experimental psychology, then that title was in a sense a misnomer; the science was really a branch of physiology, obviously not part of the work of a philosopher. In a recent form the theory shows a special interest in the minute build of objects or of the first physical data. For knowledge is required to show how these data are so directly related to, or continuous with, the material things of science as they seem to our common sense to be. This group of theorists is obviously forced into the attempt to make a special plea for, and a special study of, the self. For one can hardly solemnly go the length of asserting that there is nothing in the world but the objective, the physical, and its complexities—no self and no personal activity. These views evidently carry us back to the problem of the self already discussed. They do not yet affect the detail work of psychology (or of this new physics that the physicists do not promote). If the field of work and the drift of fact and theory are clear, psychology may leave the classificatory names to the wider comprehension of philosophy. When we have all the knowledge of fact required for exhaustive systematization and understanding, we shall hardly object seriously to any useful drawing of boundaries and naming of provinces.

2. Sensations and their attributes.—The ultimate constituents of all experiences, then, are probably sensations. Sensations are indicated in the universe of things as being the simplest experiences that are directly dependent upon the stimulation of a sense-organ or of a sensory nerve. They are familiar in the five senses of man; but the work of later years has increased that number considerably. The senses may be divided into three groups.

(a) *Simplest senses of the skin.*—The first contains the simplest and perhaps more primitive senses of the skin and, in an irregular way, of the viscera. They are four: pain, touch, cold, and warmth. Itch and tickling are related to pain and touch respectively. The problem of the psychological description of the simplest experiences of these senses is a useful preliminary and guide to the psychological definition of sensation in general. It is the important problem of the attributes of sensation.

There are at least six attributes. (1) *Quality* is the name for the radical difference between the sensations of different senses—e.g., colour, sound, touch. And touch, pain, warmth, and cold are all qualitatively different. (2) The variant known as *intensity* is too familiar to require any indication. These two attributes have been universally admitted and are readily acceptable by all as direct properties of, or variants in, these simplest experiences.

The next most frequently admitted attribute is (3) *extensity*. A colour mass is extensive; so is the warmth felt in a bath or the pain of colic, as compared with the coldness of a drop of rain or the pain of a pin-prick. Some folk feel a repugnance of a kind to the assertion that our experiences are extended or spread out. But that is merely traditional prejudice. Thought may not be extensive, but sensations certainly are; only it is not the spatial kind of extensity that is meant,

but another 'kind' or sub-class of extensity. The attribute of extensity has not always been admitted. Some have tried to derive it from groups of qualitative and intensive differences; but the attempt was never convincing; hence the gradual recognition of the primacy of extensity.

Now, those who thus admitted extensity usually proceeded to attempt to develop a further attribute of *localization* out of those three. The cover for the act of conversion involved in this attempt has been since Lotze's time the term 'local sign,' the idea being that the skin is of such different texture, etc., at different parts that a touch at one part would be distinguishable from another at another part of the total extent by its qualitative and intensive differences. But the same futility attaches to this attempt at derivation as to the previous one. The intellect can by no device convert into local signs what are after all only groups of items devoid of any sort of arrangement. These must remain what they are, unless the intellect can correlate them with a spatial order otherwise provided. And then the spatial order so obtained would not become inherent in the sensory complex, as would be required. No, mere extensity is insufficient. For it implies no definite construction, form, shape, or extent, but only extensity as a variable magnitude. If this magnitude is at the same time to have form or shape, it must be supposed to include orders implicitly or explicitly. And the magnitude cannot be definite without the help of explicit orders. This is, then, the fourth attribute—(4) *order*. It is not to be confounded with spatial order, as which it appears most definitely before our cognition in the sensory experience of the skin. It is the basis of the spatial construction. Space, as we shall see, is a form or complication of sensory order.

Two other parallel attributes are the basis of our temporal differentiation of sensory experience, namely (5) *duration* and (6) *temporal order*. The former order may be distinguished from (6) as systemic order, because it is the kind of order that depends psycho-physically upon a system of elementary sense-organs (receptors).

Another attribute has been proposed by Titchener—*clearness*. But there are great difficulties in the way of its acceptance. A sensationalistic system, of course, as already indicated, requires some primary variant to account for the apparently great difference between the higher psychical complexes and any obvious aggregates of sensations. But an integrative system, full of variously directed streams of action and of different levels, the one more remote from the other than a third, can probably account for all the facts without such a difficult attribute.

This first easy group of sensations has an appendage in the sense or senses of taste. No new primary fact is met in it.

(b) *Articular, muscular, and organic senses.*—The second group of senses differs from the first in offering in each case some feature of obscurity or difficulty. The senses here are the articular, the muscular, and the organic (a medley of hunger, thirst, lust, nausea, etc.). The difficulty consists in properly classifying the attributes of each and the obscurity in detecting their presence. Thus the quality of articular sensations has been generally held to be their indication of position. And a class of positional qualities has even been distinguished from a quality of movement. But the 'positional' variation must be classed as the ordinal attribute, while the difference of movement does not constitute a separate sense at all, as we shall see later. The obscurity attaching to articular sensations, on the other hand, concerns their intensity. But we can with care produce

intensive differences in this sensation, and we then recognize that the obscurity is not in Titchener's sense attributive, but is only apparent. Failing to recognize the fact that the physiological basis of intensive differences in this sense is almost lacking—from the nature of the case—and expecting intensive variations that we do not find, we call these variations obscure, just as visual presentations are when we try to read in the gloaming. We feel that we cannot detect fully all that is there. But when we cease to expect more than there is, we also drop the term 'obscure.'

(c) *Senses of sound, sight, and smell.*—The third group of senses presents very complex and very difficult cases that can be made to conform completely to the formula of attributes only after elaborate study. The senses here are sound, sight, and smell.

The present writer has given¹ a re-interpretation of the sense of sound on the basis of the formula of the six attributes which completely alters our view of this sense and brings it into perfect conformity with the psychology (and, by inference, with the physiology) of the other senses. It may be dogmatically indicated here. There is one quality in sound, that which distinguishes sight from sound. Intensity is familiar. The difference generally classed as quality—pitch—is really the attribute of order, while the extensity of sounds is apparent in their volumes, which run parallel to the pitch series, low tones being large and bulky, high tones thin and small. These volumes, however, are really extents or masses of sensation, so that tones are not the primary particles of this sense, but are well-rounded, balanced, symmetrical masses of sound, in which one (hypothetical) particle (or a few) is prominent in a central position, and is known as the pitch of the tone. Thus all audible tones may be reduced to a single series of particles of sound sensation, the lowest tone involving the whole series, and the higher ones progressively less and less of the series, the end particle on one side being common to all tones. This is only another way of expressing the fact that, as we rise in the tonal scale, the pitch series moves progressively to one side.

There is no need to attempt to reduce noises to tones. For noises are themselves masses of sound-particles. They differ from tones only in their irregularity and want of balance and in their lack of a prominent ordinal centre, *i.e.* pitch. All degrees of variation, however, from tone to noise are obviously possible.

In the sense of vision the systemic attributes of extensity and order offer no difficulty. That attaches only to the attributes of intensity and quality. We have interesting and highly developed physiological theories of vision, of which the most familiar are those of H. L. F. von Helmholtz and of E. Hering. But we have still to get a satisfactory psychological account of the elements of this sense.

The sense of smell is specially peculiar because of the fact that we seem unable as yet to give a complete survey of its qualities. We are unable to tell whether the enumeration that we already have is complete. This merely means that we have not yet got the key to the psychological analysis of this sense.

In spite of these outstanding difficulties, we may look forward to bringing the attributes and varieties of aggregation of the elements of all the senses some day finally into full agreement with one another. This solution may be expected to conform at least closely to the formula of six attributes indicated above.

3. Modes and laws of integration.—The other

¹ *The Psychology of Sound.*

task of pure science in psychology is to ascertain the laws of the interaction of these probable ultimate constituents of experience; or, better, to determine their modes and laws of integration. The problem of these modes has been before the minds of psychologists for some time in the form of the figure-qualities described by C. von Ehrenfels. A melody, *e.g.*, must be something more than the sum or sequence of the tones that form it. For it remains the same melody even when it is raised or lowered in pitch so far that none of the tones of the first version occurs in the second. And a square is a square, whether it be given in blue colour or red, or even in tactual sensation. Similar distinctions and arguments are found in older philosophical literature. Kant's forms of sense and of understanding are essentially the same idea. They are something more than any data that they may include or synthesize; they are the mind's own work or contribution to the build of knowledge; they cannot come from without; they are, as we may say, purely integrative 'processes' of experience.

Following Kant's suggestions farther, we may think of these integrations as a hierarchy co-extensive with experience—a scheme that, as being in experience, is directly before our observation and may well be completely described by our science before very long. Moreover, it is one that should bring with its gradual discovery a sense of its own completeness and 'necessity.'

Unlike Kant, however, we cannot hope to succeed unless we can put our scheme of integrative processes into relation to the properties or attributes of the elementary data of experience—the sensations. This connexion is expressed in the following two laws. (1) The integrative product must bear a close resemblance to the lower-level product or to the attribute upon whose integration it rests. We cannot, *e.g.*, expect localizations to rest upon differences of intensity or of quality or of both, but only upon differences of order. In such a connexion there would be no inner coherence, insight, 'necessity' (Kant), or whatever it might be called, that makes our experience coherent in all its parts instead of a mere mechanical conglomeration. (2) Wherever similar attributes (or integrative products) integrate (anew), there we must expect to find products both introspectively and functionally similar to one another. Thus, if the integration of visual orders gives systemic intervals and motions, then, if pitch is really properly classified as ordinal, we must expect to find differences of pitch integrating to similar products. And these are to be found, namely, (tonal) interval and (a certain aspect of) melody.

(3) A third law states a fact that has already been referred to and is of the greatest importance, namely that the integrative product is an addition to the mass of integrating experiences, whose existence and continuance within the integrative process it in no way impairs. It is this fact that makes such a profound difference between the scheme of sensationalism and that now expounded. At the same time, this addition to experience gives a place within experience to all that has been claimed and taught regarding the creative synthesis or evolution of experience. But this interpretation or description of experience may claim to be more scientific than others, in so far as it is more positivistic. It does not gather all the creative talents of experience in a greedy hand and bestow them upon a single agent—the brain, or the soul, or apprehension, or what not. It leaves them all in their places. It lets psychical creation come forth in its order, just as the natural and biological sciences set forth the order of natural creation.

4. Scheme of integration forms.—No proper

exposition of the different forms of sensory and of cognitive integration can be given in this short article. But a scheme of those forms may help to bring some comprehensive arrangement into the mass of data that the reader will find in the chapters of textbooks of psychology dealing with sensory and cognitive experience. Of the six attributes the chief integrating one is order. Differences in systemic order alone give systemic distance, differences in temporal order temporal distance or time interval. The unity of simultaneous and progressive differences in these two ordinal attributes is motion. These three integrates all vary in magnitude—size or speed. Distances are found in all the senses that show distinct variations in the attribute of order—touch and the other skin sensations, articular sense, sound, and sight. All senses give differences of temporal order, but some give them much better than others. So we have specially temporal, or rhythmic, senses. Obviously motion will be limited to the senses that give distance well. No other attribute than order integrates well, or even at all perhaps. An exception seems to occur in vision, where lustre is found to involve differences of brightness and seems to be a new character supervening upon these differences. It also obeys a further law of integration in that it supervenes both upon simultaneously (binocularly) and upon successively (unocularly) presented differences. This law appears to be observed in all integrations that do not involve differences in temporal order, which, as we know them, are always successive. But the problem of lustre is not quite clear; lustre may, in fact, belong to the next level of integration, which is called bisystemic, because it involves two systems of elementary sense-organs, or two ordinal systems, of the same kind—*e.g.*, two eyes, two ears.

This bisystemic level gives, in vision, a new third dimension to the forms that are found in the plane field of vision of one eye. With two eyes simultaneously, or with one eye successively, we see solidity, *i.e.* stereoscopically. Binaural hearing is similar, but simpler. It gives a new (transverse) line of orders. The pitch series of each ear is a single (longitudinal) dimension. The combined use of these two (not mathematical, but merely narrow) lines allows of (transverse) oscillation of emphasis from one side (or ear) to the other, and so provides a basis, though a very imperfect one, for our correspondingly weak power of localizing sounds round the head.

The next level of integration is intersystemic; it holds between systems of different kinds of senses. This kind of integration is still more difficult for the individual to acquire than the preceding. We may express the problem materially by asking how the impressions of the different senses ever meet together in the vast brain, so as to form a unitary whole. Although the problem has been perpetually ignored, the same question must be asked about the (vast) mind. How do the systems of the different senses become reconciled and correlated with one another? How do the impressions of the different senses ever meet together 'in the mind'? The question becomes specially acute when we turn to examine the psychological origin of the 'object.' Take the old stock example of the 'orange.' How do the different sensations given by an orange hitch on to one another in the child's mind? Not by mere simultaneous association, for not all things that are merely together in the mind associate together. There must be a specific basis that regulates association.

A minute study of visual bisystemic integration shows that this basis is the identity or similarity

of the plane forms or figures that appear in the integrating systems of the two eyes. Similarly, the systems of the different senses may be supposed to unite to form our sensory space only by the integration of their systems by means of the very similar forms and motions that are impressed upon the different senses by one and the same real object. Thus too the contributions of the different senses are brought together to form units of perception—*e.g.*, 'orange.'

The interaction of the distances and forms presented within the system of a single sense offers a rich field for study. This is most apparent in the many visual illusions (*q.v.*) now so familiar. These figures are illusions simply because their parts, when presented together, modify one another and so appear otherwise than they do when presented alone. They are chiefly illusions of distance or size, and of direction—a derivative of distance.

The scheme of sensory cognitive integrations may be summed up schematically as on next page.

5. The higher cognitive powers. — (a) *The psycho-physical problem.* — The cognitive work of experience thus appears as a great hierarchy, developing upwards by its own initiative from the data given by the senses—we say 'by its own initiative,' because in such a scheme we do not need to postulate any sort of developing agent to work or even to guide development. We can study the whole process positivistically, just as the physical, chemical, and biological sciences study the course of development within their spheres. We may speak of 'development' because the 'higher' unities are more comprehensive and also (we may confidently assert) *later* than the unities of the lower levels.

Thus, *e.g.*, we need make no speculative references to the brain for a basis of integration. Whether there is in the brain a parallel or preceding, real, unifying process or not is a question for the physiologist to settle. An answer to it, whether positive or negative, can in no way affect the work of psychology in the study of the integrative process as it is in experience. Whether parallelism or interaction be the true answer to the psycho-physical problem is not very important for the present, for the simple reason that it will be very long before proper material for an answer is to hand. On the other hand, a psychical agent, such as the soul, is quite useless. Even the spy-glass rôle of thought may be dispensed with. In that theory thought is held to be an indispensable accompaniment or attribute of sensation. It comes with it in some germ-like form, and over and through sensation, as it were, it spies out the object or cause of sensation. How could an experience have or know an object, if it were not so? How could it even if it were so? we may ask in reply.

The scheme propounded, on the other hand, offers a direct basis for constructive work on the 'references' of thought. An integrated state is always attached to, and so refers to, the basis upon which it is integrated. A melody is not a unity that is just present along with tones, as the title-name of the melody more or less is. It is intimately blended into the being of the tones, as it were. It is this intimacy of connexion that makes a psychologist like Titchener altogether overlook the presence of something new in the melody-total (or in a square) beyond the ultimate data of sense. In the same way in a perception each sensation which enters into the unity is equally 'it.' The colour of the orange is 'it,' and so are the taste, the smell, and the feel (of 'it'). And, on the other hand, the 'it' of the perceptive refers to each of these.

SCHEME OF THE INTEGRATIONS OF COGNITIVE EXPERIENCE.

The stage of perception (*q.v.*) at which the cause of a percept comes into view is certainly not the earliest form of perception, where the integrate is nothing but an it-centre of sensory experience, but a rather advanced stage in which there is some conceptual concentration of individual perceptions and some of the 'knowledge about' that then supervenes. This 'knowledge about' is not the result of an excursion or observation beyond the confines of experience, as the cause-idea might suggest, but merely the attachment to one another of experiences above the first perceptual stages by the same or similar mechanism as produced these first stages, whereby the higher integration is attained that we know as abstract knowledge or conception (*q.v.*). All these abstract units must not, however, be supposed to have to hang in the air above the sensory levels of integrations, as if they were the gases of corruption mounting upwards from them. They are attached or refer downwards to their basis through a continuous line of integration, just as the other integrative products do. And it is just this attachment which puts substance, cause, and interaction, particles or parts of various levels—atoms, molecules, and the rest—into the objects of perception.

(b) *Development in man and animals.*—The study of development (*q.v.*) is readily accessible in this way. If a certain level of integration can be by indirect evidence—of conduct, learning-by-experiment, and so on—be proved to exist in any animal, we know what earlier levels of experience are implied in it. Research thus far seems to have shown conclusively that no animal other than man shows any evidence of commanding the conceptual level of integration. But recognition and, still more, perception are by no means excluded among the higher animals. The task of deciding in each particular case is very difficult, involving a great deal of very elaborate and precautions experimentation.

To the further important question why every animal that is well endowed with efficient sense-

organs does not develop to as high an integrative level of experience as man, psychology is unable as yet to give a definite answer. This appears the more strange as man seems in certain respects to be possessor of senses which compare unfavourably with those of many other mammals. This is especially so in the case of smell and of hearing. In vision we are relatively efficient. But in one important respect we have a great advantage; we are possessors of mobile hands and fingers. The significance of this is that it endows us with a second highly elaborate and clear field of tri-dimensional forms, namely the tactual-articular. The other mammals, with the exception of our nearest relatives, use their articular sense almost only for the general purpose of postures and bodily movement, while their touch is imprisoned behind their masses of fur.

There can be no doubt that the possession of a plurality of tri-dimensional senses is highly important for development. For hearing is only weakly dimensional, and smell in ourselves (and possibly in the other mammals as well) is not so at all. All our other senses, apart from the visual and articular, are only vaguely dimensional, inactive, and of poor discriminatory power. But, as we have seen, the correlation and integration of active and complex dimensional senses are required for the proper development of sensory space, and that in its turn is the gateway to the higher cognitive powers. So we may maintain as probable the view that the height of development of the 'mind' depends largely upon the extent of variation given in the elementary data of the senses. And we should, therefore, expect to find that the size of the brain depends not so much upon the room required for the cerebral mechanisms of conception as upon the size of the parts required for the bi- and tri-dimensional senses of fine discrimination. Of course neural centres may also be required for all integrative levels. But these are problems which we must leave to the physiologist.

6. *Memory and imagery.*—With memory (*q.v.*)

another aspect of experience comes into view that is of the greatest importance. It seems clear that there can be no memory work except upon the basis of the spontaneous integrations of experience. Memory is not mechanical association of contiguous parts of an aggregate, as sensationalism is compelled to suppose. Much, if not all, has yet to be done before the springs of memory are clearly exposed. But there is a growing tendency of evidence and conviction to show that memory presupposes some form of integrative activity which makes the old form of contiguous association untenable except as a formula that presupposes but ignores this integrative activity.

But, if this is granted, there seems no doubt that association gives experiences a new grip of one another, so that, even when an integrative unity is dissolved by lapsing as an actuality, it can be reinstated from a part of its original foundations by the extra bond established before the integration lapsed. And, as we know, repetitive contemplation of the integrative complex helps to make associations more powerful and enduring. The experimental study of memory in recent years has greatly extended our knowledge of the conditions affecting strength of association. By association, too, we can extend the scope of integrations, so as to make them include a wider scope of experiences than they otherwise would spontaneously at any one moment. If integration gives height of growth to experience, as we might say, then memory gives it breadth. And the growth that can be attained in breadth by effort is enormous.

At the same time this redintegrative action of memory makes it possible for an integrative product to be revived from the side, as it were, instead of by its full conditions from below. And the revival of these lower springs does not seem to be necessary in memory work. A concept, *e.g.*, can never be got originally except from below. And yet in the fluent operations of thought, which depend so much upon the work of memory, that concept may be revived, and used as an essential link in the process of thought, without the revival of any of its sources of integration, even in the form of imagery.

And from this issue we may pass directly to the question of the value of imagery. An older evaluation of imagery considered it as a mere trace or record of previous direct impressions of sense-sensations now called up accidentally owing to the associative linking that supervened to bind it and the present reviving sensation together when both were previously present as sensations. But that view is almost certainly wrong. Imagery is revived more often because of the integrative complexes into which it was as sensation wrought up, and because it is now wanted for the redintegrative and new integrative processes of thought. Thus, when one is asked, 'Does the water-line of a ship rise or fall as it passes from fresh water to salt?', the reason why an image-scene of a ship passing from a river-mouth to the sea appears in some form or other in almost every one's mind is that such a scene presents all the material of the question in a natural and familiar scheme, each concept attached to its own peg. The memory has then to work upon the instructions given in the question and to revive what material is readily available in it, so that some of that material may perhaps cohere well with the points of the question and thus yield the answer. And, according to the drift of this work of memory and coherence (thought), so a person will even *see* the ship rising or falling in his mind's eye. Compare with that easy question such a one as this: 'John is twice as old as Mary was when he was as old as Mary is. If John is

21, how old is Mary?' Conceptually the two questions are probably equally easy; but no image is readily forthcoming in the second to hold all the concepts and their relations together in the mind and make action between them easy. When that action is easy, the answer to the question is its outcome, or rather is the verbal expression of its outcome. The thought involved in answering the question is partly the memory work, partly the trying of the concepts and the memory additions together to see if they will not give the definite complex implied by the question.

Now, one is tempted to elaborate the point and to show the question groping for its answer, like the tentacles of an octopus searching in some dark cave for what is movable and appetizing. And the reader may feel impatient at the futility of trying to make the mind work like a machine. It is the self that thinks and searches, is it not? The self is the proper that searches and sees fitness and judges? It is the self that attends, at least, for sure? It is difficult to see how one self could do so many different things. We ought at least to have the case for the self put more convincingly before us than hitherto. This will doubtless be done, if it can be done. But this much may be said, that recent psychologists in general do not seem to find that line of construction the most hopeful at the present time. Of course, very much further study by experimental and systematic methods is required if the complex field of cognitive activities is to be fully understood.

III. *EMOTIVE ASPECTS.*—Thus far we have dealt with the sensory-cognitive range of experience. We have now to consider the emotive aspects of it.

I. *Integrative theory of feeling.*—One of the most familiar views of feeling is incorporated in the three-aspects theory, according to which every experience has three aspects—cognitive, emotive, conative; knowing, feeling, and will. Or these three are merely one and the same experience from different points of view. Now there can be no hesitation about rejecting this theory so far as concerns feeling. Feeling is not an aspect of every experience; it is an experience definitely distinguishable from every other. Nor does it even accompany every other kind of experience regularly. Any one familiar with the experimental practice of introspection knows that he is not constantly feeling pleasure or displeasure. In fact, he will have found that he is in a state of feeling rather seldom than otherwise. Whole complexes and trains of experience pass by without any feeling of pleasantness or of unpleasantness appearing. It is for this reason that the theory of feeling as an attribute of sensation has also been rejected.

The difficulty has been at all times to know where to place feeling. The attributive theory is the only attempt that has been made to give it a definite place in the sensory cognitive range. The older sensationalists tried to work it into their field as a definite sensation or by the device known as mental chemistry. In this a group of sensations was held to turn by combination into an experience that did not at all resemble sensation, just as the gases hydrogen and oxygen combine to form the very different liquid water. So feelings might really be groups of tactual or organic sensations and yet not appear as such. That theory has been rightly rejected by everybody and has wrongly created a prejudice against every inclination to gather ideas towards the elucidation of experience from such a science as chemistry.

But even in recent times an attempt has been made to show that feeling is psychologically a sensation. It has quality—pleasantness and un-

pleasantness—and intensity; and the two problematical attributes of extensity and 'localization' (supposed in this theory to be an attribute) can be made plausible with an effort; feeling is not located at the beautiful picture and in the beautiful sound, but it seems to be spread out in the head more or less indefinitely. If no sense-organ of feeling is known, at least we may suppose that one does exist. Only it would not appear on the periphery, but would probably be concealed within the peripheral sense-organs or within the central nervous system, revealing to us how these organs are being affected, whether as usual (pleasantly) or far away from the range of their normal functions (unpleasantly).

This theory of feeling-sensations has not found many supporters—not that it has been definitely proved to be wrong; but it is too supposititious and speculative. Something as plausible and more in accord with the psychical facts is imaginable.

We need not discuss the theory that looks upon feeling as an irreducible element of experience. This view is the natural outcome of many fruitless attempts to resolve feeling into sensations or the like. But it does not preclude renewed attempts at reduction in general, and in particular an integrative theory of feeling is still a possibility.

Titchener has attempted to carry this theory of feeling as an element to its logical conclusion—a psychological definition of feeling as characterized by a different set of attributes from that peculiar to sensation. His important point is that feeling lacks the attribute of clearness possessed by sensation. We shall not renew the discussion of clearness. What we may notice now specially is the subtle difficulty of positing elements of experience of which one possesses attributes that another lacks. Besides, in this talk of the non-clearness or unclearness of feeling and of the difficulty of observing feeling are we not looking for a mare's nest, as it were? Suppose motion were regarded as a specific experience by such a theorist as Titchener. What would he say about its quality and intensity? Would they be non-existent or non-clear? And would motion, then, have only two attributes of extensity and localization? Or would it also be said to lack clearness? Probably no one is ever in doubt as to whether he is pleased or not. Where, then, is the non-clearness? Nor is he in doubt about how pleased he is. Then, if all that and nothing else is clear, probably there is nothing else in feeling to be clear about. Feeling would then be very like motion, as it appears within an integrative theory. It is just motion (its quality, if you like), and it has magnitude—speed. So feeling has quality and magnitude—intensity.

The work of an integrative theory of feeling really begins when the double basis of feeling has to be shown up, and also the difference in the parts of that basis that integrates to form feeling. There are many lines of evidence that converge to support this theory and to make it at least probable as an advance beyond the more conservative theory of feeling as an irreducible element of experience. But their exposition is too long to be given here.

2. **Problem of the emotions.**—We may consider briefly the other great division of the emotive life—the emotions proper. The feelings are only slight movements of the soul, as it were; emotions are rolling waves and storms whose troubles reach far down into the deep waters. And the scientific problems of emotion are equally deep and agitated.

Even the enumeration of the emotions is by no means settled. Of course about the great emotions—fear, anger, and love—there is hardly a doubt. Questions are sometimes raised about the primacy

of love—the attempt may be made to attach it so closely to the sexual instinct as to endanger its dignity as an emotion—whereas there is no such introductory function of bodily origin for the emotions of fear and anger; they come upon us like the thunder-storms of summer.

This absence of a bodily preparation serves to distinguish the emotions from the instincts, which are concerned with the great functions of reproduction, nourishment, self-protection, and the like. But there are those who tack on special 'instincts' to the emotions in order to explain the typical and neurally inherited expressions of the emotions—e.g., fear and the instincts of flight and concealment, anger and the instinct of pugnacity.

Other disputed emotions are sorrow, pride, humility, parental emotion, disgust, curiosity, loneliness, etc. No one would dispute the presence of an emotive state in these affections. The question rather is: Are they primary emotions or are they variant forms of a few generic emotions that differ only in the objects to which they refer?

This object of emotions offers as many hard problems as does the object of cognition. Not only is it hard to see how emotion comes to be directed upon an object at all—on that rock the James-Lange theory of the emotions, e.g., foundered—but the peculiar individuality of the object is puzzling. Of the object of cognition we know at least that it only gradually emerges into clear view, and we can form plausible theories of the gradual emergence of a definite objective relation. But in emotion the object may appear suddenly upon the mental horizon without any sort of previous preparation, and lo! the emotion is directed upon it at once in full force. This peculiarity is found also among the instincts. Many insects seem to be born with a nervous system prepared specifically for attention to special objects. The physiological difficulty lies in the complicated process that seems required to account for the 'perception' of those special objects. Animals may 'recognize' their other sex by simple smell-impressions. But how should a wasp recognize a certain kind or size of caterpillar in that way? Hence even the possibility of innate ideas has been seriously considered to be re-admissible. But that way out of the difficulty seems to the writer intolerable in science.

Then, again, the emotions renew the psycho-physical difficulty. They are held to be strange phases of the spirit, as strange and unaccountable as the sensations of red and yellow in their dependence on etheric wave-lengths. The feeling of fear is said to be an experience for which we cannot account by relating it to other experiences; it is a gift from the brain; something happens in some remote corner of that vast mechanism, some subtle neural congestion, and the colour of our mood is determined by it in accordance with unknown psycho-physical laws. This doctrine may be illustrated by an example from another region: we draw the hand away from heat because of the pain, so we think; that is an illusion; the real reason for drawing the hand away is neural mechanism; we should draw the hand away in just the same way if even pleasure were substituted for pain; and we should then think, as a row, that we drew it away because of the pleasure of it.

The writer is firmly convinced that this is a doctrine disastrous to any form of psychological science and a mockery to the sense and coherence of the whole of experience. For, if it is a doctrine applicable anywhere—e.g., in the emotions—it is applicable everywhere. And then, as has been so often deduced, Shakespeare's work is the accidental product of a swarm of chance variations.

As well might one truly think that, if a fount of type were cast into the air often enough, it would come down one day as *King Lear*. These reminiscences of scientific speculation carry us back to a line of thought that is far from rare, although it was probably much more universal among biologists a decade or two ago than it is now. But, as far as the outlook upon pure psychology is concerned, it has changed very little. It means, after all, only that a coherent sphere of law has not yet been recognized in experience, and that the recognition of it as such has been made very much less likely by the success of the theory of chance variations in the neighbouring sphere of biology. It is pleasant to think that such an absurd doctrine has so often been rejected by the professed philosophers of the mind.

But we must not be content with vague 'spiritual' terms and generally 'ideal' expressions. We must carry over the methods and spirit of the natural sciences into the systematic, constructive work of psychology and show how purely psychical laws will yield us a satisfactory understanding of the world of spirit, just as purely material laws give us a satisfactory knowledge of the world of matter. The evolutions and actions of the material world can be worked by no agents or guides, so far as science is concerned at least. Of course, science is only the systematic mirroring of realities in cognition. Being other than what it pictures, it can hardly repeat the inner spontaneity and being that are the essence, as against the form, of its objects. Nor can psychical evolutions and actions be worked by spiritual agents or guides, so far as the science of mind is concerned. We can only hope to find general laws of mind or of psychical stuff and to explain particular psychical phenomena properly according to them, as the ways of science demand. Then we may let matter and mind come into cognitional harmony with one another, as they undoubtedly can and will, in due course.

And a psychology on these lines of construction is in no sense a descent to a lower level, an abandonment of higher ideals. It is rather a confidence and claim in the equal primacy of the sphere of experience as a basis for the derivation of laws alongside any other part of the scientific universe. We have every right to expect that the world of experience will be as amenable to the strict ways of science as the world of matter upon which it is, as we know it, dependent.

IV. *CONATION*.—The only other sphere of experience to be mentioned is conation. In so far as that is conation within experience, as in attending, remembering, thinking, and the like, the study of it is continuous with that sketched in the preceding pages. In so far as conation involves muscular movement, we enter upon a new region of special difficulty. Here psychology is still struggling with the barest facts and first principles, as the dearth of information on the topic in any of the textbooks indicates. The reader must simply be referred to special treatises on the subject.

The primary question is an introspective one: What precisely lies before the mind's observation in the case of voluntary movement? And how can we make a coherent, systematic whole of all the facts gathered by the experimental pursuit of this problem? One of the common earlier answers to the question has been disproved. We do not necessarily anticipate our voluntary movement in a mental image of it and will movement from that basis. But the true psychological formula of voluntary movement has still to be determined. The way to knowledge is probably blocked in this, as in other regions of experience, by the confused notions left from the wrecks of previous theories.

We may expect the right key to unlock the door quite easily.

The problem of conation makes possible a reference to the line of thought that distinguishes the content, or objective side, of an experience from its subjective side or the act of it. Those two sides can be distinguished in all experiences. So we have for the series of sensum, percept, concept a corresponding series of acts—sensation, perception, conception. This distinction carries us back again to the distinction of the objective aspect of experience from the self which acts experience or does it. It is in fact only a variant upon this theory. Ingenious attempts have been made to build up a science of these acts—sensing, perceiving, remembering, imagining, etc.—which deserve serious consideration. But the writer, at least, is not convinced of the validity of the results claimed or of the merits and necessity attributed to this line of construction. At the same time, he is aware that a psychology 'without a soul,' and still more without such a series of acts, may seem to many to be a wooden affair. It seems to him that the dispute is not one which as yet makes great difference to the detail work of psychology, and he inclines to think that the difficulty discussed is the appearance in psychology of the difficulty of substance and action, matter and energy, that runs throughout all the sciences of the real. Content and act are, then, rather inseparable aspects of one reality—the reality described statically by the titles of its distinguishable unities and dynamically by the titles of the chief interactions of its parts—rather than the waters of matter and the spirit that hovers over them to divide them hither and thither.

LITERATURE.—The following works will introduce the reader in detail to the methods, facts, and theories upon which this article is based: C. S. HENRY J. WATT.

PSYCHO-THERAPEUTICS. — This is the name employed for the processes by which man attempts to influence disease by measures acting through the mind. It is a subject which brings out more prominently than any other the close relation which has existed throughout its whole history between medicine on the one hand and magic and religion on the other. The earliest modes of healing of which we know are psychotherapeutic, and, if the remedies of existing peoples of rude culture provide any indication of primitive modes of thought and action, psycho-therapeutics would seem to be the oldest branch of medicine. A distinction must be made, however, between the use of measures for the cure or amelioration of disease which act through the mind and the recognition of their psycho-therapeutic character. Though psycho-therapeutics may have been the earliest form of medicine, it has been the last to be brought within the scope of scientific treatment, the last to undergo that process of rational-

ization and foundation upon scientific principles which is the essential feature distinguishing medicine from those social processes with which it has been closely allied throughout its history.

A study of the behaviour of savage man towards disease shows that it consists almost exclusively of measures which, when successful, must have acted through the mind, especially by means of faith and suggestion. A leech who treats a case of headache on the assumption that it has been caused by the magical actions of a sorcerer, and either performs counter-charms or induces the sorcerer to remove his spell, is evidently acting purely through these agencies. In other cases faith and suggestion only assist a process which acts in some other way. Thus, a leech who treats a case of constipation on the assumption that the trouble is due to the presence of a snake or octopus in the abdomen will produce a good effect by the mechanical action of manipulations designed to destroy the imaginary animal, but in such a case faith and suggestion also play a great part. In most of the cases in which leaves, bark, or roots are employed by lowly peoples to cure disease we can be confident that success is due purely to faith and suggestion. The history of pharmacology reveals a process, still far from complete, in which medicaments supposed to act upon disease have failed to justify their reputation when subjected to scientific study and have evidently owed their reputation for medicinal virtue to faith and suggestion. While faith and suggestion are processes inextricably interwoven with the employment of therapeutic measures from the earliest stages of medicine down to the present time, these agencies have taken many other and more direct forms. The modern explanation of miraculous cures given by those who rationalize religion is that they act through faith and suggestion, and the systems of healing which are continually coming into existence in opposition to the orthodox medicine of modern civilized peoples owe their success largely, if not entirely, to the power and efficacy of these agencies. The large measure of success which these movements obtain in popular opinion is due to their exploitation, wittingly or unwittingly, of processes which orthodox medicine has failed adequately to recognize.

1. Scope.—It is often supposed that psycho-therapeutics, whether belonging to orthodox medicine or to some form of faith-healing, is especially applicable in cases of hysteria or similar diseases. There is, however, hardly a variety of disease for which this mode of treatment may not be useful. It is customary in medicine to distinguish between organic and functional disease, though these are, in fact, merely categories convenient for practical purposes, which pass insensibly into one another and are difficult to define. Roughly, by functional disease is meant disease for which existing knowledge does not allow us to assign any structural or chemical basis, which has been found by experience to tend towards recovery. There are other diseases, such as so-called idiopathic epilepsy, of the physical basis of which we are ignorant, which are characterized by a tendency towards permanent loss of function and death, and these diseases are not usually included in the functional category. Organic diseases, on the other hand, are those whose structural or chemical basis has been discovered. They again fall into two main groups: those which tend towards recovery and those which tend towards loss of function and death. In addition many mixed forms occur. Nothing is more frequent than the occurrence of functional disturbance as an accompaniment of organic disease, the real nature of which it often conceals or obscures.

It is in the treatment of functional disease and of the functional accompaniments of organic disease that psycho-therapeutic measures are most obviously applicable, but the scope of their usefulness is far from being limited to these. When it is claimed that some psycho-therapeutic measure, employed by physician or priest, has cured a case of organic disease, it will often be found that all that has been done is to remove the functional disorders which so often accompany organic disease. Psycho-therapeutic agencies can certainly influence organic conditions themselves, though the investigation of cases like these is attended by such difficulties that the mode of action is still surrounded by much doubt. We know that suggestion, especially in the form of hypnotism, can produce changes in organic processes and especially in the circulation. If such an organic change as a blister can be produced by suggestion, it is easy to understand how other organic changes can be ameliorated or removed by similar means.

A more frequent cause of the success of psycho-therapeutic measures in organic disease depends on the fact that many forms of progressive organic disease—even so grave an illness as cancer—are liable to periods of retardation or quiescence. Disease usually depends on a struggle between some noxious agent which has found its way into the body and the mechanism of the body itself. Progressive disease is that in which the external agents have the upper hand in this struggle. Any factor which raises the efficiency of the intrinsic forces, or, in other words, which reinforces the vitality of the patient, may diminish the ravages of the destroying agent and lead to retardation or quiescence of the disease; or may even in some cases turn the balance in the direction of recovery. It is thus intelligible that psycho-therapeutic measures should be capable of the beneficial action upon organic disease so often imputed to them by leech or priest, quite apart from the mere removal of functional complications. The scope of psycho-therapy is therefore as wide as medicine itself. It is especially applicable, however, in those states which depend on diminished efficiency of the nervous system and are classified together as neuroses.

2. Basis.—Certain principles are now widely recognized as of universal application in the domain of therapeutics, while others have been put forward to support special systems.

One widely-accepted principle is that psychical disorders and bodily disorders due to psychical conditions require psychical remedies. There are, of course, limits to the application of this principle. The influence of abnormal bodily conditions upon psychical states stands beyond all doubt. If there are morbid states of the body which are capable of being treated by physical means, it is essential that they shall be put right as a preliminary or accessory to the employment of psychical measures. In many cases, however, it is far from easy to estimate the need for the two kinds of treatment. Thus, there is no doubt that the retention in the body of waste products consequent upon constipation influences mental states, but in many cases the constipation itself is largely or altogether due to psychical conditions. As in every other branch of medicine, the essential preliminary to successful psycho-therapy is a correct diagnosis. When we have estimated correctly the relative shares taken by bodily and mental conditions in the production of an illness, there will be no difficulty in deciding how far the patient is to be treated by measures acting through the body and measures acting through the mind respectively.

A second principle which is now coming to be widely accepted is that in disorders of the mind or

affections of the body due to mental conditions it is necessary to discover the causes by which this morbid state has been produced. The history of medicine has been one of gradual progress from the treatment of symptoms to the treatment of the conditions by which symptoms are produced. In this progress the treatment of disorders of the mind has lagged far behind that of bodily disease. There are many practitioners of medicine who, although fully recognizing the importance of ætiology in bodily disease, fail to recognize that it applies equally to the mind, and they continue to treat symptoms as they arise or practise a purely empirical system of therapeutics.

To those who accept the two principles which have just been considered, every case of mental disorder or of bodily disorder consequent upon mental conditions is the outcome of the mental life-history of the patient, and the conditions to which it is due can be discovered only by the investigation of that history.

A third principle, now widely accepted by workers who otherwise differ greatly from one another, is that mental disease is predominantly due to disturbance of the emotional and instinctive aspects of the mind. It is believed that in the search for the conditions which have produced an abnormal mental state it is necessary to get back to experience which has been associated with a strong emotional tone, and it need hardly be said that either this emotional tone must have been of an unpleasant kind in itself or the unpleasantness must have arisen out of consequences which the experience has brought in its train.

Closely associated with this view is that according to which the intellectual disturbance in a case of mental disease depends on a process of rationalization through which the patient endeavours to account to himself for his morbid emotional condition. The direction taken by this process of rationalization is often such as leads to the formation of those beliefs at variance with reality which we call delusions.

A principle which actuates more than one system of psycho-therapeutics, but is still far from meeting with general acceptance, is that mental disorder is predominantly due to experience which has passed out of manifest consciousness. It is customary to speak of the body of experience which does not enter into manifest consciousness as the unconscious mind which shades off into manifest consciousness through an intermediate region of subconscientness.

Putting aside the largely verbal question whether this body of apparently forgotten experience is or is not to be regarded as forming part of the mind,¹ we are met with the far more vital problem concerned with the distinction between experience which is merely lying dormant, ready to appear in manifest consciousness whenever the suitable stimulus arises, and experience which has come to stand in that relation to manifest consciousness which is known as dissociation. A dissociated body of experience is one which has been separated from the body of experience making up manifest consciousness through some kind of active process—a process resembling in many respects that known as inhibition in neurology. Such dissociated experience is not recalled even by otherwise suitable stimuli in normal mental conditions, but requires abnormal or at least unusual conditions to bring it to the surface. A good example of such a dissociated mental state is that which occurs in the deeper stages of hypnotism. One of the most vexed problems of psycho-therapeutics turns on the question how far such dissociated bodies of experience, when accompanied

by an unpleasant tone of feeling, act as the basis of bodily and mental disorder. One theory of the rôle taken by such unconscious experience in the production of mental disorder which is now especially prominent is that of Freud.

Freud's theory of the unconscious.—From the point of view which concerns psycho-therapeutics, the most important part of Freud's system is his theory of forgetting. According to Freud, forgetting is not a passive process, but one which, at any rate in so far as unpleasant experience is concerned, depends on an active process of repression. It is held that unpleasant experience which has passed out of memory to such an extent that it does not enter into the manifest consciousness of everyday life has not ceased to exist, but continues to exert an influence upon the mind. It may express itself more or less continuously in the form of a phobia, a tic, stammering, dreams, etc., or, after a long period of quiescence, it may show itself under the influence of some shock or strain as a paralysis, contracture, affection of sensibility, or some form of mental disturbance. The disturbance, whatever may be its nature, is held to be the result of a conflict between a suppressed body of experience, now generally known as a 'complex,' and the general personality of the patient.

Freud has not been content merely to ascribe abnormal bodily and mental conditions to such conflict, but has put forward an elaborate theory of the mechanism by which the suppressed experience or complex produces its effects. He supposes that its modes of expression are governed by a mechanism of control which, using a metaphorical simile, he terms the 'censor.' This censorship allows the suppressed body of experience to find its way to manifest consciousness only in some indirect and often symbolic manner.

Two special features of the psychology upon which the Freudian system of therapeutics is based may be considered here: (a) the importance of the experience of childhood and (b) the rôle of sexuality in the production of morbid mental states.

(a) According to the earlier views of Freud, the suppressed experience of childhood forms the chief factor underlying morbid mental states, whether these express themselves explicitly in the form of mental symptoms or as paralyses, contractures, or other bodily affections. These states, he argues, depend on complexes dating back to early childhood, or even, in the more grotesque forms of the theory, to parturition or ante-natal experience. Freud has himself acknowledged the unsatisfactory character of much of the evidence upon which he originally based his belief in the importance of the experience of early childhood. The trend of modern work has been to accentuate the importance of recent traumata in the production of morbid mental states and to make of less account the experience of early life. This movement should not be allowed, however, to go too far and obscure the great extent to which early experience is responsible for the phobias, tics, and tendencies to morbid modes of thought, and still more of feeling, which form so fertile a soil for the growth of morbid mental states in later life.

(b) Another principle of the Freudian psychology which has led to much controversy, and has through the exaggeration of its importance gone far to wreck the immediate success of the whole construction, is concerned with the rôle of the sexual in the production of morbid mental states. Freud has come to the conclusion that the bodies of suppressed experience which he believes to underlie mental disorder invariably centre in incidents of the sexual life. So far as he himself is concerned, the form thus taken by his psychology of the morbid rests largely on an extension of the

¹ Cf. *Lancet*, 16th June 1917.

connotation of the term 'sexual' far beyond the customary, but, in the hands of his disciples and to a large extent in his own, the theory has come to deal almost exclusively with crude sexual experience, morbid mental states being ascribed to the working of repressed sexual trends and especially of perverse tendencies. There is no question that disorder of the sexual life, especially when its nature leads to repression, takes a vast part in the causation of mental disorder and of functional affections of the nervous system. It can also be granted that Freud and his followers have made definite advances in our knowledge of the sexual life, but, following the ordinary lines of scientific progress, the importance of the sexual has been so exaggerated by its advocates that it has produced a wide-spread failure to recognize the undoubted merits of the Freudian psychology and of the system of psycho-therapeutics founded upon it.

When regarded dispassionately, Freud's theory is only an extension and systematization of a principle, now widely accepted, that mental disorder, in the broadest sense, is not merely the result of the shock or strain which seems to be its immediate cause, but is the outcome of life-long processes by which the mental life has failed to adapt itself to its social environment. Every case of mental disorder is the product of two factors—a shock or strain, on the one hand, and the body of experience making up the mental constitution of the patient, on the other hand. The main principle upon which any system of psycho-therapeutics must be based is that this mental constitution must be studied and analyzed so as to discover the elements of weakness which have allowed the shock or strain to produce a morbid effect. The great merit of Freud's theory is that it provides a scheme of mental structure which, though it will doubtless have to be greatly modified, yet furnishes a most useful hypothesis from which to start in the study of mental disorder and of the measures by which its effects may be combated.

3. Psycho-therapeutic agencies.—The measures employed by those who practise psycho-therapeutics, whether they be leeches, sorcerers, or priests, depend on belief in certain agencies, though, as a matter of fact, the vast majority of practitioners employ their remedies without definitely formulating to themselves, or even without being at all aware of, the nature of these agencies; or, if the practitioner has definite notions concerning the mode of action of his measures, the agencies upon which his success really depends are often different from those in which he places his trust. The chief agencies upon which psycho-therapeutic measures are based are supernatural agency, direct human agency, faith and suggestion, and three agencies of especial importance which may be called catharsis, autognosis, and sublimation, while more subsidiary rôles fall to reasoning, sympathy, and occupation.

(a) *Supernatural agency.*—The belief that supernatural beings are able to act upon disease is common to nearly all, if not all, the religions of the world. Everywhere man believes, or has believed, that beings with powers superior to his own can be induced to influence the course of disease if they are approached by suitable rites. This belief applies not only to beings who can be regarded as gods, but also to the spirits or ghosts of the dead, and especially of dead ancestors, the cult of which forms the essential element in the religious systems of most of the peoples of the earth. In the ruder forms of religion the efficacy of the rites which make up the cults of the gods, the ancestral ghosts, or other spiritual agents is universally ascribed to the direct action of these

beings upon disease, but in the more developed forms of religion it is recognized more or less explicitly that the supernatural being works through some natural agency, such as faith. The modern belief that supernatural agents do not directly influence the course of disease depends on the wider belief in the universality of natural causation which is the foundation of science. This belief is supported by the experience that the more closely we examine cases in which the cure of disease is ascribed to supernatural intervention, the smaller becomes the residue which cannot be ascribed to some category of natural causation. The more highly developed the religion, the more do its leaders themselves adopt the theory of natural causation and ascribe successful results of their rites to the working of faith and suggestion.

(b) *Human agency.*—There is a wide-spread belief among the peoples of the earth that human beings are able to cure disease by their own powers. This is usually associated with the belief in the production of disease by magical rites, manual and verbal. In such cases the cure is effected either by inducing the sorcerer to remove his spell or by employing some other human agent, believed to be more powerful than the sorcerer, to counteract the spell or avert its consequences. In many of these cases the belief attaches in large measure to the objects or words which are used in the curative rites, and it is probable that the powers ascribed to these objects and words can often be traced back to a belief in divine or ghostly agency. It is certain, however, that efficacy is largely ascribed to the personality of the sorcerer. Some degree of confusion between personality and measures runs through the whole history of medicine. Even at the present time, and in the most civilized communities, the efficacy of therapeutic measures and of religious rites in connexion with disease is largely ascribed by the less educated members of the community to the personality of the physician or priest. Here, even more clearly than in the case of supernatural agency, the trend of modern opinion is to ascribe the efficacy of personality to the action of faith and suggestion.

(c) *Faith and suggestion.*—In modern writings on therapeutics and allied subjects it is not customary to distinguish between faith and suggestion, or, if they are distinguished, faith is regarded as a form of suggestion or is held to act through suggestion. This attitude is the result of a tendency to make the scope of suggestion so wide as to include nearly every process by which one mind is acted upon by another mind, by an object of the environment, or even by itself (auto-suggestion). When it is said that faith acts through suggestion, it is meant that through the process of belief, which is the main element in faith, a deity, person, or object produces a certain effect upon the mind which is classified with other effects ascribed to suggestion. Belief is an active and conative process, differing fundamentally from the condition of passive receptiveness which is the essential feature of the cases for which the concept of suggestion was originally framed. Though the two processes are poles apart psychologically, they are often combined. Suggestion often produces its effects through faith, but this is very different from explaining faith by suggestion. We could just as well, or perhaps with more justice, say that suggestion is explained by faith. The fact is that they are two distinct processes, differing essentially from one another in psychological character and producing their effects in very different ways.

Both faith and suggestion are of the greatest importance in psycho-therapeutics. It is undoubtedly to them that the remedies employed by savage and barbarous peoples owe their efficacy,

and they continue to be operative in the most modern forms of medicine where the confidence of the patient in his physician is generally acknowledged to be the first and most important step towards therapeutic success. Throughout the whole history of medicine from the stage of its close association with magic or religion to its full emergence as an independent social institution, the personality of the healer has been of predominant importance. It is through faith in this personality and its influence in directing the process of suggestion that therapeutical measures attain a large proportion of their success.

The influence of faith and suggestion pervades the whole system of treatment of the sick. Not a dose of medicine, not even a measure of diagnosis, can be used without bringing them into action. Their effect often begins even before the physician has seen his patient, and usually they are the more efficacious the more unwittingly they are employed. There are many practitioners of medicine, among both savage and civilized peoples, whose measures would lose most of their efficacy if they realized the true mode of action of the remedies in which they have so profound a faith. Here, as in so many branches of social life, it is half-measures that are especially likely to fail. A physician who understands the real nature of psycho-therapeutic activity and one who is wholly ignorant in this respect will succeed. The unsuccessful practitioner will be one who knows enough to destroy his faith in his medicaments and diatetic remedies without having acquired a sound knowledge of the processes upon which the success of these remedies so largely depends.

(d) *Catharsis*.—The two factors, faith and suggestion, run as manifold threads throughout the whole texture of psycho-therapeutics. They are of special importance where the mind is intact or where, more correctly, the mental disorder shows itself by some physical manifestation rather than in some overt disorder of the mind itself. The agency now to be considered is of especial importance where disorder of the mind is due to some mental injury which produces a condition of anxiety. Catharsis is the most important psycho-therapeutic agent in the process of confession, whether this form part of a religious rite or of a manifestly medical procedure. The process relieves a condition of mental tension produced by some trouble which gives cause for anxiety, grief, or other emotional state associated with an unpleasant feeling-tone. In cases where a person has nothing with which to reproach himself the relief produced by communication with others is well recognized. Where the grief due to pent-up trouble is combined with shame the relief is even greater, though the obstacles to the employment of this means of relief are greater.

The term 'catharsis' should properly be limited to the agency by which a pent-up grief, anxiety, or shame is relieved by the process of confession and that in which a mental conflict is resolved by measures which bring to manifest consciousness some element of suppressed experience.

(e) *Autognosis*.—Another most important element, both in confession and in the revival of forgotten experience, is that the subject learns the better to know himself. An important factor in the production of mental disorder, still more important in keeping it in being when it has already been produced, is that the patient fails to understand his condition. His whole disorder is enveloped by a sense of mystery which greatly accentuates the emotional state upon which his troubles primarily depend. The process by which the patient learns to understand the real state of his mind and the conditions by which this state

has been produced forms a very important therapeutic agency which may be called 'autognosis.'¹

Autognosis as a therapeutic agency includes a large number of processes. Owing to the ignorance of the elements of physiology and psychology which is general even in the most highly civilized communities, persons suffering from mental and functional nervous symptoms often wholly misunderstand, or vastly misrate the importance of, any unusual mental or bodily experience. Thus, the more or less normal hallucinations of the state between sleeping and waking (hypnagogic hallucinations) may give rise to apprehensions of approaching insanity, or normal physiological occurrences may be regarded as symptoms of serious disease—a misconception often greatly assisted by the teaching of quacks or ill-educated medical practitioners. In such cases the process of autognosis consists in imparting elementary knowledge for which the patient should not have waited until he has become the subject of some mental stress.

Another value of autognosis depends on the wholly mistaken estimate of the gravity of offences against morality which frequently accompany states of mental disorder. It is noteworthy that those who suffer in this way are not habitual offenders, who seem to pass as a rule through periods of mental stress without suffering. The persons whose neurasthenic or melancholic state centres in some old moral delinquency are usually persons of undue sensitiveness who may perhaps have only once lapsed from virtue, or may have been only innocent partners in, or even mere spectators of, some immoral act; sometimes they have offended only in thought and not in deed. It is in such cases that the process of autognosis is especially valuable, though to have a fair chance of success it should be employed in the early stages of the malady before the condition of anxiety has become habitual and some unnatural explanation has been systematized to form a delusion. Old injuries of this kind usually produce their effect after some strain and stress which lower vitality and produce disorder of various bodily processes. The awakening of the old mental injury only serves to aggravate and perpetuate this state, thus producing a vicious circle in which the trauma brought to the surface by a pathological condition accentuates the condition by which it has been produced. By the process of autognosis this vicious circle may be broken or weakened and an opportunity given for a movement towards recovery.

Of greater interest and of more importance is the process by which the patient is led to understand how his disorder has developed. Many mental disorders are only exaggerations of tendencies towards modes of feeling, thought, and action which go far back into the life-history of the sufferer. If he can be led to see where he has strayed from normal paths and can learn to know the factors to which this straying has been due, a long step will have been taken towards recovery. If the patient learns that his disease is only the expression of an exaggeration of a wide-spread trend of feeling, thought, or action, his condition will no longer appear mysterious, terrifying, or horrible, but will assume proportions which can be faced rationally and dispassionately.

The instances of autognosis just considered are examples in which mental conditions underlying pathological states are present in a manifest form. One of the leading problems of psycho-therapeutics at the present time is to discover how far the process of autognosis can be extended to include past experience which has wholly disappeared from the conscious mental life. It stands beyond

¹ The present writer owes this term to Dr. William Brown.

all doubt that past experience which has taken so little part in the conscious mental life of a person that it seems to be wholly forgotten may reappear in consciousness during the state of anxiety following some period of physical and mental strain. Moreover, this experience, supposed to have been forgotten, may come to dominate consciousness so as to dwarf all other mental content. All gradations occur between cases in which the memory of an unpleasant experience has never long been out of consciousness and experience which has been so nearly forgotten that the patient may not remember its coming to consciousness, perhaps for years before the period of stress which again brings it to the surface. The doubtful point is whether this series can be extended to include past experience which has so wholly passed from consciousness that it can be brought to the surface only by special means, such as hypnotism, or by the process called psycho-analysis.

(f) *Sublimation*.—Of the agencies common to the work of physician, priest, and teacher none is more important than that to which the name 'sublimation' has been given. The process of autognosis often shows the presence of some faulty trend of thought and action which is capable of being turned into a more healthy channel. Many nervous and mental disorders depend, at any rate in part, on tendencies which are altogether anti-social, or, while suitable to one kind of civilization, are out of place in the society into which the sufferer has been born. In such a case sublimation furnishes an alternative to satisfaction or repression.

One of the chief directions which may be taken by the process of sublimation is towards religion. The specific group of sentiments and emotions which make up the psychological basis of religion can often be substituted for those associated with the anti-social trend. Less frequently the sentiments and emotions associated with art can be utilized, or the morbid energy may be directed into some other channel of activity. The great importance of religion in the process of sublimation, and in the whole field of psycho-therapeutics, is that it is able to satisfy both emotional and practical needs, its specific emotions satisfying one kind of need while its many practical activities satisfy others. An additional value which attaches to religion as a means of sublimating morbid energies is due to the fact that in their historical development modern religious systems have brought religion and moral teaching into close relation with one another, so that a definite system of beliefs opposed to various anti-social trends serves to rationalize and fortify the process of sublimation. The relative failure of art, as compared with religion, in the process of sublimation is largely due to the absence of any such association between its specific emotion and moral teaching, most followers of art explicitly denying the connexion with morality which forms so definite a part of modern systems of religion.

(g) *Reason*.—One of the most difficult problems of psycho-therapeutics is to assign its proper place to reason as a therapeutic agency. It is a universal experience of those who have to deal with the insane that it is useless to attempt to reason a patient out of his delusions, and this holds good also to a large extent of the obsessions and hypochondriac fancies which are so frequent a feature of the broad borderland between sanity and insanity. By such reasoning the sufferer is often driven to adopt the rôle of an advocate, so that the only result may be the strengthening of his delusion or fancy. Where reasoning does good, it is often only through the influence of faith and suggestion, in which case the reasons given by the physician

or priest only reinforce processes of other kinds which act through emotional or instinctive channels. While reason is thus of little direct use, and may even be harmful, it forms a most important element in other psycho-therapeutic agencies, and especially in autognosis. Once the true emotional cause of a morbid state has been discovered and explained to the patient, the exercise of his own reason comes to form an essential element in his amendment or recovery. There is all the difference in the world between the use of reason by one who does not understand the real underlying conditions of the malady and reason exerted when these conditions have been discovered and are themselves the material from which the reasoning starts and upon which it acts. As with other therapeutic agencies reason is useless or harmful only when it is employed in ignorance of the real nature of the morbid state upon which the physician or priest is acting. Here, as in other branches of medicine, the proper use of the remedy depends on the exactness of the diagnosis.

(h) *Sympathy*.—The nature of the action of sympathy in psycho-therapeutics raises a problem of considerable difficulty. The sympathy of the physician is essential in gaining the confidence of his patient and is thus an important element in psycho-therapeutics, but, unless very judiciously expressed, sympathy will have a bad effect. It has long been recognized that removal from his or her ordinary surroundings is in most cases essential if a neurasthenic or hysterical patient is to have the best chance of recovery. One very important reason for this is the necessity of removal from the almost invariably injudicious sympathy of relatives and friends by which the attention of the patient towards his symptoms is accentuated. The physician himself should always be on his guard lest an excess of sympathy should increase the attitude of self-regard which is one of the main characteristics of many forms of neurosis. Cases are frequent in which at one stage or another it may be useful to act towards a patient in an apparently unsympathetic manner. In so far as sympathy can be regarded as a direct therapeutic agent, it is as capable of harm as of good. It is in paving the way towards the employment of other agencies that its importance in psycho-therapeutics is most definitely shown.

(i) *Occupation*.—In some systems of psycho-therapeutics work has been put in a foremost place. It has been held that the chief need in cases of neurosis is that the mind should be occupied in work of a kind which will direct the attention of the patient away from the morbid activities of his mind and body.

Since a prominent feature of many cases is abnormal preoccupation in some unhealthy trend of thought and feeling, such a course would seem at first sight to be sound, if not obvious. In practice, however, the will to work is present perhaps in excess among persons suffering from neurasthenia or other states which call for psychical treatment, while in a still larger number there is such a lack of interest or such bodily or mental weakness as to make the effort to work even harmful. In such cases it is necessary to restrain rather than encourage activity. In most cases, however, there comes a stage at which the patient is in danger of acquiring a habit of inactivity, and occupation then becomes a most important therapeutic agent. In other cases in which the process of autognosis shows the presence of sloth or misdirected energy the regulation of occupation becomes of the utmost importance in psycho-therapeutics.

4. *Psycho-therapeutic measures*.—The lines of treatment adopted by one who practises psycho-

therapeutics will depend on his beliefs concerning the nature of the agencies by which disease is produced and cured. If he believes in the efficiency of superhuman agency, his treatment will consist of religious rites of prayer, sacrifice, and propitiation, together in many cases with other rites, such as those of purification, confession, penance, and atonement, designed to put both patient and priest in a proper relation towards the superhuman being whose help is being sought. By some Churches these various rites have been combined so as to form organized systems in which large numbers of the sick undertake pilgrimages to places believed to have miraculous efficacy in the cure of disease.

Similarly, if one believes in human agency as the cause of disease and the means for its removal, either he will adopt measures designed to propitiate the person by whom the disease is believed to have been produced or he will employ, or induce others to employ, measures designed to neutralize those of the sorcerer to whose actions the disease is ascribed.

If the physician believes in suggestion, he will employ this agency wittingly in one of its many forms. If he believes in the value of autognosis, his treatment will consist chiefly in measures designed to bring the patient to a sound knowledge of himself and of the conditions by which his disease has been produced and can be remedied. If he believes in occupation, he will set the patient to tasks designed to turn the morbidly directed energy into this channel.

The discussion of psycho-therapeutic agencies in the preceding section will have pointed the way to other modes of treatment, but a few measures may be more fully considered.

(a) *Hypnotism*.—It is now generally accepted that hypnotism as a therapeutic measure is only a mode of utilizing suggestion, the chief feature of the hypnotic state being a condition of heightened suggestibility. Closely allied to hypnotism is the condition, known as hypnoidal suggestion, in which a patient is placed under conditions especially designed to enhance his receptiveness for the influence of suggestion.

A prominent characteristic of hypnotism is the production of a state of dissociation, so that, on coming out of the state, the patient has no conscious recollection of any suggestions which may have been made or of any other events which have occurred during the hypnotic state. Nevertheless the suggestions will act in the manner intended by the hypnotizer, and other events may be recalled when the patient is again hypnotized or may revive in dreams or under other conditions. In the state of hypnoidal suggestion there may also be some degree of dissociation, but the patient, at any rate in its slighter degrees, is aware of the suggestions and other experience.

Perhaps the most debated question of psycho-therapeutics is how far it is legitimate to practise hypnotism and hypnoidal suggestion. The physician who recognizes that every word that he utters may carry a suggestion will naturally utilize this agency as much as possible. The question which is disputed is how far it is legitimate to accentuate the influence of suggestion by the production of the dissociation which characterizes the hypnotic state, or to give suggestions to the patient in such a way that he is led to believe that some force with an element of mystery is being employed. One of the points on which the question turns is how far hypnotism produces a harmful effect. It is generally acknowledged that a person who has once been hypnotized can be more easily hypnotized a second time, not only by the original hypnotizer, but also by others if a definite counter-suggestion has not been given. This definite

change in the character of a person can hardly be altogether for the good, to say the least. Moreover, it often happens that a definite craving to be hypnotized is set up, though it is claimed by advocates of hypnotism that this happens only when the agency is employed unskilfully. Since, however, we can be confident that, if hypnotism became a regular part of medical practice, it would often be employed unskilfully, a vista of possibilities is opened which it is not pleasant to contemplate.

These arguments are especially directed against the habitual employment of hypnotism as a remedy for minor ailments or for ailments which experience has shown to be amenable to other measures. There are certain conditions, however, long the despair of medicine, for which the success of hypnotism is undeniable. Such conditions include dipsomania, morphinomania, and other forms of drug-habit, as well as certain forms of sexual aberration. These states, being desperate, may require desperate remedies, and, when they have failed to react to other modes of treatment, it would be difficult for the most strenuous opponent of hypnotism to deny its use. A more doubtful category is that of cases of functional disease due to shock such as have been so frequent in the great European war. There is no question that symptoms can be removed, sometimes by a single hypnotic treatment. It may be argued, on the one hand, that experience has shown that these cases tend to recover quickly by other means. On the other hand, it may be argued that the cases, having been produced by a sudden shock quite foreign to the experience of everyday life, should be treated by some equally drastic remedy. We do not know enough at present of the history of such cases to allow any decisive answer concerning this problem. We must await the investigation of the after-history of the many cases in which hypnotism has been employed during the war.

The chief objection to the employment of hypnotism is not, however, its possible harmfulness or the dangers of unskilful application, but rests on the fact that the use of suggestion and hypnotism ignores a fundamental principle of medicine in that these agencies are directed towards the symptoms of disease and do not touch the morbid process to which the symptoms are ultimately due. The action of a physician who hypnotizes for headache and sleeplessness is to be classed with that of the practitioner who administers aspirin or morphia for these symptoms without inquiring into the conditions by which the headaches and sleeplessness are being produced. Both actions are examples of a slipshod and short-sighted employment of therapeutic agencies. The most recent systems of psycho-therapeutics hold that in the treatment of mental disorder, as in other branches of medicine, it is our duty to discover causes and to remove or amend symptoms by discovering and attacking the deeper and less obvious states upon which the symptoms depend. Hypnotism may be used to discover causes and may thus be an instrument in autognosis, but, as more usually employed, it merely touches the surface and ignores, or may even obstruct, inquiry by which the real nature of the malady may be revealed.

(b) *Psycho-analysis*.—This word has been very unfortunately chosen, for every physician who endeavours to discover the conditions which have produced an abnormal mental state must of necessity carry out a process of psychical analysis. The term is so widely used, however, for the system initiated by Freud that its use can hardly be avoided. By psycho-analysis is meant primarily the process by which the physician discovers the 'complex' or body of forgotten experience which

is believed to underlie abnormal mental states or abnormal bodily states ascribed to mental conditions. The word applies primarily to the method of diagnosis by which the conditions underlying a morbid mental condition are discovered. Since, according to the earlier ideas of the Freudian school, the diagnosis is itself sufficient to bring about a cure, its use included also a system of therapeutics. According to Freud, a complex cannot be discovered by the ordinary methods of introspection, but expresses itself in dreams, in such abnormalities of conduct as forgetting, slips of the tongue or pen, and apparently meaningless acts. The investigation of these processes forms one of the chief departments of psycho-analysis.

In addition to these more or less indirect means of analysis, two other methods have been widely employed. In one, known as the method of free association, the patient has to express freely every thought that comes into his mind in response to an idea suggested by his symptoms. In another method, which is due especially to Jung, the patient is given a number of words in succession and is asked to express as rapidly as possible the ideas that each word calls up in his mind. It is found that there is a delay, or even total failure to respond, if the given word arouses ideas in close relation with the complex; and, if a series of words is repeated, the responses on the second occasion will not agree with those of the first when the words have aroused the complex. In the method of free association the patient is put into as tranquil a state as possible and the experience succeeds the better the more the condition approaches a minor degree of the hypnotic state, in which thoughts aroused by immediate association are controlled as little as possible by volition.

The method of closed association with reaction-time has a far narrower scope and is chiefly useful in providing clues for other lines of analysis. If employed without full knowledge of its purpose on the part of the patient, it savours too much of the methods of the detective and may do harm by interfering with the state of confidence between physician and patient which is the first condition of success in psycho-therapeutics.

(c) *Re-education*.—This term is used for the body of measures which the physician employs as the result of the processes by which he has led his patient to a knowledge of himself and of the conditions which have produced his morbid state. In rare cases a patient may be so intelligent and balanced that the mere acquirement of such knowledge may itself be sufficient to enable him to shake off his morbid symptoms and set him on the path leading to a healthy mental life. This holds good, not only when the experience which he has come to understand belongs to his fully conscious mental life, but also, and perhaps still more conspicuously, in those cases in which the process of psycho-analysis has brought to light some long-forgotten experience. In most cases, however, the full therapeutic value of autognosis is brought out only through a process of re-education in which the patient is led to understand how his newly acquired knowledge of himself can be utilized. He has to be shown how to readjust his life in the light of his new knowledge and how to turn energy, hitherto morbidly directed, into more healthy channels.

The processes which have been considered in this article under the headings of autognosis and re-education are as applicable to moral defects as to those more usually held to lie within the sphere of medicine. Recent movements in psycho-therapeutics go far to bridge the gulf between medicine and moral teaching and will help us to co-ordinate and reduce to common principles the work of the

physician, the teacher, the social reformer, and the priest. It is the prospect that principles of action and modes of inquiry discovered by any one of these may be helpful to the others that makes these movements so full of promise. Some of the modern measures of the physician are little more than his adoption of modes of treatment which have long been familiar, in the form of confession, to the priest. While the physician may learn much from the long accumulated experience of the priest, the priest may in his turn be helped by such a study of the psychology of confession as his special knowledge and experience allow the physician to undertake. Moreover, the experience of both priest and physician may be utilized by those who have to do with mental and moral training or with the amendment of faulty moral tendencies which have led to the commission of crime. Using the term in the widest sense, psycho-therapeutics may furnish a body of organized knowledge which can be utilized by all those who are interested in the regulation and improvement of social conditions.

The great interest of modern trends in psycho-therapeutics is that at this late stage of social evolution they seem to be again bringing religion and medicine into that intimate relation to one another which existed in their early history. We have here a typical case of social evolution in which social processes once so closely combined as to be with difficulty distinguished from one another have followed widely divergent paths only to meet again as each has come to spread its branches widely over the whole field of social activity.

PUBERTY.—Puberty is the period of life at which reproductive power is attained. Its commencement is marked by certain external signs,¹ and it is characterized by certain changes, structural and organic, intellectual, emotional, and moral.² The age at which it is reached varies considerably in the case of both sexes;³ and these variations occur not only in different races but in different individuals of the same race.⁴

I. INITIATION AND PUBERTY.—It is a familiar feature of uncivilized societies that those of their members who are of the same sex, age, or occupa-

¹ Of these the most marked are, in females, enlargement of the breasts, the growth of hair on the pubes and armpits, and the menstrual flow; and, in males, the breaking of the voice, and the growth of hair on the armpits, pubes, and face.

² As to the changes and the disorders of mind and body to which puberty has special relation, see art. **ADOLESCENCE** and authorities therein cited. See also A. E. Crawley, *The Mystic Rose*, London, 1902, p. 198.

³ A. van Gennep, *Les Rites de passage*, p. 95 ff. These variations are due to many causes, among which may be reckoned race, climate, diet, housing, clothing, occupation, temperament, mode of life, and state of health (H. Ploss and M. Bartels, *Das Weib in der Natur und Völkerkunde*¹⁰, i. 421 ff.).

⁴ Thus, in Egypt, the average age at which menstruation begins is, according to one authority, 9–10 years, according to another 10–13 years, while, among the Somali, it is 16 years. For 584 women of Tokyo the figures were: at 11 years, 2; at 12 years, 2; at 13 years, 26; at 14 years, 78; at 15 years, 224; at 16 years, 228; at 17 years, 68; at 18 years, 44; at 19 years, 10; at 20 years, 2 (Ploss and Bartels, i. 481 ff.; van Gennep, p. 95).

tion, or who have been participants in the same rite at the same time, or who are affected by interests common to all of them, tend to form themselves into subordinate social groups, membership of which confers special rights, imposes special duties, secures special privileges, and exposes to special supernatural influences. To attain egress from or entrance into such a group requires as its necessary *prius* the observance of certain customs or the performance of certain rites;¹ and we find, accordingly, that, in many instances, admission into the ranks of the mature is restricted to those who have undergone the appropriate preparation.² It is a common practice to give to the rites which mark separation from childhood and entrance upon manhood or womanhood the name of 'rites of puberty.' And yet it is only to certain of those rites that the name can be accurately applied; for admissibility to the ranks of mature persons is, in many instances, determined not by arrival at puberty, but by something having no necessary connexion with it, such as attainment of a certain age³ or possession of a certain capacity or quality.⁴ Objection upon these grounds to an indiscriminating use of the name has, we venture to think, been pushed too far by van Gennep.⁵ At the same time, he has done good service in insisting on the limits of its applicability; and, accordingly, we shall confine our employment of it to those rites whose celebration is determined in point of time by reference to puberty.

It is, however, to be kept in view that, in some instances, a rite which is undoubtedly a rite of puberty does not take place until full development of puberty is attained,⁶ while, in others, it is postponed for reasons of convenience or by force of circumstances.⁷ In cases in which initiation is spread over a long course of years it may be that none or some only of the rites are puberty rites;⁸

¹ Van Gennep, p. 35 f.; H. Schurtz, *Alterklassen und Männerbünde*, p. 52 f.; art. INITIATION.

² In Fiji uncircumcised youths were regarded as unclean (B. Thomson, *The Fijians*, London, 1908, p. 216); and among some of the hill tribes of Central India an uninitiated person was tabooed. Thus, a child who had not undergone the rites of hair-shaving or ear-piercing was treated as *dhrit*, or devil, not subject to tribal restrictions as to food, etc. (W. Crooke, 'The Hill Tribes of the Central Indian Hills,' *JAI* xxviii, [1898] 246). E. J. Eyre (*Journals of Expeditions of Discovery into Central Australia*, London, 1845, ii. 201) says of a S. Australian black-fellow: 'He is a stupid idiotic sort of man so that the natives have not deemed him worthy of receiving the honours of their ceremonies, and still call him boy or youth, although he is an oldish man' (see A. W. Howitt, *The Native Tribes of S.E. Australia*, London, 1904, p. 530).

³ As in ancient Rome (see F. O. von Savigny, *System des heutigen römischen Rechts*, Berlin, 1840, iii. 56; B. W. Leist, *Gräco-italische Rechtsgeschichte*, Jena, 1884, p. 65 ff.).

⁴ Such as ability to carry arms (J. Grimm, *Deutsche Rechtsalterthümer*, Göttingen, 1881, p. 413) or prowess in war or foray (van Gennep, p. 125).

⁵ P. 93 ff.

⁶ See the account of the ceremony of the Yuin tribe (below, II.), and W. E. Roth, *Ethnological Studies among the N.W. Central Queensland Aborigines*, Brisbane and London, 1897, p. 170 ff.

⁷ It is postponed sometimes until a sufficient number of candidates has been collected (L. Fison and A. W. Howitt, *Kamilaroi and Kurnai*, Melbourne, 1880, p. 192), and sometimes until sufficient food has been procured for the feast which forms part of the ceremony (M. Krieger, *Neu-Guinea*, Berlin, 1899, p. 167; W. S. and K. Routledge, *With a Prehistoric People: the Atikuyu of British E. Africa*, London, 1910, p. 151), or to pay the superintendent of the rite (B. T. Somerville, 'Notes on some Islands of the New Hebrides,' *JAI* xiii, [1893-94] 5), or until the chief's son is old enough (G. McCall Theal, *Hist. of S. Africa*, London, 1888-93, ii. 205). In some instances the ceremony takes place only every four or five years (H. A. Junod, *The Life of a S. African Tribe*, London, 1912, i. 74; W. C. Willoughby, 'Notes on the Initiation Ceremony of the Becwana,' *JAI* xxxix, [1909] 229), while in others it is suspended owing to the occurrence of a calamity (Theal, *loc. cit.*), such as war, famine, or plague (L. Fison, 'The Nanga, or Sacred Stone Enclosure, of Wainimala, Fiji,' *JAI* xiv, [1885] 19).

⁸ Spencer-Gillens, p. 212 f. Among the A-kamba the children of both sexes are circumcised when about five or six years old, and a second ceremony is performed at puberty (C. W. Hobley, *The Ethnology of the A-Kamba and other E. African Tribes*, Cambridge, 1910, p. 68). Similarly, among some of the northern

and sometimes a puberty rite loses its original significance by being merged in a rite of another kind.¹

II. DESCRIPTION OF PUBERTY RITES.—A rite of puberty is sometimes a simple rite, consisting merely of a dance,² a feast,³ or a procession through the street,⁴ and sometimes it is a complex rite, including within it or accompanied by subordinate ceremonies.

Thus the northern tribes of Central Australia celebrate two rites⁵—circumcision and subincision—which are obligatory on all males, and which always take place at puberty.⁶ In the Urabunna tribe the novice who has undergone both operations is shown some of the sacred totemic ceremonies, and receives instructions as to his conduct. He must give a present of food to the operators; and they, by touching his mouth with a piece of meat, release him from the ban of silence.⁷

In one of the northern central tribes—the Larakia—the novice is subjected, not to any mutilation, but to hard usage such as kicks and blows, and to tests of strength, endurance, and courage;⁸ and finally he is shown and given a sacred bull-roarer which he may not show to his younger brothers or any woman.⁹ Among the Yuin of S.E. Australia, who practise neither circumcision nor subincision, a tooth is knocked out¹⁰ by a medicine-man.¹¹ During the ceremonies the bull-roarer is frequently heard. Its sound represents the thunder, which is the voice of Daramulun.¹² The chief rite is followed by dances, pantomimic representations, and other solemnities, of which one of the most important is the mock burial and resurrection of a tribesman.¹³ The novices are subjected to certain food restrictions. Charcoal dust is the appropriate covering during the ceremonies; and, when they close, it is washed off as an indication that everything connected with them is done with. The youths are painted and invested with the belt of manhood, and retire into the bush, where the men who have had charge of them during the rite instruct them and give them their totem names. The novices do not take their place as men in the community until the medicine-men are satisfied of their fitness. Then they are permitted to marry.¹⁴

Among some of the Victorian tribes the chief rite consists of a fight between the novices of two tribes which are at feud,

tribes of Central Australia the throwing up ceremony precedes circumcision and subincision (see below, II.).

¹ See below, III. 1 (f) note, and J. Kohler, 'Das Recht der Papuas,' *ZVRW* xiv, [1900] 361 (Tami Islanders).

² See S. Passarge, *Die Buschmänner der Kalahari*, Berlin, 1907, p. 101 f.

³ E. Beardmore, 'The Natives of Mowat, Daudai, New Guinea,' *JAI* xix, [1890] 460; H. H. Bancroft, *NR*, London, 1875, i. 684 (Ceri and Tepocas). In the Marshall Islands the occurrence of first menstruation is celebrated by festivities, accompanied with singing and gifts of flowers (J. Kohler, 'Das Recht der Marshall-insulaner,' *ZVRW* xiv, 437).

⁴ B. Cruickshank, *Eighteen Years on the Gold Coast of Africa*, London, 1853, ii. 193 f.

⁵ Among some tribes these rites are preceded by a ceremony in which the novice is thrown up in the air and caught in the arms of the men (Spencer-Gillens, p. 337; cf. Spencer-Gillens, pp. 214-218).

⁶ Spencer-Gillens, p. 328 f. Among some of the tribes of N.W. Central Queensland (Roth, p. 170 ff.) and S.E. Australia (Howitt, p. 530, note 2) the ceremonies are performed at full development of puberty, when the moustache and beard begin to show. In the case of the Narrinyeri the principal rite of admission to the ranks of men consists in plucking out the beard and moustache (*ib.* p. 674). In the Yerklamining tribe circumcision does not take place till about the eighteenth year (*ib.* p. 664), while among the Dieri it is performed at the age of nine or ten years, when the novice receives a new name, and it is followed some years afterwards by subincision, in virtue of which the youth becomes a 'thorough man' (*ib.* p. 656 f.). In the case of the Arunta and other tribes the rite of painting the boy and throwing him up takes place when he is ten or twelve years of age. He may be circumcised at any time after puberty (Spencer-Gillens, pp. 214-218).

⁷ Spencer-Gillens, p. 334 f. ⁸ *ib.* p. 331 f. ⁹ *ib.* p. 332. ¹⁰ Where the practice of knocking out teeth prevails among the northern central tribes, it has, at the present day at all events, nothing to do with initiation (*ib.* p. 329).

¹¹ In the case of the ceremony in which Howitt took part there were three novices, of whom two were fourteen or fifteen years of age, while the third was older and had an incipient moustache (Howitt, p. 531; cf. p. 530, note 2).

¹² Among some of the northern central tribes the women and children believe that the sound of the bull-roarer is the voice of a spirit who devours and subsequently restores the novice (Spencer-Gillens, pp. 366, 501; cf. pp. 343, 499). Beliefs fundamentally the same are found in all Australian tribes (Spencer-Gillens, p. 246, note 1; Howitt, pp. 538, 628, 631 ff.; cf. p. 596). See also Krieger, p. 167; J. Holmes, 'Initiation Ceremonies of the Natives of the Papuan Gulf,' *JAI* xxii, [1902] 419 f.

¹³ 'The ceremonies are intended to impress and terrify the boy in such a manner that the lesson may be indelible, and may govern the whole of his future life. But the intention is also to amuse in the intervals of the serious rites' (Howitt, p. 632).

¹⁴ Howitt, pp. 556-561.

among others, of painting the novices and cutting their hair in a peculiar fashion, while, in some instances, plucking out the hair accompanies the rite of knocking out teeth.¹

Women, while usually taking part in the preliminaries to, and accompaniments of, the rite, are excluded from its actual performance.²

As to the initiation of girls, we may observe that the ceremony of rubbing the breasts with fat and ochre,³ and the operation of cutting open the vagina, followed by sexual intercourse with men who stand to them in certain relationships,⁴ appear to be the equivalents of the ceremonies of throwing up in the air and subincision. Among the Arunta and Ilpirra tribes, a girl, during her first menstruation, is secluded at a spot apart from the women's camp, unvisited by men,⁵ while at Upper Yarra she is, at the same period, tied with cords so tightly as to cause her acute pain. These are not removed until the flow has ceased.⁶ Among the Dieri the practice of knocking out two of the lower middle front teeth is not confined to boys.⁷

III. CHARACTERISTIC FEATURES OF PUBERTY RITES.—In the preceding paragraph we have noted the main characteristics of a few of the puberty rites practised by some of the Australian tribes, and found that they included mutilations, the imposition and removal of tabus, tests of endurance, strength, skill, and courage, ceremonial painting, decorating, hair-cutting, and the like, dances and pantomimic representations, ablutions, naming anew, seclusion, instruction, incontinence with a new dress, sexual intercourse, and certain other usages, which we shall now proceed to consider.

1. **Mutilations.**—(a) *Circumcision.*—This operation frequently serves as a rite of puberty either alone⁸ or in conjunction with other rites.⁹ It is employed sometimes in the case of males only¹⁰ and sometimes in the case of females as well.¹¹ It takes place sometimes on arrival at puberty,¹² or full puberty,¹³ and sometimes at stated intervals.¹⁴ Occasionally it is postponed owing to special circumstances.¹⁵

(b) *Knocking out teeth.*—Among the Murrumbidgee, Murray, and Goulburn tribes two of the incisor teeth of the lower jaw are knocked out in the case of boys on arrival at puberty;¹⁶ and among the Batoka there prevails the custom of knocking out upper front teeth of both girls and boys at the same period.¹⁷

¹⁵ Willoughby, *loc. cit.*; Routledge, p. 151; Theal, ii. 205.

¹⁶ Brough Smyth, i. 62–65.

¹⁷ Livingstone, p. 582 f. A somewhat similar usage is practised in the Seri in the case of girls before marriage.

(c) *Filing the teeth.*—In Makisar the teeth of both sexes are filed at puberty, and a five days' tabu in respect of certain foods is imposed.¹ It is said that among the Kedah Semang the teeth are filed at puberty irrespective of sex;² and a similar custom is practised by the Malays at or about the same time of life.³ The custom of pointing the teeth of the Thonga girls at puberty is dying out.⁴

(d) *Perforating the lips or ears.*—Puberty rites in the case of girls include the boring of the lower lip for the later insertion of an ornament among the Tlingits,⁵ and the piercing of the ears among the Tsimshians.⁶ The ears of the Thonga boys were pierced at puberty.⁷

(e) *Scarification, tatuing, etc.*—Among the Ba-Mbala scars are made on the face and body of both males and females at puberty.⁸ Part of the puberty rites to which the girls of the Abipones are subjected consists in pricking them with thorns, ashes mixed with the blood being rubbed into the punctures so as to render them indelible. The operation must be borne without wincing.⁹ Very similar accounts are given of the rites in the case of girls among the Charruas, Minuanes, and Payaguas,¹⁰ the Tupis,¹¹ and certain tribes of the Orinoco.¹² The Orãon girls, when adult or nearly so, are tattooed on the arms and back.¹³ In British New Guinea the completion of a girl's tatuing is a sign of her maturity;¹⁴ and in Raiatea, one of the Society Islands, it was considered a disgrace to be without the tatu marks of puberty.¹⁵ Among the Bushmen incisions were made on the forehead and between the shoulders, and charcoal was rubbed into them, as the final puberty rite in the case of boys;¹⁶ and among the Ba-Ronga women tatuing seems to have connexion with marriage or, at least, nubility.¹⁷

(f) *Dilatatio vaginæ, artificial defloration.*—In the case of girls in Azimba Land, the vagina is enlarged on arrival at puberty;¹⁸ a similar practice prevails among the Wa-yao of British Central

¹⁷ H. Crawford Angus, 'The Chemsamwali, or Initiation Ceremony of Girls as performed in Azimba Land, Central Africa,' *ZE* xxx. [1898] 480. As to the practice among the Australian tribes see above, II.

Africa;¹ and in the Pelew Islands² the girls are frequently deflowered at or a little before puberty.³

2. The imposition of tabus.—(a) *Exclusion of women from rites, etc.*—Among the tribes of Central Australia women are excluded from the actual performance of circumcision and subincision to which the males are subjected.⁴ Among the Thonga the lodge (*sungi*) where the initiatory ceremonies take place is tabu to them;⁵ and, in many instances, the novice must avoid women during the rites.⁶ Among the Narrinyeri he may not taste of food belonging to a woman;⁷ and the Kurnai do not permit him to eat of a female animal.⁸

(b) *Exclusion of men from rites, etc.*—It may be regarded as a regulation of almost universal prevalence that, during a girl's ceremonial seclusion at her first menstruation, she is not permitted to see or be seen by men, or to hold any communication with them.⁹ Among the tribes of the Tanganyika Plateau an exception seems to be made in favour of a father of twins.¹⁰

(c) *In relation to food.*—The novices are in many instances subjected during the rites to certain food restrictions. In some cases a certain food is forbidden,¹¹ while in others a special food is prescribed.¹²

(d) *In relation to speech.*—We have seen that among some of the northern tribes of Central Australia the novices are under a ban of silence.¹³ A similar prohibition prevails at Tutu, Torres Straits,¹⁴ in the Elema District, Papan Gulf,¹⁵ and among some of the Brazilian tribes.¹⁶ Sometimes

speech with certain persons only is permitted,¹⁷ or it is confined to whispering.¹⁸ In other cases archaic or foreign words are used during the ceremonies.¹⁹

(e) *Miscellaneous.*—Instances are to be found in which the novices are prohibited from feeding themselves,⁴ scratching themselves with their hands,⁵ touching the hair or face,⁶ touching the ground with their feet,⁷ looking upon the sun⁸ or fire,⁹ lighting the fire,¹⁰ looking back,¹¹ washing,¹² working,¹³ or sleeping.¹⁴

3. Tests of endurance, etc.—In many cases the novices are forced to practise a rigid fast.¹⁵ Thus, among the Musquakie Indians, the youth undergoes a prolonged fast at puberty, wandering alone until he dreams what his medicine is to be, and, sometimes, what his vocation is.¹⁶ Sometimes the novices are forced to remain in deep water,¹⁷ or to thrust their heads through collars of thorns,¹⁸ or are gashed¹⁹ or scarified²⁰ or beaten²¹ with supple wands²² or stinging nettles,²³ or are exposed to the bite of venomous ants,²⁴ or are deprived of sleep,²⁵ or are bound so tightly as to suffer great pain.²⁶ Among the Thonga they must suffer cold, thirst, and cruel punishments.²⁷ Sometimes they must show their prowess by killing a man,²⁸ or their intelligence by deciphering picture riddles;²⁹ while, in some instances, austerities in the case of women are designed to serve as remedies rather than as tests.³⁰

4. **Ceremonial daubing, masking, painting, etc.; ceremonial dress.**—We have seen that charcoal dust is the appropriate covering during some of the Australian ceremonies.¹ It is put to a similar use in Yam and Tutu.² The face, shoulders, and chest of the Indian youth seeking to find his medicine are blackened.³ So are those of the girls among the Kolushes,⁴ while, among the Sotho Negroes, they are smeared with ashes.⁵ The Kosa,⁶ the Wanyika,⁷ and other African tribes⁸ daub the boys with white clay. In some instances the novice is masked,⁹ while among some of the tribes of Central Australia he is painted with distinctive patterns.¹⁰ Among the Hupa,¹¹ the Tlingits,¹² the Bechuanas, and the Kafirs¹³ the girls—and, among the Kosa,¹⁴ the boys—wear a distinctive dress; in N. W. Central Queensland the novices are decorated with necklets and feathers.¹⁵

5. **Dances and pantomimic representations.**—Dances are sometimes the sole ceremony at puberty,¹⁶ and much more frequently form an important part of puberty rites.¹⁷ Elaborate pantomimic representations take place during the Central and S.E. Australian solemnities,¹⁸ one of the most important of which is that of mock burial and resurrection.¹⁹ Elsewhere we find mimic combats²⁰ and symbolic practices representing defloration²¹ and new birth.²²

6. **Naming anew.**—Among the Wa-yao a new name is given at circumcision, and the old name is discarded.²³ The Andamanese girl is given a flower name after the one of the sixteen selected trees which happens to be in bloom when she arrives at puberty.²⁴ On the occurrence of the same event the Inca girl received a name from her chief relative;²⁵ and among the Jakun of Johor²⁶ and some of the E. African tribes²⁷ names are changed at puberty. Among some of the Australian tribes an individual²⁸ or a sacred²⁹ name is given at initiation is regarded as a disease; and elsewhere as the result of connexion with the moon in the shape of a young man (Seligmann, p. 206; cf. J. Roscoe, 'Further Notes on the Manners and Customs of the Baganda,' *JAI* xxxii. 39). For other explanations see Crawley, pp. 10 f., 192, 196.

²⁹ Spencer-Gillens, p. 581.

initiation; and instances of change of name at puberty might easily be multiplied.¹

7. **Seclusion.**—Among the Tlingits a girl at her first menstruation was shut up in an isolated hut of boughs for a year. She might not leave it except at night nor be visited by any but her nearest female relatives.² Similar practices prevail among many of the Indian tribes of N. America,³ among the Koniagas,⁴ the Malemut and Unalit,⁵ and the Aleuts,⁶ and in some of the islands of Torres Straits.⁷ Among the Caribs,⁸ the tribes of the Upper Amazon,⁹ the River Plate,¹⁰ and French Guiana,¹¹ and the Macusis the girl's hammock is slung close under the roof, where she is exposed to the smoke, which is increased as much as possible.¹² In New Britain girls are placed in cages at an early age, and kept there until marriageable.¹³ We find less rigorous forms of seclusion among the Hupa and Wintun,¹⁴ the Pend Oreilles,¹⁵ and the Tsimshian¹⁶ and Musquakie Indians,¹⁷ at Ceram in former times,¹⁸ and among many African tribes.¹⁹

Boys are secluded sometimes in the bush,²⁰ sometimes in isolated huts,²¹ and sometimes in a lodge constructed for the occasion.²²

8. **Instructions.**—The instructions given to novices differ in different cases in nature, scope, and value. Sometimes they are concerned with the sacred mysteries²³ or tribal legends;²⁴ sometimes they deal with the duties of a tribesman towards the women of the tribe, the aged, and the poor,²⁵ or towards the community²⁶—e.g., in time of war;²⁷ and sometimes they embrace politics and government,²⁸ economic regulations,²⁹ or matters such as tribal etiquette and decorum,³⁰ intercourse between the sexes,³¹ or domestic duties;³² or they inculcate such lessons as that pain must be endured,³³ and that selfishness³⁴ and greediness³⁵ must be avoided. Very frequently the duties of implicit obedience during the ceremonies and of never divulging what he sees or hears³⁶ are strongly impressed upon the novice.

9. **The final ceremonies.**—(a) *Investing with a new dress, ornaments, etc., ceremonial washing,*

hair-cutting.—The Tupa girls wore cotton strings round wrist and waist to show that they were marriageable,¹ and the girls of Jap² and among the Herero received a special dress at puberty.³ When an Orãon girl approaches maturity, she gathers up her hair in a knot,⁴ and among the Southern Slavs a girl at the same period winds her hair under her fez.⁵ Among the Musquakie Indians a girl is secluded at puberty, and at the close of her seclusion is washed and dressed in new clothes;⁶ and the practice of clothing, ornamenting, and decorating the girls at the conclusion of the ceremonies is widely prevalent.⁷ Sometimes the novice is marked on the forehead with a spot of blood,⁸ or with the symbol of the shaman's familiar spirit.⁹ In many instances the boys receive some badge of manhood on the completion of the rites, and are clothed in new garments, anointed, and decorated.¹⁰

In one case the novice must, after the completion of the ceremony, visit another tribe and is feasted on his return.¹¹

Bathing or washing frequently forms part of puberty ceremonies,¹² especially at the final stage. Thus, among some of the Victorian tribes, the novice is given over to the women, who wash off the clay and charcoal with which he has been daubed, paint him, and dance before him. He is now a man.¹³ Similar practices prevail in Kaiser Wilhelmsland,¹⁴ at Torres Straits,¹⁵ and among many African tribes.¹⁶ Among the Swahili the girl is symbolically cleansed by being rubbed with powdered sandal-wood.¹⁷

Ceremonial hair-cutting takes place sometimes at the commencement¹⁸ and sometimes at the close¹⁹ of the ceremonies. Among the Narrang-ga tribe the hair and beard of the novice are plucked out on three successive occasions.²⁰

(b) *Feasting, saturnalia.*—In many instances the end of the ceremonies is marked by feasting²¹ and

dancing,¹ and is frequently made the occasion of great licence.²

(c) *Disenchantment, religious service.*—Sometimes the final ceremony consists in purification³ or disenchantment⁴ by a medicine-man, or in performing a religious service over the novice.⁵

(d) *Sexual intercourse.*—In many instances sexual intercourse completes the rite.⁶

10. *Destruction of things used during the ceremonies.*—Among the Pitta-Pitta tribes of Queensland⁷ and the Thonga of E. Africa⁸ the enclosure used during the rites is burnt when they are ended; and the Macusis destroy everything that the novice has used during her seclusion.⁹ A similar practice prevails among some of the tribes of S. Africa.¹⁰

11. *Privileges secured by initiation.*—Among the most important of these are the rights to eat certain articles of food previously forbidden,¹¹ to join the young men's camp,¹² to take part in the sacred ceremonies¹³ and in the dances and deliberations of the men,¹⁴ to marry,¹⁵ and, in many instances, to assume the position of a full-grown man.¹⁶ Frequently initiation entitles the youth to wear a distinctive dress, ornaments, or other decoration.¹⁷

IV. *OBJECT OF THE RITES.*—We have seen that a rite of puberty may include or indeed consist of a ceremony which is not exclusively employed as such a rite. Circumcision, e.g., serves many other ends than to indicate an important epoch in the life of a member of a community. But, where it is practised as a rite of puberty, while it may and frequently does continue to serve those ends, it marks or operates a momentous change, by which the novice is severed from the things of childhood and enters upon the rights and duties of manhood or womanhood. It is easy to trace this conception in the symbolism of mock burial and resurrection, in the passing through a new gateway and along a new road, in festivities preceded by seclusion, in the washing off of a ceremonial covering of charcoal or clay, in the reception of a new name, in the investiture in new clothing or ornaments and the like. Such practices may be intended to effect purification or change of identity or purposes other than those of a rite of puberty. Still, when employed as such a rite, they express the notion of severance from the past and entrance upon a new life. In the tests of endurance, in

² Among the Sotho Negroes the girls wear men's clothing, carry arms, and indulge in mad pranks and lewd conduct (Endemann, p. 38). See also Roscoe, *loc. cit.*; Theal, *Kaffir Folk-Lore*, p. 218, *Hist. of S. Africa*, ii. 206; J. Macdonald, *JAI* xx. 117. In some instances the novices are permitted during the ceremonies to steal, provided that they are not caught (Theal, *Hist. of S. Africa*, ii. 205; Seligmann, p. 204); in others sexual licence prevails during the same period (Chinnery and Beaver, p. 77; J. Macdonald, *loc. cit.*). In some cases obscene language, not permissible at other times, is used during some of the ceremonies (Junod, i. 79).

PUBLICANI, or Popeliciani (a corrupted form of Paulician).—This is the designation under which the Cathari (see ALBIGENSES) are frequently referred to by both French and English writers in the 12th and 13th centuries. Schmidt considers that the name, in this form, was introduced by the Crusaders, in evidence of which he cites Tudebod (*Recueil des historiens des croisades*, iii. [1866] 26) and G. de Villehardouin (J. A. C. Buchon, *Collection des chroniques nationales françaises*, Paris, 1824-28, iii. 156). J. BASS MULLINGER.

PUNISHMENT.—See **CRIMES AND PUNISHMENTS**, **REWARDS AND PUNISHMENTS**.

PUPPETS.—From the earliest times human effigies of a varying degree of realism have been fashioned by man which, from their character or their purpose, do not fall within the categories of idols, votive offerings, or purely artistic products. What may have been the object of the ivory and bone human figures of the palæolithic age cannot be stated with any certainty, but it is not improbable that they had a magical intent. The physical peculiarities which they exhibit, dividing them into two groups, one of which shows marked steatopygia, indicate that the aim of the artist was a realistic reproduction of the human form. In this respect the figures of the palæolithic period differ from many human effigies produced by primitive peoples which, whether from lack of skill or indifference, often show signs of little attention to accurate reproduction of form.

Among the ancient Egyptians models formed a regular feature in the sepulchral ceremonial of wealthy or important personages. These figures, representing men engaged in occupations of a menial type such as agriculture, domestic work, or baking, as well as the oarsmen of the model boat, were buried with the dead to serve as his ministers in the after life, while the *ushabti* figures were intended to take his place as labourers in the sacred fields of Osiris. They were a substitute for the slaves and other members of the household who, in accordance with primitive custom, were once sacrificed at the death of the master of the house. This substitution of a puppet or doll for human or animal sacrifice is not confined to Egypt. In the Malay Peninsula the sacrificial tray which is prepared on all ceremonial occasions for the propitiation of the spirits holds, among other offerings, coco-nut-leaf models of animals and dough models of human figures. Their intention is clearly indicated by the fact that the dough models of human beings are actually known by the name of 'substitutes' (*tukar ganti*) (W. W. Skeat, *Malay Magic*, London, 1900, pp. 72, 452). In India the Lushai Kuki clans, in a very solemn, but rare, form of sacrifice to the spirits of woods and streams in cases of sickness—a sacrifice of which use is made only when other means have failed—prepare two small clay figures representing a man and a woman, which are placed on a platform; they then sacrifice a pig and make the blood run over the platform. The flesh of this victim may not be eaten in a house (J. Shakespear, *The Lushai Kuki Clans*, London, 1912, p. 74). On the Nile a doll is thrown into the river when the rise is delayed, and a similar ceremony took place on the Tiber, where a straw puppet was employed, in each case in substitution for a human being (*GB*³, pt. v., *Spirits of the Corn and of the Wild*, London, 1912, ii. 107).

The spiritual basis of the use of models as substitutes appears in other connexions.

In cases of serious illness in the Malay Peninsula the wandering soul is charmed into a dough figure as an intermediate step

to its restoration to the body;¹ or dough figures, animal as well as human, may be made the receptacle of 'mischiefs' resident in a human patient, a thread acting as the conductor under the influence of a charm (Skeat, pp. 482 f., 482 f.). Among the Achewa of Central Africa spirits of the dead wandering in the bush are supposed to annoy the living until they have been confined by the medicine-man in a receptacle consisting of a few short pieces of wood bound together with a scrap of calico in the semblance of a child's doll. Inside the figure is a box made of the handle of a gourd-cup which is the actual resting-place of the ancestral spirit (A. Werner, *Natives of British Central Africa*, London, 1906, p. 69). It is possible that a curious custom followed by the Thonga chiefs may be connected with this belief. It was their practice to carry about with them wooden images called *angoza*, representing men, women, and animals. These were little more than sticks with heads carved at one end. They were lodged in the house of the chief wife and were displayed only on special occasions. When important cases were being discussed, they were planted in the ground at a little distance, and they also accompanied the chief on a journey (*ib.* p. 68 f.). It has been suggested that they were emblems of authority. Possibly, if this were the case, they are to be regarded as an embodiment of the chief's ancestral spirits.

The association of an ancestral spirit with a doll also appears in the shamanistic cults of N. Asia. In some tribes the shaman's powers were regarded as closely connected with his shamanistic ancestors and as originating at their call. The shaman's coat was an object of peculiar reverence; it was an essential concomitant of the vocation, and in use it was both a protection and a source of inspiration (see art. SHAMANISM). Potanin records that among the Uriankhai tribes a small doll was attached to the coat which represented the shaman's ancestor (M. A. Czaplicka, *Aboriginal Siberia: a Study in Social Anthropology*, Oxford, 1914, p. 217).

In European folk-custom the belief in the embodiment of a spirit in a puppet appears in the custom of fashioning a doll from the last sheaf at harvest-time—a belief which in various forms is wide-spread among primitive peoples (see art. HARVEST). Among the Akikayu a sun-dried clay figure is produced at the dance following the maize-harvest (W. S. and K. Routledge, *With a Prehistoric People*, London, 1910, p. 190 f.), which may with probability be regarded as the analogue of the corn-doll, the material abiding-place of the corn-spirit. This view of the custom, however, is a matter of inference, and the fact that the dancers appear to regard the figure with adoration when elevated before them would suggest that it is passing into the category of idols. On the other hand, the fetiches in human form of W. Africa owe their virtues to the medicines placed in or on them. A wooden fetish figure, e.g., of Bambala origin, now in the British Museum, is said to have no supernatural value unless plastered with the special magical clay (*British Museum Handbook of the Ethnographical Collection*, London, 1910, p. 266).

How far the belief in the endowment of a puppet with a personality may be carried appears in the customs connected with the female fetish Nantaba, an appanage of the king in Uganda, which has to be provided on his accession by his father's mother's clan.

This fetish consists of a gourd in which the wind is supposed to be caught at a ceremony in which a tree is cut down and a goat sacrificed. The man who carries the fetish back to the king conducts himself as, and imitates the appearance of, a woman who is *enceinte*. The image is provided with a hut and a guardian—a wife of the king—whose duty it is to attend Nantaba and carry her into the sun when she desires it. The king's wives come and sit around her, hoping thus to gain favour and have children. At the death of the king the fetish is thrown away (J. Roscoe, 'Nantaba, the Female Fetish of the King of Uganda,' *Man*, viii. [1908], no. 74).

The relation of Nantaba and fertility can be paralleled by the use of puppets to promote fertility and well-being in other connexions, but especially in relation to the crops. One instance, that of the corn-doll and the corn-spirit, has been mentioned above.

In Liberia steatite figures are employed to promote the fertility of the farms. These figures are the relics of an earlier culture, but, when found in tumuli or elsewhere by the present natives, they are buried in their fields. Sometimes the image is placed on a platform, usually an old ant-hill, and the farmer and his household march round it, striking it with a whip and chanting an appeal for a good harvest (T. A. Joyce, 'Steatite Figures from W. Africa in the British Museum,' *Man*, v. [1905], no. 57). In S. India, when rain fails, a puppet of ashes from the potter's field figures in ceremonies performed by Kapu women; they model a small figure of a naked human being, which they carry from door to door, asking gifts and singing indecent songs. After this collection of alms, which may last for three or four days, the image, which is called *Jokumara*, the rain-god, is thrown away in a field. A cultivator may also make a figure himself and place it in the fields, after spreading

¹ For further instances elsewhere see *GB*³, pt. ii., *Taboo and the Perils of the Soul*, London, 1911, pp. 53 f., 82 f.

on them leaves, ashes, and flowers which he has received in return for alms from Barike women (E. Thurston, *Omens and Superstitions of S. India*, London, 1912, p. 307).

In these cases the image is one element in a whole which forms the fertility charm. It may, however, also be employed purely for protective purposes.

In S. India the crops are protected against the supposed dangers of an eclipse by images made, as in the rain-charm, of ashes from a potter's field—a material apparently regarded as peculiarly efficacious. The figures are placed on four sides of the field (Thurston, p. 44). The parallel with the *terminalia* and other protectors of the fields in Roman religion is rendered closer by certain physical peculiarities in the effigies used for protective purposes in other connexions mentioned below.

Puppets are used to ward off evil influences of various kinds.

In Car Nicobar a wooden figure is used to scare evil spirits (*British Museum Handbook of the Ethnol. Collection*, p. 77). In the case of an epidemic among the Lushei Kuki clans a village to which it is feared the disease will spread is protected by a gateway across the road on which are straw figures of men armed with dabs and spears (Shakespeare, p. 76). The closest parallel to the Priapus figures, however, is found in S. India, where, at the Mangalore races, a figure of a man with enormous genitalia is carried in procession, or at the Canara races, where the procession is headed by figures of a man and woman in *coitu*, and in the indecent figures on the temple cars (Thurston, p. 114). In this district, again, the employment of puppets to avert misfortune is closely connected with the 'evil eye.' Dolls made of straw and covered with black cloth, splashed with white and black paint, sometimes representing a man and woman embracing, are hung on poles in gardens or fields near the road to scare away birds, but principally to avert the 'evil eye.' Figures of all kinds, but especially grotesque, indecent, or hideous human forms, are hung on houses or shops, particularly when in course of erection, to catch the eye of the passer-by, and distract it from the main structure (*ib.* p. 111 f.). It is hardly necessary to point to the Gothic gargoyle as an obvious European parallel to this form of the custom of averting the evil eye by some peculiarity or protective sign.

A familiar use of the doll in magic depends upon sympathetic action. The employment of the waxen image which was melted, pricked by pins, or otherwise injured was one of the commonest practices attributed to witches in European superstition. It is one of a number based on the belief in the possibility of harmful action on a human being at a distance.

In Japan nails are driven into a straw image, which is buried under the place on which the victim sleeps. In order to make a debtor pay his debts a broom, inverted, is made into a lay figure to represent him; it is then knocked down and belaboured. This will make the debtor dream of his delinquency and come to pay his debt. A wife punishes her husband for infidelity by nailing his effigy to a tree (W. L. Hildburgh, 'Notes on some Japanese Magical Methods for Injuring Persons,' *Man*, xv. [1915], no. 65). Similarly, in S. India, when a Parivaram woman commits adultery with a man outside the caste, she is punished with excommunication and an image is made of her into the eyes of which thorns are driven before it is thrown away outside the village. As a protection against witches a wooden figure is made, into which nails are driven, a hole cut above the navel, into which a lead plate, with the name and star of the person, and a charm written on it, is sometimes inserted, and it is cast into the sea. A favourite practice of the S. Indian magician, however, is to mould an image of a plastic material, such as dough or clay, which is buried at night in the Hindu cremation ground after thorns or nails have been driven into it, or is nailed on a tree. Sometimes the corpse of a child, which is dug up and reburied, is used instead of a figure (Thurston, pp. 246, 247, 254). The Lushei Kuki clans use bamboo splinters to drive into the limbs of clay figures, and in the Malay Peninsula wax figures are buried while powerful charms are recited (Shakespeare, p. 109; Skeat, pp. 430, 569 f.).

The interest of the ceremonial and magical use of the doll has tended to divert the attention of observers from its use as a child's plaything. Not only is this use wide-spread, but it is also of great antiquity.

Among the objects which have been found in children's graves in Egypt are dolls both of animal and of human form which show some considerable degree of development; the limbs are movable and one of them apparently had an apparatus for emitting a squeak (*Guide to Egypt. Collection in British Museum*, London, 1909, p. 78). Children's dolls have also been found in the graves of the early inhabitants of Peru (T. A. Joyce, *S. American Archaeology*, London, 1912, p. 147), and it has been pointed out that some peoples, such as the Zuñi of N. America, give ceremonial dolls to their children as playthings when no longer required for ceremonial purposes (see E. Lovett, *The Child's Doll: its Origin, Legend, and Folklore*, London, 1915, p. 10).

It has been suggested that the child's doll is a derivative from the ceremonial doll. In some cases, it is held further, the form would support this view.

Among the Yao of Central Africa, e.g., the dolls show very little resemblance to the human form and may have been originally fetishes like the *angoza* of the Thonga chiefs already mentioned (Werner, p. 69).

On the other hand, it must be remembered that both the savage and the child indulge freely in make-believe, and indeed very few of the children's dolls show much resemblance to human beings.

In the Sūdān a piece of stick with lumps of clay for the head and the swell of the hips is dressed up in native costume (E. A. Gates, 'Soudanese Dolls,' *Man*, iii. [1903], no. 22). On the Congo a piece of firewood or a manioc root serves the purpose, and these were even preferred to more realistic European dolls (J. H. Weeks, *Congo Life and Folklore*, London, 1911, p. 350). In Australia gum cement figures are sometimes modelled to resemble women, but just as commonly pieces of forked cane with joints manipulated to imitate the limbs are carried round the neck like real babies, while pieces of grass wrapped in bark are also used (N. W. Thomas, *Natives of Australia*, London, 1906, p. 132 f.).

Even granting that the use of dolls in ceremonial may have originated the use of the doll as a child's toy, imitation and the almost instinctive desire to train for the business of life which appears in a large number of children's games is probably almost equally responsible.

On the Lower Congo a doll made of a piece of firewood or a root is washed in an old saucapan and hung out in the sun to dry by the little girls just as they themselves have been treated by their mothers. They dress them in strings of beads, hang a few charms around them, and tie them on their backs as babies are carried (Weeks, p. 350). The Boloki girls, in fact, call their dolls *banana*, 'babies' (Weeks, *Among Congo Cannibals*, London, 1913, p. 149), while the Yao name for a kind of wooden doll with the rounded end covered with scarlet seeds, fitted on like a wig, is *mwaki*, 'girl' (Werner, p. 113). The Bathonga children imitate their mothers in playing with dolls made of a banana-stem or a hollowed spherical fruit fitted on a stick and with knotted string for hair (H. A. Junod, *Life of a S. African Tribe*, Neuchâtel, 1912-13, i. 173).

In Tunis among the Hausa the use of a doll as plaything is carried further. The offerings in the medicine-house to the younger *bori*, 'the children of spots,' which cause rashes and sore eyes, consist of nuts, sugar, toys, and sweets, covered with a white cloth, to which are attached two dolls, 'the playthings of Mai-Nassara.' These *bori* in all probability are spirits of dead children (A. J. N. Tremearne, *The Ban of the Bori*, London, 1914, pp. 269, 275).

Puppet-plays resembling the *fantoccini* and *Punchinello* are not uncommon among primitive peoples. In the Indonesian area they are a constant entertainment. Leather figures are used for shadow-plays which represent historical dramas (*Brit. Mus. Handbook Ethnol. Collection*, p. 101). The *dubbo dubbo* of W. Africa is almost an exact parallel to the Punch and Judy show, presenting a number of scenes in which Kachella Dambulla, like Punch, when called upon to meet his obligations, evades payment and maltreats his creditors (D. Alexander, 'Dubbo Dubbo; or Notes on Punch and Judy as seen in Bornu,' *Man*, x. [1910], no. 85).

LITERATURE.—See the works cited throughout.

E. N. FALLAIZE.

PURĀNAS.—I. Introduction.—The *Purānas* form a class of books written in Sanskrit, expounding ancient Indian theogony, cosmogony, genealogies, and accounts of kings and *ṛṣis*,¹ religious belief, worship, observances, and philosophy, personal, social, and political ordinances, and opinions about all kinds of miscellaneous matters—the whole illustrated and enforced by tales, legends, old songs, anecdotes, and fables. They present the general or popular exposition of those subjects, while the Vedic literature contains the strictly Brāhmanic thought and teaching in religious matters. The *Purānas* are always reckoned as eighteen in number. No *Purāṇa*

¹ The word *ṛṣi* denotes in the *Purānas* a holy and ascetic sage, sometimes semi-divine but, when human, generally a Brāhman. *Muni* means much the same, but is always human, and often of lower rank than *ṛṣi*.

treats of all those subjects, though some are very wide indeed in their scope, while others confine themselves to narrow limits; but, taken collectively, they may be described as a popular encyclopædia of ancient and mediæval Hinduism, religious, philosophical, historical, personal, social, and political.

The word *purāṇa* is Sanskrit and means 'ancient'; and the title *Purāṇa* signifies 'Ancient Lore,' indicating that these books profess to declare ancient lore as handed down for the most part by tradition. Its fuller form is *Purāṇa-saṃhitā*, 'Collection of Ancient Lore.' The eighteen *Purāṇas*, according to the list which occurs most often, are these—the *Brahma*, *Padma*, *Viṣṇu*, *Śiva*, *Bhāgavata*, *Nāradya*, *Mārkaṇḍeya*, *Agni*, *Bhaviṣya*, *Brahmavaivarta*, *Linga*, *Varāha*, *Skanda*, *Vāmana*, *Kūrma*, *Matsya*, *Garuḍa*, and *Brahmāṇḍa*. This list omits the well-known *Vāyu*, but there can be little doubt that the *Vāyu* and *Brahmāṇḍa* were one originally and have become differentiated; for they agree, almost word for word, in the great bulk of their contents. The name *Brahmāṇḍa* then in that list must be taken to include its twin, the *Vāyu*, and the *Kūrma* calls it by both names, the *Vāyaviya Brahmāṇḍa*. The *Matsya*, *Garuḍa*, and *Vāyu* treat them as distinct, and, in order to preserve the total eighteen, omit one of the others, the *Śiva* or the *Vāmana*. Altogether, then, there are really nineteen. The *Matsya* (liii. 11-58) declares the number of verses in each *Purāṇa*, and so also the *Vāyu* (civ. 2-11), but not quite completely. They agree, or nearly agree, as regards most of them, but differ widely about the *Brahma*; and the *Matsya* alone gives the length of the *Viṣṇu*, *Agni*, and *Linga*; both omit the *Śiva*. These figures, however, do not altogether agree with the dimensions of the present *Purāṇas*, being generally excessive, and are merely round totals mostly reckoned in thousands. Each *Purāṇa* is constructed as a discourse delivered by some person of authority to one or more hearers; the subjects are expounded, often in the form of question and answer, and not always methodically; and into the narration are woven stories and discourses uttered by other persons—with the result that the whole often appears involved, defective in consistency, and marred by anachronisms. They are mainly in verse, which is generally the common *śloka* or *anuṣṭubh*, but passages sometimes occur in prose.

2. **Origin and development.**—An account of how the *Purāṇas* came into existence is given by the *Brahmāṇḍa* (II. xxxiv. f.), *Vāyu* (lx. f.), and *Viṣṇu* (III. iv., vi.); that in the *Bhāgavata* (XII. vii. 4-7) is late and untrustworthy. The great ṛṣi Kṛṣṇa Dvaipāyana divided the single Veda into four Vedas and arranged them. Hence he obtained the name Vyāsa, 'the arranger,' by which he is generally known. He lived and did that about the end of the Dvāpara age, about the time of the great Bhārata battle. He then entrusted them to his four Brāhman disciples, one to each, and thus Paila became the teacher of the *Rigveda*, Vaiśampāyana of the *Yajurveda*, Jaimini of the *Sāmaveda*, and Sumantu of the *Atharvaveda*. Then with tales, anecdotes, songs, and lore concerning the ages he compiled a *Purāṇa-saṃhitā*, and taught it to his fifth disciple, the *sūta*, or 'bard,' Romaharṣaṇa or Lomaharṣaṇa (the two names are the same). After completing that work he composed the great epic, the *Mahābhārata*, and made Romaharṣaṇa his disciple in both the *Itihāsa* (by which is generally understood the epic) and the *Purāṇa*. Statements occur sometimes that he taught a particular *Purāṇa* to his Brāhman disciples, but these appear to be late assertions. The *sūta* Romaharṣaṇa divided that *Purāṇa* into six parts

or versions and taught them to his six disciples, Sumati Ātreya, Agnivarchas Bhāradvāja, Mitrāyu Vāsiṣṭha, Akṛtavraṇa Kāśyapa, Sāvarni Saumadatti, and Suśarman Śāṃśapāyana. The last three made each a further *saṃhitā*, or collection. The *sūta's* sixfold *Purāṇa* was called the *Romaharṣaṇika* collection (*saṃhitā*), and those of his three disciples were named after them, the *Kāśyapika*, *Sāvarnika*, and *Śāṃśapāyanika* collections. Vyāsa's original *Purāṇa* is not further mentioned and may have been merged in the *Romaharṣaṇika*. The collections made by the *sūta* and his three disciples were regarded as the four original collections, the 'root-*saṃhitās*' as they were called. They were all to the same effect, but differed in their diction. Sāvarni's version was noted for the correctness of its expressions, and Śāṃśapāyana's for its stirring style. All were divided into four parts, and all except Śāṃśapāyana's contained 4000 verses. None of them is now in existence, but several of the disciples appear in some of the present *Purāṇas*. The *sūta* had a son called Ugraśravas and *sauti* Raumaharṣaṇi, 'son of the *sūta* Romaharṣaṇa,' and taught him also the *Purāṇa*. Such is the account given, and it is not improbable. The *sūta* was a bard, and the origin of the *sūtas* is placed in remote antiquity, for the first *sūta* is fabled to have come into existence at the sacrifice of a primeval king, Prthu, son of Vena (e.g. *Vāyu*, lxii. 137-148), whose stories are often narrated. The antiquity is, of course, genuine, because bards have existed from the earliest times. The term *sūta* was afterwards applied to denote the offspring of a father of the Kṣatriya, or military caste, and a Brāhman mother, but he had nothing to do with the original *sūtas*. It was their duty, as the *Vāyu* (i. 31 f.) and *Padma* (v. i. 27 f.) explain, to preserve the genealogies of the gods, ṛṣis, great kings, and famous men. These were matters of ancient tradition, for which the *Purāṇa* and *Itihāsa* would be the appropriate receptacles, and thus these works would be naturally entrusted to the *sūta* Romaharṣaṇa. His descendants had the right of reciting the *Purāṇa* for their livelihood, but the account states that the *Purāṇa* passed into the hands of his disciples, of whom five at least were Brāhmins, and was multiplied by them.

The foregoing account does not say how the present eighteen *Purāṇas* were developed, and their origin is explained by another and inconsistent statement, that there was originally one *Purāṇa*, and Vyāsa himself divided it into eighteen (e.g., *Matsya*, liii. 9 f.). This is certainly spurious, and the reason for it seems to have been rivalry between the advocates of the Vedas and those of the *Purāṇas*, the eighteen *Purāṇas* being thus made coeval with the four Vedas. Every *Purāṇa*, in fact, says that it is 'of equal measure with the Veda,' thus placing itself in the same rank as the Vedas, and indeed the *Purāṇa* is sometimes called the fifth Veda (*Vāyu*, i. 18). In the *Purāṇas* teaching of all kinds is often put into the mouth of the chief gods, so placing it beyond cavil; indeed, the *Vāyu* (i. 200) and *Śiva* (v. i. 35) aver that a Brāhman was not really wise if he did not know the *Purāṇa*. Further, the Brāhmins put forward a claim to primeval antiquity for the Vedas, and the *Purāṇas*, while acknowledging that, answered it with a claim on their own behalf to equal or prior antiquity. Thus the *Mārkaṇḍeya* (xlv. 20 f.) says that in the very beginning it and the Vedas issued from Brahmā's mouths; and the *Brahmāṇḍa* (I. i. 40), *Vāyu*, (i. 60 f.), *Matsya* (liii. 3), *Padma*, and *Śiva* assert that he remembered the *Purāṇa* then, the first of all the scriptures, before the Vedas issued from his mouths. Moreover, the Brāhmins claimed the monopoly of religious revelation and worship, and the *Purāṇas* outbid that

by declaring that to recite or even listen to them delivered a man from all sin, the *Mārkaṇḍeya* proclaiming that by acquiring it a man attains to a benefit superior to all the Vedas. There was thus a clear rivalry between the *Purāṇas* and the Vedas, and, in asserting priority for the *purāṇa*, or ancient, tradition over the Vedas, the *Purāṇas* were right to this extent that ancient tradition unquestionably existed before the Vedas, for the Vedic hymns allude to bygone persons and events (mentioned also in the *Purāṇas*), which could have been remembered only through tradition. Tradition has always existed from the remotest antiquity, as far back as man preserved any memories of his ancestors. This is a platitude, yet it must not be overlooked when examining the *Purāṇas*, though what value the present *Purāṇas* have in that respect is a different question (see below, § 13).

In accordance with such exalted claims, all the *Purāṇas* except three, the *Līṅga*, *Nāradya*, and *Vāmana*, assert that they were originally declared by some god in primeval time. Those three say that they were first declared by some great *ṛṣi*. Accordingly, each *Purāṇa* had to provide a succession of persons through whom it was handed down. Most of them form the chain perfunctorily of a few links, but the *Brahmaṇḍa* (IV. iv. 58-66) and *Vāyu* (ciii. 58-66) give a long list of 29 names, which occur, partly at least, in chronological order. Apart from fabulous occasions, nearly every *Purāṇa* particularizes the occasion when professedly it was actually recited. The *Vāyu* gives this circumstantial account:

After the great Bhārata battle the Pāṇḍavas were succeeded on the throne of the Pauravas at Hastināpura (on the Ganges, north-east of Delhi) by Arjuna's grandson Parikṣit, and he by his son Janamejaya, to whom the *Mahābhārata* was professedly recited. The *Vāyu* says that the *ṛṣi* dwelling in Naimiṣa forest on the river Gomati (the modern Goomti in Oudh) offered a long sacrifice on the bank of the river Dṛsadvatī (the modern Chitang approximately) in Kurukṣetra (the country 70 miles north-west of Delhi), and the *sūta* Romaharṣaṇa went there and at their request recited it to them, during the reign of Janamejaya's great-grandson Adhisimakṛṣṇa—i. e. a century or rather more after the great battle (I. 12-28, xcix. 258 f.).

The *Matsya* says almost the same of itself, and the *Brahmaṇḍa* suggests much the same. The other *Purāṇas* fall off from this account, and the measure of their falling off agrees in a way with their probable posteriority. Most of the others lay the scene in Naimiṣa forest, and the late *Bhāgavata* makes the sacrifice last 1000 years. The *Nāradya* removes the scene to Siddhāśrama on the Ganges, and the *Varāha* gives no particulars. Four *Purāṇas* drop that account altogether. The *Viṣṇu*, *Mārkaṇḍeya*, and *Vāmana* say that they were declared by the *ṛṣis* Parāśara, Mārkaṇḍeya, and Pulastya respectively, and the *Bhaviṣya* says that it was recited by Vyāsa's Brāhman disciple Sumanṭu to Janamejaya's son, King Satānika.

3. The five original subjects.—Most of the *Purāṇas* declare that a *Purāṇa* should treat of five subjects: original creation (*sarga*), dissolution and re-creation (*pratisarga*), the periods of the Manus (*manvantara*), ancient genealogies (*vamśa*), and accounts of persons mentioned in the genealogies (*vamśyānucharita*). These appear to have been the original subjects of the *Purāṇas*, and were so specially their province that the epithet 'having five characteristic subjects' was an old synonym of the title *Purāṇa*; hence religious instruction apart from these subjects was not one of their primary aims, nor do they appear to have been composed for sectarian purposes originally. Sectarian designs seem rather to have been an after-modification, except in the latest *Purāṇas*, which are frankly sectarian.

The first three of these subjects are closely connected and may be considered together. The

teaching is neither uniform nor consistent, but seems to combine different schemes. Its general purport may be stated thus:

It postulates the primordial essence called *prakṛti* and *pradhāna*, spirit called *puruṣa*, and the god Brahmā (or Brahma), with whom both *prakṛti* and *puruṣa* are sometimes identified. *Prakṛti* contained the three qualities, goodness (*sattva*), passion (*rajas*), and darkness (*tamas*), in equilibrium. It first evolved the great intellectual principle (*mahat*) as the first stage. From this was evolved the principle of individuality (*ahāṅkāra*), and from this the five subtle elements (*tan-mātra*), sound, touch, form, taste, and smell, which became manifest respectively as the five elements (*bhūta*), ether, air, light, water, and solid matter. This was the second stage, the elemental creation (*bhūta-sarga*). In the third stage the ten organs of sense and action and the mind proceeded from the intellectual principle. These three stages were the creation from *prakṛti* (*prakṛta-sarga*). All these principles and elements, through the influence of spirit, combined and formed an egg, the egg of Brahmā, wherein he, assuming the quality of passion, became active. He brought the world into existence as the fourth stage, and through meditation originated, fifthly, the animal kingdom, sixthly, the gods, seventhly, mankind, eighthly, the intellectual notions called *anugraha*, and, ninthly, Sanat Kumāra and other semi-divine mind-born sons who remained celibate, whence this creation is called *kaumāra*. In all these the three qualities existed in different states of predominance.

In the main this account follows the ideas of the Sāṅkhya philosophy, but other accounts are added which seem more primitive.

Brahmā assumed four different forms in succession and from them were produced the demons, the gods, the forefathers (*pitṛs*), and mankind; and, afterwards assuming another form, he produced from his limbs all other living beings, creatures, and vegetation. But those beings did not multiply, and he created from his mind sons, whose number is variously given as seven, nine, ten, or eleven, Bhṛgu, Marichi, Dakṣa, etc., all known as *ṛṣis*, and also the deities called Rudras. Seven of these sons were specially known as 'the seven *ṛṣis*' (*saptarṣi*), who hold a unique and permanent position in cosmogony. The Rudras are generally identified with Siva. Next Brahmā created the first Manu Svāyambhuva and a woman Satarūpā. These two had two sons, Priyavrata and Utānapāda, and a daughter. Dakṣa married her and had 24 daughters, of whom 13 were married to Dharma (righteousness) and bore Love and other personified feelings; 10 were married to the other mind-born sons and Agni (fire) and the forefathers, and one named Sati became Siva's wife. But this account is complicated by a further story that Dakṣa was re-born in Utānapāda's lineage as Dakṣa Prācetasas, and then created movable and immovable things, bipeds and quadrupeds, and also begot 60 daughters, of whom 10 were married to Dharma, 13 to Marichi's son, Kaśyapa, 27 to the moon, and 10 to others. Then Kaśyapa by his wives begot the gods, good and evil beings, animals, birds, and trees; and thenceforward living creatures were engendered sexually.

Creation naturally involves the question of the ages.

Time is divided into various great periods. A human year is a day and night of the gods, and the divine year consists of 360 human years. Of divine years 12,000, i. e. 4,320,000 human years, constitute a 'four-age' period (*chaturyuga*), in which the four ages (*yuga*) are, first, the Kṛta of 1,440,000 human years, then the Trētā of 1,080,000 years, the Dvāpara of 720,000, and lastly the Kali of 360,000; and each of these ages is preceded by a twilight (*sandhyā*) containing as many hundreds of years as the age has thousands, and is followed by a twilight (*sandhyāṁśa*) of like duration. This 'four-age' period repeated a thousand times is a day of the god Brahmā and is called a *kalpa*. Creation takes place and lasts during his day, and at its close the three worlds are dissolved for the same length of time, which constitutes his night. His year consists of 360 such days and nights, and 100 such years is the length of his life, which is called a *para*. Further, a day of Brahmā comprises the periods of 14 Manus (*manvantara*), a Manu being a mythical regent of his period and progenitor of life therein. Each *manvantara* thus comprises 71 'four-age' periods, with a surplus, which is due to the impossibility of dividing 1000 'four-ages' exactly by 14, and is sometimes accounted for by assigning it to the intervals between the *manvantaras*. This is the reckoning generally set out, but variations are sometimes introduced incidentally, and the terms *yuga* and *kalpa* are sometimes used loosely. While most *Purāṇas* agree about Brahmā's duration and hold that Viṣṇu and Siva outlive him greatly, they differ as to which of these two endures longer according to their view whether Viṣṇu or Siva is the greater.

One 'four-age' period succeeds to another. When a *manvantara* closes, an interval occurs during which life ceases in the world, and the Manus, minor gods (all save Brahmā, Viṣṇu, and Siva), the seven *ṛṣis*, and the forefathers depart upwards to a high celestial sphere, and remain there for the duration of a Kṛta age in order to preserve life. Then they resume their activities as new persons under new names, and introduce the next *manvantara*, restoring all life in the world. So the *manvantaras* succeed one another, and at the end of the fourteenth, when Brahmā's day closes, occurs the great dissolution, called *naimittika pratisarga*. The three worlds are burnt

up by fire, and a deluge of rain dissolves everything into one vast ocean; life is reabsorbed into the god who sleeps on that ocean, and the three qualities become inactive in equilibrium; yet the seven great *ṛsis* are said to persist in certain celestial worlds through his nights, watching him as he sleeps. Such is the close of the *kalpa*. When his night ends, he awakes and begins to create again. That dissolution does not involve the elementary principles evolved during the first three stages of creation, and as regards them a further dissolution is spoken of, called the *prākṛta pralaya*, wherein everything evolved from *prākṛti* disappears. Half of Brahmā's life has expired, and the second half has begun in its first *kalpa* called the *vārāha*, in which six Manus have passed away, namely Svāyambhuva, Svārochiṣa, Auttama, Tāmasa, Raivata, and Chākṣuṣa; and Vaivasvata is the present Manu. The theory of the succession of the *kalpas*, *manvantaras*, and ages developed into the doctrine that succession implied repetition, that everything repeated itself in essentials in the *manvantaras* and in the 'four-age' periods. Brahmā, Viṣṇu, and Śiva outlived the dissolutions, and their existence was so vast that they were regarded as practically eternal; but Indra and the other gods were subordinate and temporary, holding their deity for a *manvantara* only. Each *manvantara* thus has its own subordinate gods and its own Manu, great *ṛsis* and kings, who all come into existence at its beginning and pass away at its end. This scheme is carried out into such detail that their names are set out, not only for the present *manvantara*, but also for the past six and the seven that are yet future.

Since the Vedas were arranged and the *Purāṇa* compiled at the end of the Dvāpara age, this theory required that the same had been done in every Dvāpara age of the 'four-age' periods, and that a Vyāsa had appeared for that purpose. Hence it was necessary to propound a list of those Vyāsas. The list (mentioned above) of the 29 persons who handed down the *Brahmāṇḍa* and *Vāyu*, reduced to 28 by combining two names at one stage, seems to have suggested the idea that 28 Dvāparas had occurred. Certainly, however, that list (e.g., *Vāyu*, xxiii. 114 ff.), with a few variations, agrees with the names of the 28 Vyāsas; and consequently 27 'four-age' periods have elapsed in the Vaivasvata *manvantara*, and we are now living near the end of the Kali, or last age of the 28th period.

Manu Svāyambhuva's son Priyavrata, mentioned above, had seven sons, who became sovereigns of the seven continents (*dvīpas*) of which the earth consists, and their progeny peopled them. Thus the subject of geography is introduced. It is not always treated fully, but the general scheme stands thus:

The earth consists of a central circular continent named Jambudvīpa, around which the other continents form a series of concentric rings, namely, Plakṣa, Śālmala, Kuśa, Krauñca, Śāka, and Puskara; the outermost; and these continents are separated by a similar series of six circular oceans alternating with them, namely, of salt water, sugarcane-juice, wine, clarified butter (*ghṛi*), curdled milk, and milk respectively. Each continent and each ocean twice the size of that which it encircles. The central continent Jambu is alone subject to the law of the four ages. It was assigned to Priyavrata's son, Agnidhṛa, and has nine countries which were named after his nine sons. Ilāvṛta is in the middle, and is flanked on the west by Ketumālā and on the east by Bhadrāśva. Along the north of these lie Rāmyaka, the Northern Kuru, and Hiraṇmaya; and along the south lie Harivarṣa, Nābhī, and Kimpurusa. In the middle of Ilāvṛta is the immense fabulous mountain Meru, on which are the gods' abodes, with Brahmā's in the centre. Various mountains, forests, and lakes are mentioned in those countries. The Ganges flows down Meru and divides into four great streams, which flow away, the Sitā east, the Alaknandā south, the Vakṣu west, and the Somā, or Bhadrā, north. Nābhī's country was named Bhārata after his grandson Bhārata, but this is a mere fancy. Bhārata again has nine divisions named Indradvīpa, Kāserumant, Tāmravarṇa, Gabhastimant, Nāgadvīpa, Saumya, Gandharva, Vāruṇa, and another which appears to be India proper and is more strictly called Bhārata. The accounts then deal with India itself, its dimensions, mountains, rivers, and peoples, which some *Purāṇas* set out in copious lists. The subject of cosmogony leads, on the one side, to a notice of the nether regions with sometimes a description of the hells, and, on the other, to a description mainly mythological of the sun, moon, planets, stars, and the celestial worlds.

The remaining two of the five special subjects of the *Purāṇas* are ancient genealogies and accounts of persons mentioned therein. They profess to give ancient history as handed down by tradition, and they certainly give the only approach to connected ancient history that is to be found in Sanskrit books. They are full of interest, but lie rather outside the scope of this article, and can

therefore only be touched briefly. They begin with the progeny of the great *ṛsis*, which is mythical, and pass on to the genealogies of the chief dynasties of kings who reigned for centuries in N. India and lists of the great Brāhman families. That the genealogies are not spurious but have some historical value is proved by the fact that they (and they alone in Sanskrit books) furnish an account of how the result that is known as the Aryan occupation of India took place through the growth and conquests of a distinct race, which they call Aila, and which they suggest entered India from the north.

Of the five subjects proper to *Purāṇas* the first three concern early religion and mythology, and the other two deal with traditional history—subject, of course, to later co-ordination, restatement, and amplification in both groups. The former were the general product of speculative thought, but the latter were based on actual history, though both are now open to the doubt how far tradition has preserved early beliefs and historical facts faithfully and correctly. The former were naturally shaped out and transmitted by religious teachers for general instruction; the latter were composed by royal bards and ballad-makers, i.e. *sūtas*, and were handed down by them. The distinction is important. The *Purāṇas* thus drew their subject-matter from two sources. These old subjects (*paurāṇikī kathā*) provided general instruction and pleasure, and it is often said that princes and *munis* entertained themselves with their recital. The traditions found in the *Purāṇas* were not primarily borrowed from the *Mahābhārata*, for they contain old tales and genealogies which are not to be found in that epic, and the stories which appear in both are not always narrated in the same way. Both are based on the same body of ancient tradition, and the *Purāṇas* incorporated old matters independently, though probably later additions to the *Purāṇas* have been borrowed from the epic, and possibly also *vice versa*. Of the stories told about ancient kings and *ṛsis* some appear to be ancient, but others are certainly either later fabrications or at best genuine tradition seriously corrupted. They may generally be broadly divided into two classes: those that appear to be Kṣatriya stories, i.e. stories narrating occurrences from the point of view of the royal and military class (which often appear to be ancient), and those that are Brāhmanical, the difference between them being similar to the distinction between tales of chivalry and legends of the saints. References to the heroes of the epic are not infrequent, but its story is not narrated except in the few cases where an abstract of it is given, as in the *Agni*, *Padma*, and *Garuḍa*, which also summarize the *Harivaṃśa*.

4. Additions, interpolations, and losses.—The *Purāṇas*, like the epic, have grown by continual additions and interpolations, as abundant evidence shows, both direct and indirect. The *Linga* (II. lv. 36 f.), e.g., says that it contains 108 chapters in its first part and 46 in its second; this is correct as regards the former, but the latter now contains 55 chapters. Again, the *Bhaviṣya* (I. i. 103–105) says that it contained 12,000 verses and was augmented by various stories to 50,000, just as the *Skanda* was amplified. The indirect evidence is of various kinds. (a) Many *Purāṇas* mention the eighteen *Purāṇas*, which they could not all do unless the enumeration were an addition made after all the eighteen had become established. In the *Padma*, which professes to have been recited by the *sūta*, pt. vi. continues pt. iv., ignoring pt. v., which begins as a separate *Purāṇa* recited by the *sūta*'s son. (b) The same matter is sometimes told more than once; thus the story of the sun is told twice in the *Mārkaṇ-*

deya and that of Jalandhara is told twice in pt. vi. of the *Padma*. (c) Some of the stories are manifestly late, such as the portion of the *Brahma* which dilates on the sanctity of Puruṣottamakṣetra in Orissa. (d) There are differences in language in some *Purāṇas*, certain passages being marked by irregularities in grammar and metre not found in the remainder of the same work. (e) Different and sometimes inconsistent doctrines occur in various places even in one and the same *Purāṇa*, as is noticeable in the two parts of the *Kūrma*. Addition and interpolation have been practised continually; thus the *Garuḍa* quotes from the *Mārkaṇḍeya* and Yājñavalkya's law-book; and, since the *Bhaviṣya* professes to deal with the future, the edition published lately in Bombay has boldly brought its prophetic account down to the 19th cent., besides incorporating a summary of the Biblical account from Adam to Abraham. It often happens that the same passage is found in several *Purāṇas*, so that they either borrowed from one another or borrowed from a common original. Indeed, it almost seems from many peculiarities, such, e.g., as that noticed above in the case of the *Padma* and the triple structure of the *Vāmana*, as if there had been different *Purāṇas* bearing the same name, or as if a particular *Purāṇa* existed with different versions, and that they were brought together and formed into a whole. On the other hand, there have been losses, as much evidence shows. In the *Padma*, e.g., pt. v. says that the *Padma* which it introduces consisted of five sections, but that part contains only the first section called the *Paṇḍaraparvan*, and the other four appear to be missing, while the entire *Padma* has six parts. Again, a comparison of *Brahmāṇḍa*, III. lxxiv. 103 f., with the corresponding passage in the *Vāyu* (xcix. 101–291) shows that about 190 verses have been lost in the former. The arrangement of the contents of the *Purāṇas* accords with these conclusions, for in several there is no logical scheme, and matters are expounded piecemeal as if by additions. On the other hand, some *Purāṇas* deal with their subject-matter on a consistent plan, such as the *Viṣṇu*, *Agni*, and *Bhāgavata*, betraying apparently a late stage, when the matter had been co-ordinated and systematized. The *Viṣṇu* is one of the best arranged, yet it hardly professes to be early, for it declares that it was compiled out of the four 'root-*Purāṇas*' mentioned above.

5. **Additional subjects.**—The *Purāṇas* claim to expound, besides the five characteristic subjects, the four subjects which comprise all human endeavour—righteousness (*dharma*), wealth (*artha*), love (*kāma*), and final emancipation from existence (*mokṣa*). These, with the copious religious teaching now found in the *Purāṇas*, are Brāhmanical additions to the original five subjects. Of the four ages the *Kṛta* was the golden age when righteousness was perfect, but it deteriorated through the *Tretā* and *Dvāpara*, until it has well-nigh perished in this evil *Kali* age. This is figuratively expressed in the adage that *dharma* had four legs for its support in the *Kṛta* age, three in the *Tretā*, two in the *Dvāpara*, and has only one in the *Kali* age.

6. **Theology.**—The theology taught is heterogeneous, and most deities that enjoyed a certain amount of popular acceptance can be found praised in the *Purāṇas*. Of the Vedic gods, Indra and Agni retain a prominent position, and Indra is the chief of the gods, i.e. generally of the subordinate gods, those other than Brahmā, Viṣṇu, and Śiva. Varuṇa is the god of the ocean and appears at times, but Mitra has disappeared. The sun (*Sūrya*) holds an important position, and the names Vivasvant, Savitr, Āditya, and Pūṣan are freely given to him. He is highly extolled in the *Brahma*, *Mārkaṇḍeya*, *Agni*, *Padma*, and *Garuḍa*, but his

worship is most fully inculcated in the *Bhaviṣya* (I. xlviii. ff.), which says that it was introduced with the sun's priests from Sākadvīpa into the Panjāb by Kṛṣṇa's son, Sām̐ba, who suffered from leprosy and was cured by worshipping the sun. It calls the sun's priests *magas* and *bhojakas*. The sun's children were Manu Vāivasvata, Yama, and the Āsvins, who are celestial physicians. Yama is the god of the dead, especially of the wicked dead, and holds a dread position as the punisher of sinners in his hells. Vāyu, also called Mātariśvan, is a god of some note. Soma is the moon. Brhaspati is the divine priest. The *gandharvas* are celestial musicians, and the *apsaras* are celestial nymphs and courtesans, who often play the part of beguiling *ṛṣis*, whose austerities (*tapas*) awakened fear in the gods. On the evil side were the *asuras*, who were demons. *Dāityas*, *dānavas*, and *rākṣasas* meant in the earlier traditions hostile races, sometimes uncivilized and always hated and dreaded; hence these names took on the meaning of 'demons,' especially in passages that appear to be late, where they and also *asura* are treated sometimes as interchangeable. Midway was Kubera Vaiśravaṇa, the god of riches, whose attendants were the *yakṣas* and *gṛhyakṣas*. In late *Purāṇas* or passages local cults are commended, such as the worship of Manasā, the goddess of snakes, and the *tulsi*-plant, the holy basil; and the veneration of the cow is noticed in the *Padma* (v. xlv. 122–190).

The three chief gods are Brahmā, Viṣṇu, and Śiva. Brahmā is the creator of the world, Viṣṇu its preserver, and Śiva its destroyer. Brahmā is sometimes extolled as the highest, as in the *Mārkaṇḍeya* (xlv. f.), but is generally held to be inferior to Viṣṇu and Śiva, and the relative supremacy of these two is the higher theology taught. The *Purāṇas* are sometimes classified according to their teaching on this subject and the three qualities, goodness, passion, and darkness. The *Matsya* (liii. 63 f.) says that the *Purāṇas* which extol Viṣṇu as supreme are called *sāttvika*, 'characterized by goodness'; those that extol Śiva and Agni are *tāmāsa*, 'characterized by darkness'; and those that extol Brahmā are *rājasa*, 'characterized by passion'; but these distinctions are purely fanciful. It adds a fourth class, those which extol the goddess Sarasvatī and the forefathers (*pitṛs*) and which it calls *saṅkīrṇa*, 'mixed'; but no *Purāṇas* display this character, though Sarasvatī is praised here and there and a high position is assigned sometimes to the forefathers (see below, (c)). The *Padma* (vi. cclxiv. 81–84) says much the same, and distributes the *Purāṇas* in sixes thus—as *sāttvika*, the *Viṣṇu*, *Nāradiya*, *Bhāgavata*, *Garuḍa*, *Padma*, and *Varāha*; as *tāmāsa*, the *Matsya*, *Kūrma*, *Linga*, *Śiva*, *Agni*, and *Skanda*; and, as *rājasa*, the *Brahmāṇḍa*, *Brahmavaivarta*, *Mārkaṇḍeya*, *Brahma*, *Vāmana*, and *Bhaviṣya*. The *Vāyu* must be understood to be included in the *Brahmāṇḍa*. But this division is only roughly true, because the *Agni*, e.g., gives instruction about the worship of both Viṣṇu and Śiva. The *Padma* (*loc. cit.* 85) further declares that the *sāttvika* lead one to final emancipation from existence, the *rājasa* to heaven, and the *tāmāsa* to hell; but this estimate is merely Vaiṣṇavite, for the *Śiva* (II. ii. 63), which is classed lowest as *tāmāsa*, declares that a man who reads it completely and respectfully attains final emancipation even while he is alive, and that the gods attain thereto only by attaching themselves to Śiva. The Śaivite *Purāṇas* show a difference from the Vaiṣṇavite in that, though they make Śiva supreme, yet they also extol Viṣṇu highly; and they almost suggest that the exaltation of Śiva was a later doctrine imposed on that of Viṣṇu's supremacy, as appears indeed to be implied in the *Śiva Purāṇa* (I. ii. 5–11).

The rival advocacy of Viṣṇu and Śiva was carried to the farthest length, and the partisan *Purāṇas* sometimes introduce these gods themselves, each as explicitly declaring the other's supremacy. The rivalry thus reached an impasse, from which the only escape was to affirm that both were one and the same god, in different persons. This is often taught and, with the corollary that Brahmā also was one with them, constituted the highest theology inculcated—the triple manifestation (*tri-mūrti*). Thus the three were one, yet it was open to a partisan to maintain that Viṣṇu or Śiva was the true and chief person, of whom the other was a manifestation; and so a *Purāṇa* is able to extol one or the other as supreme, while affirming their unity. This monotheistic conclusion carried the teaching to the Vedānta standpoint, that God alone really exists, eternal, immutable, that He is everything, and that everything animate and inanimate is but a portion of Him. This doctrine is elaborated and enforced most in Vaiṣṇavite *Purāṇas*, and is stated fully and clearly in the *Viṣṇu*. It is essentially the same as that expounded in the *Bhagavad-Gītā*, except that it does not go so far in enunciating that the whole world is *māyā*, 'illusion'—a view which is mentioned in places, but is stigmatized as Buddhistic and bad by the *Padma* (vi. cclxiii. 70). The highest religious philosophy is therefore monotheistic and pantheistic; its popular presentment is polytheistic. The doctrine of transmigration is involved in it and is thoroughly inculcated, both as a consequence entailed on all human beings by their actions (*karma*), often with elaborate and fanciful apportionments of particular evil conditions to particular sins, and as an explanation of misfortunes, serving to solve or justify distressing situations and perplexing problems.

(a) *Viṣṇu*.—Viṣṇu is said to have ten incarnations. The lists have some variations, chiefly as regards Buddha; but the following list is a general one. In it the first five incarnations are mythological, the next four have a historical basis, and the tenth is still future:

(1) As a fish (*matsya*), when he saved Manu Vaisvata amid the deluge; and when the *Matsya* says it was declared by him to Manu; (2) as a tortoise (*kūrma*), when he supported the mountain Mandara at the churning of the ocean, and Lakṣmi, divine nectar, and other things were produced; the *Kūrma* says that in that form he declared it; (3) as a boar (*varāha*), when he raised up on his tush the earth that had sunk to the bottom of the universal ocean; and when the *Varāha* says he declared it to the earth; (4) as the man-lion (*nara-siṃha*), when he delivered the gods from Hiranyakāśipu and other demons who had vanquished them; (5) as a dwarf (*vāmana*), when he delivered the gods from the demon king Bali, and accomplished his purpose by obtaining from Bali the boon of having as much space as he could cover in three steps; (6) as the Brāhman Rāma, son of Jamadagni (sometimes called Paraśu-Rāma, 'Rāma with the axe'), who destroyed all the Kṣatriyas off the earth twenty-one times, in revenge for the murder of his father by the sons of Arjuna Kārtavīrya, king of the Haihayas; (7) as Rāma, son of Daśaratha, king of Oudh (sometimes called Rāmachandra), whose wife was Sītā, and whose story is the subject of the great epic, the *Rāmāyaṇa*; (8) as Kṛṣṇa, who reigned at Dvārakā in Gujārāt over the Yādavas, the friend of the Pāṇdavas and one of the chief figures in the *Mahābhārata*; (9) as Buddha, who founded Buddhism; (10) as a warrior, Kalki or Kalkin, who will appear at the close of this Kali age, overthrow all adversaries, and re-establish pure Hinduism.

All these incarnations are often mentioned, and sometimes described at great length. The sixth often appears in the Haihaya genealogy. The seventh is narrated in the *Agni* and *Padma* as a condensation of the epic, and the *Padma* (iv. cxii.) relates what it calls the ancient *Rāmāyaṇa*. The ninth is least often mentioned. The eighth, the story of Kṛṣṇa, is a favourite topic; his life, doings, and youthful frolics are often described at very great length; and his favourite shepherdess, Rādhā, is deified in the *Brahmavai-varta* and the *Padma*. Kṛṣṇa is completely identified with Viṣṇu—so much so that his name, his patronymic

Vāsudeva, and others of his epithets are habitually used as synonyms of Viṣṇu in his purely divine character. These are the well established incarnations, but others less acknowledged are also mentioned—indeed, the *Garuḍa* and *Bhāgavata* mention 22, and add that his incarnations were really innumerable. The superlative work attributed to Vyāsa naturally created the belief that he was no ordinary *ṛṣi*, but a divine incarnation; consequently he is often called an incarnation of Viṣṇu, and so also all the other Vyāsas mentioned above; while the *Kūrma* in its second part (xi. 136 f.) makes him an incarnation of Śiva also.

(b) *Śiva*.—The position of Śiva differs markedly from that of Viṣṇu. Viṣṇu is celestial and takes no immediate part in terrestrial affairs except when incarnated, but Śiva is largely a terrestrial god. He is often spoken of as dwelling human-wise on the Himālayas or in Benares, and as practising human asceticism. Similarly with their wives. Viṣṇu's wife, Lakṣmī, is a beautiful abstraction, but Śiva's wife, Umā or Pārvatī, is very realistic. She was Sati re-born as the daughter of the Himālaya range. Śiva's wooing and wedding of Pārvatī and their conjugal life and conversation are often introduced and sometimes narrated at length, yet always in wholly human fashion. They had two sons, Skanda or Kārttikeya, and Gaṇeśa, the god of wisdom. Śiva takes part in terrestrial affairs and especially in contests between the gods and the demons, who are always terrestrial, even when the nether world is their special abode. Śiva and Rudra are synonymous. Pārvatī, especially in her terrible forms, and Skanda also join in the battles. Stories of this kind are often narrated, such as the destruction of Tripura and of the demons Andhaka, Śumbha, Niśumbha, Mahiṣa, and Jalandhara. Her victory over the demons is the theme of the *Devīmāhātmya* in the *Mārkaṇḍeya Purāṇa*—a gruesome story much esteemed by the worshippers of Kālī, who is identified with her; and the worship of her as Durgā is inculcated in the *Padma*, *Brahmavai-varta*, and *Garuḍa*. Śiva was worshipped as Paśupati, 'the lord of cattle,' beneath whom all the gods and all creatures ranked as mere cattle; and this Paśupata cult is commended in Saivite *Purāṇas*, but reprobated in others. Śiva had thus no genuine incarnations, yet his worshippers propounded that he had 28 incarnations contemporary with the 28 Vyāsas, and their names are mentioned in the *Vāyu* (xxiii. 114 ff.), *Līṅga*, and *Śiva*, but they were merely *ṛṣis* who expounded *yoga*, 'ascetic devotion.' Śiva's *līṅga*, the phallus, is often mentioned and extolled, and its worship is well established in *Purāṇas* that appear to be late, and especially in the *Līṅga* (ii. xlv. 13-21), which exalts Śiva in this form as above all gods and as containing everything. Instructions are given about its construction, establishment, and worship. The female counterpart, the *yonī*, is not noticed much, and then only in late *Purāṇas*. The *Vāmana* identifies it with Pārvatī, but the *Padma* with Sītā. The *śaktis*, 'female energies,' are not often mentioned and then generally as somewhat abstract conceptions. They proceed from Brahmā, Viṣṇu, and Śiva in the *Varāha* (xc. ff.) and *Mārkaṇḍeya* (lxxxviii.); they are identified with, or related closely to, Pārvatī in the *Kūrma*. The worship of the *śaktis*, however, existed, for the *Kūrma* (i. xxx. 25) reprobates the Vāmāchārins, or obscene left-hand votaries.

(c) *Pitrs*.—As already mentioned, the forefathers (*pitr*, 'father') are accorded high dignity sometimes. This term means a man's dead ancestors, but in this connexion denotes a class, comprising seven groups, of abstract forefathers, divine yet hardly personal, for they are always spoken of

collectively. The *Brahmāṇḍa* (II. xxi., III. ix.-xii.) and *Vāyu* (I. lvi., lxxi.-lxxvi.) especially magnify them, and similar references occur in the *Matsya* (xiii., xv.), *Mārkaṇḍeya* (xvi. f.), *Padma*, and *Garuḍa*. They are ranked with the gods and even called the earliest gods; they and the gods stand to each other in reciprocal relationship as fathers, and they are also the gods' gods, to whom the gods offer sacrifice. They and the gods come into existence with each *manvantara*, and pass upward to a high celestial world at its close, but apparently do not perish till the universal dissolution. They perpetuate in some undefined way the existence of mankind through the ages. They have a path in the sky between the sun's southern course and the star Canopus, and Yama is their king. They are particularly connected with the *śrāddha*—the sacrifice offered in honour of and for the benefit of one's dead ancestors—and thereby confer blessings on their worshippers. This teaching appears to be ancient, and is not found in the latest *Purāṇas*. See ANCESTOR-WORSHIP (Indian).

(d) *Heresy*.—Heretics and heretical teaching are often alluded to. Such teaching is always sharply and contemptuously reprobated, especially in the form of Jainism and more particularly Buddhism, though often without being named; and the distinction between them is not always made or observed. Books that teach heretical doctrines are called *moha-sāstras*, 'scriptures of delusion,' and are accounted for as the work of Viṣṇu or Śiva or both, or Pārvatī, intended to beguile haters of the gods and Vedas to destruction. The longest notice of such teaching occurs in the *Viṣṇu* (III. xvii. f.), but is largely fanciful, for it makes both Jainism and Buddhism originate in the Narbadā valley. The *Garuḍa* (i. 32) says that Viṣṇu became incarnate as a Jina's son named Buddha in Behār; and the *Agni* (xvi. 1-3) says, as *Suddhodana's* son who beguiled *dāityas*, 'demons,' to become Buddhists. The *Kūrma* (I. xvi. 117) denounces also the *Pañcharātras* (who are followers of Viṣṇu) and more particularly the Śaivite sects, *Kāpālas*, *Bhairavas*, *Pāsupatas*, and *Yāmālas*. The *Brahmāṇḍa* (III. xiv. 39-42) and *Vāyu* (lxxviii. 30-33) class contemptuously among 'the naked and such like' both Buddhist and Jain orders, also Brāhmins who pretentiously wore matted locks or shaved their heads, and those, too, who pretentiously observed religious exercises or uttered prayers.

7. *Dharma*.—Under the head of *dharma*, 'righteousness,' the *Purāṇas* provide a great deal of religious teaching, both popular and what is more strictly Brāhmanical. All deeds, both good and evil, produce necessary consequences, which a man must undergo. Good deeds may raise a man after death to *svarga*, 'heaven'; evil deeds certainly entail punishment. The doctrine of sin and its punishment is clearly laid down. At times lists of sins are set out, together with the penances by which they may be expiated and the specific punishments provided for them in the various hells. Also, and sometimes in this connexion, a description of the hells is given with more or less fullness and ingenuity. As regards the popular teaching, the most striking features are catholicity and the provident care to make religious practice and the acquisition of blessings easy for all. It deals with sacred places (*tīrthas*) and pilgrimages to them, religious exercises, gifts, prayers, and spells, and miscellaneous observances; many of the provisions are expressly declared to be available to women and the lowest classes, thus disregarding mere caste and personal limitations.

8. *Tīrthas*, etc.—The subject of *tīrthas* and the benefits which they confer on pilgrims occupies a very large space, being a favourite subject, for it

offered absolutions and indulgences to the people and brought profit to the Brāhmins. Sometimes itineraries are set out, instructing the pilgrim what he should do at each place and what benefits he would gain thereby; and at other times these matters are woven into a discourse on some point of belief or conduct as edifying illustrations. Some *Purāṇas* deal with *tīrthas* comprehensively, while others advocate the merits of particular spots; and in connexion with each important *tīrtha* is generally narrated the tale which explained its fame and merits. The sacred places in N. India receive most attention and praise; Benares, Allahābād, and Gayā were the chief centres, while the Ganges is often pronounced supreme. But the doctrine of *tīrthas* was firmly established in the Deccan also, and many places there are extolled. The rivers Narbadā and Godāvarī attained a sanctity hardly inferior to that of the Ganges, and were crowded with *tīrthas*. The merits of the Narbadā are expounded in the *Matsya* (clxxxvi.-cxciv.), *Agni* (cxiii.), *Padma*, and *Kūrma* (II. xxxix.-xli.), and those of the Godāvarī in the *Brahma* (lxx.-clxxv.) especially. The explanatory tales are sometimes simple, with possibly a real basis, but generally are mythological or fanciful; and all the resources of Hindu mythology with its myriads of divine and semi-divine beings, together with accretions from Dravidian beliefs such as the reverence towards the monkey Hanumān, were available either for the new localization of some old legend or for the fabrication of pious fables, in order to furnish a *tīrtha* with a title to sanctity. Pilgrimages were open to every one; and, though the toil and expense may have been burdensome sometimes, yet these were far outweighed by the benefits promised. Some places conferred heavenly joys hereafter, others delivered the pilgrim from the evil of being born again, and others bestowed plenary absolution from all sin; and many shrines proclaimed their power to free even from the deadly sin of brahmanicide. Gifts also procured blessings for the donors and were lucrative to the Brāhmins. The making of gifts is warmly commended and sometimes expounded with great detail, as in the *Bhaviṣya* and *Matsya*, as regards both their manifold varieties, from the most costly munificence to simple almsgiving, and also the occasions when and the procedure with which they should be made. Further, various religious exercises (*vrata*) are lauded as procuring benefits, especially those prescribed for certain auspicious days and months, and this subject is sometimes expounded minutely, as in the *Matsya*, *Agni*, *Garuḍa*, *Padma*, and *Bhaviṣya*. Even occult practices to effect both good and harm are commended and explained, such as mystical formulæ, magical spells, and prophylactic verses, in the later *Purāṇas* such as the *Agni*, *Brahmavaivarta*, and *Garuḍa*.

The readiness displayed in all these ways to provide relief from sin and enable every one to acquire substantial future blessings was carried so far that in the *Matsya* (lxix. 2) and *Padma* (III. i. 5) the question how a man could gain final emancipation from existence with the least amount of asceticism is naively asked and soberly answered. It may well be surmised that these features of popular religion were not haphazard. Brāhmanism evidently found it expedient to smooth the path of religion for the people, and this suggests that it was outbidding other claims to popular favour. But, whether deliberately provided or not, these easy ways of practising religion and reaping blessings must have presented strong attractions, compared with the self-regimen that Buddhism required of its adherents in this life and the dreary

future existences that it announced for the ordinary man. It is probable, therefore, that all this popular teaching contained in the *Purāṇas* materially helped the Brāhmins to stem the spread of Buddhism and finally to oust it from general acceptance.

9. **Caste and ritual.**—The more special Brāhmanical instruction lays down the rules governing the castes. Ordinarily the castes are taken as four—the ancient theoretical number—viz. the Brāhmins, the Kṣatriyas, or military body, the Vaiśyas, or trading classes, and the Śūdras, who comprised all the lowest strata; yet the existence of other castes, whose origin is theoretically explained as the intermixture of those four castes, is noticed at times, though only in a general way. For the most part it is the Brāhman's life that is considered worthy of description, and the duties of the other castes are summed up briefly. The Brāhman's four stages, as the religious student, the married householder, the forest recluse, and the ascetic mendicant, are explained, often at much length. Directions are often given about sacrifices, purifications, sacred texts, and various rites and ceremonies, especially the *śrāddha*. Information is offered about images and their worship in the *Matsya*, *Bhaviṣya*, and *Varāha*. Elaborate instruction is sometimes set out about 'virtuous custom,' or correct behaviour in all matters, religious, social, and personal. All these subjects appear to be later additions, and are generally expounded in the encyclopædic *Agni*.

10. **Kāma.**—Next may be mentioned the subject of *kāma*, 'love,' in so far as it is noticed in the *Purāṇas*. It may be regarded as illustrated by many stories. Such treatment as it receives deals mainly with women. Rules are laid down about marriage, and personal characteristics are sometimes described. The care that a wife should show towards her husband and relatives is explained in the *Bhaviṣya*; and as examples of perfect wifehood are often cited Sītā, the much-tried wife of Rāma, and Savitrī, who saved her husband Satyavāt by her devotion. The practice of *satī*—a widow's immolating herself on her husband's funeral pyre—is alluded to sometimes, but ordinarily the subject of widowhood is left untouched, as if it needed no particular notice. Lastly, rules are laid down even for courtesans, which it is said were originally given to Kṛṣṇa's wives after his death.

11. **Artha, etc.**—The subject of *artha*, 'wealth,' is not itself discussed in the *Purāṇas*, but the welfare of a king and his subjects falls partly under this title and partly under *dharma*, and is the subject of works called *artha-sāstras*. This is dealt with under the title of *rāja-dharma*, 'the righteous functions of kings,' and is expounded with regard to a king's personal and religious duties, civil, criminal, fiscal, and military administration, the conduct of war and peace, and the safeguarding of his realm from calamities. The *Matsya* treats the subject fully, and so also the *Agni*, as expounded by Puṣkara; while the *Garuḍa* lays down wise maxims, both generally and with special reference to kings. Here may be also noticed various other subjects that are sometimes expounded. The *Agni* and *Garuḍa* treat of medicine and veterinary science, architecture (which is also in the *Matsya*), the scrutiny of gems, astrology, and grammar. The *Agni* further treats of archery, poetry, metre, the drama, and dancing. Many *Purāṇas* (e.g., *Vāyu*, lxxxvii.) discourse on music, generally in connexion with the fabled visit of an ancient king of Gujārāt to Brahmā's court, where the *gandharvas* were the musicians.

12. **Mokṣa.**—The fourth additional subject is

mokṣa (q.v.), 'final emancipation from existence.' Transmigration was believed in unquestioningly, and every man had to experience and so consume the consequences of his actions in subsequent lives. Some shrines promised deliverance from existence, but generally religious rites and observances, pilgrimages, and such like conduced merely to amelioration of future existence. That was as much as the ordinary man was capable of, but did not satisfy earnest souls who desired to be rid of re-birth and obtain absorption into the Supreme Soul. To attain to this was the highest aim of philosophical religion, and two ways to this end were taught, namely, *yoga*, 'complete ascetic meditation on and devotion to the Supreme Soul,' and *bhakti*, 'loving faith.' Pure ascetic self-mortification (*tapas*) could enable a man to acquire and exercise superhuman knowledge, faculties, and powers; and that is often described and held up to admiration in the marvellous stories of the ancient *rṣis*; but there its fruit is treated rather as an object in itself, for the doctrine of final emancipation was not the highest aim of human aspiration in ancient times as it became established later. The *yoga* that achieved final emancipation was twofold: (1) *jñāna-yoga*, 'the *yoga* of spiritual knowledge,' which was exclusive, ascetic, and contemplative devotion, rejecting all works; and (2) *karma-yoga*, 'the *yoga* of works,' which consisted in the full and single-minded performance of all one's earthly duties, and was also called *Sāṅkhya-yoga*. Both kinds are taught and are contrasted sometimes, but on the whole the *yoga* of spiritual knowledge is more highly commended. The *Vāyu*, *Brahma*, *Viṣṇu*, and *Linga* give instruction about *yoga*, especially the *yoga* of spiritual knowledge, and the *Viṣṇu* extols it highly. On the other hand, the *Matsya* (lii.) lauds the *yoga* of works as far superior to that of spiritual knowledge, and declares that it is the *yoga* of works that produces such knowledge and the *yoga* of such knowledge, and that there can be no spiritual knowledge without it. The *Kūrma* (i. iii. 21-27), however, commends a middle course in a combination of both, because works lead on to spiritual knowledge. The other path, *bhakti*, is connected indeed with *Siva*, but more especially with *Viṣṇu* and Kṛṣṇa, who are completely identified. Faith in *Siva* is alluded to incidentally in various *Purāṇas*, and is inculcated in the *Linga* (i. viii.) and in the *Siva* (vi. viii.), which bases it on knowledge. Faith in *Viṣṇu* is not only alluded to often, but is enjoined in the *Brahma*, *Brahmavaivarta*, and *Garuḍa*, is expounded in its various forms in the *Padma* (iv. lxxxv.), and is the special theme of the *Bhāgavata*. The *Brahma* (ccxxviii. 8-13) says that one rises through faith in *Agni*, the sun, and *Siva* successively to faith in *Viṣṇu*, that men of even the very lowest classes can possess it, and that man fails to reach it because of *Viṣṇu*'s *māyā*, 'illusion.' The teaching of the *Bhagavad-Gītā* on these subjects is summarized in the *Agni* (ccclxxx.), *Garuḍa* (ccxix.), and *Padma* (vi. clxxi. ff.). Faith in Brahmā also is expounded in the *Padma* (v. xv. 163-192) similarly to faith in *Viṣṇu*; and faith in the sun is inculcated in the *Bhaviṣya* (i. xlviii. ff.). The *Padma*, moreover, in a late allegory personifying *bhakti* as a woman, says:

Bhakti was born in Drāviḍa, grew up in Karpātaka, became worn out in Mahārāṣṭra and Gurjara, sought refuge with her two sons, *Jñāna* (spiritual knowledge) and *Vairāgya* (passionlessness), in Vṛndāvana, and regained her vigour there (vi. clxxxix. 51-56); and it concludes, 'Enough of vratas, tīrthas, yogas, sacrifices and discourses about knowledge, faith alone indeed bestows final emancipation' (vi. cxc. 22).

13. **Age of the Purāṇas.**—The age of the *Purāṇas* is a question much disputed and quite unsettled. In a general way it is not difficult to perceive differences of age in the *Purāṇas* collec-

tively and in the component parts of a single *Purāṇa*; but the *Purāṇas* (except the latest), as they exist now, can hardly be assigned to any definite age, because additions and modifications have been made, as shown above, and they now present the combined results of many centuries. While, then, it is required that the different strata in their contents should be distinguished as far as possible, the important question is, not so much What date do the latest additions prove for any *Purāṇa*? as What dates do its earliest features indicate? Tradition says, as already mentioned, that Vyāsa, who was alive at the time of the great Bhārata battle, and his disciple, the *sūta*, compiled the first *Purāṇa*. That a collection of ancient traditions was made not long after that period receives strong confirmation from two patent facts: (1) that the royal genealogies (which are given in most *Purāṇas*) terminate at that stage, the three chief lines only being continued later in a few *Purāṇas* and then professedly as a prophetic addition; and (2) that stories of the kings mentioned in the genealogies stop short at that stage except as regards the next two Paurava kings, Parīkṣit and Janamejaya. These two facts suggest strongly that the period following the great battle was the time which determined the lower limit of ancient tradition, i.e. when ancient tradition was collected regarding genealogies and stories about kings—the two out of the five subjects characteristic of *Purāṇas* that admit of chronological scrutiny. Hence it is probable that the first *Purāṇa* was compiled about that time, and the four 'root-*Purāṇas*' soon afterwards. Those original *Purāṇas* do not exist now as such; the present *Purāṇas* have been developed out of them, as the *Viṣṇu* expressly asserts about itself; yet portions of those *Purāṇas* may survive embedded in existing *Purāṇas*, and there is no good reason to doubt that the royal genealogies and their incidental notices of kings mentioned therein are really ancient matter. *Purāṇas* are cited as authorities, and a *Bhaviṣyat* in particular, in the *Apastamba Dharmasūtra*, which is not later than the 3rd cent. B.C. and may be nearly two centuries older. Moreover, epigraphic evidence, in the shape of verses quoted in land-grants which are dated, shows that even *Purāṇas* which do not appear to be early must have been in existence in the 4th cent. A.D. at the latest. On the other hand, some *Purāṇas* are no doubt later still, and the *Bhāgavata* (probably

not before 8th cent. A.D.) is the most striking instance of such. Further, whatever the age of any *Purāṇa* may be substantially, it has undoubtedly been augmented and modified later than the 4th century. Various points which touch the relative age of the *Purāṇas* have been noticed in the course of this article, but, until the *Purāṇas* have been studied far more carefully than they hitherto have been (and they deserve such study), it is impossible to affirm anything positive about their ages. A preliminary estimate of the older matter, however, may be offered thus. The oldest appear to be the *Brahmāṇḍa* and *Vāyu*, and the *Matsya* also, though it has large later additions. The latest seem to be the *Brahmavaivarta*, *Siva*, *Vāmana*, and *Bhāgavata*, the last of which may be called 'the Bible of the worshippers of Viṣṇu.' The others appear to be intermediate, and among them an early place may probably be assigned to the *Mārkaṇḍeya* and *Brahma*, the last often styled the *Ādipurāṇa*, 'original *Purāṇa*,' though a large part of its contents is certainly not ancient. The *Padma* has old matter in so far as it has affinities with the *Matsya*, but the bulk of it is late, and some of its tales show a stage of transition to the moral fables of the *Pañchatantra* and *Hito-padeśa*.

14. *Upapurāṇas*.—Besides the *Purāṇas* proper there is a class of similar but later and inferior works called *Upapurāṇas*, 'minor *Purāṇas*.' They also are said to be eighteen in number, and their names are given thus in the *Kūrma* (I. i.), *Garuḍa* (cxv.), and *Padma Purāṇas* (IV. cxi.) *Sanatkumāra*, *Nārasiṃha*, *Skanda*, *Śivadharmā*, *Durvāsa*, *Nārada*, *Kāpila*, *Vāmana*, *Uśana*, *Brahmāṇḍa*, *Vāruṇa*, *Kālīkā*, *Māheśvara*, *Śāmba*, *Saura*, *Parāśara*, *Mārīcha*, and *Bhārgava*. The *Kūrma* and *Garuḍa* say that these were declared by the *munis*, but the *Padma* attributes them to Manu to give them spurious antiquity. Some of them have been published, but they have not been studied.

LITERATURE.—Mainly the *Purāṇas* themselves. See also H. H. Wilson's tr. of the *Viṣṇu Purāṇa*, ed. Fitzedward Hall, 5 vols., London, 1864-70, preface; *Le Bhāgavata Purāṇa*, ed. E. PURIFICATION (Introductory and Primitive).—I. Introductory remarks.—Among the more prominent factors both in the regulation of primitive life and in the determination of the character of religious ritual are the conception of the state of purity and the attendant ceremonies requisite for the preservation of that state, and for its recovery should it be impaired. It must be noted, however, that purity as conceived by the primitive mind has a wider significance than is usually attached to the modern use of the term among civilized peoples, in which emphasis is laid on the positive side of its meaning, purity

being almost regarded as the equivalent of continence or chastity. The difference is sometimes expressed by applying to the primitive idea the epithet 'ceremonial,' and further by pointing out the non-ethical character of ceremonial purity or 'ceremonial uncleanness.' But, apart from the question whether it is correct to deny the term 'ethical' to any body of rules governing conduct, it would be more correct to describe ceremonial purity as pre-ethical in that, as will appear, in certain respects it provides the basis for higher moral codes.

Owing to the emphasis on the negative and

inhibitory aspect, which is generally characteristic in primitive rules of conduct, it is as a negative state rather than a positive ideal that purity governs primitive action, while purificatory ceremonies have as their object protection from harmful influence rather than the attainment of righteousness even of a ceremonial kind. The state of purity would be defined by the primitive savage as one which resulted from such a course of action that defilement, whether by intentional or by inadvertent act, had been avoided.

Ceremonial purity is closely bound up with the class of ideas and rules of conduct described by the generalized term 'tabu.' Infringement of tabu, whether voluntary or involuntary, renders the individual subject to spiritual influence or, to use the Melanesian term, an adverse *mana*. As such he not only is a danger to himself, but may transmit the danger to others, and may affect the whole community. Hence certain restrictions are imposed upon him: he is isolated, his actions are regulated that they may not affect the well-being of the community—e.g., in such a matter as the food supply—until such time as he has been freed from danger by a purificatory ceremony or, in a case in which defilement is so great that the interests of the community are paramount, the adverse influence has been removed by his outlawry or death.

2. Loss of purity by defilement.—(a) *Death*.—Ceremonial defilement is closely connected with the occasions of crisis in human life, both social and natural, such as birth, initiation, puberty, marriage, and death. The ceremonies which accompany these crises are to a great degree both directly and indirectly purificatory in intent.

Death to the primitive mind is the greatest pollution of all—so much so that it commonly puts an end for a time to all activity over a social circle of varying extent. As the Bathonga say, 'the uncleanness of death kills if it is not properly treated.' Not only the corpse, but the possessions of the deceased, are regarded as infected with danger, which must be averted by ceremonial treatment. Many customs testify to the peril which is supposed to attach to contact with a dead body. There is a reluctance to handle it.

Among the Lillooets of N. America the last offices of preparing the body for the grave are performed by the shaman, whose innate magical qualities are regarded as in themselves sufficient to secure his immunity from harm. Among other Indian tribes of the north-west the duty of disposing of the body is performed by grave-diggers, who themselves become unclean and must for some days observe certain restrictions with regard to food, relations with their wives, and the like.¹ Among the Bathonga the grave-diggers, who are employed because of the great danger involved should relatives handle the body, plug their nostrils with the leaves of a strongly-scented plant as a protection against the dangerous influences of the corpse. They must undergo a rite of ablution and, with their wives, they are subjected to vapour baths. They also suffer from disabilities such as those mentioned in the case of the N. American Indians. They eat with special spoons, and for five days must not take food from the common plate.²

The wide-spread custom of placing implements, weapons, etc., in the grave for the use of the spirit is also no doubt to some extent an outcome of an idea that they are 'unlucky,' while the custom, almost equally wide-spread, of avoiding the use of the name of the deceased is based on a disinclination to afford an opportunity for an adverse influence to make itself felt by the use of a word which is associated with the 'unclean.' Such possessions as are not devoted to the spirit of the dead are frequently destroyed.

The Loucheux crush and break the dead man's beads. Among the Thompson Indians the *tepee* in which a man died is burned, or, if death took place in the more permanent hut, it is

washed with water in which juniper or tobacco has been steeped. In the lodge no one sleeps in the dead man's place for a considerable period.¹ In Uganda the hut in which the queen, the king's mother, or one of his wives had died was destroyed. When a man dies, the main post of his house is taken down by his sister's son and is partially burned in the fire.² Among the southern clans of the Bathonga the crown of leaves which tops the hut is taken down and used to block the doorway, where it remains for some time until the hut is ceremonially cleansed. The food and the gardens belonging to the dead man must also be purified.³

In these instances, which could be multiplied indefinitely, it is clear that material things which have been in intimate contact with the deceased are dangerous to those who handle them. The same danger attaches with added intensity to human beings, first those in his immediate circle—his wives, who are especially impure, and his relatives—and ultimately the whole community. Each is a centre of danger to others until a purificatory ceremony has removed the defilement. Hence the restrictions which surround any one who has become polluted aim at segregating him or her from the remainder of the community. Certain mourning customs, signs of grief and bereavement, such as allowing the hair and nails to grow and the wearing of special clothes, mark the mourners as a class apart;⁴ the resumption of their ordinary appearance and attire marks their return to a state of purity.

In addition to the custom of segregation, general among primitive peoples, special regulations, varying according to the locality and people, may have to be followed.

Among the various tribes of the Déné and Salish the segregation period extends in the case of mourners to a period of two moons, but in the case of widows for twelve months. The possibility that they may affect the food supply adversely by their action is recognized, and precautions against such a contingency are taken. They must observe a period of fast, varying from four days to four months, during which no fresh meat or hot food must be eaten; food must not be handled or cut, but must be torn by the teeth, and a special birch-bark cup, which is thrown away after four days, must be used for drinking. Not only must a widower refrain from eating venison, flesh of any kind, or fresh fish, and from smoking, but, should he touch another man's net or fish from his place, the net and the station become useless for the season. Both widows and widowers are regarded as specially unclean; the former may retire to the woods for a period of one year, performing purificatory ceremonies, bathing in streams, and taking sweat-baths, while the latter must in some cases watch the place where the corpse was buried for a like period, eating no fresh meat in that time.⁵

Among the Bathonga widows form a secret society. Until the great mourning the chief widow lives in a special hut in front of the mortuary hut, and the period of mourning of all the widows lasts for one year. Before another husband could be taken, the ceremony of 'throwing away the malediction of death' had to be performed, in which a stranger, ignorant of the circumstances, was deceived by the woman, and, by a ceremonial sexual act in the bush which was not completed, took upon himself the pollution and had to be purified in turn. Pollution by death is sufficiently strong to attack the members of the family who are absent even so far away as Johannesburg. A relative who returned home even months after the death could not enter the village or eat any food in it until purified. This people in fact recognize grades of impurity following on death, in which the degrees are first the widows, then the grave-diggers, thirdly the community, and lastly relatives and wife's relatives in other villages. At the death of the headman the village was abandoned, and, although the pollution in the case of an ordinary death was not sufficiently grave to require such an extreme measure, the community was affected in a certain degree. No sexual relations were allowed, and the warriors were unable to go out to battle until they, holding their assegais, had taken part in a purification ceremony in which the whole of the community was aspersed by the medicine-man. No fire could be kept burning in the village except that which had been kindled in the open by the medicine-man with fire from the mortuary hut. This was used by the whole village for its requirements until the fifth day, when it was put out by the medicine-man and a new fire kindled, from which the people lighted their fires. This was a part of the ceremonial purification of the village.⁶

¹ C. Hill-Tout, *British N. America*, i. *The Far West*, London, 1907, p. 199 f.

² H. A. Junod, *The Life of a S. African Tribe*, London, 1912-13, i. 133 f.

Among the Greenland Eskimo the restrictions which followed death were very distinctly of a protective character. Not only was the corpse buried as quickly as possible, but the relatives were secluded for five days, and every one avoided crossing the tracks of those who had dragged the corpse to its burial-place. No man who was in a state of pollution by death was allowed to disentangle the dog traces; a boy accompanied every expedition to perform this office. During the five days' seclusion there was no hunting or fishing, and no work was done; but, if any sewing was necessary, the eyebrows were blackened.¹

Among the Todas, owing to the peculiar ritual importance of the dairy and the susceptibility of the cattle and the milk to ceremonial defilement, great stringency prevails in the regulations to be observed after a death. A special hut is provided for the corpse, or (among the Tatharol division of this people) a special dairy with three rooms is set aside for mortuary purposes. All who are near the corpse are impure, while the whole family of any one who comes to the village in which the relics of the deceased—a lock of hair and a piece of skull—are kept, in the period between the first and the second funerals, are polluted. All who attend the funeral, unless they take up their position at a distance, are affected in like manner, while the *uursol* (dairyman-priest) who attends to kill the sacred buffalo loses his office. The *pep*—the ceremonial portion of the dairy product which preserves ritual continuity from day to day—is thrown away, and new *pep* is prepared. Relatives of the deceased remain in a state of impurity until the moon after the second funeral.²

The break in continuity brought about by death, which is marked among the Todas by the casting away of the *pep* and the preparation of new *pep*, frequently finds expression in a cessation of all normal activities. Action is rendered unlucky or useless by the defilement. All work done by the Basutos on the day on which a chief dies is defiled.³

The pollution of death is intensified if it be due to violence, even though the killing may be justifiable or accidental.

In the Cameroons an accidental death must be followed by a purificatory ceremony,⁴ while among the Akikuyu, although the death of a member of another tribe entails no disabilities, the killing of a fellow-tribesman requires atonement by a ceremony in which the slayer eats with the brother of the slain, and the ghost, in the shape of a wild cat, partakes of part of the food placed for it at the foot of a tree.⁵ Even warriors are not immune from the consequences of their act. As the Bathonga say, 'they are black, the black must be removed.' Consequently, Bathonga warriors, on their return from an expedition, must remain at the capital for some days, wear old clothes, eat from old or broken vessels, and have special food, partaking of no hot meals until they have been purified.⁶ The Awemba warrior must not sleep in the hut until he has washed in a stream and been smeared with medicine,⁷ while the Basuto must be purified by his chief.⁸ On the Wanigela river, British New Guinea, the man who is guilty of blood sits apart on the 'logs of sacrificial staging.' He is then placed apart in a special hut in charge of two or three boys, and is re-admitted to the community only after a hunt in which a kangaroo is killed, with the spleen and liver of which he is smeared.⁹ The Chinook murderer is strictly quarantined; no one eats with him, nor is he allowed to see any one eat until he has been purified.¹⁰ The Pima Indian who has slain an Apache is not allowed to look at a blazing fire during the whole of the sixteen days in which he is undergoing purification.¹¹

Contact with the murderer may transfer his unclean state to others.

Among the Akikuyu, if a homicide sleeps and eats in a village, those who entertain him are polluted to such a degree that they must have recourse to the medicine-man.¹²

Some form of penalty may be imposed, whether the killing is regarded as sin or not.

In Rajmahal, if two men quarrel and one wounds the other, the guilty man is fined a hog or a fowl, but the intention is purificatory as well as penal; the blood of the fine is sprinkled over the wounded man to prevent him from being possessed by a devil.¹³

It has sometimes been thought that the disabilities which follow murder are an expression of horror at the intentional spilling of that precious substance, blood. Now, while it is undoubtedly true that blood is highly tabu, and while the importance attached to it in various purificatory ceremonies shows its sacred character and ceremonial value, yet the explanation of the ceremonies and disabilities given by natives themselves appears to minimize the importance of the spilling of blood in death by violence, while emphasizing the fact that those who are guilty of the death of a human being are subject to attacks from the spirits of those whom they have slain, and that through them the danger may be transmitted to the whole community. The penalty, *e.g.*, which follows omission of the purificatory ceremony is usually madness caused by the spirit of the dead.

The Bathonga warriors are pursued by their slain enemies, who would drive them mad if the proper precautions were not taken. The Basuto warriors are anointed with the gall of a sacrificial ox, this preventing the ghost from pursuing them.¹

On the other hand, there is a connexion between the ghost and blood in the explanation given by the Kai of German New Guinea.

They say that the souls of the slain follow the returning warriors to recover those parts of the souls which cling to the blood clots on the clubs.²

Not only is it the souls of those slain in battle that are feared; the soul of the murdered man pursues his murderer.

Among the Eskimo of N. Greenland the victim's soul drives the murderer mad, or it may tear him to pieces, should he venture far on the ice.³

It would be possible to multiply instances to show that that which renders the man unclean—unfit to re-enter on the life of the community—is not the fact that there is blood upon him, that he is physiologically unclean, but the fact that he is the storm-centre of a dangerous force which, unless appeased or sterilized, will prove harmful to himself and to all with whom he comes into contact. When these conditions may arise after any death for which an individual is responsible, it is clear that intention, which constitutes the murder, is, from a ceremonial point of view, of little importance. Such a conception belongs to a different code, and only gradually rises into prominence in the development of moral ideas.

This view of the primitive theory of the consequences of murder is supported by the ideas which prevail about the killing of animals.

The Hottentots, *e.g.*, purify themselves after slaying animals. The character of the beliefs held by the Bathonga makes it clear that the source of the danger is the spirit of the animal. Purificatory ceremonies, closely resembling those to which returning warriors must be submitted, must follow the killing of certain animals, under penalty of persecution by the soul of the animal which has been killed. Some animals are more dangerous than others. Unless the medicine-man performs a purificatory ceremony after the killing of an eland, madness follows, while, if the man is accompanied by his wife, she shares his impurity; a bracelet of the skin must be made for her, or they cannot eat together, and on the following day the couple must repair to an anthill and there set fire to the bracelet.⁴

Cf. also art. DEATH (Introductory and Primitive).

(b) *Childbirth*.—Childbirth is another of the important crises of human life; it is marked by its intimate and peculiar character and by experience as requiring special measures for the protection of the mother and child, sometimes of the father, and of the other members of the community.

In the Malay Peninsula it is believed that mother and child are the special objects of attack of certain spirits of an extremely virulent and dangerous character, themselves women who have died in childbirth or have lost their children at birth. The belief in the danger of attack by these and other spirits is probably to be regarded as the explanation of the peculiar custom which requires the Malay mother for the whole period of impurity, lasting for 44 days after labour, to mount daily (and sometimes two or three times a day) a platform upon

which she is subjected to intense heat from a fire for a considerable period and, after returning to bed, to have a heated stone from the furnace applied to her stomach.¹

That expectant mothers are regarded as impure and a source of defilement to others is indicated by the period of seclusion imposed upon them by the customs of many peoples.

Among the Kota of the Nilgiri Hills the wife dwells in three different huts in the first three months of pregnancy, staying for one month in each, then for a time in the house of a relative, while the husband purifies himself with water and smoke.² A period of segregation also follows after birth. In N. India husband and wife are separated, and the mother is unclean for a period of five weeks.³ The Basuto father is separated from his wife for four days, when the medicine-man performs a ceremony in which the woman, sitting on the *tephoko* (a log four or six feet long), and the man, sitting opposite with his legs touching her legs, are anointed with a preparation of roots and fat, and drink healing water.⁴ Among the Bulgars birth is followed by a rigorous tabu period of 40 days. At the end of this period the woman goes to church with the child. On her return she visits three houses, where the people make gifts to her and sprinkle the child with flour. On the next day the relatives visit the mother's home, and she sprinkles with holy water all the places in the house and courtyard where she has been during her 40 days' seclusion.⁵ Segregation among the Todas takes place in the fifth month of pregnancy; the mother retires from the village, the distance being determined by the degree of sanctity of the village. A special hut is built for her, where she is visited by the relatives, who, however, may not come near her. When she enters into seclusion, her wrist is burned ceremonially after the erection of an artificial dairy, and then, when she has stayed in the hut for a month, a second ceremony called 'to the village buttermilk we pour' is performed, after which she returns to her ordinary hut. For the next 30 days she lives on a diet of buttermilk and food cooked in buttermilk. After the birth mother and child go to the seclusion-hut again. On her way the mother steps over a leaf on which are some threads from the garment of the dairymen known as *wursoi*, and water from an artificial dairy erected for the ceremony is poured over a calf and given her to drink, while a few drops are sprinkled over the child. In the procession to the hut of seclusion the woman holds up a leaf umbrella, does not look at the sun, and avoids looking at the star or other body called Keirt, which is believed to be near the sun. The ceremony is intended to avoid and avert the evil of Keirt. Among the Teivalioi division of the Todas the husband assists his wife in her journey, and thereby himself becomes unclean and must remain with her at the hut.⁶ The intention of some of these Toda customs is obscure, but the ceremonial of stepping over a leaf and part of the garment of the holy man appears to be a case of transference of evil, the wrist-burning is purificatory, while the 'buttermilk ceremony' is a ceremonial re-introduction of a person in a transitory state to a sacred substance. The use of an umbrella by the Toda woman to keep off the rays of the sun is connected with a wide-spread belief, which also appears in connexion with female puberty, that neither the mother nor her offspring must see the sun. In Korea the rays of the sun are excluded for 21 or 100 days after birth, according to the rank of the family.⁷ New Guinea tribes confine the mother to the house for a month; when she leaves it, unless she covers her head with a mat, a male relative will die.⁸

The object of the Eskimo customs is less obscure. Here too there is segregation. The expectant mother must leave the house which she inhabits with her husband. Her conduct may affect the well-being of the community, especially in the most important item of food. Therefore on the day of birth she must eat only meat fried in fat on a flat stone. After the first night following the birth she must make herself new clothes, as her old clothes must be thrown away, and immediately after the birth she must wash from head to foot. Women who have fewer than five children may not eat young rough seals, eggs, entrails, heart, lungs, or liver.⁹

The impurity of the mother extends to the child. For ceremonies admitting the child and re-admitting the parents to society see art. BIRTH (Introduction).

(c) *Puberty*.—In the ceremonies which mark the introduction of the individual to full sexual and tribal life, at puberty or at initiation, purificatory rites in some form or another are usually a prominent feature. These rites, which present certain general resemblances, by such observances

as a period of seclusion, a special diet, frequent ablutions, the use of pigment for the body, and bodily mutilation such as circumcision or the loss of a tooth, emphasize or, as the primitive mind would regard it, bring about the separation from a former status and the entry on a new phase of life.

In some cases among the tribes of Australia the novices are regarded as having died. Among the American tribes (e.g., the Shawanese) not only did the initiates observe a special dietary, but they also took an emetic at regular intervals—an obvious and common method of purification.¹ In the Kurnai initiation mothers and sons sprinkled one another with water to mark the separation.² Further, it was a common custom to take a new name at initiation. In the Fijian *nanga* rites, at the close of the ceremonies, all the initiates went to the river bank and washed off the black paint with which they had been smeared.³

As in the case of mothers after childbirth, pubescent girls during their period of impurity were rigorously secluded from the rays of the sun, and frequently were not allowed to touch the earth with their bare bodies. This was the case in Loango.⁴ Girls of the Zulu and kindred tribes, should they perceive that they have attained puberty while away from home in the fields, were required to hide in the reeds lest they should be seen by a man, and to cover their heads lest the sun should shrivel them up. At nightfall they ran home, avoiding the paths, and were secluded for a fortnight, during which time they and the girls who waited on them were not allowed to drink any milk, lest the cattle should die.⁵ In New Ireland pubescent girls were confined for four or five years in cages, in which they were kept in the dark, and were not allowed to set foot on the ground.⁶

In the Bathonga nobility customs followed in the case of girls among the northern clans a period of seclusion took place at the appearance of the menses. Three or four girls who ran away to an adoptive mother lived in association; each morning they were covered with a cloth and led to a pool in which they were immersed to the neck. On their return from the pool they were imprisoned in a hut, where they received instruction. Any man who saw them during this period was smitten with blindness.⁷ In the case of boys, on leaving the village for their period of seclusion, they leapt over a fire of scented wood which had been made in the road; every morning while they were in the school they were smeared with white paint as a mark that they had abandoned the darkness of childhood. Before the end of the school the medicine of purification was administered to them in a mouthful of beer, and on the last day their forekins were burnt and made into a powder which was smeared on the pole which stood in the place of seclusion. Finally, all the paraphernalia of the school were destroyed by burning—an act in which 'all the filth and ignorance of childhood was burnt.' The boys were then led to a stream, where they washed off the white clay, cut their hair, anointed themselves with ochre, and put on new clothes.⁸

Circumcision, like other forms of initiation, being a ceremony introducing the novice to a new status in life, is usually found to be accompanied by some period of seclusion or withdrawal, in itself a purification, but it also as a rule included some element of a more obvious kind, such as the taking of emetics, washing, plastering with clay, the individual being thus prepared to face the new spiritual influences with which he or she was to be brought into contact. The position of the uncircumcised in Fiji was indicated by the fact that they were regarded as unclean and not allowed to carry food for the chief.⁹

(d) *Marriage*.—The ritualistic observances which precede, accompany, and follow the marriage ceremony are of such a character as to indicate that, when this important stage in the individual life is reached, the parties immediately concerned are particularly liable to spiritual influences. Although some of the practices are more obviously of a purificatory character than others, as a whole they are intended to minimize the danger (1) of contact between the individuals, and (2) of the entry into a new set of conditions and a new phase of life. On both grounds marriage is brought

within the category of the crises in human life which require the observance of purificatory rites.

The measures taken to guard against the first-named danger usually take the form of seclusion. It is almost invariably the case among primitive peoples that, from the time of betrothal until the actual ceremony, bride and bridegroom do not meet, repeating in the individual the segregation which takes place between the sexes as a whole at puberty or initiation.

In New Guinea betrothed persons may not see one another.¹ The Menangkabauers allow no communication before marriage,² while the Malay *janak* makes every endeavour to avoid her future husband.³ The Wa-taveta bride is 'sealed' to the bridegroom by the payment of the first ox of the bride-price, and until the price is complete must see no man.⁴

Measures may be taken to prepare for contact between the parties, just as initiation prepares for sexual maturity.

Loanda girls, e.g., are excised eight days before marriage by the medicine-man, while the ceremony performed on girls at puberty among Central Australian tribes is actually the marriage rite and initiation ceremony.⁵

It is significant that re-marriage of a widow or widower requires less elaborate ceremony.⁶ This, especially if taken in conjunction with the fact that intercourse with a medicine-man or other person of essentially magical quality, such as a chief, is sometimes exacted from a virgin, and precedes marriage, suggests that the ritual precedent on marriage is a preparation for the entry on a new state. It is also no doubt the result in some degree of the conception that the sexual act involves uncleanness.

The ceremonies which accompany the marriage rite indicate that those who are in contact with the bride are also involved in the danger. It is usual to take some measure of precaution to avert the influence of the spirits during the marriage procession.

In Nishegorod the 'best man' walks three times round the party, against the sun, holding a holy picture. He then scratches the ground with a knife, cursing evil spirits and evil-disposed persons.⁷ Guns are fired during the progress to or from the church—a custom at one time followed in the north of England.⁸ In Manchuria the bridal procession is preceded by two men, each of them holding a red cloth to ward off evil, the arrival of the bride's sedan-chair at the groom's house is signaled by firing crackers, and the chair itself is afterwards purified with incense.⁹

A common preliminary is lustration.

In S. Celebes the bridegroom bathes in holy water, and the bride is fumigated.¹⁰ The Matabele bride pours water over the man on arriving at his house,¹¹ while among the Malays lustration continues for three days after the ceremony; at the actual wedding the first operation is the fumigation of the bride and groom with incense and the smearing with the neutralizing 'rice paste,' which forms such an important element as a purificatory or protective agent in all the magico-religious observances of Malay life.¹² In all Muhammadan countries purification by water in the bath and painting with henna are among the more important of the preliminaries to the wedding rite. The bath usually takes place a day or two before the departure for the groom's house. In Egypt the bride goes in state through the streets in a procession as elaborate as means allow, accompanied by her friends.¹³

The custom of cutting the hair or of wearing old clothes, which in other connexions marks an occasion for, or forms part of, a purificatory rite, also occurs in connexion with marriage.

Among the Muhammadan tribes of N.W. India both bride and bridegroom wear old clothes for some days before marriage.¹ The head of the Kafir bride is shaved, while the Fijian bride cuts off a long lock of hair or shaves her head.²

Notwithstanding the great variety of marriage rites and ceremonies, they agree to a great extent in the same manner as the preliminary rites in having as their object the prevention of the transmission of harmful influence from one individual to another and the aversion of the influence of malicious spirits. The ceremonies may be supplementary to those preliminary rites, marking especially the separation from the former life with all its circumstances and magical influences. Of such, lustration, cutting the hair, and the abandonment of old clothes are significant instances. Or they may be protective, as the use of the veil and of fire-arms, or the custom of Muhammadan countries, where one of the most important days of the wedding ceremony is that on which the smearing of hands and feet with henna, antimony, etc., takes place.³ Another form of protective rite at marriage occurs in Morocco in the tapping of the bride with a sword on the wedding night by the bridegroom to drive away evil spirits.⁴

Finally, the wedding observances may be purificatory in neutralizing or preparing the individual for the new existence upon which he or she is about to enter. In this category would fall such customs as the ceremonial intercourse by men of the tribe, as in Australia, or by the chief or the medicine-man, as in America,⁵ sometimes by friends of the groom, as among the Wa-taveta.⁶ The customs of substituting a bride, which occurs, e.g., among the Beni Amer, and of marriage to a tree preceding the actual marriage, such as occurs among the Mundas,⁷ have the same protective and preparatory object.

After the ceremony bridegroom or bride or both may still continue to be regarded as impure and a danger to others. It is not uncommon for a further period of seclusion to follow marriage.

Among the Arabs of Mount Sinai the bride must remain in her hut for a fortnight.⁸ In the Aru Islands and Ceramaut the pair are shut up for some days,⁹ and among some of the Bedawin the wife may not leave the house or touch any work for three years.¹⁰

(c) *Sexual relations.*—Notwithstanding the pre- or post-nuptial looseness of sexual relations found among many peoples, among others irregularities, and in particular incest in the wider sense in which it includes all the rules of exogamy, are regarded as a great pollution especially to be avoided on account of its effect not merely upon the individual but upon the life of the community. The infecting influence is removed by death, segregation, casting out from the community, or other purificatory process, such as sacrifice, smearing with the blood of the victim, lustration, etc. This class of crime is closely connected with the well-being of the crops. At certain periods of the crops' growth married couples live apart.

In ancient Greece the olive was planted by virgins or pure boys, and, in default of such workers, the crop was gathered by men who had taken oaths of their marital fidelity.¹ The Karens believed that illicit love blighted the crop; the guilty man in his prayer in the course of the ceremony of purification accused himself of having destroyed the productiveness of the country, and went on to say: 'Now I repair the mountains, now I heal the hills and the streams and the lands. May there be no failure of crops.'² In Rajmahal the adulterer furnished a hog to avert plague and the ravages of tigers.³

In some cases incest was regarded as the cause of barrenness.

This was the case among the Dinkas and Bathonga, while among the latter people as well as among the Akikuyu marriage of cousins, being within the forbidden degrees, required a special ceremony which purged the uncleanness and loosed the bond of relationship.⁴ In Borneo first cousins could marry only after the ceremony of *bergapit*.⁵ The Sulka of New Britain considered the pollution of pre-nuptial unchastity so great that not only was it fatal to the parties unless they were purified, but their mere presence was sufficient to tarnish the instruments of the sacred dance,⁶ while among some Dayak tribes the family was made responsible for any death by drowning which happened a month before the atonement.⁷

The frequency with which death by drowning or the use of substitutes, either sacrificial animals or personal possessions, follows sexual crime, and especially incest, is due to the fact that the degree of defilement is so great that even shedding the blood of the guilty is avoided in order that the earth may not be polluted. Consequently among the Torajas of Celebes adultery was expiated by the sword, but incest by clubbing or throttling.⁸

The importance of sexual purity is further indicated by the numerous occasions upon which it is emphasized as a condition of a certain course of action or its absence is regarded as a deterrent.

In Morocco no man who is not clean in regard to sexual matters may enter a granary or vegetable-garden.⁹ No sexual act may be committed in a holy place, nor must a person so polluted present himself in a holy place until he has washed; otherwise he will go blind, become lame, or go mad, he or his family will die, or he will lose some of his animals or his crop. A person sexually unclean may not pray. An act usually considered sacred will lose its magical efficacy if performed by a sexually unclean person.¹⁰ Among the Romans a cook or butler might not handle food or butter while unclean. Reference has already been made to the cultivation of the olive in Greece and the incense tree in Arabia. During the Cherokee New Year Feast¹¹ sexual relations were forbidden, and the same regulation is found in the Bathonga community after the death of a headman and when a village is removed.¹² Among the Todas the relations of the dairymen-priests were regulated according to the degree of sanctity of their grade of office. The number of nights they might sleep in their village huts varied according to their grade, but the highest grades, the *pohkartpol* and the *paiol*, were required to avoid women altogether while holding office.¹³

(f) *Relations of the sexes.*—The regulations governing the relations of individuals and of the sexes are based upon the idea of the transmission of evil either maliciously or inadvertently from one person to another. The danger may be permanently present, but in any case is considered to be peculiarly acute at particular times, such as the performance of natural functions, eating, drinking, etc., or at natural crises. The penalty for the infringement of the tabus which regulate action and intercourse is of such a character, or the consequences are averted by such means, as to indicate that disregard of the tabu entails pollution. A widely-recognized danger lies in contact with

the inferior female sex. Violation of the rules governing the relations of the sexes usually requires some ritual act of expiation. Although in some cases such violations may be regarded only as breaches of correct social behaviour, the observances and the ritual are such as to appear to be derived originally from a tabu connected with danger, and especially with danger arising out of impurity.

A typical attitude finds its expression in Morocco, where women, because of their uncleanness, are subject to many tabus. They are forbidden to enter the threshing-floor or granary for fear of destroying the virtue of the corn; some tribes do not allow them to work in a vegetable-garden or to ride beasts of burden, and they are injurious to bees and must not handle them. In some places, should they enter a shop, its prosperity will be destroyed, and they are not allowed to visit certain holy places or to attend the feasts of the saints who died fighting Christians.¹

In Nukahiva, if a woman sat on or passed near an object which had become tabu by contact with a man, it could not be used again, and she was put to death.² Among the people of Rajmahal, if a man detects a woman sitting on his cot, he kills a fowl furnished by the woman and sprinkles the blood on his bed. For the converse the man pays a fine of four fowls to the woman.³ Among the Samoyeds and Ostyaks a wife may not tread in any part of the tent except her own corner, and, after erecting the tent, she must fumigate it.⁴ The club-houses which form a feature of social life in the Pacific are sometimes tabu to persons of the opposite sex. In the Marquesas, should a woman pollute the men's house by her presence, the penalty is death.⁵

The differentiation which extends to occupation is also in many cases enforced by consequences which are explicitly stated to involve either a condition of impurity or something analogous to such a condition.

Pastoral and cattle-keeping peoples, especially in Africa, frequently debar their women from tending the flocks and herds. The Todas, with their rigorous exclusion of women from the work of the dairy, and the tabu which keeps them and their characteristic domestic implements apart from contact with the cattle and the dairymen and even forbids their use of the cattle paths, are a case in point.⁶ Among the Bantus of S. Africa women are not allowed to touch the cattle.⁷ As already stated, pubescent Bantu girls and their attendants are not allowed to touch milk. Some of the pastoral tribes of the Sudan and E. Africa forbade women, especially at certain times, and those sexually impure to come into contact with the milk, and among the Dinkas even old men were not allowed to milk the cows, this duty devolving on boys and girls who had not yet attained the age of puberty.⁸ The same applies to men in the case of women's occupations. *Tapa-making*, e.g., is tabu to men, while the use of canoes is forbidden to women.⁹ In the case of man's most important occupations—hunting and fighting—a certain precaution must be observed in relation with the other sex; continence for a varying period is often a necessary preparation. In certain S. African tribes the warriors must abstain from women.¹⁰ Among the Nutka Indians a preparatory abstinence of some weeks is required.¹¹ In New Guinea warriors are not allowed to see or approach a woman.¹²

In both hunting and war success depends upon the observance of these regulations. The purificatory ritual underlying these disabilities and exclusions is still more clearly indicated when it appears that women are debarred from participation in religious ceremonies.

In the Sandwich Islands women were not allowed to share in religious worship because their touch polluted the offerings; while, if a Hindu widow touched an image, its divinity was

destroyed and it had to be thrown away.¹ Australian women were not allowed to see a *bora* under pain of death, and in Fiji they could not enter any temple.²

Reference to the customs attendant on the attainment of puberty, to initiation ceremonies—rites in themselves largely of a purificatory nature—will show the importance attached to the protection of one sex from the evil of the other, even when conveyed by such a means as the sight.

Among the Basutos, *e.g.*, no woman may come near the boys at their initiation.³ The practice alluded to above of confining pubescent girls in seclusion both protects them from harm—barrenness appears to be the consequence most generally feared—and at the same time prevents defilement being conveyed to others. In New Ireland girls are kept in cages from puberty to marriage; during this period they must be seen by no males except their relatives;⁴ and in Ceram no male must come near girls at the puberty ceremonies.⁵

The aim of preserving purity is, however, most clearly marked in the case of sexual crises such as menstruation, when both segregation and a subsequent ceremony are almost invariably practised.

Among the Pueblo Indians a man will fall ill if he touch a woman during menstruation or pregnancy.⁶ In the Island of Yap there are special houses for menstruous women.⁷ Among the Bathonga the woman separates from her husband, wears old clothes, which she brought from her home at her marriage for the purpose, and at the termination of the period purifies her hut.⁸

(g) *Contact of sacred and profane.*—Apart from the impurity which is the result of some specific act or contact, there is also an impurity which attaches normally to the individual, and becomes especially pronounced when he is brought into relation with things or persons of a tabu or 'sacred' character. This belief is responsible for such regulations as those which govern the relations of castes in India and for the secrecy surrounding the practice of the rites of the mystic religions of Greece, which found expression in a warning cry addressed to non-initiates, such as the 'Procul este, profani' of the Sibyl.⁹ Instances of such beliefs are of frequent occurrence among primitive races.

Among the Polynesians the tabu character of a chief is violated by the touch of an inferior, although in this case the danger falls upon the inferior. On the other hand, in Elate the 'sacred man' who comes into contact with *namim* (ceremonial uncleanness) destroys his sacredness.¹⁰ In Uganda, before building a temple, the men were given four days in which to purify themselves.¹¹ On the other hand, the chief and his belongings are very often regarded as sacred and therefore as dangerous to others of an inferior rank. In Tonga Island any one who touched a chief contracted tabu; it was removed by touching the sole of the foot of a superior chief.¹² The sacred quality of the chief in the Malay Peninsula also resided in the royal regalia, and any one touching it was visited with serious illness or death.¹³

Even the ordinary individual may in some degree possess this quality.

In New Zealand any one who touched the head of another received 'sacredness' from the contact.¹⁴

The impurity of the ordinary individual is responsible for the purificatory element in a number of ceremonies.

In the case of the ceremony of pouring drugs on the roof of the hut practised by the Thonga hunter the purification takes on a protective character. In the Mambura ceremony which precedes the circumcision of Kikuyu youths in the Masai fashion those who were present purified themselves by licking

a little of the diatomaceous earth used in their purification ceremonies and then smearing themselves on throat and navel. The candidates themselves were purified by an elder with his principal wife, two sisters, and another elder; after smearing them with the white earth, he sprayed honey-beer upon them from his mouth. This purified them and at the same time protected them from any *thahu* which might otherwise pass from spectator to candidate.¹

A most striking example of the influence of the relation of a sacred substance and profane society is to be found among the Todas, the whole of whose elaborate ritual and (it would not be too much to say) the whole basis of whose social organization are directed towards securing the ceremonial purity of the sacred herds, the sacred dairy, the vessels, and the milk, and of those whose duty it is to minister, the strictness and elaboration of the rules and methods to attain this object varying according to the degree of sacredness of each dairy. In the dairy, *e.g.*, the sacred vessels are always kept in a separate room, and the milk reaches them only by transfer to and from an intermediate vessel kept in another room. The priests or dairymen, of whom there are four grades, are admitted to office only after an elaborate ordination, which in effect is a purification, removing them from the ranks of ordinary men to a state of fitness for sacred office, while their conduct is governed by regulations such as those which permit only certain grades of priest to sleep in the village and only at certain times, or that which entails that a priest who attends a funeral should cease from that time from his sacred function. On the other hand, the milk, a sacred substance, is to be used by the profane, and in the migration ceremonies, when the dairies are moved from one village to another, the sacred vessels are open to profane view. It has therefore been conjectured that the aim of much of the ritual is to avert the dangers of profanation and prepare or neutralize the sacred substance for consumption by those who are themselves unclean.²

(h) *Contact of old and new; strangers; strange countries.*—It is a familiar dogma of primitive thought that anything new or doing anything for the first time entails peculiar dangers. Reference has already been made to this belief in connexion with other matters above. Its importance lies in the fact that it involves an endeavour to protect the agent by a purificatory ceremony in which the pollution of the former state is cast off. This is especially the case in seasonal festivals such as harvest, when it is held desirable to avoid all contact between the new crops and the old, or the influences connected with the old, in order that the former may not lose their virtue or harm those who consume them.

The peculiar *nanya* rites of the Fijians appear to have been in part an initiation and in part a firstfruit ceremony. In certain elements they were purificatory.³ The firstfruit ceremonies of the Cherokee were accompanied by the clearing out and purification of the whole village, the taking of emetics, the throwing away of old and the wearing of new clothes, and other measures. The devil-driving ceremonies at harvest or at the end of the old year or beginning of the new year were sometimes a similar protection and sometimes a remedy for indifferent crops.

On the other hand, it is not only necessary to observe certain precautions to safeguard the virtues of the new crop; it is almost equally important that it should be neutralized or prepared for consumption by a purificatory process. This is the object of many of the firstfruit ceremonies which are observed.

The Bathonga regard it as dangerous for the subjects of the king to eat certain foods before they have undergone the *luma*, or purificatory process, in which they are mixed with royal drugs. The most important of these rites is the *luma* of Kafir corn, the staple crop.⁴

Another instance in which entry upon a new state requires special preparation is on the removal of a village from one site to another, when each dwelling and the community as a whole must be purified.⁵

A related idea, which, however, in its application is the converse of these practices, governs the precaution that must be taken in entering new ground or a new country. Here it is not a case of the new being protected from the profanation of the old, but those who are passing into it must be protected from its dangers. It is therefore customary for a purificatory ceremony to be performed before

crossing the borders from the known to the unknown. That that which is outside or strange is powerful for evil unless neutralized is a familiar belief.

Among the Bathonga it is believed that those who travel outside their own country are peculiarly open to danger from foreign spiritual influence, and in particular from demoniac possession.¹ Strangers are tabu because, worshipping strange gods, they bring strange influences with them. They are, therefore, fumigated or purified in some other way.² In the Dieri and neighbouring tribes even a member of the tribe returning home after a journey was treated as a stranger, and no notice was taken of him until he sat down.

In the same manner those entering a house from the outside world should perform some ceremony, even if it were only to remove their shoes, which would purify the incomer from the evil with which otherwise he might contaminate those within, while the threshold, door-posts, and lintel—important as points of contact with the outer world—are smeared with blood or sprinkled with water when any member of the household or of the community has become a source of pollution, or a horseshoe is suspended over the door to keep out evil and bring good luck.

The danger of entering a new country is as great as that which attaches to those who come thence.

In Australia, when one tribe approaches another, the members carry lighted sticks to purify the air,³ just as the Spartan kings in making war had sacred fires from the altar carried before them to the frontier, where they sacrificed. This attitude towards a foreign country and those who belong to it is perhaps best expressed in that passage in the Vedas which is the basis of the rule that higher castes lose caste if they cross the sea or sojourn beyond the recognized borders of their land. Manu⁴ says: 'That land on which the black antelope naturally grazes is held fit for the performance of sacrifices; but the land of foreigners is beyond it. . . . Let the three first classes [Brāhmanas, Kṣatriyas, and Vaiśyas] invariably dwell in the above-named countries; but a Śūdra may sojourn wherever he chooses.' In the *Brāhmaṇas* it is said that Agni, the fire-god, flashed with fire over five rivers and as far as he burnt the Aryas could live.⁵

(i) *Illness*.—Illness, frequently attributed to the influence of spirits or to violation of the regulations of ceremonial purity, may itself be regarded as a source of defilement for others.

In Borneo the Kayans hang leaves of *long* (a species of caladium) and a large sun-hat on the door of a sick-room to signify that it is tabu. In returning thanks for recovery from a long illness an altar consisting of a bamboo is set up; the upper part is split and a fresh fowl's egg inserted.⁶

While the use of the egg suggests a propitiatory offering to the *toh*, or spirits, upon whom rests the responsibility for punishing the infringement of any tabu, the use of the split bamboo may be compared with the split bamboo through which the mourners step in a funeral ceremony (see below), and further with the custom of passing through a fissure in a tree as a charm in the case of deformity or illness.⁷ The purificatory intention of the ceremony in which propitiatory offerings of eggs and fowls are made to the *toh* when a tabu is infringed is indicated by the sprinkling of the culprits with the blood of young fowls or pigs, which is performed by the chief.⁸ As a rule, however, the purificatory element in observances connected with illness, whether directed against the dangers of contact or intended for the benefit of the sufferer, can be readily distinguished.

The Beni Amer cure their sick by bathing them in the blood of a girl or some animal; or the blood of a goat is poured over the man's head or body.⁹ Changing the name, a method of putting away the past at a critical moment, was one means

employed by the Dayak to rid himself of dangerous influences after a serious illness.¹ In Fiji disease was often introduced by foreigners, and strangers were therefore quarantined and sometimes killed. In the Marquesas on one occasion the natives of Kau Atolls disinfected or disenchanting the crew of a European vessel at the end of a conference held at sea; one man in each Marquesan canoe held a handful of ashes wrapped in leaves, which he scattered in the air at the close of the interview. In Normanby Island, in the D'Entrecasteaux group, the natives would not hold parley with an exploring party until an old man had chewed a scented bark and spat it over the visitors and his own party.² The use of the sweat-house in America as a cure for disease is largely, though not entirely, magical; its use in ceremonial purification is frequent. The vapour bath also appears in African ceremonial. Among the Bathonga it is employed both as a cure for certain complaints, especially when a ritual defilement is feared, and after a death. Further, among the same people an obligatory ceremonial purification, in which the patient, sitting on a mat, rubs himself with *psanyi* (the half-liquid contents of a goat's stomach) mixed with drugs, follows a successful treatment of a serious disease 'to disperse the bloods which have made him sick so that they cannot return to him violently.' This ceremony is also obligatory after weaning. The drugs themselves of the medicine-man are subjected to an annual ceremony in which they are purified and renewed by the addition of new material (part of which is dried and part roasted, the whole village assembling to inhale the smoke); a goat is sacrificed, and *psanyi* squeezed on the burning drugs to put them out. The ceremony of renewing the drugs cast away the evils and misfortunes of the old year and prepared the community for the year to come, in the words of the medicine-man, 'that it may not be too heavy for us.'³

3. Results following from ceremonial impurity.

—The consequences which are thought to follow upon an act involving loss of purity or upon failure to remove pollution when incurred help to throw light upon the nature of the conception as it exists among primitive peoples. Not only is the ceremonial character of these beliefs clear, but at the same time it is apparent that any attempt to ward off these consequences is frequently undertaken as much in the interest of the community as in that of the individual.

Sometimes the consequences of impurity are conceived only in a vague way: ill-luck or danger follows transgression. At other times the form which the danger will take is precisely defined.

One form of evil which frequently follows loss of purity, especially after contact with a corpse, is illness and death. The danger may be general, affecting the whole community, or it may attack the individual and spread from him to others, or it may be confined to the one person contaminated.

An instance in the first category occurs in Rajmahal, where incest is followed by plague or the ravages of tigers.⁴ The same offence among the Khasis, in this case in the form of contravention of the laws of exogamy, leads to great disasters, people being killed by lightning and women dying in childbirth.⁵ On the other hand, such an individual misfortune as barrenness may be the consequence. The Dinkas and the Bathonga regard incest as the cause of barrenness,⁶ while among the Sulka of New Britain the death of both guilty parties ensues as a result of the fatal pollution that they have contracted.⁷ Barrenness is frequently regarded as a consequence of the infringement of regulations governing conduct at puberty. It is necessary that a Baganda girl should immediately inform her parents of her condition, that her father may perform the ceremonial act of jumping over her mother at the end of the period; otherwise barrenness followed. The Akamba hold that a like result follows from disregard of the prohibition of the use of public paths to girls at their first menstruation. This comes about if they should leave a spot of blood on the path and a man have connexion with a woman after stepping over it.⁸ Among the Thompson Indians, again, should any of the purificatory ceremonies and prohibitions which should follow a death be omitted or neglected, it is believed that the culprits will suffer from sore throat, loss of voice, or loss of sight.⁹ An Akikuyu who is under the ban of *thaku* must be relieved, or he will suffer from boils and probably die.¹⁰ In New Zealand the breaking of a tabu entailed punishment by the *atua*, or spirits; this took the form of deadly sickness or disease.¹¹ A Thonga hunter who failed to perform the requisite rites after killing an eland ran the risk of losing his head and of being unable to find the way home, while a similar neglect, if his wife were travelling with him at

the time, brought misfortune on their child, which became weak, miserable, and emaciated. Ritual defilement was also held by this people to be the cause of many forms of disease, but in particular of swelling of the hands, feet, and joints, and of pains in the bones.¹ Among the Basuto, if the medicine-man did not perform the purificatory ceremony which should follow childbirth, the father swelled up and died.²

Insanity not infrequently followed as a consequence of a death by violence unless atonement by purification was made.

Among the Awemba the slayer of a man was believed to go mad.³ In Fiji, should any of the uninitiated see those who are being initiated in the *nanga* rites, they become insane.⁴

This form of penalty is not uncommonly associated with the idea that vengeance for the violation of the tabu is the work of the spirits of the dead.

Thonga warriors, until purified, are in great danger from the spirits and run the risk of becoming insane, and for the same reason after a death all members of the community cut their hair to a degree of shortness determined by their connexion with the deceased.⁵ Among the Greenland Eskimo the spirit of a murdered man will torment his murderer until it frightens him to death, or, if he goes on the ice after neglect of the rites and regulations following death, may tear him to pieces.⁶

That the fear of ghosts or spirits lay at the root of the purificatory ceremony and that those who were ceremonially impure were peculiarly susceptible to their attacks is in many cases either expressly stated or implied. In addition to the cases already mentioned in which insanity, disease, or death caused by spirits is to be feared, attention may be called to the ceremonial as a whole of those Indian tribes of N. America to which reference has already been made. In some matters it is directly stated that the danger apprehended comes from the ghost; in others the character of the belief is such as to justify the same explanation.

The guests at the funeral feasts, e.g., would not eat, drink, or smoke in the open air after sunset, nor did they sleep for four days for fear of ghosts. Widows underwent a ceremonial purification in order that they might be long-lived and innocuous to their second husbands, while among some tribes a protective breech-cloth was worn for some days. The sleeping-place of a dead man in the hut was not occupied for a considerable period, and then first by an adult male for four nights in succession.⁷ In Africa—e.g., in Uganda, among the Basutos, and among other peoples—the purificatory ceremonial is intended to lay the ghost and prevent its troubling those upon whom lies the responsibility of causing death.⁸

That fear for the community rather than for the individual is the more potent influence is suggested by the number of prohibitions connected with food and the precautions taken to preserve the food-supply from contamination. Food should on no account come into contact with impure persons.

No Basuto who is unclean should handle the corn when it is exposed to view.⁹ Reference has been made above to the precautions taken in Morocco to protect the corn from the adverse influence of women and those polluted by sexual intercourse. After a death the Bathonga perform a ceremony purifying the food which belonged to the dead man.¹⁰

Everywhere, in eating and drinking, the impure must avoid touching food with their hands or follow certain rules which mitigate the danger.

Among the American Indian tribes those who take part in a burial or who are nearly related to the deceased must refrain from fresh meat for a period; their food should be cold and not cut with a knife, but torn with the teeth; they must be fed by others or eat with the help of a twig, and must drink from a special vessel which they carry with them.¹¹ In Samoa relatives of the deceased must be fed by others. The Bathonga require those who are unclean—e.g., widows, those who have helped to bury the corpse, or those suffering from a disease which is the result of defilement—to eat with spoons and drink from their own cups, while victorious warriors who have killed eat with special spoons from special plates or broken pots and take their food cold, lest, being hot themselves, they swell internally.¹² Among the Thompson Indians, if an unpurified widow gathered berries, the whole crop would fall off the bushes or wither up. If a widower transferred a trout from one lake to another, he

had to remove the pollution of his touch by chewing deer-fat and spitting some of it on the fish before he let it go, bidding it farewell and telling it to propagate its kind.¹

The implication in these cases is that contact with pollution would endanger a whole species or class.

It is, however, particularly in connexion with sexual impurity that the prosperity of the crops is involved. Illicit love is held to blight the crops, while at certain seasons legitimate relations must be suspended.

In Arabia those who tended the incense-trees were required to be free from the pollution of sexual relation and of death. Ceremonial purity increased the crop.² Among the Karens bad crops were the consequence of adultery.³ If the Battak found an unmarried woman with child, she was married at once; otherwise the crops failed.⁴ The purificatory ceremony of Celebes in which the blood of the sacrificial goat or buffalo, substituted for the human victims guilty of incest, was poured on the field was intended to preserve or restore their fertility.⁵ Among the Dayaks incest and bigamy, and among the Torajaks of Central Celebes unnatural unions, were believed to be the cause of incessant rainfall.⁶

Laxity in sexual matters or acts in contravention of sexual tabus involved other penalties, in particular through sympathetic ties. The belief that the conduct of the wife affected the success or safety of the husband while he was absent at war or on the chase is of frequent occurrence.

The Dayaks believed that, if the wife was unfaithful, the husband would lose his life.⁷ A somewhat similar example, in which the consequence by sympathy falls upon another as well as the guilty party, occurs among the northern Bathonga. When a community moves its village to a new site, sexual relations are forbidden until renewed ritually as part of the purification of the community in its new quarters. Any violation of this tabu is followed by the illness or paralysis of the headman, while the woman herself becomes barren, and the work of removal must begin again.⁸

4. The purification ceremony.—(a) Water.—One of the mediums most frequently employed to dispel impurity, as well as one of the simplest, is water either in aspersion or in ablution.

On the fifth day after handling a corpse the Samoan, who between that day and the time of the pollution was not allowed to handle food but was fed by others, bathed his face and hands with hot water.⁹ After an interment on the Gold Coast those who have touched the corpse go to the nearest brook and sprinkle themselves with water.¹⁰

Water is frequently used as a purifying agent in other cases in which also the idea of its cleansing properties is prominent, as, e.g., after childbirth, when both mother and child are thoroughly washed.

One of the duties of the Eskimo mother is to wash herself completely after the birth.¹¹ The Malays purify mother and child by washing them in warm water, and this is repeated every morning and evening for some time.¹² The first act of the Uganda mother, on leaving the hut after seclusion, is to wash herself; the sponge which she uses is sent to her husband, and with it he washes the private parts of his body.

Bathing at the public bath has already been mentioned above as one of the most important items in the ceremonial preceding marriage in Muhammadan countries. In Morocco at Fez the bride is purified with water and henna. On the fifth, fourth, and third days before the wedding she goes to the hot bath, and on the last occasion seven buckets of lukewarm water are poured on her by seven women, 'so that she shall have no quarrel with her husband.'¹³ In S. Celebes the bridegroom bathes in holy water, while the bride is fumigated.¹⁴ In Abyssinia for several days before the marriage the bride performs ablutions and restricts her diet,¹⁵ while the Matabele bride, on arriving at the bridegroom's hut, pours water over him.¹⁶

The physical contact in such cases probably both suggests the remedy and is responsible for its

simplicity. On the other hand, simple lustration may be employed where the idea of superficial contact has given way to one of ingrained and essential impurity.

In Ireland, according to the legend, in the kingdom of Munster, the crops were blighted by the incest of the king and his sister. The nobles demanded their offspring in order that they might be burned and their ashes cast into the stream. One of the princes was saved by being sent out of the kingdom to a Druid, who purified him daily by placing him on a white cow with red ears and pouring water over him.¹

Water may be used, possibly to some extent in a symbolical sense, as the final mark of separation from a previous state at a critical stage in the life-history of the individual. As has already been stated, initiation ceremonies usually include, as part of their ceremonial, some form of purificatory operation.

The Kurnai initiation ceremony, in which the boys and their mothers sprinkle one another with water, signifies, it is said, that the boys are no longer under their mothers' control.² The Hausas of Tunis practise a ceremonial purification of half-a-dozen boys and girls before the harvest. They are shut up in a large house for a period during which they are stuffed with food to make them strong, and taught the Bori dances as well as their duty to totem and clan. At the end of the period the medicine-man washes the boys and the medicine-woman washes the girls in the forest. In both cases the washing is medicinal.³

The last instance presents two features which commonly occur: (1) the fortification of the purificatory agent by medicine, and (2) the intervention of the medicine-man, the expert in these sacred matters. Both these elements tend to become more prominent as greater attention is paid to the spiritual or magical side, the manifestation of which, however, is still conceived as material and to be treated on material lines.

At a Boloki funeral a trench about 20 ft. long is dug, and the mourners take up their position on the side nearer the grave. The medicine-man's assistant pours water into one end of the trench, and the medicine-man then helps the mourners over the trench as the water runs down.⁴

In this ceremony the idea of the cleansing power of water has given way to that of the magical efficacy of running water as a barrier which the noxious influence of the ghosts is unable to pass. On the other hand, the two ideas combine in the Thonga cure for childlessness in which the medicine-man pours water over a married couple who have no children.⁵ The class of regular or professional hunters also fortified with drugs the water used in the purificatory ceremony performed before they set out on a journey.

A pot of drugs was cooked, in the froth of which the hunter washed himself. He then poured the contents of the pot on the roof and allowed the water to drip on him as he entered the hut. The medicine-man at the same time uttered a prayer and incantation: 'Go and be happy. Though the rain will fall on you, though the dew make you wet, when you sleep you will be everywhere as in a hut,' and so forth, making it clear that the object of the ceremony was to protect him from the dangers of the bush.⁶

That this ceremony is purificatory rather than protective, as might be thought from the character of the prayer, is indicated by the further condition which must be observed to secure not merely success but also safety in hunting. Sometimes a fowl is sacrificed, but only children may eat it; the hunter must not partake, must not touch salt, and must abstain from sexual relations; i.e., he must in all respects be pure.

Water is used in various ways in a number of ceremonies connected with special seasons of the year. In many places, e.g., a water fight follows the bringing in of the harvest or the last sheaf, or an individual may be attacked with water, usually by women. As a general rule these practices

must be regarded as rain charms. Sometimes, however, they have a purificatory intention.

In Burma, at the end of the solar year in April, when a great feast lasting several days took place, in order to wash away the impurities of the past and commence the new year free from stain, it was the custom on the last day for the women to throw water over every man they met, and for the men to retort. A visitor, on entering the house of a dignitary, was met by the family and presented with a bottle of rose-water, a little of which was poured into the hand of the host, who sprinkled it over himself. The mistress of the house poured a little rose-water over the host, and then over each of the guests, after which a water fight began.¹

(b) *Other detergents.*—In the use of water as a purifying agent it would be reasonable to assume an obvious connexion in idea with its effect in cleansing physical impurity. The same idea may be at the root of the use of other materials.

In the Kai Islands the warriors smear themselves with the juice of a disinfecting plant. The Akikuyu remove *thahu* by a process of lustration which in the more serious cases is performed by the medicine-man or the native council. The slaughter of a sheep accompanies the ceremony, and they smear themselves or are smeared by the medicine-man with the contents of the stomach and with a white diatomaceous earth.² Such a custom as the complete smearing of a Kafir woman with green and red clay after childbirth³ is perhaps connected with the custom of donning new clothes at the end of mourning or after a period of seclusion due to ceremonial impurity. In New Britain men guilty of unchastity may rid themselves of the taint by drinking sea-water in which coconut and ginger have been shredded. They are then thrown into the sea and, on emergence, throw away their dripping clothes.⁴

(c) *Changing clothes, cutting hair, nails, etc.*—

The Eskimo mother after childbirth begins to make herself a new suit of clothes.⁵ The Thonga woman is rigorously secluded from her husband at the regular periods, sleeps on a special mat, and wears special clothes which she brought with her at her marriage. At the end of the period she puts on her ordinary clothes once more. A woman who loses an infant is deeply defiled, and after a period of impurity of some two or three months' duration she undergoes purification in a ceremonial sexual act by her husband, and then buys new clothes.⁶

New clothes, however, are rather a sign of the termination of a period of uncleanness than a purification. In mourning they mark the close of the period of danger to others—the final putting off of the pollution of death.

At the end of the Thonga purification of the warriors everything that they had used during the tabu period was tied in a bundle with their clothes and hung on a tree at some distance from the village, and left to rot.⁷ Among the Kayans, after the termination of the mourning in a ceremony for which a freshly-taken human head was required and in which every one had been sprinkled with the blood of a sacrifice of pigs and fowls, mourning garb was laid aside and new clothes put on.⁸

The complete severance with the old and impure life which is brought about by the purification ceremony is further marked in some cases by changes or modifications of the toilet.

On the death of a relative the eyebrows or head may be shaved, as in the case of the Baganda warriors mentioned above, whose heads are shaved on their return from battle; or, on the contrary, the hair and finger- and toe-nails may be allowed to grow. The Bathonga cut their hair completely for the death of a near relative, the operation being performed by a doctor or some one who knows the correct method.⁹ The father and mother of twins among the Baganda allow their hair and nails to grow until the purification ceremony, when they are cut and wrapped in bark cloths. They are kept until the men go to war. At the end of the period of mourning for the king all shaved their heads, cut their nails, and put on new clothes.¹⁰ The Lilloets on the fifth day after a burial—a period spent in fasting and ceremonial ablution—had their hair cut by the mortuary shaman who prepared the corpse for burial. They then returned to their homes and painted their faces, while the hair which had been cut was rolled up into a ball, taken into the forest, and fastened to a tree.¹¹

(d) *Artificial stimulation of natural processes.*—Other methods, based in an equal degree on getting

rid of all influence of the past, depend upon an artificial stimulation of natural processes.

Before the new season's corn can be eaten, an emetic must be taken.¹ In Fiji one of the first acts after a birth is to give the infant an emetic.² Pastoral and cow-keeping tribes in Africa, such as the Masai or the Nandi, require a certain period of time to elapse between the eating, in some cases, of meat, in others, of vegetables, and the drinking of milk.³ The Shawanese boys during the period of their preparation for initiation took an emetic at regular intervals. The Seminoles took 'black drink,' which was supposed to efface from their minds all wrongs that they had committed and to endue them with courage.⁴ The Lilloet widower induced vomiting by means of a stick thrust down the throat.⁵

(e) *The sweat-bath.*—Among N. American Indians the employment of the sweat-bath is almost universal as a means of removing physical impurities. It also serves by analogy to remove spiritual influences, to cure illness, and to remove ceremonial impurity. A widower during the period of seclusion is required to bathe frequently in a special sweat-house erected near a stream.⁶

(f) *Beating and other forms of expulsion of material evils.*—A method which showed a combination of the belief in the material and spiritual character of defilement was followed in Car Nicobar.

A man possessed of devils was rubbed all over with a pig's blood and beaten with leaves, the idea being that the devils were swept off by the leaves, which were then folded up and tied tightly with string. Before daybreak all the packets of devils were thrown into the sea.⁷

The purificatory ceremony of driving out the devils is sometimes practised on an extensive scale, especially at critical seasons of the year such as before or after a harvest.

The Iroquois practised an annual expulsion of evils, while at the Cherokee New Year festival all old clothes were burnt and pots, pans, and utensils were broken, all cabins swept clean, provisions destroyed, and all fires extinguished. The warriors took medicine and fasted for three days, abstaining from sexual intercourse, while all malefactors were pardoned. On the festival day new clothes were donned, new fires lighted, and the new corn cooked and eaten.⁸ On the other hand, the Nicobarese method of dealing with the physical side of the belief finds its analogy in the Navaho custom of scraping the body with a bundle of stuff and blowing away the evil from the bundle through the smoke-hole of the dwelling;⁹ or the New Hebrides custom of sprinkling or pouring water from a coco-nut or of drawing a forked branch of a particular plant over the body.¹⁰ The tribes of N.W. Canada—e.g., the Thompson Indians—after a death passed through rose-bushes, the object no doubt being to leave the impurity behind them as the thorns entangled their flesh or garments. The rose-branches that formed part of the beds on which they slept during the period of impurity were in like manner doubtless intended to entangle the ghosts whose attacks they feared. They also cleaned themselves with fresh fir-twigs morning and evening for a period of one year.¹¹

(g) *The use of blood.*—Blood, being of extreme importance in ritual, not unnaturally figures prominently in many purificatory acts, both as a cleansing agent and as a symbol.

The Caribs washed the new-born infant in some of the blood of the father.¹² But the blood with which the ceremony is performed is more commonly that of the victim offered by the guilty or unclean in part as an expiation of their offence. In cases of adultery—e.g., that in Rajmahal cited above—both parties are sprinkled with the blood of the hog furnished by the lover. Among the Dayaks the incessant rain caused by sexual irregularity is stayed by the use of the blood of a pig to purify the earth and atone for the moral guilt.¹³ The pollution may attach more particularly to the dwelling. The Batang Lupar Dayaks, in cases of a daughter's frailty, sacrifice a pig and sprinkle blood on the doorway to wash away the sin.¹⁴ For

incest the tribes of Borneo purify the household with the blood of pigs and fowls, the property of the offenders,¹ while in Ceram every house in the village is smeared with blood.²

Blood is also used as a medium of purification in other cases than sexual impurity—e.g., death from other than natural causes, when the blood of a sacrificial animal may be used.

In the Cameroons an accidental death is expiated by the sacrifice of an animal, with the blood of which the relatives of both slayer and slain and all present are smeared.³

Blood is also used in the interesting ceremony called 'the purifying' which forms a part of the complicated Toda funeral rites.

At the second funeral, which takes place some time after the first and simpler ceremony, the blood of a buffalo is mixed in a cup with powdered *tudar*-bark. A Teivali man, dressed in the mantle of the deceased and many ornaments, accompanied by a *wursol* (dairymen-priest), walks to a female buffalo-calf under one year old, the *wursol* throwing the blood from the cup as he goes before and behind him. On reaching the calf, the Teivali man hangs a bell on its neck, and the *wursol* touches the remains three times with bow and arrow. The calf is driven away, and all fall down touching the earth with their foreheads. The skull and hair of the deceased are then rubbed with the blood and *tudar*-bark. The object of the ceremony is apparently that any one who in his lifetime has not been purified by the sacred *tudar*-bark, which is used in the ordination of the dairymen-priest, should be so purified after death.⁴

(h) *Death or excommunication of offender.*—The use of blood in purification ceremonies appears to be due to one of two distinct trains of thought. In some cases, such as those already cited, the use of blood seems to be dictated largely, if not entirely, by a belief in its purificatory qualities. If, however, these instances are examined more closely and especially in relation to the general character of the belief in purification, it will appear that this belief in all probability is a growth from the desire to rid the community of an individual whose conduct has endangered himself and the community in which he lives. As this usually involves in serious cases the death or exile of the offender, what is objectively a purification of the community becomes subjectively a punishment. This connexion between punishment and purification is particularly apparent in the case of sexual crime. While the purificatory ceremony involves the use of sacrificial blood, the animal to be sacrificed must be furnished by the offenders. This may in itself be regarded as a punishment by fine.

In Rajmahal, as stated, the pig required by the ceremonial is furnished by the adulterer. Among the Nias of Sumatra, who regard rain as the tears of the god weeping at adultery or fornication, the culprits are buried in a narrow grave with their heads projecting and are then stabbed in the throat with knives; then the grave is filled up; or they may be buried alive.⁵ Among the pagan tribes of Sarawak a bamboo is driven through the hearts of the offenders into the ground, where it is left to take root. But it is said that this is rarely done, because it is difficult to get any one to assume the responsibility of taking life. Therefore a commoner method is to put the offenders in a cage and throw them into a river.

(i) *Substitution of expiatory victim.*—Among the Torajas of the Celebes adultery is punished by the spear, but incest by throttling. This aversion from shedding the blood of the incestuous is not infrequent and is, it is to be presumed, to be attributed to a fear that the blood of a person already infected is noxious in an enhanced degree—so much so that sometimes a goat or buffalo is sacrificed and the blood mixed with water is poured on the fields to appease the spirits and restore fertility.⁶ This doctrine of substitution is frequently encountered in connexion with sexual crimes. It is clear that it is a case of substitution arising out of a disinclination to spill the blood of the guilty, and not primarily a propitiatory offering.

⁵ H. Sundermann, *Die Insel Nias*, Barmen, 1905, p. 84.

⁶ Hissink, quoted in Frazer, *Psyche's Task*, p. 53 f.

In the Dayak ceremony of *bergapit*, preparatory to the marriage of first cousins,¹ the couple go to the river and fill a small pitcher with personal belongings and sink it in the river. They also fling a plate and chopper into the water. A pig is sacrificed on the bank, and the carcass, when drained of blood, is thrown into the water. The pair themselves are then pushed into the water and made to bathe together. Finally a joint of a bamboo is filled with blood, and the couple parade the country sprinkling blood as they go.² In another case, among the Kayans, in a closely analogous practice, the idea of substitution or mitigation is still more clearly indicated. The property of the pair is smeared with blood, eggs are sent floating down stream, and the pair, as they come out of the water, are attacked with grass blades representing spears.³ A still more significant case is that of the Tomori expiatory (purificatory) ceremony for the marriage of uncle and niece—again a case of incest—in which a garment of each is laid on an open vessel, the blood of a sacrificed animal is allowed to drip on to them, and the vessel with its contents is set to float down the river.⁴

(j) *Parts of victim other than blood*.—An act of purification may be performed with parts of the sacrificial animal other than the blood.

After the bathing of the returned Basuto warriors in the stream it is sometimes the custom of the chief to complete the ceremony by the sacrifice of an ox in the presence of the army, with the gall of which the warriors are smeared.⁵

On the Wangigela river in British New Guinea a man who has taken life is unclean and is segregated from the community until he has undergone certain ceremonies. As part of the ceremony he hunts and kills a kangaroo, which is cut open and whose spleen and liver are rubbed over his back. He then goes to the nearest water and washes himself straddle-legged, while the young warriors of the village swim between his legs.⁶

A custom of interest in connexion with the reverence for grass which exists among pastoral peoples is found among the peoples of the eastern side of the African continent, extending from the Dinkas in the north to the Bathongas in the south. This is the use in nearly all the purification ceremonies of the half-digested grass found in the stomachs of goats, bullocks, or sheep, when killed, with which the person undergoing the ceremony is smeared. In cases of incest among the Dinkas, the abdomen of the guilty man or woman is smeared with the contents of the large intestine of a bullock. Among the Bathonga cousins who marry are purified and saved from the consequence of their sin by a ceremony in which they are smeared with *psanyt*. A hole is cut in the goat-skin, in which the heads of the pair are inserted. The medicine-man's assistants take *psanyt* and place it on the head of the bride, saying, 'Go and bear children.'⁷ The use of cow-dung—e.g., by the Kavirondo in the purification of warriors returning from war in which they have killed, when they are smeared with this substance by their friends and their heads shaved, or among the Wa-wanga when the warrior must smear with dung the cheeks of his wives and children as he enters the hut—not improbably must be traced to the same idea as inspires the use of *psanyt*.⁸

The custom of clothing the subject in the skin of the goat or sheep or making an anklet or wristlet of the skin is also frequent among these tribes. The Thonga hunter made one for his wife if he killed an eland while bringing her home.⁹ Among some of the Indians of N. America it is also customary to wear a circlet of willow withies round the waist or a thong of buck-skin round the wrist, ankle, neck, or knee.¹⁰

(k) *Fire and fumigation*.—Fire, or the concomitant smoke, and incense are other means which are held to be efficacious in dealing with defilement.

The less serious *thahu* are removed by means of smoke among the Akiuyu.¹¹ In the Kakadu tribe of Australia after a death a circle of grass is made, in the middle of which is placed the bark in which the corpse was wrapped when it was carried to the grave. All the possessions of the camp, but especially the dilly bags of the women, are then purified by smoke from the fired grass, while the men of the tribe pour water over one another and rub themselves with charcoal.¹² Jumping across a fire in preparation for a journey was at one time practised in Persia,¹³ and the custom has already been noted above in connexion with the boys' seclusion among the Bathonga. The great fire festivals of the European peasantry, as well as the fire-walking ceremony, appear in like manner to have for their object the general freeing of the community in the districts

from evil influences and evil spirits, and therefore, like the devil-driving or devil-clearing ceremonies, may be regarded in a broad sense as purificatory in intention.¹

(l) *Transference of impurity; the scapegoat*.—The principle of the transmissibility of impurity was sometimes called into play in order to remove the defilement. It was transferred to some one who was already tabu.

In New Zealand, if any one touched the head of another, the head being a peculiarly 'sacred' part of the body, he became tabu. He purified himself by rubbing his hands on fern-root, which was then eaten by the head of the family in the female line.² In Tonga, if a man ate tabued food, he saved himself from the evil consequences by placing the foot of a chief on his stomach.³

The idea of transmission also appears in the custom of the scapegoat.

In Fiji a tabued person wiped his hands on a pig, which became sacred to the chief,⁴ while in Uganda at the end of the period of mourning for a king a 'scapegoat,' along with a cow, a goat, a dog, a fowl, and the dust and fire from the king's house, was conveyed to the Bunyoro frontier, and there the animals were maimed and left to die. This practice was held to remove all uncleanness from king and queen.⁵

The same idea underlies the practice of sin-eating (*g.v.*), by which the sins of the dead are assumed by any stranger who may eat of a cake and other food prepared for the purpose.⁶

PURIFICATION (Babylonian).—Purification may be considered as including any ceremony or ritual observance undertaken with a view to purging or cleansing a person, place, or thing from the ritual consequences of impurity. Impurity was a bar to communion with the deity, often to social intercourse, and was sometimes a real danger to the health and well-being of the person or community. Most writers who refer to purification among the Babylonians and Assyrians are influenced by the OT views on the subject, for which see PURIFICATION (Hebrew). Consequently, some chiefly seek for parallels to the Hebrew treatment of clean and unclean. Others take a wider view and compare the usages connected with purification in all the religions and civilizations where they can be recognized. The subject of rites, exorcisms, and other ritual ceremonies is already dealt with in art. BABYLONIANS AND ASSYRIANS, vol. ii. especially pp. 316-318. For the Babylonian attitude to offences against chastity the art. CHASTITY (Semit.-Egyptian), vol. iii. p. 498, § 3 should be compared with CHASTITY (Introductory). For the Babylonian conception of sin and the need to be purified from it compare CONFESSION (Assyro-Babylonian), vol. iii. pp. 825-827. The way in which disease was regarded may be gathered from art. DISEASE AND MEDICINE (Assyro-Babylonian), vol. iv. pp. 741-747. The connexion of expiation and atonement with purification is brought out in art. EXPIATION AND ATONEMENT (Babylonian), vol. v. pp. 637-640. HOLINESS (Semitic), vol. vi. pp. 751-759, illuminates the ideas of cleanness and purity, and their opposites.

No formal treatise on the subject has come down to us amid the mass of cuneiform literature, mostly fragmentary, which, however, supplies instruction

and formulæ for many cases presumably involving the need for purification. From this mass of exorcisms, medical receipts, prayers, hymns, spells, and magic ceremonies we have to deduce what was the Babylonian view of impurity and what was the method of cleansing or removal of that impurity.

This is a long and by no means easy task—long because of the enormous amount of material to be considered, difficult because so much of it is merely implicit and admits of so many different estimates of its implications. We have rarely much security that we estimate rightly the intention of the ceremony, which may really have been directed to a completely different aim.

The sufferer may have been the victim of some affliction and quite mistaken as to its origin and cause; indeed, it is likely after all to have been purely imaginary. If the supposed or implied cause of his distress was really what he suspected, we may fairly charge the ancient Babylonian with being very nervous about himself. But we may well believe that the Babylonian ministers of religion exercised their ingenuity in inventing many cases of conscience and providing remedies for them to an extent far beyond the demands of those who came to them for help and comfort. To judge from what we already know, every abnormal experience must have given the Babylonian uneasiness, as to his health of body or soul. Certainly the belief in demons and their power to plague humanity, the suspicion of having offended the gods, or broken tabu, must have added many terrors to the natural feelings of discomfort and apprehension, the prickings of conscience or despondency. To the average layman it was by no means easy to say wherein he had offended, nor against whom, and his good intentions were but a slight solace to a man who believed that he might be called to suffer not only for unwitting misdeeds but also from the malice of devils or men. So he hastened to the priest or soothsayer, the magician or astrologer, to discover for him his offence or the evil influence that was upon him. He may have gone in turn to all and certainly was called upon to suffer many things of them.

Whatever their diagnosis of his evil case, it seems probable that purification was the first requisite. But that was not all. When the thing to be removed from the man had been recognized as sin, disease, anger of the gods, possession by devils, or the spell of some witch, a further treatment appropriate to the case awaited the victim. An obstinate case might have to undergo all the treatments in turn. But none was likely to take effect if he had not been purified.

In itself purification might be a washing with pure water. This requirement was strongly insisted upon. Pure water must be procured from the Tigris or the Euphrates or, even better, from the mouth of the rivers, where their waters met and where were the Isles of the Blessed. The water must have been kept in a pure place 'preserved faithfully in the abyss.' The abyss, *apsu*, was properly the cosmic sea which underlay the whole earth, on whose bosom the earth rode, to which the kings boasted that they had dug down their palace foundations, the fresh water sea from which arose the springs and rivers. But in every great temple stood the 'great sea'—the laver, also called *apsu*, like Solomon's brazen sea. Doubtless, it is this temple abyss which held the pure water referred to. It is called the water of Eridu, 'the sweet or good city.' But, in default of such holy water, the water of wells was allowed, if only it were consecrated by a correct incantation.

Pure water was often modified by the addition of herbs or aromatic woods. What these were is

difficult to ascertain from their names, such as *binu*, 'herb of Dilbat' (perhaps the place of Venus-Ishar), a date-stone, straw, *gatstu*, *unqu aban nisikti* (perhaps a ring, set with precious stones, possibly as fee to the priest), *GAM-GAM* scent, *burashu* (possibly cypress). The *binu* plant is thought to be 'tamarisk.' It is probable that such additions had magical efficacy. The washing of the hands was repeated often, accompanied by different incantations, usually cited by their first lines, of which we often know no more, but which we may hope gradually to know completely. But to follow out in detail the various accompaniments of the hand-washing would demand a treatise.

It does not seem in any case to have been necessary to bathe the whole person; usually the hands sufficed, though the head or forehead is sometimes ordered. Special cases demanded a cleansing of the mouth, and the water was sometimes drunk. Sprinkling sufficed occasionally. A proper time had to be determined, which was the object of divination and the subject of omens. The literature of these fit times is extensive and usually obscure. Often it is prescribed that the ceremony shall be performed in a clean place; the open country or the desert would do. But for perfect security a *bit ringi* was built. This was a 'washing-house,' or lustration-chamber, and was often attached to a house in the city, possibly to a priest's house or for the convenience of any who could pay for its use. There was a distinct ritual for the *bit ringi*, whither the polluted should be taken. The ceremony was performed in special vestments of a sable hue, worn both by the suppliant and by the minister.

Apparently the motive of the washing was the symbolical removal of the contamination and often its symbolical transfer by the water to some object, rendered by incantation a representation of the supposed author of the trouble—e.g., a clay or wax image of the witch. This image could then be buried, burned, or otherwise destroyed, and the sufferer freed from his uncleanness. But in this case also the methods are most varied, and no exhaustive treatment is possible here.

It is not clear just how much of the treatment was merely purification. A sick person had to be purified before he could be cured, for without purity he could not expect the cure to work at all. But the full cure may be regarded in his case as a purification. Hence the word has been used to cover all the process by which a man who believed that his distress came under the head of uncleanness was relieved of his ailment. As he did not confine the idea of uncleanness to any very simple category, it is hard to say what cleansed him of it, and the whole of the above-named articles must be read to exhaust the already recognized ideas of purification. It is dangerous to attempt classification of the kinds of uncleanness. But analogy suggests some classes.

Sexual impurity is very hard to define. On the one hand, all sexual intercourse involved the necessity for purification. But, on the other hand, the Babylonians seem to have allowed even homosexuality. It is difficult, therefore, to state wherein consisted the impurity of irregular intercourse. Possibly excess, leading to the reaction of lassitude, was productive of the suspicion that the patient was under a spell or a demon. This may have been extended by fear to all cases of indulgence. But we must know more before we can fairly generalize, and our material, with all its fullness, has many omissions, which may or may not be significant.

Fear of consequences, when there was so much to fear, hard to distinguish from consciousness of wrong-doing, was evidently the motive to declare

oneself unclean and seek purification. The spiritual director would move the penitent to confession and quite honestly prescribe a treatment deemed likely to be effective.

LITERATURE.—The literature quoted in art. BABYLONIANS AND ASSYRIANS and the relevant sections of art. CHASTITY, CONFESSION, DISEASE AND MEDICINE, EXPIATION AND ATONEMENT, etc., is ample for a preliminary treatment of the subject. Much further research is needed before a clear and consistent view can be set out, if that can ever be attained now. Distinction will have to be made between the usages of different periods, and changes of view may be detected.

C. H. W. JOHNS.

PURIFICATION (Buddhist).—The religious movement which is known as early Buddhism did not take as its central doctrine an ideal of purity to be aimed at by a system of ritual purification. Its own keynotes are those of individual enlightenment, of release, of spiritual vision, and of movement to a goal discerned thereby. But early Buddhism largely made itself felt as a protest and reaction against a system, or systems, of elaborate rites and practices cultivated for the express purpose of obtaining absolution and purification from the impurities inherent in this fleshly mechanism and in the deeds wrought by it. As formulated doctrine, a religion was referred to as *dhamma*, but, as end gained by ritual works, it was referred to as *suddhi* (or *visuddhi*, 'purity', 'purifying', 'cleansing'). Buddhism laid down its own *dhamma* as insight into truth, and as path or means of attainment. But we see it turning aside from these to take account of the prevailing notion of ritual purification. It condemned the methods in practice; it substituted 'inward spiritual grace' for external symbols, and upheld its own 'vision' and 'way' as the true *kāḍhāpāṣa*.

Salvation envisaged as (*vi*)-*suddhi*, when Buddhism arose, appears in many of the early Pali documents, as the belief or 'view' of Brāhmanas and recluses:

'The views of recluses and brahmins, not of us, who deem that *suddhi* is by moral conduct, that *suddhi* is by ritual, or by both' (*Dhamma-saṅgaṇi*, § 1005).¹

'With us alone is *suddhi*, so they declare; not in other norms (*dhammas*) is *Visuddhi*' (*Sutta-Nipāta*, 824).²

'Not so
Were pure (religion) to be reached'
(*Psalm of the Brethren*, 893).³

'The celebrant in many a sacrifice,
I fostered sacred fire, oblations made;
"These be the pure and holy rites!"⁴ methought'
(*ib.* 841).

'Some recluses and brahmins hold that purity is by dieting . . . by transmigration . . . by rebirths . . . by sphere of being . . . by oblations . . . by tending a (perpetual) fire' (*Majjhima-Nikāya*, i. 80 f.).

'Lo! ye who blindly worship constellations of heaven,
Ye who fostering fire in cool grove wait upon Agni,
Deeming ye thus might find purification (*suddhi*)' . . .
(*Psalm of the Sisters*, 143).

The rites and practices to gain *suddhi*—otherwise referred to as release (*mokṣa* [*q.v.*]) from demerit—most frequently condemned in Buddhist scriptures are of three kinds: (1) asceticism, (2) fire-ritual, (3) baptism, or frequent immersion in any convenient (usually) running water. Thus the 'dieting' alluded to above consisted in reducing the daily food to a minimum vegetable diet, even to a single bean. There was, again, the *tapas* ('austerity') of the five fires (one on each side and the sun overhead), and all the petty acts of self-thwarting and self-denial enumerated in *Digha-Nikāya*, i. 165 f. (*Dialogues of the Buddha*, i. 226 f.), and elsewhere. They were less characteristic of Brāhmanas than of recluses generally, whether these were Brāh-

mans or not. Nevertheless in the anthologies a Brāhman is made to say:

'Painful the penances I wrought for heaven,
All ignorant of purity's true path'
(*Psalm of the Brethren*, 219).

Protest against the belief that such practices made for real purity finds expression in a *sutta* describing the Buddha resting in the sense of enlightenment and of deliverance from his own self-torturing exercises that had brought him no light. The tempter assails him by suggesting doubt:

'His penitential tasks abandoning,
Whereby the sons of men are purified,
The impure fancieth that he is pure,
When he hath strayed from path of purity.

(*The Buddha* :)

Full well I understood how any rites
Austere, aimed at the overthrow of death,
Belong to matters useless for our good.
Yea, nothing good they bring along with them,
Like oar and rudder in a ship on land.
But morals, concentration and insight—
The Path to Enlightenment—these were my tasks;
That Path creating and developing,
Have I attained the purity supreme'

(*Samyutta*, i. 108).

A more typical Brāhman view, however, is that of the Bhāradvāja referred to as Suddhika ('purity-man', 'puritan'):

'Though he be virtuous and penance work,
There is in all the world no brahmin found
Thus rendered pure.
In Veda-lore expert and in the course
His class lays down :—thus is he purified,
Unique 'mong men' (*ib.* i. 186).

This expertness in the latter field (*charaṇa*, explained by the commentary as *gotta-charaṇa*, the practice of the clan or *gens*—in Sanskrit, *chāraṇa*) includes (a) all religious observances peculiar to the Brāhmanas, and (b) all 'colour' or class regulations. The specific differences marking off the four social classes of early India one from another are called 'colour-purity' (*chatu-vāṇṇi suddhi*) in *Majjhima*, ii. 132. The Brāhman claimed priority in class 'on account of his pre-eminence, of the superiority of his origin (Brahmā), of his observance of restrictive rules, and of his particular sanctification' (*Laws of Manu*, x. 2 [SBE xxv. (1886) 402]). The Buddha, as against such a claim, affirmed that social worth depended solely on character and quality of work. There was no 'colour' bar to purity, social or religious:

'And be he noble, brahmin, commoner,
Or labouring man, or of a pariah class :—
Who stirs up effort, puts forth all his strength,
Advances with an ever-vigorous stride,
He may attain the purity supreme'

(*Samyutta*, i. 166).

Of religious observances, which every Brāhman house-father was qualified to celebrate (see art. BRAHMAN), none appeared to incur the protestant disapproval of early Buddhism so often as those of oblations to fire and of ceremonial bathing. Both are denounced as merely external, and therefore misdirected and futile. Let the *suttas* speak for themselves:

(*The Buddha* :)

'Nay, brahmin, deem not that by mere wood-laying
Comes purity. Such things are all external.
To him who thus purification seeketh
By things without, none is made pure, the wise say.

I lay no wood, brahmin, for fires on altars.
Only within burneth the fire I kindle.
Ever my fire burns, ever tense and ardent,
I, Arabant, work out the life that's holy'

(*Samyutta*, i. 160).

Again, to a matron who was making her regular food-offering to Brahmā, while her son, a saintly *bhikkhu*, stayed without on his round for alms, the Buddha says:

'Far hence, O brahminee, is Brahmā's world, . .
And Brahmā feedeth not on food like that . . .

¹ Ed. PTS, London, 1885; *Dhamma-Saṅgaṇi: a Buddhist Manual of Psychological Ethics*, ed. O. A. F. Rhys Davids, London, 1900.

² Ed. PTS, London, 1913.

³ PTS, ed. O. A. F. Rhys Davids, London, 1913.

⁴ Lit. 'this is *suddhi*.'

⁵ Cf. *Jātaka*, iv. (tr.) 117.

Lo here! this Brahmadeva, son of thine,
A man who past the gods hath won his way, . . .
. . . hath come up to thy house for alms . . .
Meet for oblations from both gods and men, . . .
By evil undefiled, grown calm and cool, . . .
His heart at utter peace, all vices purged . . .
Let him enjoy the choice meats thou hast served'
(ib. i. 141).

Another of the ritualistic Bhāradvāja clan invites the Buddha to go bathing in the Bāhukā river.

The Buddha asks: 'What of the river, brahmin, what can it do?' The reply is: 'Many consider it as a means of deliverance and of merit; many people let it bear away their evil deeds (karma).'

[The Buddha:]

'What boots the Bāhukā, or the Gayā? . . .
For ever and a day his foot may plunge
Therein, yet are his smutty deeds not cleansed.
They will not purge the man of passions vile.
To him that's pure, ever 'tis Phalgu-time,
To him that's pure, ever 'tis Sabbath-day,
To him that's pure and in his actions clean,
Ever his practices effectual prove.
Here, brahmin, is't that thou shouldst bathing go:—
Become a haven sure for all that breathes;
Speak thou no lies, harm thou no living thing,
Steal nought, have faith, in nothing be thou mean.
So living, what are river-rites to thee?'

(Majjhima-Nikāya, i. 39).

To another Brāhman who confesses to belief in the moral cleansing power of water, the rebuke takes this form:

'The Norm's a lake, its strand for bathing virtue,
Clear, undefiled, praised by the good to good men,
Wherein in sooth masters of lore come bathing.
So, clean of limb, to the beyond pass over'

(Samyutta, i. 183).

In the anthologies Sister Puṇṇā pours ridicule on a Brāhman seeking a shivering purity in the water, in which he must inevitably be excelled by any animal having its habitat in that element (*Psalm of the Sisters*, lxv.).

The quoted passages throw some light on the advocacy by Buddhism of ethical purity unaided by ritual symbols. Some further testimony will assist in bodying out their ideas of purity, and their application of it to their own specific doctrines.

We find the purification idea applied to the possibility of melioration in all rational beings. The Buddha maintains, against a current sceptical doctrine, that beings either deteriorated ('became defiled') or advanced ('became purified') through a sufficient cause. This was the hedonically mixed nature of the factors of life. In other words, our experience is sufficiently pleasant to make the things of this world seductive, and sufficiently painful to make us long for something better (*Samyutta*, iii. 69 f.). This is called the 'twofold doctrine hard to penetrate' (*Dīgha*, iii. 274).

How did Buddhism conceive the nature of defilement (*sankilesa*, *upakilesa*) and its opposite? Consciousness, or heart (*chitta*), was not considered as intrinsically impure. Though 'formless' or immaterial, it was likened to a radiant or flashing clarity, infinitely swift and plastic in procedure, but liable to defilement by adventitious influences (*Anguttara*, i. 5–11). These made their advent on occasion of sense. In reacting to sense-impressions, a number of mental adjuncts were held to come into play, such as feeling, volition, emotions, etc. Prominent among these were the three radical conditions ('roots') of immoral activity—appetite or lust, enmity, dullness or unintelligence. The corresponding three opposites might come into play instead—disinterestedness, love, intelligence or insight. The *karma* from previous lives would decide this in the first instance; nurture and training would modify the adjuncts during life. But defilement consisted in the three immoral conditions exerting themselves in response to the calls of sense. That defilement is fully described, e.g., in the *Amagandha Sutta* (*Sutta-Nipāta*, *SBE*

x. [1881] 40 f.), as consisting in violence and injustice, sensuality, covetousness, and deceit, obstinacy and conceit, etc. Again, sixteen forms of *chitta*-defilement are given in the *Vatthūpama-Sutta* (*Majjhima*, i. 36 f.).

Purification from all these spiritual defilements consisted, as the latter *sutta* shows, in a mental awakening (1) to new ideals, (2) to the nature of defilement as such; and in an emotional upheaval and subsequent tranquillization, the defiling tendencies having been ejected. The process of course took time, and was held to be perfected only by progress along the 'Four Paths,' i.e. stages of the path, to saintship. It is illustrated (ib.) negatively and positively by a well-cleansed cloth taking on a fine dye, or again by refining in fire:

'Little by little, one by one, as pass
The moments, gradually let the wise,
Like smith the blemishes of silver, blow
The specks that mar his purity away'

(*Dhammapada*, 239).

Another favourite purity simile is that of moon or sun getting free from cloud, resplendent in a clear sky:

'Passionless, purified, undefiled as the moon when clear of blotting (cloud)' (*Sutta-Nipāta*, 636).

We have seen Buddhism using purity ritual as metaphor to emphasize the inwardness of its ideal. More appropriate is the figure borrowed from that craft on which its central doctrine was modelled, to wit, medicine. The possible cure of certain ailments for which the physician prescribes purging and cathartics (*vamana*, *virchedā*) are compared (*Anguttara*, v. 218 f.) with the sure remedy for all suffering in the 'Aryan Eightfold Path' of the perfect life. The convalescent is described, not as purified, but as emancipated or released—a more characteristic Buddhist ideal, as has been stated above, than that of purification.

Once annexed, the ideal of purity was applied to every kind of proficiency of heart and head. The acme of purity (*koṭi-parisuddha*) in conduct was to exercise self-reference—not to do unto others what would be disagreeable if done to one's self (*Samyutta*, v. 252 f.). The inward purifying fire referred to by the Buddha (see above) is explained as his insight. Vision and insight have to be 'cleansed,' but different temperaments are stated to attain this ideal in different ways (ib. iv. 191–195). Mystical or supernatural sight and hearing are also defined as purified or clarified (*visodhita*) as well as 'divine' (*dibba*, 'godlike,' or 'angelic').¹ Achievements of this kind are attributed, in varying degrees, to recluses graduating in saintship. But none of the emphasis of Christian mysticism on the purity or clarity as such is to be found in the Buddhist canon.

Finally, three special applications of the purity ideal may be noted, namely, to morals, to the work of teaching, and to the *summum bonum*.

Thus observance of the five sets of rules for the order are technically called 'the five purities' (*Vinaya*, v. 132; cf. *Vinaya Texts* [*SBE* xiii. (1881)], i. 15, 55, etc.).

'Perfectly pure teaching' is such as is undertaken because of the excellence of the doctrine's ideal and method, and out of love and compassion felt by the teacher (*Samyutta*, ii. 199).

'Purity' is again annexed as one of the 44 synonyms for salvation or *nibbāna* (ib. iv. 372), and this is at times referred to as 'the purity supreme.' Thus envisaged, the sovereign means of attaining it was that of the exercises in self-knowledge known as the 'Four Applications of Mindfulness' (*Dialogues*, ii. XXII.):

'the path that leads only to the purification of beings . . . to the realization of Nibbāna.' (The translation 'one and only path' in that work (*ekāyano*) is not correct.)

¹ See, e.g., *Dialogues*, i. 89, 91.

¹ The typical ceremonial bathing was in the Gayā, at the spring-festival of Phalgu (*Psalm of the Brethren*, p. 181).

Insight into impermanence, suffering, and non-existence of soul are called no less 'the path to purity' (*Dhammapada*, 277-279; *Psalms of the Brethren*, 676-678)—a phrase that became immortalized for all Buddhists of the Theravāda teaching down to the present day as the title of Buddhaghosa's classic work, the *Visuddhi-Magga*.

LITERATURE.—All the texts and translations quoted are named in the text, and all, except those in *SBE* and in *SBB*, are among the Pali Text Society's publications.

C. A. F. RHYS DAVIDS.

PURIFICATION (Chinese).—The technical term usually employed by the Chinese to denote the rites connected with ceremonial purity is a word which in modern Pekingese is pronounced *chai*. The word is used, especially among Buddhists, to denote the practice of abstinence from animal food; but it implies much more than this. The written character for *chai* is a modification of another character *ch'i* (radical 210); indeed, in classical literature *ch'i* is used where modern writers would use *chai*; and this fact provides us with an unmistakable clue to the original ideas which the term was intended to convey. *Ch'i* means 'to regulate,' 'to arrange in order,' 'to make even,' 'to equalize,' 'to establish uniformity'; and, when used in an ethical sense, it implies the due regulation or adjustment of the whole personality—physical, intellectual, and moral. The process of adjustment (*chai*) was regarded as an essential preliminary to the exercise of priestly or sacrificial functions, and it implied fasting, self-control, and an inward purity of which physical cleanliness and spotless raiment were outward and visible signs.¹

1. **The State ritual.**—The principal authority for sacrificial and other religious rites in ancient China is the *Li Chi* (*SBE* xxvii. and xxviii. [1885]). In that Chou dynasty classic we find the greatest stress laid on the necessity for gravity, sincerity, and reverence in all who take part in such rites. We are told that sacrifice is not 'a thing coming to a man from without; it issues from within him, and has its birth in his heart.' Religious ceremonial is not merely an external show, nor should it be carried out for selfish reasons or in expectation of reward; it is the outward expression of inward feelings, and, unless those feelings are of a pure and disinterested character, the ritual in which they find expression will necessarily lack dignity and impressiveness. Hence it is only men of exalted virtue who should presume to officiate at sacrifices (*SBE* xxvii. 61 f., xxviii. 236 f.). But even men of the noblest character must not occupy themselves with sacred things without scrupulous self-preparation; hence, 'when the time came for offering a sacrifice, the man wisely gave himself to the work of purification' (*SBE* xxviii. 239). To effect this purification, he had to guard himself against all noxious and unclean things and to keep his desires under strict control. He shunned music, because music would cause mental distraction and excitement. He kept all wayward thoughts out of his mind, and concentrated his attention on the way of rectitude. He refrained from unnecessary movements of his hands and feet. He strove to bring his intellect and his moral sentiments to the highest degree of clarity and refinement. When he had succeeded in conducting himself in this manner for the required number of days, he was in a fit condition to enter into communion with spiritual beings (*ib.* 239 f.).

Of this purificatory process there were two stages. The lower stage, known as *san chai*, 'lax purification,' lasted for seven days; the higher, known as *chih chai*, 'strict purification,' occupied the three days immediately preceding the performance of the

sacrificial ceremony. The process involved bathing (*mu yü*), the wearing of clean raiment, restriction to the simplest food, and abstinence from sexual relations. The person undergoing 'strict' *chai* separated himself from his family, and lived by himself in apartments other than those which he usually occupied. He wore unadorned garments of a black colour, because these were regarded as consonant with, or symbolical of, the solemn nature of his thoughts, which should be concentrated on the unseen world (*SBE* xxvii. 448; see also J. Legge, *The Chinese Classics*², i., Oxford, 1893, p. 248). Great stress was laid on the inutility of attending merely to the external aspects of the purificatory rites. Mencius implies that a well-regulated mind was far more important than outward comeliness and correctness, when he tells us that even a leper (or a person of external repulsiveness) may sacrifice to God, provided he carried out the rules of *chai* in the proper spirit.¹

The sacrificial rites for which purification was and still is considered necessary are mainly those connected with the cult of ancestors, and purification is therefore theoretically binding upon all heads of families and others whose business it is to lay sacrificial offerings before the family tombs or the spirit-tablets in the ancestral temple. But the rule applies with equal force to the stately ceremonies which are or were conducted by the emperor or his deputies in connexion with the cult of canonized sages and heroes such as Confucius, Kuan-Ti, and Yo-Fei; the worship of the Supreme Deity and the divinities of earth, mountains, rivers, and other nature-spirits; and the propitiation of the spiritual beings whose function it is to distribute the rainfall, to ward off pestilences and other calamities, to promote the growth of crops, and to regulate the seasonal changes. The impressive ceremony of the worship of Shang-ti (the Supreme Being) at the winter solstice took place at the marble Altar of Heaven, which is situated in the midst of a wooded park in the southern section of the city of Peking. The theoretical sanctity of the emperor's person did not exempt him from the duty of undergoing *chai* before he was qualified to act as high-priest for myriad-peopled China.

Three days before the ceremony his majesty moved into a building called the *chai kung*, 'purification palace,' situated within the 'forbidden city.' Here, in cloistered stillness, he was expected to remain two days and nights. On the third day he proceeded to the sacred enclosure of the Altar of Heaven, and was conducted to another *chai kung*, where he kept solitary vigil during the last of the three nights of 'strict purification.'

Similar purificatory rites were in ancient times performed by the emperor at the beginning of the four seasons.

Three days before the festival of Li-Ch'un ('Beginning of Spring') the Grand Recorder informed the emperor that 'on such and such a day the spring will begin.' Thereupon 'the son of Heaven devotes himself to self-purification, and on the day he leads in person the three ducal ministers, his nine high ministers, the feudal princes (who are at court), and his Great officers, to meet the spring in the eastern suburb.'²

The emperor's duties and prerogatives in connexion with these State rituals were to some extent shared by his consort, though the imperial pair were separated from one another during the period of purification.³ In the third month of spring a ceremony took place in which the empress acted alone.

'In this month orders are given to the foresters throughout the country not to allow the cutting down of the mulberry trees and silk-worm oaks. . . . The trays and baskets with the

¹ J. Legge, *The Chinese Classics*², ii., Oxford, 1895, p. 330. For the translation of 'leper,' which is doubtful, see H. A. Giles, *Confucianism and its Rivals*, London, 1915, p. 98. Legge's tr., 'wicked,' is unsupported by the commentators and is inappropriate.

² *SBE* xxvii. 253. For similar observances at the other seasons see *ib.* pp. 289, 284, 297. For a reference to the emperor's restricted diet when undergoing purification see E. Biot, *Le Tchou-Li*, Paris, 1851, i. 72 f.

³ See, e.g., *SBE* xxviii. 433; cf. Biot, ii. 15, 18 f.

¹ Cf. art. **FASTING**, vol. v. p. 761, § 4.

stands (for the worms and cocoons) are got ready. The queen, after vigil and fasting, goes in person to the eastern fields to work on the mulberry trees' (*SBE* xxvii. 266; cf. xxviii. 223 f.). This was done in order that the women of China might be encouraged to feel that, when they laboured at one of the great national industries—the production of silk—they were following the example and carrying out the precepts of the first lady in the land. Similar recognition was accorded by the emperor to the industry of agriculture; for the custom was that in the first month of spring the emperor prayed to heaven for bountiful harvests, and then, with his own hand on the plough, turned up three furrows (*SBE* xxvii. 254 f.). This rite has been kept up till our own day.

2. Purification in Confucianism. — A modern writer has hazarded the statement that in Confucianism fasting is perhaps 'wholly unrecognized' (*EB* x. 193). This remark is by no means accurate, for ritual fasting is an essential part of the rites of purification referred to in the *Li Chi*, and the *Li Chi* ranks as a Confucian classic. In bk. xxix. we find the following remark attributed to Confucius himself:

'Vigil and fasting are required (as a preparation) for serving the spirits (in sacrifice); the day and month in which to appear before the ruler are chosen beforehand;—these observances were appointed lest the people should look on these things without reverence' (*SBE* xxviii. 331).

From other sources also we have ample evidence that Confucius by no means ignored these ritual observances. In a classical passage we are told that there were three things which Confucius took very seriously and in regard to which he showed the greatest reverence and circumspection. These were purification (*chai*), warfare, and disease (Legge, i. 198). The selection is not so whimsical and arbitrary as may be supposed. The third, it will be observed, concerns the individual human life, which it mars or cuts short; the second affects the welfare of society and the rise and fall of states; while the first is associated with the solemn rites that are believed to open a channel of communication between living men and the spiritual world. From another passage we learn that Confucius 'purified himself with water' before going to court to announce the murder of a feudal prince. Legge rightly points out in connexion with this passage that the Chinese phrase (*mu yü*) represented by these words 'implies all the fasting and all the solemn preparation as for a sacrifice or other great occasion' (i. 284). In the same classic (the *Lun Yü*) we read that Confucius, when undergoing *chai*, arrayed himself in clean linen cloth, changed his diet, and sat elsewhere than in his usual seat (Legge, i. 232). In the classic usually known to Europeans as *The Doctrine of the Mean* Confucius is represented as having uttered the following words:

'How actively do the spiritual beings manifest their powers! They are beyond the ability of eyes to see or ears to hear, yet they are immanent in all things. It is for them that men purify themselves and don rich array and establish the rites of sacrifice and worship.'

Not only was purification known to and practised by Confucius and his disciples and contemporaries; it also forms part of the ritual of the cult of which Confucius himself is the central figure. The chief seat of this cult is the imposing temple at Ch'ü-fou in Shantung. The temple stands near the enclosure which contains the sage's tomb, and adjoins the palace of the ennobled representative of the Confucian family—the Yen Shêng Kung, 'duke of extended sagehood.' As the rites of the Confucian cult throughout the empire are modelled on those practised at Ch'ü-fou, special interest is attached to a book called the *Shêng Mên Li Yo Chih*, 'Records of the Ritual and Music of the Holy Temple,' which is in two small volumes printed from wooden blocks preserved in the temple pre-

cincts. The latest edition of this work was published in 1887 under the editorial supervision of a committee composed wholly of the sage's reputed descendants. From this handbook we may gather authoritative information concerning the place occupied by purificatory rites in the Confucian ceremonial.

Fifteen days before the date fixed for the sacrificial ceremony the duke (as hereditary custodian and superintendent of the temple and its rituals) carries out a rite technically known as *ti shêng*, 'the purification of the sacrificial animals' (ox, sheep, pig, etc.). The duke and his assistants, arrayed in their robes of office, go to the park in which the animals are kept (the *hsi-shêng-so*) and select unblemished and well-conditioned victims for the forthcoming sacrifice.¹ These animals are then ceremonially washed with warm water; and every day thereafter, until the time comes for the sacrifice, this cleansing rite is repeated. On the same day a proclamation is issued at one of the temple-gates, called the Yang-kao-mên, 'the gate of gazing upwards,' whereby the temple officials and all whose duty it is to take part in the ceremonies are called upon to prepare themselves for the rites of purification, which in their 'lax' form begin on the tenth day before the sacrifice. From the tenth day onwards the temple-officers go daily to the temple and carry out a thorough cleansing of it. The court-yards are weeded, and all dust and rubbish are carefully removed. This process is technically known as *sa sao*. On the third day before the ceremony the ministrants enter upon the period of 'strict' *chai*. At noon on this day there is a solemn procession of robed officials, headed by the duke himself, to one of the temple-gates known as the Tung-wên-mên, where they stand in order of precedence. The persons who are to officiate at the ceremony, and who are therefore about to enter upon three days' *chai*, then perform the treble obeisance (*kotou*), while a herald (*hsian-tu-shêng*) reads aloud the *chieh-tz'ü* and *shih-tz'ü*, i.e. the vows (*shih*) by which the ministrants bind themselves to a faithful observance of the rules of abstinence (*chieh*).² After this ceremony the candidates for purification proceed to the special pavilions set apart for their use—buildings known as *chai-su-so*, 'purification lodgings.' Between the hours of 8 and 5 on the same day they must bathe and array themselves in clean garments made of plain black cotton. They then walk to the Hall of Poetry and Rites (one of the main temple-buildings), salute each other decorously, and carry out certain duties connected with the arrangement of the sacrificial vessels. Their nights have to be spent in the 'purification lodgings,' where they are under the supervision of officials who after dark go their rounds with lamp in hand to see that there is no unseemly breach of rules.

Into the details of the sacrificial ceremony itself we need not enter. The culminating moment arrives when the sacrificial articles are solemnly placed in front of the 'spirit-tablets' of Confucius and his canonized associates. This can be done only by persons in a state of ceremonial purity, and the privilege falls therefore to those who have just completed their three days' strict *chai*. Even they, however, are not allowed to approach the altars with the sacrificial meats and fruits until a final ceremony of purification has duly taken place. From a richly-garnished vessel (*chin lei*) a ministrant takes a ladleful of clean water and transfers it to a smaller vessel (*kuan-pên*), which is simply an ordinary washing basin placed on a four-legged wooden stand. The officer (*chéng-hsien-kuan*) who is to take the offerings up to the altars then goes through the form of washing his hands. One of the ministrants takes a long narrow strip of fringed cloth from a bamboo basket (*ssü*), kneels down, and passes the cloth to the *chéng-hsien-kuan*, who uses it to dry his hands.³ The latter then proceeds to wash seven goblets (*chio*) which are to hold the sacrificial wine. The *chio* is a three-legged cup with two ears and a projecting lip. Three of the seven are intended for the altar of Confucius; the other four are destined for the altars of the four subordinate sages who are associated with Confucius in the sacrificial rites. These are Yen Hui (the favourite disciple), Tsêng Tzû, Mêng Tzû (Mencius), and Tzû-ssü.

There are various rules of discipline which have to be observed by all persons who occupy permanent posts in connexion with the Confucian rites. Among the offences which entail dismissal from office two are of interest as bearing on our present subject. One is the offence of *ju miao pu chai*, entering the temple (to perform duties connected therewith) without having undergone purification. The other is the offence of *ni sang ju miao*, entering the temple while in a state of mourning, and concealing the fact. The temple-ministrant

¹ For references to similar functions carried out in ancient times by the monarch see *SBE* xxviii. 222 f.; cf. Biot, i. 455 f.

² For a similar custom in ancient times see Biot, ii. 107 f.

³ For further references to hand-washing as a ritual act in China see Biot, i. 466 f., ii. 230. It will be seen that there were occasions on which the ablution had to be performed by the emperor himself. For observations on the religious significance of the rite, and its use in other parts of the world, see *Art. HAND*, vol. vi. p. 498 f.

who is in mourning is expected to notify the fact without delay to his official superiors, in order that arrangements may be made to have his duties temporarily delegated to some one else.

There are several references in ancient Chinese religious literature to a curious belief that, when the rites of strict purification had been scrupulously fulfilled, the purified worshipper would see the spirits to whom his sacrifice was to be offered and on whom his thoughts had been concentrated (see, e.g., *SBE* xxvii. 448, xxviii. 211). This rather startling statement should not be taken as the expression of a literal belief that the spirits would present themselves before the worshipper's bodily eyes. It is not impossible, indeed, that statements of this kind indicate the survival of pre-historic beliefs similar to those which existed down to our own time among the Eskimo or the American Indians, who believed that the fastings and other austerities which a youth underwent at puberty would enable him to see his guardian-spirit.¹ It is also possible that among the ancient Chinese, as among many sects known to Christendom, fasting and other ascetic practices were the cause of psychical disturbances which resulted in 'visions.'² An interesting parallel to our Chinese text is to be found in the 'oracle' of the Montanist prophetess Priscilla, which declared that 'purity unites (with the Spirit), and they (the pure) see visions, and bowing their faces downward, they hear distinct words spoken.'³ The Chinese, however, under the sober influences of Confucianism, have shown little inclination to carry their religious austerities to morbid extremes; indeed, worshippers are told that they should not emaciate themselves till the bones appear, nor should they let their seeing and hearing become affected by their austerities.⁴ Confucian Chinese, therefore, prefer to interpret the classical references to the visibility of spirits in a sense similar to that in which the term *t'ien yen* ('heavenly eye') is understood by Buddhist mystics. This 'heavenly eye' is much the same thing as Plato's 'eye of the soul' when it is turned towards reality, or the 'mind's eye' and 'heart's eye' of Gregory of Nyssa and St. Augustine. When our Chou dynasty enthusiast expressed his belief that the spirits would become visible to their faithful and purified devotee, he probably meant exactly what was in the mind of the 15th cent. Christian mystic who said:

'Si tu esses intus bonus et purus, tunc omnia sine impedimento videres et bene caperes. Cor purum penetrat caelum et infernum' (*de Imit. Christi*, ii. 4).

3. Purification in ancestor-cult.—Strict purity has always been enjoined on those who officiate at the sacrifices to the dead.

'When a filial son is about to sacrifice, he is anxious that all preparations should be made beforehand. . . . The temple and its apartments having been repaired . . . the husband and wife, after vigil and fasting, bathe their heads and persons and array themselves in full dress.'⁵

Purity is indicated by the very name of the great spring festival of Ch'ing-ming, at which the family graves are visited, repaired if necessary, and swept clean; for *ch'ing ming* means 'pure and bright.' This phrase contains an allusion to the

belief that on this day all nature achieves a general purification and renewal. This was symbolized by the lighting of 'new fires' to take the place of the old fires which, in accordance with ancient custom, had been extinguished on or before the preceding day. The term *han shih* ('cold eating') was applied to the day (or to the three days) preceding the Ch'ing-ming festival because, as the old fires had been put out and the new ones were not yet lighted, it was impossible to do any cooking.¹ The ceremony of lighting new fires is almost forgotten now, but there is ample evidence that it once took place and that it was regarded partly as a purificatory rite by which evil was extinguished and the old life transformed into something new and clean.² Both 'pure water' and 'pure fire' occupied a place in the ritual offerings of ancient China.³ Frazer, referring to a certain fire-ceremony still celebrated in the province of Fuhkien, records the significant fact that 'the chief performers in the ceremony . . . refrain from women for seven days, and fast for three days before the festival.'⁴ The well-known custom of letting off fire-crackers, which is intended to exorcize evil spirits and effect a general purification, is still well known throughout China. 'Disembodied spirits,' as de Groot says, 'are afraid of fire.'⁵ The original meaning of the Ch'ing-ming festival has been obscured in China by the fact that the day came to be regarded as the appropriate occasion for the performance of the spring ceremonies in honour of deceased ancestors; and the importance of the ancestral cult naturally caused the other associations of the festival to recede into the background. But the idea of purity is associated with the performance of the ancestral rites no less closely than with the renewal of nature's activities, though, as we shall see below, pollution of a distinctive kind was believed to be inseparable from the mere fact of being in mourning or of having come in contact with death. The ancient customs forbade any approach to the tombs or the spirit-tablets by any member of the family who had sullied the honour of his house by committing a crime, or who had brought disgrace upon himself or his ancestors.⁶ This is interesting as showing that something better than mere 'ritual purity' was expected of those who paid religious honours to the dead.

4. Popular purificatory rites.—Apart from the State rituals and the national cults of Confucius and of ancestors, there are many occasions on which ceremonial purification in some form or other was formerly practised by the people, though in modern times most of these rites have tended to become obsolete. At an ancient triennial drinking festival described in the *Li Chi* there was a ceremonial washing of hands and rinsing of cups (*SBE* xxvii. 56, xxviii. 435 f.). In the Confucian *Analests* there is an interesting passage which, according to the commentators, contains a reference to an old custom of 'washing the hands and clothes at some stream in the third month, to put away evil influences' (Legge, i. 249). Purification ceremonies, whereby

³ Quoted by Rufus M. Jones, *Studies in Mystical Religion*, London, 1909, p. 52.

⁴ *SBE* xxvii. 87. We may refer to the book of Mencius, however, for a curious case in which fasting and purification were carried to a morbid extreme (see Legge, ii. 284 f.).

⁵ *SBE* xxviii. 214; cf. 292 and see xxvii. 87. For observations on the ritual washing of the head see art. HEAD, vol. vi. p. 538 (§ 7 (b)). The Chinese phrase here used is *mu-yü*, which is the term ordinarily employed to denote ritual ablutions and includes washing of the head (see Legge, i. 284).

¹ See R. F. Johnston, *Lion and Dragon in Northern China*, London, 1910, pp. 185-187. There is a well-known Chinese legend which professes to trace the Han Shih festival to an episode attributed to the 7th cent. B.C., but it was probably invented to explain a ritual of which the original meaning had been lost. See L. Wieger, *Moral Tenets and Customs in China*, Ho-Kien-fu, 1913, p. 427 f.; and H. A. Giles, *A Chinese Biographical Dictionary*, London, 1898, no. 353.

⁵ J. J. M. de Groot, *The Religious System of China*, Leyden, 1892-1910, bk. i. p. 355; see also bk. ii. pp. 941-952.

⁶ For an early Chinese discussion and criticism of this custom see Wang Ch'ung's *Lun Hêng*, tr. A. Forke, Berlin, 1911, pt. ii. p. 379.

disease and other things of ill omen were expelled from the house or locality, were regularly practised in the Chou dynasty, as we know from the *Chou Li* (Biot, ii. 225); and in various forms similar rites are still performed on New Year's Eve and other great occasions, and at some of the village festivals.¹ Purification and fasting formerly took place when marriages were announced to the spirits of the ancestors (*SBE* xxvii. 78). Before marriage the bridegroom went through 'fast and vigil,' and wore a dark-coloured cap to signify the solemnity of his thoughts (*ib.* p. 441). At one time it appears to have been the custom for a father to fast on the occasion of the birth of a child.² Purification was resorted to in cases of extreme illness.

¹All about the establishment was swept clean, inside and out. . . . Males and females changed their dress' (*SBE* xxviii. 173). The patient himself, if recovery was deemed hopeless, was clothed in new raiment.

In China, as in many other parts of the world, contact with death has been supposed to cause pollution. We have already seen that a person in mourning is forbidden to take part in the rituals of the Confucian worship, and that, if he conceals the fact that he is in mourning, he is liable to the punishment of dismissal. Purification is sometimes undergone by those who have merely paid visits of condolence to a bereaved household, though purification of this kind is probably carried out as a matter of local custom only, and in a perfunctory manner.

²'Some condolers,' says de Groot, 'hide a few garlic roots under their garments, convinced that the strong smell will prevent the influences of death from clutching to their bodies; on leaving the house they throw the roots away in the street. Others, on re-entering their dwelling, purify themselves by stepping over a fire, or over some burning incense powder of a kind considered especially suitable for this and similar ends and therefore styled *ts'ing hsiung*, "purification incense."' ³The same writer mentions cases where pollution caused by contact with a corpse is removed 'by passing through a small fire of straw kindled on the pavement.'⁴

It seems not improbable that the well-known custom of Government officials, after the death of a parent, vacating their posts and retiring into private life until the period of mourning is over (three years in theory, 27 months in practice) was based not merely on the traditional doctrines of filial piety but also on a belief that the interests of the State would suffer if persons who were in mourning, and therefore ceremonially impure, were allowed to take part in public affairs.

5. Buddhist rites.—Buddhism has various purificatory rites of its own, and the rituals of all the sects make provision for ceremonial ablutions and other cleansing rites; but, as these do not materially differ from the ceremonies already described, it is unnecessary to mention them in detail. Reference has been made to the fact that *chai* is used by Buddhists to denote abstinence from animal food. Pilgrims to sacred hills and famous shrines are known in some places (e.g., the Wutang mountain in Hupei) as *chai kung*, a term which indicates that such pilgrims have undertaken to confine themselves to a vegetarian diet until their pilgrimage is over. To certain bands of rebels and revolutionaries the curious name *chai fei*, 'fasting robbers,' has been applied. The term is derived from the fact that the illicit societies which were responsible for some of the anti-dynastic movements of modern times often assumed the guise of quasi-

Buddhist sects, or borrowed certain Buddhistic usages and formulas for the purpose of throwing an air of religious mystery over their secret rites. Such was the White Lotus Society, which was the cause of an immense amount of bloodshed in the reign of Ch'ien-lung.

6. Taoist view of purity.—In the Taoist system purity and purification are regarded from a point of view which differs very considerably from that of Confucianism. *Chai hsin*, 'the fasting (or purified) heart,' is strongly contrasted with the *chi ssü chih chai*, the ceremonial purification, which may be merely external and fictitious. But, when Chuang Tzu and other Taoist writers speak of the 'fasting heart,' they do not mean exactly what the Confucian means when he insists, as we have seen, that true purification must be internal as well as external. For the Taoist the only thing worth fastings and purifications is the attainment of *Tao*, and for the single-minded seeker after *Tao* all ceremonies are superfluous and meaningless. The 'fasting heart' is a negative state in which the individual shuts himself off from sense-contact with the outer world, and, by discarding everything that is treasured by ordinary mankind, fits himself for the reception of the only thing that endures and is incorruptible—the transcendental *Tao*.¹ 'The height of self-discipline,' says the Taoist, 'is to ignore self.'² But the orthodox Confucian cannot ignore self (so the Taoist would argue) so long as he lays stress on outward observances and attributes importance to the correct fulfilment of 'rites.' Moreover, ceremonies imply activity—and activity of a kind which, from the Taoist point of view, is useless. Man's function is to be rather than to do. The true sage 'does nothing, and therefore there is nothing that he does not do.'³ He is one who has cleared away all the impurities that dimmed the lustre of his true self and who knows that he has transcended the limitations of his phenomenal Ego. His perfectly purified nature is in complete conformity with the ineffable *Tao*, which is never so fully possessed as when it eludes all observation and makes no outward manifestation of its presence. At the outset of his search for *Tao* the sage usually retires to the lonely hills, where he makes himself a romantic hermitage among the rocks and woods and lives on wild herbs and the pure water of the mountain streams. The beauty and wonder of his surroundings gradually enter into his soul and teach him that all the most glorious manifestations of external nature are but signs and symbols of spiritual glories that lie far beyond the range of unpurified vision. As he grows in spiritual stature, he catches fugitive glimpses of that loveliness, and after a long upward struggle he learns at last 'to ride upon the glory of the sky, where his form can no longer be discerned.'⁴ He is now a *hsien-jên*—a Chinese term which etymologically means nothing more than 'a man of the mountains,' but which in Taoist lore means one who has attained the immortality and the spiritual graces which *Tao* alone can confer. One of the highest grades of this transcendent state is that of the *chên-jên*, the 'true man,' one who 'fulfils his destiny. He acts in accordance with his nature. He is one with God and man.'

He is a being 'whose flesh is like ice or snow, whose demeanour is that of a virgin, who eats no fruit of the earth, but lives on air and dew, and who, riding on clouds with flying dragons for his team, roams beyond the limits of mortality.'⁵

Such is the language in which the old Taoist mystics strove to express the inexpressible—language

³ De Groot, bk. i. p. 32; see also pp. 162, 200 f., 231, 640 f.; cf. *SBE* xxviii. 151 f.

⁴ De Groot, bk. i. p. 137. The steps taken to purify a house in which a death has occurred are described by the same writer (bk. i. pp. 107–110), but the description does not apply to all parts of China. Purging the grave with incense and by means of various rites and incantations (described by de Groot, bk. i. p. 209 f.) is practised in some localities (cf. *PC* ii. 436 f.).

which led in later ages to pitiful misunderstandings, and which fostered the growth of that degraded modern Taoism which is a hotch-potch of magic, ritualism, priestly mummeries, and demonology. The priests of the cult are, for the most part, comparatively harmless members of society—if, indeed, it is possible for uselessness and harmlessness to co-exist. But they are ignorant, unenterprising, and superstitious; and, though they may know a good deal about the mysteries of talismans and exorcisms, it must be confessed that they show very little knowledge of, or interest in, the 'mystic way' of philosophic Taoism.

LITERATURE.—This has been indicated in the article.

R. FLEMING JOHNSTON.

PURIFICATION (Christian).—Purification of course implies defilement. It is the act or operation of cleansing, and may be spoken of in regard to things physical or things spiritual.

The sense of sin, which has from very remote times oppressed man's understanding, has led to a general consciousness of unworthiness in relation to the Deity; and this consciousness is developed in proportion to the increasing realization of the holiness of God.¹ The purer the religion, the stronger the conviction of separation—far-offness—from the Deity, through personal defilement. In Christianity, therefore, we may expect to find this sense-impression at its highest.

1. NT modification of Jewish teaching. — Formerly, when religion itself was regarded more or less as an external thing, external purification was considered essential and adequate. Rites of purification—ceremonial cleansing—are common to all ancient religions. The Jewish religion had many elaborate rites of this nature. The references to ceremonial purification which are found in the NT are purely Jewish, and therefore do not call for consideration here.² It is, however, quite otherwise as regards the teaching. Examination of our subject from a specifically Christian standpoint must start from the controversy about purifying between Christ and the Pharisees, of which a record is preserved in Mk 7 (cf. Mt 15). The teaching of Christ here, as always, is concerned with the inward rather than the outward. It is true that this was not 'a new teaching' (cf., e.g., Is 11¹¹⁻¹⁷), yet so far had the Jewish teachers of the time departed from the higher ideals of their own prophets that it might well seem so to the majority of people who heard it. We take Mk 7, then, as the *locus classicus* for the Christian principle of purification.

The ceremonial rites of Judaism, though not formally abolished, are here relegated to their proper subordinate position.

'It cannot be too carefully noticed that no condemnation is passed upon these rites of purification in themselves. Had the Pharisees recognised their symbolism and deep moral significance: had Jesus been certain that when they washed their hands they thought of or prayed for purity of heart and life, He would have been the last person to rebuke them, however much they multiplied external forms and ceremonies. These are useful as stepping-stones to higher things; but the moment they begin to satisfy in themselves they become snares, and lead to superstition.'³

Henceforth there can be no ceremonial, but only moral, defilement. It is sin alone that defiles a man and renders him impure. It is from sin, therefore, that purification must be sought and obtained. Unless ceremonial purification is truly

symbolic of that which is much higher, much holier than itself, it is indeed a vain thing.

Thus purification becomes entirely symbolic for Christians.⁴ St. Paul's treatment of the question of circumcision illustrates his attitude towards purification and shows that he had grasped the principle of Christ's teaching in this matter.

2. The sacraments.—The primary significance of baptism seems to have been that of cleansing, and usually, though not always, it was understood in a more than material sense. The Pauline Epistles throughout regard baptism as a cleansing from sin. It has been said that the idea of purification attains its highest form in the Christian rite of baptism; certainly it is on the spiritual purification that the emphasis is now laid.

As 'baptism had in Judaism come to mean *purificatory consecration*, with a twofold reference—from an old state and to a new—so was it in Christianity.'⁵

The gift of the Holy Spirit does not seem at first to have been associated with the baptismal ceremony (cf. Ac 8¹⁶). The rite seems to have been regarded by the primitive Church simply as a cleansing from sin, bringing about the renewal of a former undefiled state. The convert must be purified in the laver of regeneration,⁶ as a preparation for the reception of that which is to follow.⁷ So effective is the purification here that it can be regarded as 'a death unto sin, and a new birth unto righteousness'—not a generation, but a regeneration. This conception is maintained in the Baptismal Office of the Church of England in the prayer for the sanctification of the water to the mystical washing away of sin and in the vow of renunciation.⁸

'Since the middle of the second century the notions of baptism in the Church have not essentially altered. The result of baptism was universally considered to be forgiveness of sins, and this pardon was supposed to effect an actual sinlessness which now required to be maintained.'⁹

This maintenance was supplied by the second great sacrament, which, offering the means of communion with God, through outward and visible signs, became the recognized channel for the conveyance of grace and strength to the soul, purified already in baptism, and a guarantee of the continuance of that purification. Yet it was soon realized that the flesh still remained weak and continued to act as an instrument of defilement to the spirit. Thus, just as it was necessary that the purification of baptism should cleanse from sin and so prepare for the gift of the Holy Spirit, so it became necessary that a formal purification should precede, cleanse, and prepare for the gift received in Holy Communion. Hence the further sacrament of penance (*q.v.*) and absolution, which was entirely a rite of purification in its conception and effect.¹⁰

'The original position was that baptism alone was the cure for sin; it was in itself sufficient for the needs of the believer. Experience, however, showed the difficulty of this position; it became more and more clear that Christians were not immune from the attacks of sin, and if sinlessness were really required from them as a condition of salvation few indeed would be saved. Sin after baptism thus became a practical problem; a

¹ Cf. esp. Tit 1¹⁵, Ro 14^{14, 20}, 1 Co 6¹¹, 2 Co 7¹, 1 Jn 3³, 1 P 1²², Ac 15⁹, Eph 5²⁶, He 9^{13c}, Ac 10^{14c}.

² ERE ii. 377^b, art. BAPTISM (New Testament); cf. also Chrysostom's *οἱ αἰρετικοὶ βάπτισμα ἔχοντες, οὐ φώτισμα*, ap. Suicer, *Thesaurus*, Amsterdam, 1728, s.v. φώτισμα.

³ At a much later period Cyprian speaks of 'lavacrum regenerationis et sanctificationis' (cf. Cyprian, Ep. lxxiv. 7, 6, *de Bono Patientiæ*, 6; also Tertullian, *de Res. Carnis*, 47; for other references in Cyprian to purification in baptism see *de Hab. Virg.* 2, 23, Ep. lxxviii. 15, lxxiii. 18).

⁴ Cf. 1 Co 6¹¹, He 10²².

⁵ Note also the prayer, 'We call upon thee for this infant, that he, coming to thy holy Baptism, may receive remission of his sins by spiritual regeneration.'

⁶ A. Harnack, *Hist. of Dogma*, Eng. tr., London, 1894-99, ii. 140.

⁷ Note the comprehensiveness of the words of absolution: 'by his authority committed to me, I absolve thee from *all* thy sins.'

¹ Only the greatest saint can realize that he is the greatest sinner.

² E.g., Jn 26^{32s}, Lk 22³, Mk 14⁷⁵, Lk 5¹⁴, Ac 21^{24, 26}, etc.

³ H. M. Luckock, *Footprints of the Son of Man as traced by Mark*, ed. London, 1902, p. 149^{f.}, on Mk 7. Not only does Christ not condemn, but, on occasion, He orders the observance of rites of purification (cf. Mk 14⁴). Yet it should be remembered that He did not always Himself observe the traditions in this respect (Lk 11³⁸), nor did His disciples (Mk 7²).

second baptism, suggested by some, was regarded as impossible, but nevertheless analogous rites—in so far as they were looked upon as sacraments—were established. Penitence (or Penance, to use the more customary word) and the Mass came to be used as the sacramental means whereby Christians could be cleansed from the stains of post-baptismal sin, and the ministry of the Church developed into a great system for their administration, in order to heal and comfort souls stricken with sin and calling for the care of a physician.¹

The Roman Church to this day insists upon this formal purification for the individual before allowing access to the second great sacrament. It is impossible not to recognize in the provision for frequent and continual purification of a formal kind, even apart from any particular material ceremony, a dangerous resemblance to the older and pre-Christian usages.² The Church of England has never insisted upon this pre-communion purification, yet has rightly recognized the essential idea in the collect at the opening of the Communion Office: 'Cleanse the thoughts of our hearts . . .', and in the confession and absolution which must precede the reception of the sacrament. It is on these lines that purification is treated in the other offices and prayers of this Church.³

3. Purification and the contemplative life.—The idea that underlies purification has always appealed most strongly, as we have already hinted, to the more earnest and sincere Christian. It has been the initial cause of many great movements, both within and without the orthodox body; the Novatian and the Montanist movements, *e.g.*, were attempts to realize this idea. But it is above all in mysticism (*q.v.*), with its passionate desire for communion with God, that we find the greatest stress laid upon purification. It is an essential part of the system. It is the earliest path—'the purgative way'—which alone can lead to 'illumination.' To those who follow it will come indeed many a 'dark night of the soul,' until the end is reached and the achievement of purification brings light. The process is a gradual advancement, step by step, at each of which something is left behind. As the runner strips himself of one garment after another in order to attain the goal that is set before him, so the mystic must disencumber himself of all material or spiritual hindrances, as he strives after purification.

'Now be assured that no one can be enlightened unless he be first cleansed or purified and stripped. . . . Thus there are three stages: first, the purification; . . . The purification concerneth those who are beginning or repenting, and is brought to pass in a threefold wise; by contrition and sorrow for sin, by full confession, by hearty amendment.'⁴

This notion of purification as an absolutely essential element in the religious life was the immediate cause of monasticism (*q.v.*). It was in order to escape the defilement which, it was thought, was almost necessarily incurred in living the ordinary life of men that the extraordinary life was adopted. There were fewer enemies to contend with in the seclusion of the cell or the monastery, and against these the most severe measures were taken—fastings, self-mortifications, and constant prayer. Only a state of purification could bring about that condition of holiness which is the passport to eternity.⁵ The practice and exaltation of celibacy most probably find here their root motive. Thus the two greatest developments of the contemplative life—mysticism and monasti-

cism—may fairly be said to be developments of the Christian idea of purification.¹

4. Purification through suffering.—No article on Christian purification would be complete without consideration of the purificatory influence inherent in suffering. Perhaps the best illustration of this to be found in literature is contained in the beautiful poem of Mrs. Hamilton King, *Ugo Bassi's Sermon in the Hospital*.² It is not given to many to attain purification in this way, though opportunity is rarely lacking.

'It is only those who are already far in the path of spiritual growth who are purified by suffering, even as the Captain of our Salvation was thus made perfect.'³

Those, however, who do through suffering win the peace of God which passeth all understanding reach a level of purification which is higher and more perfect than that which can be attained in any other manner.

The suffering which comes to us through the fault of another would seem to possess a very high capacity for purification. This kind of purification embraces the idea that lies at the root of atonement. It is exemplified in its most perfect form in the life of Christ Himself,⁴ and it is on these lines only that it is possible for men to become pure even as He is pure and, in so scaling the rugged heights of true Christian purification, to win for themselves the beatific vision of the promised land which lies beyond—'the glory that shall be revealed.'

5. Cleansing of the conscience.—When it has been once realized that it is no longer purification of the body but purification of the conscience and character that is the really essential thing,⁵ it will be seen that the need for purification may exist even when the act which would render the person obviously impure has not been committed. This is indeed definitely taught by Christ Himself in the Sermon on the Mount.⁶ Many other nations besides the Jews have required a ceremonial purification of the body after deeds of lust and bloodshed. Christianity, if it is to follow the conception of its Founder, requires the purification of the conscience after the 'will' to commit such deeds, even when the opportunity of actually doing them has been lacking. Again, non-Christian ceremonial purification can be and sometimes has been refused, but Christian purification can never be refused to the true penitent who seeks for it.

6. Ceremonies of purification still observed in Christianity.—The Feast of the Purification of the Blessed Virgin Mary is still observed by the Church. But the ceremony which it commemorates was a purely Jewish rite, though it has been taken over by Christianity in the Office for the Churching of Women after childbirth. The notion of legal uncleanness, which prevented the Jewish mother from appearing in public until after the ceremonial purification had been performed, has been dropped.⁷ The many women who still insist very strongly on going to this service before going elsewhere do so from the notion of thanksgiving rather than from that of purification. They have no idea of being legally unclean. The offering of the lamb, pigeon, or turtle-dove which was connected with the purification idea has given place to a money-offering, which, though forming

an actual part of the service, again emphasizes the thanksgiving motive.

7. Purification of churches after suicide, sacrilege, etc.—Ceremonies of purification are still observed in many churches for reasons of this nature. The idea is that of restoration to the former state of holiness conveyed by consecration.

8. Purification of the sacred person.—The Church of Rome has many elaborate directions for the purification of the individual priest after accidental or unconscious defilement.

LITERATURE.—See the works mentioned in the article.

H. C. TOWNSEND.

PURIFICATION (Egyptian).—I. **INTRODUCTORY OBSERVATIONS.**—Owing to the prevailing climatic and geographical conditions the entire water-supply of Egypt is derived from the river Nile. When the weather is hot, the modern Egyptian bathes at least once a day either in a bath in his house or else in the river or a canal. The heat and dust combined make washing essential for health and comfort. Washing, therefore, must have been one of the common acts of daily life in ancient no less than in modern Egypt.

The ground that the Nile cannot reach by irrigation, inundation, or percolation is to all appearances dead—a barren and dusty tract of crumbling clods. But, when once this ground is inundated or irrigated, it soon begins to show signs of life and grows green with vegetation in a remarkably short space of time.

Thus the same Nile waters both cleansed and vivified—a phenomenon that seems to have profoundly influenced the ancient Egyptians' ideas about purification (see below, esp. V. 1, 3).

II. **MATERIALS AND VESSELS EMPLOYED FOR PURIFICATION.**—1. **Materials.**—Water was the most usual as well as the most natural purificatory medium. Natron, i.e. native carbonate of soda¹ (variously named *hsmn*, *smn*, *smn*, *ntr*, *bd*),² was often dissolved in the water to enhance its cleansing properties.³ Natron was also used dry (see below, V. 2 (d), 7 (a)); a box of this substance is included among the requirements of the dead in certain Middle Kingdom funerary prayers.⁴ Incense was used for fumigation, but was apparently also employed like the dry natron (see below, V. 2 (e) (ii.)). Sand was likewise regarded as purificatory (see below, VI. 4), and so, in a secondary sense, were food and drink (see below, V. 1 (d)).

2. **Vessels.**—Two varieties of metal ewer and a basin were used for washing the hands.⁵

The tall thin ewer was named *snb-t*,⁶ the squat one, apparently, *pr-t*⁷ or *hsmny*;⁸ the basin was named *h'w*⁹ or *š'uty*.¹⁰ The same kind of basin was used for feet-ablutions,¹¹ but the ewer employed for this purpose was of a very curious shape.¹²

All these vessels could be made of gold or silver, but were more usually of copper.¹³ For bathing or

sprinkling purposes, earthenware pitchers were employed; also a metal vase named *hs-t*, or a *snb-t*-ewer.¹

The pitchers, variously designated *nms-t*,² *dšr-t*,³ and *'b-t*,⁴ were sometimes of gold.⁵ The *hs-t*-vase was usually copper, but sometimes gold or silver.⁶ *Plankhi Stele*, line 112, mentions 'all the vessels for the purification of a king, of gold and every precious stone.' The stone vessels would perhaps be those originally made of pottery. For fuller details and a number of useful references see Kees, *Der Opferdienst des ägyptischen Königs*, Leipzig, 1912, pp. 54 ff., and 212-214.

III. **SECULAR WASHING, SANITATION AND SANITARY OBSERVANCES.**—In an Old Kingdom palace the toilet-rooms were designated 'House of the Morning' (*pr-dw'-t*), in a noble's house of the Middle Kingdom 'Cabinet of the Morning' (*hnyty dw'-t*). They would have comprised from quite early times a privy⁷ and a bathroom,⁸ of which excellent examples (XVIIIth dynasty) have been unearthed at El-Amarna.⁹ The 'House' or 'Cabinet of the Morning' was probably so named because, as in modern Egypt, ablutions were performed immediately upon rising.

Morning ablutions were so much a matter of course that a 'wash' (*'w*) is not an uncommon term for a light morning repast—a *petit déjeuner* doubtless being served directly the morning toilet had been completed.¹⁰

The compound *pr-dw'-t*, 'House of the Morning,' obsolete after the Old Kingdom, survived right down into Ptolemaic times as the name of the temple vestry.¹¹

1. **Bathing.**—A Pharaoh or noble, when he took a bath, seems to have squatted or stood in a tank, or upon a stone slab or pedestal, while servants poured water over him;¹² the water often contained natron.¹³ Two attendants rubbed him dry,¹⁴ after which he was sometimes fumigated with incense.¹⁵

2. **Purification of the mouth.**—The mouth was ceremonially purified by chewing natron (see below, V. 2 (e) (ii.)), 7 (a)); but this was doubtless also a secular practice. Incense was apparently put to a similar use. The mouth, one would imagine, was afterwards swilled out with water. The natron was certainly spat out.¹⁶

After the mouth had been cleansed with natron, it was said to be like the mouth of a sucking calf on the day it was born.¹⁷ A light repast, consisting of a loaf of bread and a jar of drink, was called *t'w-r*, 'a mouth-wash.'¹⁸ Perhaps the word *t'w*, 'breakfast,' mentioned above, is an abbreviation of *t'w-r*. If so, the official in charge of 'all the places of the king's mouth-ablution'¹⁹ was not a courier who assisted at the royal toilet, but, as Sethe supposes,²⁰ the person responsible for the proper serving of the Pharaoh's breakfast.

3. **Washing of the feet.**—The feet would have been frequently washed, as in the modern East;²¹ there was a special ewer for feet-ablutions (see above, II. 2).

¹³ Lacau, 28024, nos. 25, 26, 28123, nos. 41, 42; *Book of the Dead*, *loc. cit.*

4. **Cleaning of nails.**—Care was taken to keep the finger- and toe-nails clean.¹

5. **Shaving.**—(a) *The face.*—From the time of the early Old Kingdom² and onwards the custom was to shave off all facial hair, a false beard being assumed on special occasions.³ The moustache is very rare.⁴

(b) *The head.*—From early Old Kingdom times the hair of the head was either closely cropped or shaved off entirely, wigs being worn by the upper and well-to-do classes.⁵

For cooks and personal servants with their heads close shaven for the sake of cleanliness see Blackman, *Rock Tombs of Meir*, ii. pl. xviii. 16, iii. p. 31, pls. xxiii. 1, xxv. xxvi.; Newberry-Griffith, *El-Bersheh*, i. pl. xiii.; P. Virey, *Le Tombeau de Rekmara*, Paris, 1889, pl. xlii.; W. Wreszinski, *Atlas zur altägypt. Kulturgeschichte*, Leipzig, 1914, pl. 7a. For representations of barbers shaving men's heads see Newberry, *Beni Hasan*, ii. pls. iv., xiii. Razors (?) formed part of the burial equipment in the IIIrd dynasty.⁶

6. **Depilation.**—There is evidence for thinking that depilation was practised by the upper classes and priests in the Old and Middle Kingdom, as it certainly was by the priests in later times (see below, V. 7 (f)).

There is a passage in *Sinuhe* (line 291f.) which suggests that part of that exile's toilet upon his return to civilization consisted in the removal of body-hair.⁷ It should be noted, too, that the modern Egyptian peasants of both sexes shave off their public hair.

7. **Purification before a meal.**—The Egyptians, in ancient as in modern times, purified themselves before partaking of food; indeed, as Griffith points out,⁸ 'purify oneself' is equivalent to 'take a meal.' This purification would usually have consisted merely in the washing of the hands.

'Thy hands are washed . . . thy ka washes himself, thy ka sits down, he eats bread with thee.'⁹ Even before drinking a cup of beer, a man would have his hands washed by his wife.¹⁰ The washing of the hands was often followed by fumigation with incense.

In the list of requisites for a banquet¹¹ 'water for washing the hands' is immediately followed by 'incense.' Davies¹² shows two servants, one of whom pours water from a ewer into a basin, while the other holds a brazier of burning incense.¹³ Table servants were required to have clean hands.¹⁴

IV. **SOCIAL PURITY AND PURIFICATION.**—By this is meant the avoidance or removal of impurities which impair man's relations with the community.

1. **Circumcision.**—See art. CIRCUMCISION (Egyptian), vol. iii. p. 670 ff.

2. **Purification at birth.**—A child was washed immediately after birth.¹⁵ The cutting of the umbilical cord seems to have been associated with purification and is given a religious signification in *Book of the Dead*, xvii. 19.¹⁶

3. **Purification after sexual intercourse.**—The modern Egyptian men of the peasant class are very scrupulous about purifying themselves after sexual intercourse or after a nocturnal emission, sometimes having a bath, and always washing the genital organs.

¹⁶ See Grapow, *Germ. tr.*, p. 10, n. 1.

Perhaps this explains why the citizen (*nbs*) regularly bathed in the pool after spending the day with the wife of Ubaöner in the pavilion.¹

4. **Purification of women.**—(a) *During menstruation.*—The Egyptian women washed themselves with water containing natron during their periods.²

The Egypt. for 'menstruate' is *tr hsmn*, 'make a purification with natron' (for *hsmn* as an active verb, 'purify,' see H. Brugsch, *Hieroglyph. demot. Wörterbuch*, Leipzig, 1867-82, p. 996; *RTr* xvi. [1897] 58 f.).

The women evidently performed these particular ablutions in a special part of the house.³ This, and the women's quarters in general, seem, as in a modern Egyptian house, to have been upstairs.⁴

(b) *After childbirth.*—Women purified themselves for fourteen days after childbirth. When this purification was accomplished, they could resume their household duties.⁵ The purification consisted in washing and in fumigation with incense,⁶ also perhaps in eating a special kind of cake.⁷ The *pr-mst*, 'birth-house,' also called *ht-bw*, 'house of purification,' attached to Ptolemaic temples of goddesses, suggests that a woman remained secluded in a special apartment during her *accouchement* and subsequent purification.⁸ Chassinat believes that this seclusion extended also over the whole period of pregnancy.

V. **RELIGIOUS PURITY AND PURIFICATION.**—By this is meant the avoidance or removal of impurities which impair man's relations with the gods.

1. **Purification of the living Pharaoh.**—Many ceremonies and beliefs which originally were connected with the king alone obtained, during the feudal period, a general use and application; unless this is recognized, their true significance is often obscured.

(a) *In infancy.*—The Pharaoh was apparently fitted for the kingship by a purification undergone in early childhood. The officiants, according to the XVIIIth dynasty accounts, were supposed to be the gods Atum and Month, or Re-Harakhte and Amün.⁹ The ceremony, which consisted in sprinkling the child with water, was not merely purificatory; it endowed the prospective ruler with vital force and certain divine qualities.¹⁰ It is possible that in early times royal children were washed at birth in the sacred pool of the State god.¹¹

(b) *Before coronation.*—Piankhi, on his way to Heliopolis, 'was purified in the midst of the Cool Pool,' and 'his face was washed in the water of Nun in which the sun-god washes his face.'¹² By this act Piankhi was brought into close association with the sun-god, who was about to be asked to recognize him as his son. Like the pilgrimage to Heliopolis itself, it probably formed part of a procedure followed by every Pharaoh.¹³ It was with a view to his being affiliated to the sun-god that the deceased Pharaoh, apparently reborn, is said to bathe, or be washed by Atum, in the sacred Heliopolitan waters.¹⁴

¹³ Breasted, *Ancient Records*, ii. 222.

¹⁴ Pyr. 211 f.; cf. also *Book of the Dead*, clxix. 19 f., and see above, (a).

(c) *At coronation.*—The coronation purification was a renewal of that undergone in infancy. It was performed before the diadems were placed upon the Pharaoh's head,¹ by a priest impersonating the god Yahes (*I;hs*).

The god thus addresses the king: 'I purify thee with the water of all life and good fortune, all stability, all health and happiness.' The Pharaoh, therefore, was not only purified, but endowed with the qualities which fitted him for his new position, and which he possessed, *qua* Pharaoh, in common with the sun-god.² Perhaps this ceremony and that of (a) above have some connexion with the primitive ideas about kingship and fertility. In both scenes³ the water issues from the vessels as strings of

symbols of life, .

(d) *Before officiating in a temple.*—Before he could enter a temple to participate in any ceremony, the Pharaoh had to be purified by two priests impersonating Horus and Thôth⁴ or Horus and Seth.⁵ Cf. 'Horus and Thôth hold out their hands to receive thee when purifying thy body.'⁶ This purification, which took place in the House of the Morning,⁷ consisted, when the full procedure was carried out, in sprinkling the king with water, which sometimes contained natron,⁸ fumigating him with incense, and presenting him with natron to chew⁹ and thereby cleanse his mouth (see below, V. 2 (d) (e)); he was also offered food and drink.¹⁰

The water, called the 'water of life and good fortune,'¹¹ and 'that which renews life,'¹² was brought from the sacred pool with which every temple seems to have been provided.¹³ The purification, therefore, besides cleansing the Pharaoh, imbued him with divine qualities; it also reconstituted him, as is shown by other formulae pronounced during the ceremony, which are like those accompanying the funerary purifications. Food and drink were also purificatory in this secondary sense, for they possessed similar virtue to that of water and incense.¹⁴

Probably on ordinary occasions the king merely washed his hands,¹⁵ after, perhaps, being lightly sprinkled with water by the two priests. It is unlikely that the fumigation with incense was ever omitted.

The king is described as 'pure of hands when performing the ceremonies.'¹⁶ For a realistic representation of the king washing his hands in the House of the Morning see Lepsius, iv. pl. 4a. In the sun-temple of Nusserrê some or all of the ablutions were probably performed in the two basins which are sunk in the pavement just outside the door of the vestry, one on either side of it.¹⁷

(e) *At a Sed-festival.*—At this festival special importance seems to have been attached to the washing of the king's feet¹⁸ and hands.¹⁹

In the mutilated scene from the sun-temple part of the special can for feet-ablutions is still recognizable.²⁰

2. Purity and purification after death.—Many of the funerary texts found in general use during and after the feudal period treat of what was once considered the destiny of the royal dead only (see above, under i.).

As the Pharaoh during his lifetime had to be purified before entering a temple, so after death he had to be purified before he could enter the solar, or Osirian, kingdom, the inhabitants of which, and all things connected with them, were pure.

Examples are the abodes of the sun-god,¹ those who sail in the boat of Osiris,² the lotus-flower which the sun-god holds to his nose,³ and the deceased's throne in heaven or his seat in the sun-god's bark, either of which he can occupy only if he himself is pure.⁴

Purity was therefore the only passport to posthumous happiness.

Accordingly, the dead Pharaoh's ascent to heaven did not take place until his purity was assured. 'Thou art pure, thou ascendest unto Re.'⁵ 'Piôpi is pure . . . this Piôpi ascends to heaven.'⁶ The guardians of the gates of the under world allow the deceased to cross their thresholds because he is pure.⁷

This purity as originally conceived was to a large extent physical.

Before Thôth and the sun-god can draw the dead king up to heaven, it must be said of him: 'The mouth of N. is pure, the Great Ennead have censured N., and the tongue which is within his mouth is pure. What N. abhors is dung, N. puts urine far from him. N. abhors this. N. eats not this abomination.'⁸

The purity demanded by the gods of the dead Pharaoh, according to the Pyramid Texts, was not incompatible with gross sensuality or flagrant immorality.⁹ It is, however, occasionally stated that something more than physical cleanliness was expected of him.¹⁰ From the time of the Vith dynasty onwards¹¹ the claims made by the dead to moral integrity and purity become more and more prominent; they find, perhaps, fullest expression in the *Book of the Dead*.

In ch. cxxx., the 'Assertion of Sinlessness,' among the many sins which the deceased claims to be innocent of are fornication, masturbation ('Introduction,' line 15), and adultery ('Confession,' line 20).

In their conceptions of moral purity and righteousness the Egyptians very rarely, at any stage of their religious development, lost sight of the sanitary observances in which they had their origin.

'Let me pass,' says the deceased to certain gods who block his way, 'I have purified myself upon this great *w'r-t*, I have put away my evil, I have banished wrong, I have driven to the earth the evil appertaining to my flesh.'¹²

There were several ways of attaining that purity upon which the welfare of the dead so entirely depended.

(a) *Ceremonial acts performed by the deceased in his lifetime.*—These acts, which had associated, or identified, him with certain divinities and so rendered him pure, are (i.) bathing in sacred waters or pools (see V. i and 8 (b)); (ii.) participation in the Osiris mysteries (see V. 8 (c)).

(b) *Spells*, asserting (i.) that those acts had been performed;¹³ (ii.) that all impurities had been avoided.¹⁴ By means of these potent formulæ the things alleged, however untrue they might be, became actualities.¹⁵

(c) *Ablutions performed after death by the deceased himself* (i.) on earth: in the 'water of

¹⁵ Cf. Gardiner's remarks about the ceremonial voyage to Abydos (Davies-Gardiner, *Tomb of Amenemhet*, p. 47 f.); cf. also Pyr. 921, which describes the followers of Horus not only as washing the dead king, but as reciting spells whereby he was rendered righteous and so might ascend to life and happiness (Breasted, *Religion and Thought*, p. 171 f.).

Khereha,¹ the two pools at Herakleopolis Magna;² (ii.) in the other world: he might, like the sun-god, cleanse himself in the Field or Pool of Earu,³ or squat on a stone (cf. below, V. 7 (b)) beside the Pool of the God and wash his feet.⁴

(d) *Ceremonies performed for him by the gods* (i.) on earth: the deceased might be washed by Satis in the waters of the First Cataract—the source of the Nile, according to tradition,⁵ and therefore especially pure and sacred⁶—or by Atum at Heliopolis;⁷ (ii.) in the other world: in the Field of Life, the birth-place of the sun-god, Kebhōwet, daughter of Anubis, might empty her four pitchers of water over the deceased and then fumigate him with incense.⁸ He might bathe with the sun-god in the Pool of Earu and then be rubbed dry by Horus and Thōth,⁹ or wash his feet in the sun-god's own silver basin which had been fashioned by Sokar.¹⁰ He is described as sitting upon the lap of Mekhentirti while his mouth is purified with natron (see below, (e) (ii.)) and the gods clean the nails of his fingers and toes.¹¹ Again, he is shaved by Duawer,¹² and his face is washed by that god and massaged by Sokar.¹³

(e) *Ceremonies performed by the living*.—Purification rites figured prominently in the funerary ceremonies, in which the deceased (originally the dead Pharaoh) was identified with Osiris¹⁴—the officiants impersonating Anubis, Horus, and other divinities.¹⁵ Doubtless it was believed that the purifications supposed to be performed by the gods in the other world actually were performed if they were faithfully mimicked on earth and the proper formulae recited.¹⁶ One of the funerary libation formulae describes the washing of the dead Pharaoh by Horus.¹⁷

(i.) In the *w'b-t*, 'Place of Purification,' i.e. the embalmer's workshop,¹⁸ the corpse was washed with water in which various kinds of natron had been dissolved,¹⁹ and with wine, milk, and beer.²⁰

(ii.) At the 'Opening of the Mouth' in the 'House of Gold,' i.e. the sculptor's studio,²¹ and at the burial and periodical services in the tomb-chapel, various purification ceremonies were performed on behalf of the deceased. These consisted in sprinkling the mummy, or its substitute, the statue, with water, fumigating it with incense, offering it libations, and holding up to its mouth (see III. a, V. 2 (d), 7 (a)) balls of natron and incense.²²

3. The significance of the posthumous purifications.—As Junker has clearly shown in his *Götterdekret über das Abaton* (Vienna, 1913), the object of the ceremonies performed on behalf of Osiris was to furnish the god with never-failing supplies

of vital force and so keep him perpetually rejuvenated, thereby securing a high Nile and a fruitful season. Since every person (originally only the Pharaoh) became at death an Osiris, the same ceremonies were performed for the dead as for the god.

The funerary washings, sprinklings, fumigations, etc., possessed, therefore, a secondary, what we might term sacramental, significance; they both helped to reconstitute the deceased and, together with the food- and drink-offerings, supplied him with nutriment which enabled him to continue his existence and to maintain unimpaired all his reconstituted faculties and powers.

(i.) The water with which the corpse or statue was washed or sprinkled not merely cleansed the deceased from his impurities but brought together the head and bones and made the body complete (*tm*) in every particular.¹ Accordingly either stream of water that flows about the figure of the dead User² termin-

ates in a large symbol of life,  (see above, V. 2). With the

offering of libation-water to the deceased is associated the giving to him of his spirit (*k*); his power (*sh*), and at the same time he is bidden to stand upon his feet and to gather together his bones.³

(ii.) Incense-smoke had the same effect, cleansing the dead 'from all the evil appertaining to him,' and making him 'strong and powerful above all gods.'⁴

(iii.) For the mysterious virtue of the food- and drink-offerings see Breasted, *Religion and Thought*, p. 60.

(iv.) The deceased was also, of course, supposed to be similarly reconstituted by the purifications that he underwent in the other world. After ablutions in the Field of Earu he received 'his bones of metal' (*bt*) and 'stretched out his indestructible limbs which are in the womb of the sky-goddess.'⁵ By the washings of Horus and Thōth and other divinities the dead was cleansed from all impurities, moral and physical, his body came together again or was entirely refashioned, and he was fit to enter heaven or the *Tei*, i.e. under world.⁶

4. Purification of divinities in the temple ritual.—Owing to the influence of the Osiris myth, and to the fact that the Pharaoh was Horus and every god was conceived of as his father, the ceremonies performed in the temple and tomb-chapel were in many respects identical. Every divinity, for cult purposes, was treated as an Osiris, and his or her statue was purified like that of a dead person—and for the same reasons.

When his statue was sprinkled,⁷ Amūn was acclaimed not merely as pure but as reconstituted: 'Unite unto thee thy head, unite unto thee thy bones, make fast for thee thy head unto thy bones . . . what appertains unto thee is complete; pure, pure is Amūn, Lord of Karnak!'⁸ The libation-water also is 'life-renewing.'⁹ The incense both purifies the god¹⁰ and imbues him with life and vigour.¹¹

5. Purity and purification of offerings to gods and dead.—(a) *Purity*.—All offerings made to the gods and dead, and everything used in their service, had to be pure.

The door-posts of temples often bear the following, or a similar, inscription: 'The offerings and all that enters the temple of such-and-such a divinity—it is pure.'¹² The living pray that the mortuary equipment of the dead may consist of 'every good and pure thing.'¹³

Maspero, *La Table d'offrandes des tombeaux égyptiens*, Paris, 1897, pp. 4–12.

Herodotus¹ describes the measures taken to ensure the ceremonial purity of victims offered to the gods, and in Græco-Roman times this was reckoned a matter of supreme importance.² The testing of at least funerary victims was customary as far back as the Old Kingdom.³

In A.D. 122-123 a regulation was introduced forbidding the officiating priest to offer a victim until he had received a written certificate of its purity.⁴ For an extant example of such a certificate see L. Mitteis and U. Wilcken, *Grundz. und Chrestomathie der Papyrskunde*, Leipzig, 1912, i. ii. 'Chrestomathie', p. 118, no. 89.

(b) *Purification*.—Offerings were purified by pouring libations over them and by fumigating them with incense.⁵

Virey (pl. xxv.) shows a lector pouring water over the carcass of a victim which a butcher has begun to dismember. Offerings presented to the dead could be washed or sprinkled with water containing natron, the purifying qualities of which were thus transmitted to the dead.⁶

The purification of the offerings possessed the same significance as the other purificatory rites.

As already seen (V. 3), the water used in lustrations and libations, incense-smoke, and food- and drink-offerings were endowed with mysterious reconstructive powers. The soaking in the liquid, therefore, and the fumigation added to the already existing virtue of the food, and, when the formula of presentation was recited, the combined qualities were imparted simultaneously to the god's (or dead person's) soul (b).⁷

The table or altar upon which the offerings were placed had first to be purified with water and incense.⁸

The following formula shows that the water might contain natron: 'It is pure. Purified is the offering-stand (*wḏhw*) with natron, with cool water (*ḥḥw*), with incense . . . for the ka of the Osiris N.'⁹

6. *Purification of temples and of buildings used for religious ceremonies*.—(a) *Consecration of a new temple or shrine*.—A new temple was solemnly purified before it was handed over to its divine owner.¹⁰

The two chapels or booths of Upper and Lower Egypt that figure in the funerary ceremonies appear to have been purified by having water sprinkled over them.¹¹

(b) *Renewal of purification*.—It was sometimes thought advisable to purify a temple afresh.

A certain Sebekhotp informs us that he was sent by Sesostriis II. to purify the temples in the Theban nome 'for the sake of the pure celebration' of the monthly festival and the clean observance of the half-monthly festival.¹²

Purification would naturally be necessary after the profanation of a temple or sacred city.

The day after Piankhi had taken Memphis by assault 'he sent men into it to protect the temples of the god, hallowed (?) the sanctuaries of the gods, offered to the community of gods (*dḏt*) of Hetkeptah, purified Memphis with natron and incense.'¹³ So also Mentemhet 'purified all the temples in the nomes of all Patoris, according as one should purify violated temples,' after the Assyrian invasion in 667 B.C.¹⁴

7. *Purity and purification of the priests*.—The characteristic mark of the priest, from the earliest down to the latest period, was his purity. This

appears in the ordinary word for priest, *wē'eb*, 'pure one,' Coptic *ⲙⲉⲛⲃ*.

The retention of the word by the Christian Egyptians suggests that even with them it was still his purity, rather than his sacrificial and intercessory functions, that separated the priest from the layman.

A number of measures were taken by the priests to ensure their absolute purity.

(a) In the Græco-Roman period a priest had to purify himself for several days before entering upon his course¹—a practice that is evidently very ancient.²

Pap. Turin, pl. 67, line 9 ff. (*temp.* Ramesses IV.-V.) shows that this prefatory purification comprised drinking natron for a specified number of days; until they were accomplished, the priest could not enter certain parts of the temple precincts nor carry the image of the god.³ The wailing women who bemoaned Osiris had to purify themselves four times before they could stand within the 'door of the Broad Hall';⁴ they also washed their mouths and chewed natron (see V. 2 (d), (c)), and fumigated themselves with incense, in order that both they and the lamentations with which they 'spiritualized' the dead Osiris might be pure.⁵ A passage in Gardiner, *Admonitions of an Egyptian Sage* (p. 76), suggests that the bread eaten by a priest during his prefatory purification and his course must be white bread (*ḥḥ*).

(b) Priests and priestesses had always to wash or sprinkle themselves before entering a temple or engaging in a religious ceremony; every temple seems to have possessed a tank or pool set apart for this purpose (cf. V. 1 (d)).

A priest pronounced a special formula when entering the temple 'after making his purification in the pure pool.'⁶ During the service he continually refers to his purity.⁷ G. Legrain and E. Naville (*L'Aile nord du pylône d'Amenophis III.*, Paris, 1902, pl. xi. B) reproduce a mutilated relief depicting priests and priestesses purifying themselves before entering the temple. They seem to be standing in two shallow pools or tanks, while water is poured over them.⁸ The descriptive text reads: 'Going down to wash by the prophets, the god's wife, the god's hand (*drt ntr*), in the Cool Pool, (and then) entering into the temple.' According to Herodotus,⁹ the priests washed in cold water twice every day and twice every night.

Legrain found at Karnak an alabaster pedestal—bearing a dedicatory inscription of Tethmōsis III.—on which the priests stood while they purified themselves.¹⁰ Cf. the stone beside the Pool of the God on which the deceased washed his feet.¹¹

(c) The priests also perhaps fumigated themselves with incense before officiating in the daily service (see (a) and V. 1 (d)).

Before taking hold of the brazier, which was to contain the burning incense, the priest said: 'Hail brazier . . . I am cleansed by the Eye of Horus.'¹² 'Eye of Horus' in this context must surely mean incense.

(d) Great emphasis is laid upon the purity of the priest's hands.

Ikhnofret says of himself: 'I was pure handed in adorning the god, a *sem*-priest with clean fingers.'¹³ 'Pure of fingers' is the oft-recurring epithet of priests.¹⁴

(e) *Paring the nails*.—The priests cut their nails short so as not to harbour dirt which would render them ceremonially unclean.¹⁵

Reliefs in the mastaba of 'Enkh-me-ḥōr, a *sem*-priest and

lector,¹ possibly depict the cutting and cleaning of priests' finger- and toe-nails, and not, as has been suggested, surgical operations.

(f) *Depilation*.—Herodotus² states that the priests in his day shaved their whole body every third day to ensure ceremonial purity.

Depilation seems to be an ancient practice (see above III. 6). The depilation of a priest is perhaps depicted in the *mastaba* of 'Enkh-me-hôr;³ the man's leg is being rubbed to remove hair. The adjacent scene possibly represents a priest having his back scrubbed to render it ceremonially clean. It is said of the women who impersonated Isis and bewailed Osiris: 'Their body is pure . . . the hair of their body has been removed.'⁴

(g) *Shaving*.—The clean-shaven head does not appear to have become the distinguishing mark of the priestly caste⁵ till towards the end of the XVIIIth dynasty.⁶ In the Græco-Roman period the regulations about the priests shaving their heads were very strict.⁷

(h) *Dress*.—From the time of the New Kingdom onwards the priests seem to have been very punctilious in the matter of dress.⁸ As early as the IXth to Xth dynasties we learn that a priest during his period of service had to wear white sandals.⁹

(i) *Circumcision*.—See art. CIRCUMCISION (Egyptian), vol. iii. p. 670 ff.

8. *Purity and purification of the laity*.—(a) *Purification before entering a temple or sacred place*.—Until the Græco-Roman period we know practically nothing about the purification of the lay people before entering a temple,¹⁰ but we may be certain that ablutions of some sort were deemed necessary. There is possibly a reference to this practice in an inscription dating from the reign of King Teti of the VIth dynasty.¹¹ In the Old Kingdom it also appears to have been reckoned impious for those who had eaten an impure thing, *bwt*,¹² or who were still purifying themselves, *m'bw-sn*,¹³ to approach the portrait-statue in a tomb-chapel, or indeed enter the building (cf. below, VI. 1). Ch. lxiv. of the *Book of the Dead*, line 46, speaks of a worshipper's hands as pure when praising the god. Herodotus¹⁴ says that a man had to discard his woollen cloak before entering a temple.

Hero of Alexandria (fl. c. 250 B.C.) says that 'stoups (*περιπάρηθρα*) for the sprinkling of those who enter' stood at the entrances to Egyptian temples.¹⁵

Perhaps we have examples of the *περιπάρηθρα* of Hero in certain large stone vessels of the Ptolemaic age, which, as the inscriptions show, came from temples, and which, apparently, were meant to hold water. Some of them are

decorated on the inside with the symbols , 'good fortune, life, stability,' which are associated (see above, V. 1) with religious ablutions.¹⁶

Hero also speaks of bronze wheels, which were apparently fixed to the doors of temples, and were

turned by those entering 'because it is thought that bronze cleanses.'¹

This is quite an un-Egyptian device, and was probably imported from the East.² Von Bissing describes what may be an actual example of one of these wheels and gives a drawing of it.³

An inscription of the Ptolemaic period⁴ states that people who had become impure through sexual intercourse,⁵ birth, miscarriage, menstruation, etc., had to pay dues before being admitted into the temple of Asklepios at Ptolemais. These were apparently paid into a money-box (*θησαυρός*) at the entrance to the temple.⁶

A bronze wheel was sometimes, it seems, associated with the money-box; thus a person paid his or her dues and then was purified by turning the wheel. Hero⁷ proposes to make a combined money-box and wheel; the former is to be surmounted by a bird which will sing when the wheel is turned.⁸ We also learn from Hero⁹ that bronze wheels were set up near the water-stoups. He therefore proposes to make a 'contrivance of such a kind that when the wheel is turned the water runs out of it for the sprinkling.'¹⁰ For further particulars as to these two contrivances, the former of which was a penny-in-the-slot machine worked by 5-drachma pieces, the latter an ingenious swivel tap, see Rochas, *Annales du Service des Antiquités*, xi. [1911] 95 ff.

(b) *Purification in sacred waters and pools*.—(i.) Near Khorepha (the Græco-Roman Babylon) there was a pool connected with the Heliopolitan sun-cult. In its waters the sun-god washed his face, and it was of advantage to mortal men to do the same.¹¹

(ii.) At Herakleopolis Magna there were two great pools in the precincts of the temple of Harshef, called the 'Pool of Natron' and the 'Pool of Me't.'¹² The worshippers of the god washed in these pools and so were cleansed from their sins; their offerings were washed in them also.¹³

An official of the Saïte period records that he built a wall 'behind the Pool of Me't.'¹⁴

(iii.) The water at the First Cataract, the traditional source of the Nile,¹⁵ was believed to be endowed with special cleansing properties, and therefore was used (or supposed to be used) for all the lustrations and libations offered to the gods and the dead.¹⁶ The fact that the dead go there to be bathed by the goddess Satis¹⁷ suggests that the living also performed ablutions there.¹⁸

(c) *The Osirian mysteries*.—Participation in the Osirian mysteries¹⁹ was productive of religious purity. This is suggested by certain statements in the *Book of the Dead*.

E.g., the deceased thus addresses the gods in the other world: 'I am pure of mouth, pure of hands, one to whom is said "Welcome, welcome" by those who see him; for I have heard those words which the ass spake with the cat' (cxxxv. ['Conclusion'] 13 f.). Again he says to his *ka* who stands in his way: 'Let me pass, for I am pure. I have made Osiris to triumph against his foes' (cv. 8); see also i. 3, 8-10, 13 f., clxxx. 13 ff.

9. *Purification before going into battle*.—Apparently the only reference to this custom in Egyptian writings is *Pyr.* 2190a-2191b,²⁰ which says:

'Horus comes forth from Khemmis. Buto Town arises for Horus, and he purifies himself there. Horus comes pure that he may avenge his father.'

VI. PURITY AND PURIFICATION IN MAGIC.—

1. The reciter of a spell and a magician must be pure. He who would recite ch. cxxv. of the *Book of the Dead* must be pure (*w' b*) and clean (*twr*), must be clothed in the finest linen and shod with white sandals (cf. above, V. 7 (*h*)), have his eyes painted with stibium, and be anointed with the finest unguent.

The purity demanded of the reciter could be obtained by washing with water containing natron¹ or by washing and fumigation in the sunlight.² Impure food, such as venison and fish, and sexual intercourse are to be avoided.³ In the case of one spell the reciter, and his servants also, are directed to purify themselves for nine days.⁴ To be successful in 'spirit-gathering' the magician must be pure.⁵

In vessel-divination by the moon the magician, if a medium is not used, must be 'pure for three days.'⁶ In divination by a lamp without a medium the magician, who must be 'pure from a woman,' is directed to lie down on green, i.e. fresh, reeds.⁷

2. Purity of the medium.—In 'spirit-gathering' the medium must be a 'boy, pure, before he has gone with a woman.'⁸

3. Purity and purification of the objects used.—The papyrus upon which a spell is written must be pure.⁹ The table used in 'spirit-gathering' is to be 'of olive-wood, having four feet, upon which no man on earth has ever sat.'¹⁰

In lamp-divination the lamp must be a white one 'in which no minium or gum-water has been put, its wick being clean'; it is to be filled with clean genuine Oasis oil, and is then to be set upon a new brick.¹¹ The *Book of the Dead*, ch. cxxv., rubric, directs that the representation of the Hall of the Two Truths be drawn upon a pure tile of porcelain fashioned of earth upon which no pigs or small cattle have trodden. The canopy (?) placed over the model of a boat used in a magical ceremony is to be purified with natron and incense.¹² In Griffith-Thompson, xxviii. 4, we learn that the bronze vessel used in divination is to be washed with water of natron.

4. Purity and purification of the place where the ceremony was performed.—The place where the magic rite was to be performed must be clean.¹³ Sometimes it had to be both 'clean' and 'dark without light,'¹⁴ and in addition must be purified with natron water¹⁵ or sprinkled with 'clean sand' brought from the great river.¹⁷ Furthermore, it is laid down that there is to be no cellar underneath it.¹⁸

VII. PURITY OF THOSE WHO WISHED TO HAVE AUDIENCE OF THE PHARAOH.—In the *Piankhi Stele*, lines 147–153, we are informed that of the four princes who came to the Pharaoh to pay homage three, being fish-eaters, were not admitted to the royal presence. Perhaps this scrupulosity on the part of Piankhi was due to the fact that he had just been affiliated to the sun-god (see above, V. 1 (*b*)), to whom fish was evidently supposed to be an abomination.¹⁹

LITERATURE.—This has been sufficiently indicated in the article.

PURIFICATION (Greek).—All the lower religions and most of the higher are concerned with the ritual of purification in its manifold forms; the higher are also deeply interested in purity as a spiritual ideal. The history of Greek religion falls into line with the general history of religions in both these respects. Its 'cathartic,' or purificatory, ritual agrees in essential respects with that of the other communities noted in the various sections of this article; it agrees also with the history of the higher religions in that a spiritual ideal, appealing to the more exalted or more sensitive minds, emerged from that ritual. Nevertheless, the phenomena of Greek purification, the ideas and the value attaching to it, bear the impress of the unique temperament of the people, and especially illustrate the pliancy with which the Greek communities could adapt the traditions of ritual to serve the purposes of legal and ethical development.

The student of this department of Greek religion is at once confronted by a chronological question that is also a question of origins: At what period and from what source did the cathartic system arise in Greece? It has been maintained that the whole of it was post-Homeric, and that in origin it was non-Hellenic, being derived from some Oriental or Anatolian source—e.g., from Lydia.¹ This view rests mainly on Homer's supposed silence concerning it, and his silence is explained by his ignorance of any such ritual, which therefore could not have existed in the period when the poems were composed. But we have now learned that Homer's 'silence' has to be carefully and critically judged and interpreted before it can be accepted as certain evidence that what he is silent about did not exist in his time. Also the statement that the Homeric poems are wholly silent concerning any ritual of purification from stain ignores the plain or the probable significance of certain texts. We read that Odysseus purifies his hall with fire and sulphur after the slaughter of the suitors;² we may suspect a religious sense of impurity as a motive, though we cannot prove it. But Hector's words, 'It is not meet for a man stained with blood and grime to offer prayers to God,'³ cannot but be interpreted in relation to a contemporary simple rule of ceremonial purity—the same religious rule that compels Achilles to wash his hands in lustral water before raising them in prayer to Zeus,⁴ or Telemachos to wash his hands in sea-water before praying to Athene.⁵ Also, we find the *χερσιν*, or lustral water, the purificatory value of which cannot be doubted, a constant concomitant of the Homeric sacrifice and libation.⁶

Again, we should consider the purification of the Achæan camp, ordered by Agamemnon as a method of expelling the plague, as by no means a merely sanitary or hygienic act, but as inspired by dæmonic or divine fear and therefore as a religious act of purgation; for it is the immediate preliminary to a sacrifice to Apollo, and the Achæans throw the *λύματα*, the articles with which they had purified themselves and their tents, into the sea; and this is a formal act suggesting that these things are tainted with a curse or religious contagion or the *πλασμα* of evil spirits.⁷

Therefore the evidence of the Homeric poems does not allow us, still less compel us, to suppose that the Greeks of the Homeric period were wholly destitute of purificatory ceremonies; had they been so, we should have to regard them, in the light of

¹ G. Grote, *Hist. of Greece*, 10 vols., London, 1838, i. 23; P. Stengel, *Die griechischen Alterthümer*, p. 114.

² *Od.* xxii. 481 f.

⁶ *Id.* vi. 267 f.

⁷ *Id.* ii. 261.

modern anthropology, as in this important respect distinguished from all the other races of the world. Doubtless the invaders from the north, whose blending with the southerners, the people of the Minoan culture, generated the Hellas of history, brought with them their own cathartic ideas and practices; and the evidence of legends and accounts of festivals recorded by the later Greek writers suggests that they found on the soil of Greece and in Crete a more elaborate system of the same significance and of immemorial antiquity.

But there is indeed a marked difference between Homeric society, so far as that is mirrored in the Homeric poems, and the succeeding periods of Greek life; and this difference should be noted at the outset before we proceed to the details of the subject. If we call the people to whom those poems were originally addressed the Achæans, we may venture to say that the Achæan conscience took its cathartic duties, such as they were, very easily and lightly; on the other hand, the later Hellenic conscience became anxious and at times even sombre in regard to such matters, and was often haunted by terrors of the ghostly world and by the feeling that certain acts, especially homicide, might arouse the wrath of unseen spirit-powers or ghosts, and that such dangers could be averted only by an elaborate prophylactic ritual of purification. There is a wide cleavage between the Achæan and the later Attic religious consciousness in this vital respect, as wide as that between the genius of Homer and the genius of Æschylus. The Homeric ghost is impotent and piteous, of no power in the social-religious world, no shadow on the brightness of that early epoch.¹ And nothing more vividly illustrates the moral light-heartedness of the Homeric world, so splendidly endowed in most respects, than its normal indifference concerning ordinary homicide. Man-slaying was regarded in certain cases as a sin and might at times concern the whole community; but nowhere in the poems is there any hint of the need of purification from the stain of bloodshed, which in later Attic law was prescribed even for the accidental slaying of a slave. Telemachos, who has committed the sin of shedding kindred blood, has merely to flee from the wrath of his kinsmen;² the suppliant who has fled from his home for having killed a man is at once admitted by Telemachos at the moment of a religious service.³

Now, much that appears post-Homeric, merely because the first record of it belongs to the later period, may be an ancient inheritance of the pre-Hellenic stock that was submerged temporarily by the wave of northern invasion but rose to the surface again and re-asserted its traditions. So the later prevalence of a cathartic system, especially elaborated in regard to bloodshed, may only be another example of revival.

Such a revival would receive strong stimulus from the diffusion from Thrace through Greece of the religion of Dionysos, a religious phenomenon of great import for the spiritual history of the race. The cult had begun its Hellenic career already in the earlier 'Homeric' period, but had finally established itself in most parts of the Greek-speaking world, and especially at Thebes, Delphi, and Athens, at the close of the later migratory and colonizing movement. The god was aboriginally associated with the ghostly world and some part of his ritual was 'cathartic'; and this aspect and function of his cult were strongly proclaimed by the brotherhoods of 'Orpheus,' who were propagating doctrines and establishing their

influence in Greece perhaps as early as the 7th cent. and with marked success in the 6th and 5th. And the religious-philosophic system known as Pythagoreanism, maintained by the Pythagorean brotherhoods which played a prominent part in the religious and political world of those two centuries, bore the closest affinity to Orphism, agreeing with it on the whole in its views as to the destiny of the soul and the need of an elaborate ritual of purification and a careful rule of purity.¹ Fortunately the Orphic-Pythagorean mission did not succeed in capturing the Greek democracies or the chief centres of the national worship; but it undoubtedly helped to render the general religious consciousness more sensitively anxious concerning purity and impurity; and Aristophanes warmly acknowledges, in terms that are doubtless too sweeping, the deep indebtedness of his countrymen to 'Orpheus' for much of their spiritual life.²

We may now review briefly the details of Greek καθάρσις and consider the ideas attaching thereto; our records are mainly late, the literature from the 5th cent. onwards and certain later inscriptions; but we must always bear in mind that a fact is not necessarily 'late' because the earliest record of it is.

The technical inquiry is concerned always with two questions: (a) What are the acts, states, objects, agencies, seen or unseen, that are supposed to leave a stain on the soul or body of a person, which unfits him for intercourse with man or deity because he is spiritually, not merely physically, unclean and is liable to infect others and render nugatory any divine service by his *μiasμα*? (b) What are the cleansing, purgative, or cathartic processes, material or spiritual, by which he can rid himself of that stain?

The Greek evidence on these two questions, which is very multifarious and scattered, may be briefly summarized thus. (a) The causes of impurity were bloodshed, the presence of ghosts and contact with death, sexual intercourse, child-birth, the evacuations of the body, the eating of certain food such as pea-soup, cheese, and garlic, the intrusion of unauthorized persons into holy places, and, in certain circumstances, foul speech and quarrelling. (b) The purgative means, usually called καθάρσις by the Greeks, were lustral water, sulphur, onions, fumigation and fire, incense, certain boughs and other vegetative growths, pitch, wool, certain stones and amulets, bright things like sunlight and gold, sacrificed animals, especially the pig, and of these especially the blood and the skin; finally, certain festivals and festival rites, especially the ritual of cursing and the scapegoat (*q.v.*). More exceptional methods might be cutting off the hair of the polluted person, or sacrificial communion with the deity. To philosophize on these bizarre phenomena belongs to the more general exposition of the theme; and little study is needed to convince us that they concern in the first instance the sphere of primitive psychology rather than ethics; but, if we look more carefully into their history, we shall find how closely they are interlinked with the higher moral and religious life of the people and states.

1. The causes of impurity.—The deepest impurity was that caused by the shedding of human blood in certain circumstances; and the growing sensitiveness of conscience in this matter was a vital force in the development of society. We have noted the weakness of the sentiment in the Homeric world, and that world was still barbaric in its rules regarding homicide. The first record

of a change in feeling is the citation of an incident in the *Aithiopis*, an epic poem by Arktinos of Miletos, composed probably near the close of the 8th century B.C. Achilles, provoked by the gibes of Thersites, slew him and was thereupon obliged to quit the army for a time and to retire to Lesbos, where he was purified by Apollo and Artemis.¹ It is very doubtful if the poet of the *Iliad* or *Odyssey* would have comprehended this. Thersites was no kinsman to Achilles, and at most only a degraded member of the same Achæan stock. Yet the Milesian poet feels that his homicide, however justifiable, deeply concerns the whole army and is a stain upon Achilles, who must be purged by a religious ritual at some distant place before he can safely resume fellowship with his compatriots. The legend represents, no doubt, the contemporary State law of Miletos, and exhibits that State as having advanced soon after its foundation beyond the stage of culture wherein homicide is only a matter of the blood-feud and the *wergild* to the higher religious thought that the slaying of any member of the community brought a stain on the slayer and a danger on the whole society against which it must protect itself. We are still very far from the establishment of advanced secular law; the various stages of progress in later Greece and the ideas that inspired and assisted it are obscure and difficult to trace. On one point we may form a probable hypothesis. As ideas of purity and impurity are closely related to natural sensations of horror and aversion, and in Greece as elsewhere these feelings were most strongly excited by the shedding of kindred blood, it is probable that this type of homicide was the first occasion for the institution of an elaborate ritual of purification. Some of the few legends concerning its origin and vogue convey this impression. Ixion, who slew his father-in-law treacherously, figures in Greek mythology as the first murderer, and he is also the first suppliant who is pitied and purified by Zeus 'Ικέστος, the god who hears the prayer of the suppliant and outcast. Bellerophon was purified by King Proitos for the accidental slaying of his own brother; Theseus, who slew the robber Sinis most justifiably, had to be purified from the stain, as Sinis happened to be his cousin; and the typical exemplar of the divine law of purification is the matricide Orestes.² But, if the law was in origin limited to this special kind of homicide, it had already enlarged its scope at some indefinitely early period. The law of Miletos, as illustrated by the passage referred to above in the poem of Arktinos, attests such an enlargement for the 8th cent.; and the legends that Athens purified Herakles from the blood that he had copiously shed,³ and that Apollo himself, the pure god, had to be purified in Crete from the blood of Pytho,⁴ bear the same significance, and may have arisen in the same early period. To explain this extension of the ritual we might suppose that the sphere of kinship, in which it originated *ex hypothesi*, was enlarged when the city-State was built up and included various kins within its union, until the slaying of any member of the political community came to be regarded as a stain similar to that of kindred-slaughter. But this would not explain the belief, which some of the legends cited attest, that the same impurity might be contracted by the slaying of an alien enemy, unless we are to attribute to the Greeks of an early period the advanced conceptions of the kinship of the whole human race and the sacredness of all human life. But no one would hazard such a theory to explain

any evolution of the early post-Homeric epoch; and we may seek a more probable explanation in the increasing terror of the ghost-world; for we have the evidence of the later funeral laws and ritual, confirmed by many legends, to suggest that this was more potent in the post-Homeric than in the Homeric and Mycænæan periods. Given an intensified belief in the dangerous power of the ghost, and the conviction that purification from bloodshed was the only safeguard both to the individual and to the community against the wrathful spirit of the slain, we can well understand the wide extension of the law, until it covered the slaying of a slave; for even the ghost of a slave might be dangerous.¹ The miasma emanating from a ghost was supposed to attach also to inanimate objects that had caused the death of a man; the civilized Attic law required that the axe which had slain the sacrificial ox of Zeus Πολιεύς should be formally tried and cast into the sea—a means of purging and purifying the land;² solemn purification ceremonies were performed over the head of the bronze ox at Olympia that fell upon a boy and killed him.³

This sensitiveness to bloodshed and death may become extravagant and morbid, and has at times evoked such strange vagaries of the ritual law of purity as may half-paralyze the life of a community; but the Greek was saved from this by his moderation and a certain secular common sense, which protected him from the extreme logic of the view that all bloodshed was impure. We are not sure that any purification was imposed by Greek State law or social custom upon a man who had slain an alien in foreign lands; that would depend on his own sensitiveness or on his desire to be initiated at any of the great mysteries, which would demand a *κάθαρσις* from such a stain. Nor have we any record proving or suggesting any rule, such as prevailed with stringency among the Hebrews or still more and with detrimental results among the Indian tribes of N. America, requiring the purification of the army returning from battle;⁴ the Greek soldier was probably content with an ordinary washing, sufficient for the purposes of refinement. Nor, again, was the ordinary Greek troubled by over-sensitiveness in regard to the blood of animals shed for sport, for food, or for sacrifice; there is no hint that the butcher or, as a general rule, the sacrificer incurred impurity.⁵ At least, the only evidence that can be quoted of some such feeling is isolated and peculiar; the priest who slew the sacred ox in the Attic Bouphonia had to go for a time into exile; but this ox was a mystic, 'theanthropic' animal, charged with the divine spirit of the altar, and the priest had shed divine blood;⁶ there is no reason to believe that at any time the Attic people regarded the slaughter of an ordinary ox as a heinous impurity. We may note also the fact that a certain altar of Apollo in Delos was specially called *ἀγνός*, 'the pure,' because the offerings and ritual were bloodless, no animal-sacrifice being allowed;⁷ this is no proof of ordinary Greek feeling, but suggests rather some peculiar sacerdotal development of thought concerning blood.

Not bloodshed alone, but any contact with death and the ghost-world was a strong source of im-

⁴ The Macedonian army was purified in spring before the campaign (Livy, xl. 6); a similar Boottian custom described by Plutarch (*Quæst. Rom.* 111) may have had a similar significance.

⁵ As regards the hunter, there is a passage in Arrian, *Kyneg.* 32, recommending the purification of the hounds and the hunters after the chase in accordance with ancestral rule; but the text is not well preserved.

⁶ See *CGS*, loc. cit.

⁷ Clem. Alex. *Strom.* 848 P; cf. *CGS* iv. 452, R. 276.

purity or *μιασμα*. The household to which the corpse belonged was impure; even the friends and others who attended the funeral were impure. In the tolerant Greek world this did not mean that they were severely boycotted, but only that they were unfit to approach the altars and to take part in divine service with others, also that it might be unlucky for them to carry on any serious business while in that state; Hesiod is our first witness to a superstition which descends from a far older period, that it was unlucky for a man returning from a funeral to try to beget a child.¹ The inscriptions and other evidence show that the period of impurity varied in the different states; at Lindos in Rhodes (in the time of Hadrian) it lasted for forty,² at Eresos in Lesbos for twenty days.³ Those who merely attended the funeral were under the tabu for three days at Eresos, but at Pergamon they could recover purity on the same day by means of lustration.⁴ The fear of the ghost-world, implying a shrinking of vitality in the living and a general sense of bad luck abroad, explains much of the funeral ceremonies of the Greeks, which show indeed the desire to please the ghost and to assure it of the family affection, but at the same time the determination to keep it at a distance and especially to prevent it following the mourners back to the house; one day of the Attic Anthesteria was devoted to an All Souls' celebration, when the spirits of the dead kindred were formally invited to an entertainment within the houses, but great care was taken to purify the dwellings at the end and to effect a complete riddance of them;⁵ meantime the whole day was *μιαρά*, impure and unlucky. The same feeling explains the elaborate ritual to which the *δευρεπότομος* must submit, the person who had been reported to be dead and had had funeral ceremonies performed over him and was then found to be alive and desirous of returning; society was afraid of such a person, for, though he had not really been in the ghost-world, yet the unnecessary funeral ceremonies had put that contagion upon him, which must first be washed off before he could be received back.⁶ Such was the condition of Alkestis, when Herakles had rescued her from Death and was placing her in the hands of Admetos. Even those who performed the rites known as *ἀπορρίψαι*, rites for 'turning away' evil spirits, including ghosts, were constrained to wash their persons and garments before returning to their homes.⁷

There were certain occasions when the whole community performed cathartic ceremonies to purge itself of such evil influences of the unseen world. Such occasions were either periodic and regular or exceptional owing to a crisis that had arisen. In spring, when the new vegetation was beginning, or when the early harvest was ripe for gathering and the firstfruits ready for consecration, the feeling that this was the proper time to cleanse the whole city of the evil influences that had accumulated throughout the old year inspired such festivals as the Thargelia⁸ in May and probably the Dionysia in February-March, the former certainly, the latter probably, possessing a cathartic value. It inspired also the frequent practice at the end of the old year and the beginning of the new of the extinction and rekindling of fires, especially the fire on the city's hearth,⁹ and the washing of the statues of the tutelary divinities. The Attic Plynteria, held in May, is the best

known example of the last ceremony, when the vestments and probably the idol of Athene were solemnly washed, and its day was *μιαρά*, the air being temporarily dangerous when contagion was being expelled.¹ Resort was had to the same sort of ritual at some momentous crisis or emergency. The Persian invasion had polluted the Greek temples with the presence of the stranger,² itself a source of defilement to the national deities apart from any outrage committed against them; therefore the first care of the Greeks after the victory of Plataea was the purification of the holy places.³ The presence of the matricide Orestes was supposed to pollute the Tauric image of Artemis, which therefore needed washing in the sea.⁴ Another momentous crisis was the foundation of a new city, and we have some indication that the ground was first carefully purified so that the settlement might start under good auspices purged from evil demonic agencies.⁵

The gravest crisis of all was one that was only too frequent in the life of the Greek states—the outbreak of civic massacre, when kindred blood was shed, the sense of guilt weighed on the citizens, and the atmosphere was charged with the miasma of wrathful ghosts. This was the condition of things at Athens in the 6th cent. B.C., when Kylon and his adherents had been sacrilegiously slain, and the people appealed to the aid of the Cretan prophet Epimenides, who came over and purified the whole city, the fields, and the homesteads; the recollection of this historic event lingered late in Attic tradition and gave rise to the erroneous belief that it was this prophet who first taught the Athenians the ritual of purification and its value.⁶

As regards sexual intercourse, we have evidence that the Greeks, like other primitive and advanced peoples, regarded the act as an occasional source of impurity and held the belief that abstinence had a certain value and efficacy for some religious or magical ritual. A deeper and more interesting question arises when we consider purity in the abstract and the Greek view of chastity as a religious duty and ideal. The law of purification in this matter was very simple and easy; such an act was supposed to render the person unclean in the religious sense, but the uncleanness could be immediately removed by washing and anointing, and some temple codes might allow the person to approach the altar on the same day, others might impose a tabu of one day or even more; for the catechumens of the mysteries and for certain lengthy ceremonials such as the Thesmophoria a longer abstinence might be required. In the later inscriptional records we are interested to mark the glimmer of an ethical idea; for the impurity is regarded as greater and the period of tabu imposed longer in the case of irregular and lawless indulgence;⁷ and by Attic law the adulteress was permanently excluded from temple worship.⁸ But, on the whole, the temple rules in regard to this act are concerned not directly with morality, but with a superstition arising from a primal feeling that has evolved our modern social laws of decency; and the non-ethical standpoint is sufficiently revealed in some of the special rules and some of the phrasing of the temple-inscriptions: in the inscription from Eresos a longer tabu is imposed in cases

of loss of virginity than in other sex-indulgence,¹ and in the rules of *ἀγνεία*, or 'purity,' demanded of the visitants to the altar of Zeus *Κύνθιος* and Artemis *Κυθήα* at Delos the prescription of temporary chastity was put on the same footing with abstinence from salt-fish and meat.² The priest was concerned, not with society in general, but with safeguarding the purity of the temple. Therefore the sexual act, by which a stain was incurred that must be washed off before the person could safely approach the altar, became immeasurably more heinous if committed within the precincts of the temple; in the Greek legends that relate such exceptional incidents the whole community suffers divine punishment until expiation is made.³

The same feeling prescribed the law, which is practically universal, against the defilement of the temple or the temple-precincts with the evacuations of the human body; and some of the sacred codes carefully proscribed the entrance of cattle into the *temenos* for the same reason.⁴ It may also explain the rule prevailing in some of the Greek temples against the wearing of sandals in the holy place, the rule which is universal in Muslim communities;⁵ the source of it may be sought in the fact that the sandals are made of the skins of dead animals and that therefore they bring the impurity of death into the shrine.⁶

From the same prompting of primeval feeling, child-birth has been generally regarded as a strong source of impurity to both the woman and the man of the house,⁷ not because it is the result of the sexual act, but because of its concomitants and the awe attaching to it; nor did the civilized Hellenic societies differ in this respect from the savage, though their tabu and rules of purification were much milder and easier. Such an event was not likely to happen within the temple itself; but we are familiar with the law that required the removal from Delos of any woman who was approaching her time, lest the island of the pure god should be polluted. The ordinary temple codes would be concerned only to prescribe the period during which the woman should be in tabu after travail;⁸ it is noteworthy that in one example we find the abnormally long period of forty days imposed in the case of miscarriage, the more unnatural event producing the greater sense of strangeness and awe to which the idea of religious uncleanness is so closely linked. In the *ἱεροὶ νόμοι* of the Greek temples we might have expected to find under this head some rule of tabu concerning menstruous women, about whom the code of Leviticus is anxiously severe; but no direct evidence touching this matter has yet been found,⁹ and probably none will be; for the Greek religious mind was more easy and tolerant than the Hebrew, and the vast number of Greek priestesses would make the application of any such rule very difficult.

As regards impure food, the Greek world was happily free from the severe scrupulousness of some

⁴ e.g., Dittenberger, nos. 560, 561, 570.

⁵ *Ib.* no. 560.

⁶ This is supported by the rule at Eresos that neither shoes nor any other leather garment were to be brought into the temple, and by the regulation of the mysteries at Andania that women should wear sandals and garments of wool (Dittenberger, no. 653. 22).

⁷ Cf. inscr. from Eresos (*CLR* xvi. 290); Eur. *Iph. Taur.* 382; Theoph. *Char.* xvi. 9; Porph. *de Abst.* iv. 16.

⁸ At Eresos this seems to have been ten days; Censorinus, *de Die Nat.* 11, § 7, in a doubtful passage speaks as if the Greek rule excluded the woman eighty days, forty before child-birth and forty after.

⁹ The only Greek inscription known to the present writer dealing with these cases refers to the cult of the Phrygian god Men (Dittenberger, no. 633).

other religions, nor was the distinction between clean and unclean animals natural to the Greek mind; the Greek inscriptions that preserve certain temple laws only indicate that it was desirable, in order to attain the *ἀγνεία* necessary for participation in religious service, to abstain for a short time beforehand from certain foods. What these were the various codes probably did not agree in determining, and it would be hard to find a common principle explaining all. In some we seem to detect the natural feeling that foods which left an unpleasant odour attaching to the person ought to be avoided before worship; hence would arise a tabu on pea-soup, salt-fish, cheese, and garlic;¹ for evil smells have much to do with the sense of uncleanness and with the belief in the presence of evil spirits. Again, the rule sometimes enjoined abstinence from certain animals because they were specially dear to the divinity, and the question of the origin of such rules involves a discussion of totemism (*q.v.*).

As speech suggests action, it was natural that the same law should apply to foul speech as to impure act, and that evil words should be considered to mar the purity of the divine service; hence the universal Greek rule that before the sacrifice began the command for *εὐφημία* should be proclaimed to the people; this word, at first meaning 'auspicious speech,' became indirectly a synonym for 'silence'; for, as it was difficult for each member in a vast concourse to be sure what word was auspicious and what not, it was best for general silence to prevail.²

In accordance with the same idea, the purity of the ritual would be disturbed if any quarrelling or altercation arose, for quarrelling suggests bloodshed. Hence during festivals of exceptional solemnity, such as the Eleusinia, by Attic religious law no legal action could be taken, no creditor could distrain, even a person aggrieved by the State might not lay a suppliant-bough on the altar; for all this implied strife.³

2. The means of purification.—The means of purification are of two kinds, (a) mechanical, and (b) religious or quasi-religious; and the two may be used together. Among the former we find in Greece, as elsewhere, such natural purgative media as water, fire, sunlight. To the examples already noted of the first may be added the Attic custom of purifying the bride with water from the sacred spring before the marriage ceremony.⁴ It is not clear that there was any ceremonial purification of the new-born infant with water equivalent to our baptism. The need was fulfilled some days after birth by an interesting ceremony called *ἀμφιδρόμια*, 'the running around,' in which the new-born infant was carried at a running pace round the fire of the domestic hearth;⁵ and with this we may compare the Eleusinian legend that the goddess Demeter tried to purge away by fire the impure and mortal parts of her fosterling Demophon.⁶ The use of fire in certain Greek rituals, such as that of the Mænads who sprang through the fields with torches, may be supposed to have the cathartic effect of driving away evil influences or spirits,

¹ Dittenberger, nos. 564 (inscr. from Delos, wine tabued), 567 (Lindos, pea-soup, goats' flesh, cheese), 633 (Sunium, Men Tyrannus, garlic and pork, 'Oriental influence'); Protz-Ziehen, ii. 1, no. 91 (Delos, temple of Zeus *Κύνθιος* and Athene *Κυθήα*, all flesh forbidden), no. 92 (Delos, shrine of Artemis, salt-fish). The rules of *ἀγνεία* in the mysteries were much severer than in ordinary cult—e.g., Porph. *de Abst.* iv. 14; Libanius, *Orat. Corinth.* iv. 356 (Reiske).

² Cf. *Il.* ix. 171; Arist. *Thesm.* 294; Eur. *Hec.* 530.

though other explanations are possible, and we are told that the torch was used in the purification of cities.¹ The idea of the purity of fire is strikingly illustrated by the annual rite practised by some of the Greek states of renewing the purity of their hearth-fires, both public and private, by bringing new fire from some specially pure source, such as the altar of Apollo at Delos or of Hephaistos in the Academy at Athens.²

The use of incense at the sacrifice, as a mode of purifying the air by fumigation, which Greece adopted from Assyria in the 8th cent. B.C., had in the East a strong cathartic power against demons, who are generally supposed to be attracted by evil smells and banished by good; and, though its pleasing odour would cause it to be maintained merely as an attractive concomitant of worship, we may believe that at least the earlier Greeks were aware of its original significance.³ Fumigation by sulphur had an obvious purificatory value; for, though its odour is not pleasant in itself, its pungency is such as to overpower other smells which might be dangerous; hence Homer calls it *κακῶν ἄκος*, 'a healing of evils.'⁴

The boughs of certain trees, probably on account of their smell or colour, possessed a cathartic value, such as the laurel at Delphi, which Apollo was supposed to have brought back from Tempe after his purification there from the blood of the Python,⁵ the witly-bough, or *λύγος*, which the Attic women used as a purifying medium in the Thesmophoria,⁶ and especially the squill, or *σκόλλη*, which was used in the general purification of cities and for beating the scapegoat in the Thargelia,⁷ a ritual of purification or expulsion of evil; therefore the Arcadian rite in which the image of Pan was beaten by boys with squills must be interpreted as cathartic.⁸ When the Athenians on one day in the Anthesteria stuck branches of buckthorn at the entrances of their houses, this was a mechanical means of purification, its object being to keep out ghosts;⁹ for its thorns would naturally embarrass the ghost, as would the sticky pitch with which the citizens at the same time smeared their doorposts.

Thunder-stones in certain religious circles had a recognized cathartic value, which their mysterious origin and perhaps their connexion with fire would naturally attach to them.¹⁰ Perhaps it was a stone of this kind that, according to a Boeotian legend, Athene dashed at Herakles to cleanse him of his madness after he had slain his children.¹¹ There is also an Arcadian story about the sacred stone called Zeus *καπνῶρας*, evidently from its name meteoric, by sitting on which Orestes was healed from his madness.¹²

There is some evidence that gold, the pure and bright metal, was regarded as purificatory;¹³ also among the mechanical cathartic media we must include amulets, which were as much in vogue in the later periods of classical antiquity for keeping ghosts and evil spirits at a distance as they were in Christendom; some of the Greek types, such as the *φαλλός* and the pointed finger have no connexion with religion; others might be carved in the form of divinities, but their working was mechanical magic.

The other type of purificatory methods consists

of those that may with more right be called religious, as connected directly and indirectly with the worship of the divinities or with their influence. The use of certain animals—their blood or skin or whole carcass—was perhaps the most common method of purification from bloodshed and other taints. The fleece of the ram offered to Zeus *Μελίχιος*, the god who had specially to be appeased when kindred blood had been shed, was used for the purification of the catechumens at Eleusis, upon whom the stain of blood rested and who knelt on the 'fleece of God,' the *Διὸς κώδιον*—as it was called—while the purgation ceremony was performed over them.¹ In the mysteries of Andania we hear of the 'ram of goodly colour' used for the purification of the initiates.² Plague might be averted from a city by a priest carrying round its walls the ram of Hermes.³ But the most usual animal employed for purification was the pig, of special potency in the Eleusinian mysteries. The Athenian assembly was purified before its meeting by a ceremonial procession of little pigs;⁴ and no other purgation was of such avail for the homicide as pig's blood. Hence on one vase representation we see Apollo himself purifying Orestes by holding over his head a pig dripping blood.⁵

Now, we have strong evidence that in the magic rites of purification practised by many modern savage societies the blood of animals—the goat, the bullock, or swine—has an intrinsic mysterious potency in itself, wholly unconnected with sacrifice or divine worship; and this primitive feeling may have survived here and there in historic Greece. But that this is in general a sufficient explanation of the Greek ceremonies is not credible. The ram's fleece and the pig's blood in Hellenic purifications were suggested by their intimate sacrificial association with the high god and the great goddesses and powers of the lower world; just as the *aiyis*, or goat-skin, of Athene, wherewith her priestess at Athens visited the newly-married couples for cathartic or fertilizing purposes, derived its efficacy from its contact with Athene.⁶ In Hellas the pig was the sacred animal of Demeter and Kore, the powers of the world of spirits; the pig's blood was charged with a portion of their divinity, and therefore the homicide who had offended those powers could recover grace by its contact, in fact by a sort of communion with them.⁷

A different type of communion, serving a cathartic purpose, is suggested by a record of Plutarch that at Argos the period of mourning for a death in the family lasted thirty days, and that at the end of that time the mourners regained their original status by a sacrifice to Apollo; we may interpret this to mean that by communion with the pure god they finally wiped off their impurity.⁸

It has been observed that cathartic features, often overlaid and obscured by other accretions, attached to some of the complex Greek festivals; the Thargelia at Athens and elsewhere is an example of this, as the driving out of the scapegoat, which was its central act, effected a *κάθαρσις* of the whole community from sin and other evil.⁹ Another curious but not unique accompaniment of certain Hellenic ritual and festivals was the employment of curses, ribaldry, satire, and abuse:

in the solemn procession along the sacred way to Eleusis the aspirants to the mysteries were ceremonially abused and ridiculed by the crowd at one point;¹ in the Thesmophoria the men abused the women and the women the men;² and that such badinage had a cathartic purpose—the averting of *vêneis* or of evil spirits—is a reasonable theory confirmed by a text in Suidas that the people of Alexandria in old days purged the city of ghosts by going round in waggons to the doors of the houses and proclaiming the sins and misdoings of the individuals within.³ This humorous procedure may be regarded as a kind of vicarious confession; the cathartic character of confession has been long recognized, but confession in our sense, a private and personal revelation of one's sins to a priest, was alien to the old religious system of Greece.⁴ The purgative value of personal satire may have been one motive for its dramatic development in the Dionysiac festivals.

The religious aspect of the Greek system of purification was further emphasized by its close association with certain high divinities, especially Zeus Meilichios and Apollo of Delphi. The former deity belongs to the older stratum of Greek religion, but retained his function of granting or withholding purification from kindred and civic bloodshed throughout the later centuries.⁵ The Delphic-Apolline *katharpis* has been a subject of much dissertation and cannot be even summarized here.⁶ But it may be noted that it was the claim of the Apolline priesthood to deal with the question of purification from bloodshed that led to the establishment of one of the most important law-courts in Athens to deal with the plea of justifiable homicide, whereby the civilized Athenian State approached the level of modern equitable law.⁷ But, though power was thus taken out of the hands of the priesthood, the secular court at Athens that dealt with homicide remained strikingly religious in their procedure; and it is mainly their strong infusion of cathartic ideas concerning the miasma of blood that differentiates them from the modern tribunal.

A side question that may be glanced at under this section is whether Greek feeling about impurity was always associated with a belief in ghosts and evil demons as its cause. The question is important because an overstrung susceptibility to the terrors of the demon world can vitally affect the religious and scientific development of a race. We have seen that the sense of the impurity of bloodshed in Greece was connected with the fear of the ghost and that ghosts made a household impure; but we have no reason to believe that this fear or any clear belief in evil demons accounted to the Greek of the 'classical' period for the other sources of impurity. It is true that Porphyry declares that the chief motive for the various *ágyēlai*, or methods for obtaining purity, was to drive away the evil spirits which cling to certain kinds of food.⁸ But Porphyry is no true witness for the earlier Greek thought, as he represents the later demonology that swept over the Mediterranean world from the East and found expression in Neo-Platonism and the Hermetic literature. But in the earlier Hellenic spiritual world there was no true dualism of good and evil spirits; nor was the average Hellene of the earlier centuries ghost-ridden or demon-ridden or much dependent on the exorcist for his peace of mind;

and this is one of the most salient differences between Greece and Babylon.¹

3. The idea of purity.—It remains to consider briefly certain religious and moral aspects of the idea of purity. This was expressed by the Greek *ágyēla*, meaning originally a state of the body and the person that fitted an individual for communion with the deity, and this state could be obtained by certain ceremonies and abstinences. It was required with peculiar insistence of the Greek priesthood and as a condition of participation in the greater mysteries, which offered to the initiated the promise of posthumous happiness. Hence the idea could gain ground that a state of purity, as it qualified a person in this world for divine fellowship, might also be a potent means of grace and salvation in the next. It was the Orphic sects that developed this view with the greatest zeal in Greece. They preached and practised a specially stringent code of abstinences, and based on this their claim to happiness in the next world. *Ἐρχομαι ἐκ καθαρῶν* was the Orphic password in the portals of Hades—'I come from the pure.'² But most of our ancient evidence concerning Orphism suggests a ceremonial and Pharisaic 'purity,' rather than an ethical, and an exclusive sect-prejudice which demanded even a separate burying-ground for the votaries. And we cannot allege that it was wholly or mainly from their influence that the ideal of purity of soul permeated at last the higher mind of Greece. Its earliest testimony is in the 5th cent. B.C., a phrase of Epicharmos, 'If thy mind is pure, thou art pure in all thy body';³ and the elevated ethical thought that purity of soul was of more avail than all lustration and mere washing of hands was proclaimed later by the Delphic oracle and the Pythagorean literature near the beginning of our era;⁴ and even some of the later codes of temple ritual adopted it in their formulæ.⁵ This 'purity of heart' connoted to the Greek the absence of any stain on the conscience and of evil purpose or thought; it is important to note that the idea of sexual purity, which is often the sole significance of our English word, was not the dominant idea in the Greek *ágyēla*. The Greek philosophers and ethical teachers, who preached *σωφροσύνη*, or self-restraint, the Greek priesthood, who required occasional chastity under special circumstances, never preached chastity in general as an ideal of life. The Greek priest and priestess were usually married; chastity was enforced very rarely upon the priest, still rarely though more frequently upon the priestess, who was probably in this case considered the bride of a jealous god, and whose position was only temporary. The Greek priest had to be of unblemished body, and led the normal life of a citizen; the eunuch played no part in Greek religion, which was saved by its sanity from the morbid anti-sexual excesses of the Phrygian. Even the worship of Artemis, apart from its mythology, could not and did not attempt to establish among the Hellenic people any conception of the chaste life as spiritually more perfect and dearer to God.

PURIFICATION (Hebrew).—The term 'purification' is applied to those ritual observances by means of which an Israelite was absolved from the taint of uncleanness. This article deals exclusively with the Jewish laws and customs relating to purification; to estimate the methods by which the Israelite probably reached his conception of it, it will be necessary to refer to the other articles in this series.

W. Robertson Smith (*The Religion of the Semites*², London, 1894, p. 425 f.) points out that, 'primarily, purification means the application to the person of some medium which removes a taboo, and enables the person purified to mingle freely in the ordinary life of his fellows'; he shows that the normal life of the holy people was a holy life, and therefore 'the main use of purificatory rites is not to tone down, to the level of ordinary life, the excessive holiness conveyed by contact with sacrosanct things, but rather to impart to one who has lost it the measure of sanctity that puts him on the level of ordinary social life.' Speaking of blood as being one of the media of purification, he says (p. 427): 'In the most primitive form of the sacrificial idea the blood of the sacrifice is not employed to wash away an impurity, but to convey to the worshipper a particle of holy life. The conception of piacular media as purificatory, however, involves the notion that the holy medium not only adds something to the worshipper's life, and refreshes its sanctity, but expels from him something that is impure.'

We must first consider in what ways the uncleanness was produced or contracted, and then the observances by which purification was effected. And we shall see that there were ritual ordinances in regard both to persons and things and to a land defiled.

1. Uncleanness and its penalties.—Uncleanness was contracted in various ways.

(a) *Sexual uncleanness*, in the functions of reproduction (e.g., Lv 18^{20, 23f.}, Nu 5^{18ff.}), by issues in both sexes (Lv 15^{4ff.}), in menstruation.

The functions of reproduction 'early excited the superstitious awe of mankind, which invested the organs and their activities with mysterious powers. Sexual intercourse was widely regarded as producing uncleanness' (A. S. Peake, in *HDB* iv. 827). The period of separation lasted seven days, and the uncleanness was communicated to the bed or seat, contact with either produced uncleanness until the evening, and required the washing of the body and clothes (Lv 15^{18, 2 S 11⁴}). It is worth observing that 'holiness' and 'uncleanness' were regarded as infectious and demanded similar ritual purification, and instances occur in which a condition of sacredness necessitated abstinence from sexual intercourse, as, e.g., prior to the approach of Jahweh at the giving of the Law (Ex 19¹⁵); the holy bread of the sanctuary could be eaten by David's men in 1 S 21⁴ only if they had strictly observed this abstinence; and the same regulation applied to men on active military service, for war was regarded as a sacred act (cf. the expression *לְחֵמָה קֹדֶשׁ* [Jer 6⁴ 22⁷ 51^{27f.}], from the custom of opening a campaign by sacrifice). The same idea obtains probably in the case of the first year of marriage, when a man is exempted from military service (cf. Lk 14²⁰); and in Uriah's refusal in 2 S 11⁸⁻¹³ to obey the king's order. In ordinary cases the uncleanness lasted till the evening (Lv 11. 15^{5ff.}), but in menstruation, at the end of seven days from the cessation of the symptoms, in the evening, the candidate for purification performed an ablution both of the person and of the garments, and on the eighth offered two turtle-doves or two young pigeons, one for a sin-offering, the other for a burnt-offering. The same means of purification applied to males with abnormal issues. And so infectious was the condition in such cases that contact with such persons or contact with their clothing or furniture involved uncleanness and necessitated ablution on the day of the infection. In lesser cases of issue, such as *gonorrhea dormientium* in males, a condition of uncleanness was involved until the evening, and

the ablution of the person and of the defiled garments was necessary.

(b) *In childbirth.*—J. G. Frazer (*GB*², London, 1900, iii. 463) informs us that 'women after childbirth and their offspring are more or less tabooed all the world over.' With regard to purification after childbirth, a difference was made between the birth of a boy and that of a girl; in the case of the latter the period of uncleanness was doubled, as it was commonly held that in this case the symptoms of infection continued much longer. In the case of the birth of a boy the mother is unclean for a week, during which time she would be infectious, and she continues 'in the blood of her purifying' for thirty-three days (during the latter period she would not presumably be infectious). During the whole forty days 'she shall touch no hallowed thing, nor come into the sanctuary.' At the expiration of the forty days she was required to offer a yearling lamb for a burnt-offering, and a young pigeon or turtle-dove for a sin-offering. In the case of poverty she was permitted to substitute a second pigeon or turtle-dove (e.g., Lk 24⁴, Lv 12⁸).

(c) *Ceremonial uncleanness.*—(1) Caused by contact with death, by contact with carcasses of unclean animals (Lv 11^{24ff.}) or with any carcass (Lv 17¹⁵), by eating a carcass (22⁸), by contact with the dead (Nu 6⁹⁻¹², Ezk 44²⁸). Such contact involved uncleanness till the evening. The eating or the carrying of a carcass involved, besides uncleanness till the evening, the necessity of washing the clothes, and in some cases (Lv 17¹⁶) the washing of the person. In the case of a Nazirite coming in contact with the dead it was necessary to shave the head, and to offer two turtle-doves, for a sin-offering and for a burnt-offering, and a lamb for a trespass-offering.

(2) Caused by contact with one unclean by the dead (Nu 19²², Hag 2¹³), or by contact with one unclean from whatever cause (Lv 5⁸ 22⁵), or with some thing unclean (22⁶). The purificatory observance in these cases involved the ordinary condition of uncleanness until the evening, the confession of guilt, and the offering of a trespass- and sin-offering (5⁵⁻¹⁰).

(3) Caused by contact with creeping things (22⁵) or by eating creeping things, or with certain animals which were always unclean (11^{26f.}: 'every beast which divideth the hoof, and is not cloven-footed, nor cheweth the cud . . . and whatsoever goeth upon his paws, among all manner of beasts that go on all four'). The purification in these cases was principally that of remaining unclean until the evening.

(4) Caused by leprosy. The full regulations are dealt with in Lv 13 and 14, in regard to the disease in the person, the garments, and the house.

The ceremonial of purification consisted of various elements. (a) After the examination by the priest, two living birds were to be brought, together with a rod of cedar (juniper)-wood, scarlet wool, and hyssop; one bird was to be killed over water from a running stream, and the leper was to be sprinkled seven times with the blood of the bird, signifying the new life imparted to one who was regarded as 'dead,' and the living bird was to be released, a symbol of the removal of the evil. (b) The washing of the clothes, shaving off all the hair, and bathing. It was also necessary to remain outside the house for seven days, and the shaving and ablutions were also repeated. (c) On the 8th day the final offering was made at the 'Tent of Meeting,' and consisted of (i.) a guilt-offering and a consecration of the cleansed leper by the priest placing oil on parts of the body and pouring it on his head. 'This offering was a reparation to God for the loss of service during the time of his seclusion'—the blood of the victim (a lamb) and the oil being symbols of atonement and reconciliation (R. A. S. Macalister, in *HDB* iii. 98); (ii.) a second he-lamb as a sin-offering before readmission into the congregation; (iii.) a ewe-lamb as a burnt-offering and three-tenths of an ephah of flour as a meal-offering; special provision was made for the poor by the substitution of doves for the lambs, and a reduction in the quantity of the flour for the meal-offering.

(d) *Uncleanness in religious matters.*—Uncleanness might be caused by idols (Ezk 22³), conceived

as whoredom (Hos 5⁸, Ezk 20^{30f.}), by necromancers (Lv 19³¹), or by sacrificing children to idols (Ps 106³⁷⁻³⁹). The prohibition rings out clearly in such cases, but it is often disregarded. But what is the purification? Jahweh takes the matter into His own hands. The only purification possible is punitive; such sins need the smelting in the furnace of Jahweh's wrath: 'And ye shall know that I the Lord have poured out my fury upon you' (Ezk 22²²). Sacred places were also defiled by Israel through the sacrifice of children (Lv 20⁸, Ezk 23³⁴), and Jahweh 'defiled' him thereby, and made him desolate to the end that Israel might 'know' Jahweh. Josiah 'defiled' the idolatrous places of worship by destroying them and making them unfit for use (2 K 23²⁴). Death, stoning, excommunication, the opposition of the face of Jahweh, could be the only purification.

(e) *Uncleanness of land or country*.—Again, a land or country is defiled by the sexual impurities of the people, by spiritual whoredom (Lv 18²⁸, Ezk 23¹⁷). Israel is warned repeatedly against this contamination: it was the sin of the nations driven out by Jahweh; Israel had been and will be visited for such, and the very land itself 'vomith out her inhabitants.' The antidote is the observance of the divine statutes, the remembrance that Jahweh is their God, and the purifying punishment is the cutting off of the souls from among the elect people, and the raising up of the divine instruments of judgment, the Babylonians, etc. A land may also be defiled by the shedding of innocent blood (Nu 35³⁴). The purifying punishment of the land is the shedding of the blood of the murderer; the land is sacred because Jahweh dwells among His people; there can be no expiation for the land except by the shedding of the murderer's blood. A land may not be defiled by allowing a murderer to hang upon the tree all night; the body shall be buried on the day of execution; the land is sacred because it is the inheritance of the people sacred to Jahweh (Dt 21²²). A land was defiled by idolatrous practices (Jer 27, Ezk 36¹⁷); it was a goodly land that Israel had inherited, and the people, priests, and rulers had made it an abomination by idolatry; their way was before men, הָיָה לְפָנֵינוּ; the outpouring of Jahweh's wrath and captivity among the heathen were the punitive, purifying remedies.

2. *Purificatory media*.—We have seen that there are various media of purification, and various acts of ritual to be observed. Speaking of cathartic sacrifices, Robertson Smith says:

'Purifications are performed by the use of any of the physical means that re-establish normal relations with the deity and the congregation of his worshippers—in short, by contact with something that contains and can impart a divine virtue. For ordinary purposes the use of living water may suffice, for, as we know, there is a sacred principle in such water. But the most powerful cleansing media are necessarily derived from the body and blood of sacrosanct victims, and the forms of purification embrace such rites as the sprinkling of sacrificial blood or ashes on the person, anointing with holy unguents, or fumigation with the smoke of incense, which from early times was a favourite accessory to sacrifices. It seems probable, however, that the religious value of incense was originally independent of animal sacrifice, for frankincense was the gum of a very holy species of tree, which was collected with religious precautions. Whether, therefore, the sacred odour was used in unguents or burned like an altar sacrifice, it appears to have owed its virtue, like the gum of the *samora* tree, to the idea that it was the blood of an animate and divine plant' (p. 426 f.).

The principal media of purification would thus be water, blood, ashes, herbs, incense, oil, shaving the hair, seclusion, confession, and punitive destruction.

(a) *Water*.—In regard to water it should be observed that sacred wells, fountains, and streams are often found near sanctuaries in Arabia, Phœnicia, and Syria.

Robertson Smith points out (p. 178) that 'the one general principle which runs through all the varieties of the legends

[about sacred waters], and which also lies at the basis of the ritual, is that the sacred waters are instinct with divine life and energy . . . their main object is to show how the fountain or stream comes to be impregnated, so to speak, with the vital energy of the deity to which it is sacred.' And, again, in regard to the healing power of the sacred spring, he says (p. 188): 'Beyond doubt the first and best gift of the sacred spring to the worshipper was its own life-giving water, and the first object of the religion addressed to it was to encourage its benignant flow. But the life-giving power of the holy stream was by no means confined to the quickening of vegetation. Sacred waters are also healing waters.' And once more (p. 184): 'The healing power of sacred water is closely connected with its purifying and consecrating power, for the primary conception of uncleanness is that of a dangerous infection. Washings and purifications play a great part in Semitic ritual, and were performed with living water, which was as such sacred in some degree.'

(b) *Blood*.—For the cathartic nature of blood reference should be made to artt. SACRIFICE. Here we need only quote the words of the Epistle to the Hebrews (9²²): 'Without shedding of blood is no remission.'

(c) *Incense*.—For incense used in purification see above, and Robertson Smith, p. 426 f. Cf. Nu 17¹¹ [EV. 16⁴⁶] for its atoning efficacy.

(d) *Confession*.—For instances of confession cf. 1 K 8^{33, 35}, Ps 32⁵, Pr 28¹³, Ezr 10¹, Neh 9⁸, Dn 9⁴, Lv 16²¹ (P) 26⁴⁰ (E), Nu 5⁷ (P), Lv 5⁸ (P), Neh 1⁹, Jos 7¹⁹, and especially the ceremony of the scape-goat (q.v.). The idea is both corporate and individual, as these instances will show. For the idea of lamentation cf. Is 15², and Robertson Smith, p. 430 ff.

(e) *Ashes*.—The term אֵשֶׁת is frequently used as a token of humiliation and penitence (Job 42⁸, Is 58⁵, etc.). In Nu 19⁹ (P) it denotes the mixture composed of the ashes of the red heifer and those of 'cedar wood, hyssop and scarlet,' and used for the preparation of the 'water of separation' (cf. G. B. Gray, *Numbers [ICC]*, Edinburgh, 1903, pp. 241-247; for ashes of the red heifer cf. HDB iv. 207 f.).

(f) *Herbs*.—For the use of herbs, especially the hyssop, for the act of sprinkling blood in ceremonies of purification cf. Ex 12²², Lv 14, Nu 19⁶, Ps 51⁷; it is spoken of literally in 1 K 4³⁸. G. E. Post (HDB ii. 442) identifies it with *Origanum Maru*, which is eminently adapted for the purpose of sprinkling. He points out that in certain of the ceremonial sprinklings, as in the case of leprosy, there was added to the bunch some cedar-wood, scarlet wool, and a living bird. Gray (p. 251) contends that it was used 'on account of its cleansing properties,' and he adds:

'The scarlet thread was presumably selected for its colour, for the same obscure reason that required the cow to be red; the cedar, perhaps, on account of its soundness and endurance, and its supposed property of imparting these qualities.' He reminds us that Pliny mentions 'numerous medicinal qualities with which cedar and hyssop were credited in the ancient world' (HN xvi. 76).

LITERATURE.—The authorities are cited throughout the article. S. M. COOKE.

PURIFICATION (Hindu).—There is nothing that an orthodox Brāhman, or Brāhmanized castes generally, will shun so much as external defilement. 'The predominating idea in their general conduct, and in their every action in life, is what they call cleanness,' says J. A. Dubois.¹ The rules regarding impurity (*āśauca*) and purification (*suddhi*) occupy, therefore, a conspicuous place in the Sanskrit law-books, and there are many special treatises in Sanskrit on this subject—the *Āśauchanirnaya*, *Suddhitattva*, *Suddhima-yukha*, etc. The horror or superstitious dread inspired by the sight of a corpse becomes particularly manifest in these rules. The impurity of a Brāhman caused by the death of a relative is declared to last in general ten days. Those who have carried out a dead relative and burnt his

¹ *Hindu Manners, Customs, and Ceremonies*², p. 179.

corpse are required to plunge into water, dressed in their clothes. During the period of impurity they must sleep on the ground and practise other austerities, and must give up all intercourse with other people in order to avoid defiling them. When the impurity is over, they must bathe, sip water, and make gifts to Brāhmanas. Even those who have merely come near the smoke of a funeral pyre must bathe. Childbirth is an occasion of impurity in the same way and for the same length of time as death. Menstruating women are considered unclean, and their touch contaminates. They become pure after four days by bathing. A bath is also ordained for a man who touches such a woman, or the carrier of a corpse, or members of the lowest castes, or the corpses of certain animals, or one who has had his hair cut, or has vomited or been purged, etc. If the lower part of the body has been defiled by one of the impure excretions of the body, it is sufficient to cleanse the limb in question with earth and water. In minor cases of pollution, as after spitting or sneezing, one has to sip water. The ancient and popular story of King Nala shows how one neglecting such purification was supposed to be liable to be possessed by a demon. Even before birth men were believed to be tainted with uncleanness, and the various *saṁskāras*, such as tonsure, investiture with the sacred thread, marriage, etc., were regarded as purificatory ceremonies capable of removing that taint (Manu, ii. 27).

Purity in regard to food was considered even more essential than external purity, and the rules concerning allowed and forbidden food are very numerous (see FOOD [Hindu]). Drinking alcoholic drinks was reckoned as a mortal sin, like killing a Brāhman or incest. Any one offering spirits to a Brāhman was liable to capital punishment, and one offering forbidden food to such had to pay a heavy fine (*Viṣṇu*, xxxv. 1, v. 93 ff.). A Brāhman tasting the food or water of, or eating with, a Śūdra or other person of low caste had to perform a penance, such as the *parāka* (fasting for twelve days) or *sāntapana* (subsisting for one day on the five products of a cow, including her urine and dung, and fasting the next day). Another set of rules concerns the purification of inanimate objects (*dravyasuddhi*). Spirituous drinks and the impure excretions of the body are declared to cause the worst kind of pollution. If an iron vessel has been defiled by them, it should be cleansed by heating it in fire; utensils made of stone or shells should be dug into a pit for seven days; objects made of horn, ivory, or bone should be cleansed by being planed; but wooden or earthenware vessels should be thrown away. In lighter cases of pollution the defiled object should be washed or sprinkled with water, or rubbed with earth or ashes, etc., the general rule being that earth and water should be constantly applied as long as the scent or moisture caused by an unclean substance continues on the defiled object. Specially purifying qualities are attributed to cows, the cow being considered a sacred animal. Thus not only are the five products of a cow (*pañcagavya*) swallowed, but a piece of ground may be cleansed by allowing cows to pass some time on it or by plastering it with cow-dung; stagnant water is pure if a cow has drunk from it; and even drops of water trickling from a cow's horn are said to have an expiatory power. The detailed provisions regarding a man's daily bath, which include the recitation of prayers and other religious ceremonies, also fall under the head of purificatory rules. Bathing in a sacred river is believed to be specially purifying, and the water of the Ganges is considered the purest of all kinds of water.

The Buddhists, Jains, and other religious sects

have each their own code of defilements and purifications. Nor have these ancient notions of purity and impurity died out in modern India. Thus, according to Dubois (in India from 1792 to 1823), the Hindus immediately after a funeral 'hasten to plunge themselves into water . . . even the news of the death of a relative . . . produces the same effect.'¹ The ten days' period of mourning or impurity is still observed, and during all this time the mourners must neither take more than one meal a day, nor shave, nor perform domestic worship, nor use dainties or spices. A sick person is entirely excluded from some religious ceremonies. Married women near the period of confinement are taken into a small room or shed, where they are shut up for a whole month, during which period they must touch neither domestic utensils nor clothes, still less any person. The same rule is observed during the monthly sickness of a woman. The time of seclusion being over, she has to take a bath, or else a large quantity of water is poured over her head and body. If a woman miscarries, the family become impure for ten days. 'A scrupulous Brahmin,' Dubois says, 'would be defiled and obliged to bathe if by accident his feet should touch a bone, a piece of broken glass or earthenware, a rag, a leaf from which any one had eaten, a bit of skin or leather, hair, or any other unclean thing. . . . but any one may sit on the ground without fear of defilement, if the place has been recently rubbed over with cow-dung.'² Here we have a modern instance of the veneration paid to the cow. A mediaeval instance of it may be found in al-Birūnī, where he speaks of Hindus returned to their homes from Muslim captivity, when, after fasting by way of expiation, they were buried in the dung, stale, and milk of cows for a certain number of days, and given similar dirt to eat afterwards. The fear of personal contact with people of a different caste is gradually dying out in this age of trams and railways, but there are even now depressed castes—e.g., in Kashmir—which are obliged to live outside of the villages, and must make a sign to persons of high caste from a distance so as to avoid meeting them (see PARIAS). Many of the ancient rules regarding food and commensality are still in force, and nothing is so apt to cause loss of caste as a breach of these rules. The rumour that the British Government was conspiring to rob the Sepoys of their caste by greasing the cartridges of the guns with offensive fat was among the causes of the Mutiny of 1857. Earthenware vessels have to be destroyed in case of defilement, whereas metal ones may be purified by washing.³ It is true that Brāhmanas and rich Śūdras are gradually abandoning the use of earthenware vessels for cooking. Silk and cloth made of the fibres of certain plants are and were believed to remain always pure. It is for this reason that the ancient Brāhman hermits used to wear clothes made of such material, and that a modern Brāhman doctor, when feeling the pulse of a Śūdra, first wraps up the patient's wrist in a small piece of silk so that he may not be defiled by touching his skin.⁴ The prevailing belief in the sanctity and purifying power of Ganges water is too well known to require illustration.

PURIFICATION (Iranian).—In the less developed religions of the world purification means

¹ *Loc. cit.*

² *Id.* p. 181.

³ *Id.* p. 182 f.

⁴ *Id.* p. 181 f.

the expulsion of the contagion of a ritual pollution. In higher religions it is above all the liberation from an ethical depreciation. Mazdæism combines both conceptions. The annulling of sin is primarily to be obtained by outweighing the evil deeds, evil words, evil thoughts by good deeds, good words, good thoughts (*hushkyaothna, hūkhata, humata*). A penitential formula (*paitita*) was also recited before the *dastūr*.¹ The term *paitita* expresses the balance of merits and sins,² and in later texts seems to be applied to the state of mind of the penitent renouncing the sin, and saying, 'Henceforth I will no more commit the sin.'³ But there is no remission—or, more exactly, neutralizing—of the sin unless by good actions in compensation for the evil inflicted on good creation by the evil act. In the *Vendīdād* these works are enumerated; they consist in building bridges, gifts to the priests, purification of defiled good beings, etc. More often regular penances are provided, in the form of strokes by means of a whip of discipline (*ashtrā, sraoshō-karana*). The rate of strokes is given in several passages of the *Vendīdād*. In later times, as a substitute for the strokes, silver coins were paid by the penitent, and a scale of fines was established.

Often, also, spells had to be recited, expiatory offerings had to be presented, or purifications performed;⁴ and here we have prescriptions connected with the more materialistic conception of purity and purification, as we find it in lower religions, where sin is but one of the many pollutions that may be inflicted upon man and have to be wiped off by means of some ritual process.⁵ Mazdæism gives to purity and purification as much importance as any lower religion, because those conceptions have been made to fit into the dualistic system. Pollutions come from contact with impure beings or are ascribed to demons, exactly as in the beliefs of primitive people, but they are considered at the same time as an achievement of Ahriman, the evil spirit, creator of the evil creation, source of every evil, material or moral. When those defilements are suppressed by means of water, *gōmēz*, and other substances, or by rituals completely similar to those used for that purpose in all magical proceedings, it is inasmuch as these elements are endowed with the purifying power emanating from Ormazd, the producer of good creation. In all this we have to do with aspects of the great struggle between the two principles. The material and the moral aspects of purity are wholly intermingled in Mazdæan conceptions.

The verb *yaozhdā*, 'to purify,' is akin to Lat. *jus* and Skr. *yosh*. It refers to all that is fine, good, or right—all that is as it should be. In the *Gāthās* the word is found only once and means 'to accomplish,' 'to make perfect,' 'to put in good shape.' It is used of the *daēna*, the conscience, the soul of the faithful, while in the *Vendīdād* we find it used of the body and of all kinds of material beings susceptible of being polluted.

Darmesteter⁶ compares this double meaning to that of 'cleanliness' in English, which is a moral as well as a material virtue—'cleanliness is next to godliness'; and he adds with much reason that, for a Zoroastrian, cleanliness is an aspect of godliness, since it is the state of a being belonging to Ahura Mazdāh. In most cases one has to do with pollutions that are real infections or defilements. But they not only soil; they also put one in the power of the evil spirits. Impurity must nearly

resemble the contagion of a disease; it extends by contact and dooms the victim to perdition unless it be redeemed by a purification that gives it back to the realm of Ormazd. The conception of purity comes fairly near to that of health. All that is unhealthy or abnormal in the body is impure: disease, menstruation, childbirth, death of the whole body or of parts of it; and, after all, sin is a kind of disease also—a folly in contrast with wise conduct (*ārmatay*) or the right kind of mind (*Vohu Manah*).

It is therefore not surprising that Mazdæism professes that wise conduct and good teaching purify man's life (*Yaozhdao mashyā aiipi zanthem* [*Ys. xlviii. 5*]).

The worst impurity is that which arises from contact with a corpse. For a Mazdæan, to die was to pass into the power of the *druj* Nasu (*νεκρός*). Hence it is necessary to minimize the evil produced by this demon by protecting all good beings and substances from its power, and, if contact has taken place, it is urgent that the defiled substance should be freed as soon as possible from the grasp of the *druj*. The first process of purification applied in that case is the *sag-did*, or the look of a dog, preferably of one with yellow ears and four eyes (*i.e.* with spots near the eyes). This, however, is not sufficient to destroy the impurity inherent in the corpse, and every person and thing that has come in direct or even indirect contact with it must be purified. The contact is greater on soft and wet ground and where decomposition has set in. The corpse is therefore deposited on a flat stone around which the *nasā-sē-lār* traces with a knife three deep circles to prevent the Nasu from infecting the surroundings. The corpse has to be stripped of its soft and liquid parts by the action of vultures or other animals of the evil creation. It is therefore deposited in some remote and dry place far from the cultivated fields or on a *dakhma* till it is completely dried up. Then it is presumed to be no longer infectious. All kinds of purification are prescribed for the people who perform the duties connected with the dressing of the corpse and its transportation. See, further, art. DEATH, etc. (Parsi).

Next to death, the worst impurity is menstrual blood. The *dashtān*, 'woman during her courses,' must be kept indoors in a special room (Pahl. *armēsht-gāh*), where food is handed to her from a distance by means of a stick. The woman after childbirth is treated in the same way, and must be confined during forty days in the *armēsht-gāh*, which greatly increases the mortality among Parsi women.

All that is detached from the body, being dead, is impure. Hence the ceremonies prescribed for cutting the hair or the nails (*Vend. xvii. 1-9*). This is also the reason why the priest wears the *paitidāna*, or piece of gauze, before his mouth when he comes near the sacred fire—lest he should soil it by his breath.

All that has been touched by one of the defiling substances has to be purified, and the greater part of the *Vendīdād* is devoted to the description of the ritual processes securing the purification of all kinds of elements or materials, such as wood (*Vend. vii. 28*), corn (*ib. 32*), water (*vi. 26*), fire (*viii. 73 ff.*), earth (*vi. 1-24*), the house of a dead man (*viii. 3*) or the road followed by the carriers of the corpse (*ib. 14, 22*), household utensils (*vii. 74*), clothes (*ib. 10 ff.*), and animals—*e.g.*, the cow that has eaten from a corpse (*ib. 76 f.*). Soft and porous substances require a more complete cleansing than hard and dry ones, and purifications are more elaborate in winter than in summer.

The cleansing substances are the same as are used in all rituals of the same kind, viz. above all, water, and next to it *gaomaēza* (Pahl. *gōmēz*),

or urine of cattle. A *riṇāyat* quoted in Darmesteter (*Zend-Avesta*, ii. 266) explains that, when Jamshēd (Yima Xshaēta) extracted Talmuruz from the body of Ahriman, he had soiled his hands; but, a drop of *gōmēz* having by chance fallen on them, they immediately recovered their fine aspect. Earth is also mentioned at times as a purifying element (*Vend.* vii. 14, 74).

As for fire, it is generally considered to be the purifying element *par excellence*; it has been exalted so high in Zoroastrianism, as the purest offspring of the good spirit, that it cannot be used as a purifier. It must never come in contact with anything impure.

For some specially serious cases of contamination there was provided an extensive ceremony—the *barashnūm*, or purification of the nine nights, described in *Vend.* viii. 35-72 and ix. 1-57. The ground had to be prepared by cutting down trees in a dry place. Then holes had to be dug, and furrows drawn. The unclean person had to walk to the holes, recite a prayer, and be sprinkled with water and *gōmēz* on all parts of his body in succession.

ALBERT J. CARNOY.

PURIFICATION (Jain). — 1. **Introductory remarks.**—The Jains of to-day are rightly proud of the old saying that a Jain might be trusted in the zenana of a king; so great, indeed, was their character for purity that it won for them the epithet of *paraghara pavesā*, 'worthy to enter another's house.' There can be little doubt that this splendid reputation was due to the ethical character of their religion, though even to-day the ethical nature of Jainism is insufficiently realized by European scholars, and too little appreciated even by the Jains themselves. It is in accordance with this ethical tradition that sins against purity of any kind are never glossed over, but always treated with the greatest severity. Adultery is accounted one of the most heinous sins, equivalent to taking life (*jīva hinsā*), and the layman or monk who breaks the vow of chastity is held to have broken all his vows. Every sin of impurity, whether it lie in thought, word, or deed, or in causing others to offend against the law of chastity in thought, word, or deed, must be confessed to one's director (*guru*) as soon as possible, and the penance imposed by him performed. The usual penalty for unchastity is for a monk nothing short of expulsion from the order, and he must undergo long fastings before he can hope to obtain reordination. A layman guilty of impurity is held to have slipped back on the ladder of rebirths and fallen below the stage not only of being a Jain but even of being human, and he must observe the strictest fasts with the idea of torturing the body which led him to commit such crimes before he can win back again the birthright which he has forfeited. If the sin be not repented of and confessed, the most hideous torments await the offender in a future rebirth as a hell-being. With regard to women who sin against the law of chastity, a Jain husband can never divorce his wife, but, if she prove unfaithful, he would very probably separate from her, and though, as a rule, the practice of taking a second wife is much looked down on, it would be considered pardonable in such a case, and the woman would look forward with dread to being widowed in her next existence.

The idea of purity differs of course for a monk

and a layman. The monk must observe the most rigorous celibacy, never looking at, thinking of, speaking to, or touching a woman, never even sitting where a woman has sat or stroking a female animal. It is interesting to notice that these laws are enforced in their sacred books not only by every religious sanction present and future, but also by appealing to the natural laziness of the monk, warning him of the burdens and cares of married life.

A layman vows to maintain his wife in all honour and loyalty and to renounce the society of other women. It is customary for a devout layman to observe celibacy before any of the great Jain festivals or fasts, before going on pilgrimage, and for twenty days in every month, and, as he advances in holiness, he at last renounces entirely the society of his wife (*brahmacharya pratimā*).¹ All unnatural sins against purity are punished in this life by heavy penances, or after rebirth by the most hideous tortures.

The Jains are also proud of the purity of their worship, for courtesans are not to be found connected with their temples, nor does their religion permit any *śakti* or *vāma mārga* orgies, and their entire sacred literature contains nothing approaching to the Tantras of the Hindus.

With regard to ritual purity and purifications, the Jains themselves say that they have borrowed their rites from the Hindus and especially from the Brāhmins; so it will be interesting to compare the two systems on this point. A Jain is always most anxious to maintain ceremonial purity, for only when in a state of ritual holiness can he go to temple or monastery, or perform any of his religious duties, such as meditation, adoration, or reading the sacred books; but ceremonial pollution is very difficult to avoid, accruing, as it does, in so many minor ways,² and especially on the occurrence of any birth or death in a family.

2. **Birth impurity (*vraddhi sūtaka*).**—Before the birth of the first child the young mother goes to her own old home, where she must stay for at least a month and a quarter after the child's birth; during all this time she is considered ceremonially impure and 'untouchable,' and her husband is not allowed to see her or to enter the house where she is living.³ The child, when born, is considered impure, and the midwife bathes it with all possible speed, for, if it dies before being thus purified, it might have to be buried somewhere in the compound of the house instead of in the children's cemetery reserved for infants dying when less than eighteen months old, which is situated near the burning ghāt.

There are four distinct stages in the progress of the mother back to ceremonial purity:

(a) *On the tenth day* after the child's birth she bathes in the house and on the very bed on which she gave birth to the child; her forehead is marked with an auspicious mark (*chāndalo*) in red powder, and a change is made in her diet. She is not allowed to touch milk during the whole forty days of her impurity, and the first day after the child's birth she has to observe as a fast; if she rebels very much against this, she may be given a native dish called *rāba* (a gruel made of wheat-flour, ghee, and molasses). Up to the tenth day she is allowed to eat only a favourite Jain dish called *śiro* (the same ingredients as *rāba*, but less liquid), but after the tenth day she may take bread and the curried vegetables which she so keenly relishes, and several different kinds of gruel.

(b) *On the twentieth day* the mother again bathes in the house, and on the same bedstead, which is then washed and put in the sun; and the earthen floor and sometimes the walls of the room are freshly plastered with the usual mixture of clay, cow-dung, and water. An auspicious mark is again put on her forehead (she had not been allowed to do this during the intervening days), and, though she is still 'untouchable,' and must sit apart and eat apart, she may now be allowed to sweep the house, but

¹ See M. Stevenson, *Heart of Jainism*, p. 223.

² *Ib.* p. 258.

³ If, however, he is very anxious to see his first-born, it may be brought outside the house for him to look at after it is twelve days old.

must not go outside (unless the family is so poor that she must help with the work). On this particular day she may again eat *śiro* and, according to some Jains, she may now begin to tell her beads.

(c) On the thirtieth day, or on the Thursday nearest to the thirtieth day after the child's birth, the mother bathes in the ordinary bathing-place of the household, whether it be in a room or in the courtyard, and again is decorated with the auspicious mark and given *śiro* to eat; she is now considered less unclean and allowed to go outside the house, though she still must not touch any one or go to the nunnery or temple.

(d) On the fortieth day, or on some convenient Sunday, Tuesday, or Thursday nearest the fortieth day, the mother bathes again in the household bathing-place, and is at last considered ceremonially pure; she is now allowed to touch the household water-pots, the family hearth, and the hand-mill, and may cook for her friends. If during these forty days she has used earthen pots, they will be thrown away, but the brass vessels that had been kept apart for her use will be cleansed by fire or ashes, and taken into general use. After bathing, the mother is marked with the *chāndalo* and is given *śiro* or some specially dainty dish to eat, perhaps *kamsāra* (a dish resembling *śiro*, but not cooked with *ghī*). She then goes to her mother-in-law's house (which is probably her husband's house also), does obeisance at the feet of her mother-in-law, and offers that much-feared lady a present of money, which varies according to her purse. Very often the daughter-in-law gives two rupees if a son has been born to her, and eight annas if it is only a daughter. After this her husband may permit her to return to her own mother's house for a varying period lasting probably six months—this seems the 'correct' thing to do, as it is the Brāhman custom—or he may summon her at any time.

Among most of the Jains the child's father is considered impure for ten days, and for that length of time he is not allowed to go to the temples or perform any religious duties; and all his near relatives that bear his surname are in the same state of ceremonial impurity (though, unlike the Brāhmins, they are allowed to celebrate weddings during that period). The impurity is removed at the end of ten days by simply bathing in the ordinary way. In cases of necessity, however, the father and his relatives may purify themselves by ordinary bathing the day after the child's birth.¹ Though the Jains are anxious that the mother should not die before the purification is complete, yet, if she should not survive, they do not have to perform that pathetically tragic rite of bathing the young mother's dead form one hundred and eight separate times, as the Nāgar Brāhmins do. It is good to know that human nature is stronger than tradition, and the writer's Indian friends have assured her that, if their wives were to die in childbirth, they would now break through every custom and insist on being with them at the last.

3. Death defilement.—The defilement which death brings on a household (*mṛtyu śūṭaka*) is far heavier than that of a birth. During the time the pollution lasts the Jains, like the Brāhmins, can celebrate no marriage, hear no music, eat no sumptuous meals, and perform no religious duties, and they must wear only white turbans, but, unlike the Brāhmins, they need not shave off their moustaches.

When a Jain is dying, he is placed on the floor, which has been newly plastered with cow-dung and clay (if Hindu influence is strong, the cow-dung will probably have been mixed with water from the river Ganges), and the patient is so arranged that his head is towards the north and his feet towards the south. Great attention is paid to the purification of the dying man's soul, and, with this in view, he is urged, even before he has been placed on the floor, to take certain vows, especially that of religious suicide (*santhāro pāṭha*),² in which he promises never to eat or drink again while he lives; he also gives away much in alms for feeding cattle and the poor; and, the moment he dies, his heirs offer further alms in his name. Still with the object of purification, a lamp fed with melted butter is lit close to the man when

¹ The mother's own brothers are not considered ceremonially impure, though they may have been in the house where the child was born.

² See Stevenson, p. 221.

he is on the point of death, and is kept constantly burning till the dead body is carried out of the house. The corpse is not usually bathed, but, in the case of a woman dying while her husband is still living, the big toe of her right foot is bathed, and her forehead is smeared with red powder.

Every one in the house is considered unclean; the men of the family go with the corpse to the burning-ground and bathe before returning.¹ The women leave the house to go and bathe in a river or tank after the corpse has been carried out, but they must be careful to return before the men. The period of ceremonial impurity lasts for seven or nine days, and is broken on a Monday, Thursday, or Friday nearest the seventh day, when the men all go to the river and bathe, and then shave for the first time since the death occurred. The women bathe in the house, wash their hair, and change their clothes.² The house has also been impure during the week, and no outsider would drink water in it; but now it is all cleansed and re-plastered with cow-dung. The room in which the person died is re-plastered with special care, and, if Hindu influence is strong, it will be further purified by having cow-urine sprinkled on the floor. All the clothes worn during the seven days have to be washed, the vessels used purified with ashes and water, and the cooking-hearth cleansed with water and cow-dung. The funeral ceremonies end with a feast to all the caste-fellows, whether Vaiṣṇava, Jain, or Svāmi Nārāyaṇa by religion.

4. Special impurity of women.—The birth and death *śūṭaka* are the two great periods of impurity for a man, but a woman contracts ceremonial pollution more frequently, and is regarded as untouchable for four days in every month. During this time she must sit apart either on a thick cloth or on a hassock made of sacking, and, though she may sleep on a bed, it must not have the mattress spread over it, but only sacking or thick cloth. She must eat apart, and may not touch copper or bronze vessels, though she is allowed to use brass or crockery, but all the vessels that she touches are regarded as impure and have to be cleansed at the end of the four days. She should not go out of the house, if she can possibly avoid doing so, and of course cannot visit temple or nunnery; nor may she perform any of her religious duties, such as meditation or confession, even in the house. During these days she must not cook for the family or touch the hearth or the water-pots. At the end of the fourth day she bathes, changes her clothes, and washes her hair. On the occasion of first attaining puberty, however, the purification ceremonies are more elaborate. The girl, who, though married, is probably still living in her mother's house, bathes after the fourth day and puts on a simple green bodice and red *sārī* (two auspicious colours) that her mother has prepared for her, and then starts out for her mother-in-law's house; but, just before she leaves, her mother puts some molasses in her mouth. Arrived at her destination, she makes her reverence at her mother-in-law's feet and offers her two rupees; and the old lady, if gracious and kindly, presents her daughter-in-law with a more elaborate green bodice fashioned of silk. Then the mother-in-law invites her to a feast of specially nice food, which will include a dish of wheat, treacle, and *ghī* (*lāpaṣī*). The girl can be summoned any time after this to go and live with her husband in her mother-in-law's house, and the sewing of the trousseau will be hastened, for she must not go till this is completed. Prob-

¹ It is interesting to notice that, though the body may be carried out through the ordinary house-door, there are usually certain city-gates through which a corpse may not be borne.

² Near relatives, even if living in a distant village, are obliged to go and bathe in a stream immediately after hearing of the death.

ably, despite all the bowing that she has done and will do at her mother-in-law's feet, the last thing that her own mother will whisper in her ear will be the proverb, 'Don't be as bitter as a *nim*-tree, or you will be spat out; but don't be as sweet as sugar, or you will be eaten up [with the work they will put on you].'

5. **Accidental pollution.**—A Jain, however, may also acquire pollution in his ordinary life, and especially through what he eats and drinks. The worst fault that a man can commit is to eat meat, and, if this were done openly and persistently, he would be put out of caste absolutely and never be allowed to eat with his equals again. If, however, it were done accidentally and repented of, the offender would confess it to his director and have to observe very strict fasts before he would be regarded as purified. The rule is the same for drunkenness: even moderate wine-drinking is absolutely prohibited on account of the entry of life by fermentation, though eating opium and smoking tobacco (while not approved of) do not render a man impure.

Pollution is also acquired by touching an out-caste (an untouchable), and, after sitting beside one in a train or brushing against one, Jains purify themselves either by bathing and changing their garments, or, if less particular, by just sprinkling water over their clothes; village Jains are content with simply touching a Muhammadan by way of purification. If an out-caste passed very near their house or accidentally entered a room, Jains would purify it by sprinkling water, and, if he brought them wood, they would sprinkle water on the faggots; in the same way, after walking through an out-caste quarter of the town, they would purify themselves by bathing or by sprinkling. The rule seems to be that a very particular Jain purifies himself by immersion or, rather, affusion, and a less strict one does it just as effectually by aspersion—an interesting parallel to the varying methods of Christian baptism.

Bronze and copper vessels are treated with great respect; if they should, despite every precaution, be defiled, they are put into the fire to be cleansed. Brass vessels can be purified with fire or more simply with ashes, crockery by being washed in warm water; but the writer was shown in one house the glass that a Muhammadan visitor frequently drank from, kept in a special niche in the garden wall. In schools, in the same way, the vessels used by Muhammadans are kept separate from those belonging to Hindu or Jain children.

If the whole of a house be defiled—by a dog bringing a bone into it or a crow dropping some meat in the courtyard—the householder summons a Muhammadan or some meat-eating Hindu, such as a Koli, to take it away and himself purifies the house by sprinkling water and cow-urine where the meat had lain.

Unlike the Hindus, the Jains do not become impure during an eclipse, but, where Vaisnava influence prevails, they throw away their earthen cooking-pots when the eclipse is over and bathe in a river.

Like the Hindus, the Jains perform ceremonial bathing and teeth-cleansing every morning, and until their teeth have been rubbed with the tooth-stick they will not swallow a drop of water.¹ Monks and nuns, once they are professed, may never bathe, lest they should injure the water-*jiva*. Naturally cleanly ascetics, however, evade this by rubbing themselves over with a cloth which has been moistened in warm water. But they must never clean their teeth. Before they are professed, they bathe in the ordinary way, and then their

¹ Cutch and Mārwar Jains do not, like other Jains, bathe daily as a religious duty.

heads are shaved except one lock of hair which they must themselves pull out. Every year afterwards they have to pull out their hair¹ before the great annual confession—a custom which is believed to be peculiar to the Jains.

The idols in the temples are also bathed every morning, but the most elaborate idol-bathing is that which takes place every twenty-five years at Śrāvāna Belgolā (see art. FESTIVALS AND FASTS [Jain]). Before a man can worship in a temple, he must bathe; and, if he wishes to penetrate the inner shrine, he must bathe at the temple and don the special pure clothes provided at the cost of the community and kept in a particular room attached to the temple. In Kāthiāwār the Jains seem to be able to go to England without going through any special purification on their return, but in other places where Vaisnava influence is strong a Jain goes and bathes in a sacred river, such as the Ganges, the Godāvāri, or the Nerbādā, and, under the pressure of Hindu opinion, he might even sip the fivefold nectar which consists of butter, curds, milk, sugar, and honey. He would also probably have to go on pilgrimage to Palitānā, Gīrnār, or some other sacred place. All this trouble, however, is sometimes avoided by a well-understood and useful fiction—the man simply giving out that he is going on pilgrimage, and then quietly proceeding to Europe, but returning *via* the pilgrim resort.

E.g., a well-known Jain gentleman was travelling in Germany at the outbreak of the war and suffered all sorts of difficulties before he was able to leave for India. He was careful, however, to return to his native place by way of a sacred hill; and it was apparently assumed that he had spent the whole time there, though his hearers must have found it difficult to reconcile the stirring adventures, alarms, and excursions under the Kaiser's tyranny, which he openly recounted to every one he met, with the peaceful happenings incident to a pilgrimage, which ought to have composed his story. Anyhow, no purification was demanded.

LITERATURE.—The information contained in the above article has been derived directly from Jain informants. See also the present writer's *Notes on Modern Jainism*, Oxford, 1910, *The Heart of Jainism*, do. 1915; and *SBE* xxii. [1884] and xiv. [1895].

MARGARET STEVENSON.

PURIFICATION (Japanese).—As cleanliness or purity is the dominating ideal of Shintō, rites and ceremonies of purification make up a considerable portion of the 'way of the gods.' The most important among these are the two ceremonies known as *harai* and *misogi*.

Their origin is said to date from pre-historic times as far back as Izanagi and Izanami, the male and female creators of the land of Toyo-ashi-hara, as Japan was anciently called.

Izanami died and departed to the land of *yomi*, or darkness; her husband followed her and, behold, 'her body was already putrid, maggots swarmed over it . . . and Izanagi, greatly shocked, exclaimed, "What a hideous and polluted land I have come to unawares!" So he speedily ran away.' He threw aside the stick with which he had touched the dead, and his belt, garments, waist-cloth, hat, and bracelet, thus sweeping off everything that had clothed his body. The action was called *harai*, literally the 'sweeping off.' Thereafter he jumped into the sea and cleansed his body with its water. This was termed *misogi*, 'watering' the body, in token of the removal of all impurities. Thus *harai* and *misogi* became integral parts of court ceremony and consequently of Shintō ritual.

There are various kinds of *harai*, named according to their purpose and importance: *yoshino-harai*, *akuno-harai*, *ō-harai*, *kamino-harai*, *nakano-harai*, *shimono-harai*, etc. *Yoshi* means 'good,' and *yoshino-harai* is to secure the good; *aku* means 'evil,' and *akuno-harai* is to avoid evil; *ō* means 'great,' and *ō-harai* is the most important of all; *kami*, *naka*, and *shimo* mean respectively 'upper,' 'middle,' and 'lower,' thus indicating their grade of importance.

The *ō-harai*, or great purification, is a ceremony intended to cleanse from all the evils and pollutions experienced since its last celebration. It is observed twice a year (at the end of June and the

¹ Stevenson, p. 165 f.

end of December), when the official in charge, after the proper purification of his own body, offers flax and a sword. The most important part of the ceremony is the reading of the formula known as the *Nakatomi-no-norito*, so called from the fact that in the beginning the family of Nakatomi had charge of the reading. The formula first announces to all whom it may concern the celebration of the ceremony, then enumerates the evils and impurities which have been incurred, and concludes with the statement that these all shall be purged away by the virtue of the rite.

The *ô-harai* was usually performed at the southern gate of the royal palace in Kyoto. Special messengers were sent by the court to all parts of the empire, and the same ceremony was performed in various Shintô temples. Regulations governing the details of the ceremony were formulated from time to time, but these tended not to perpetuate the ceremony but to hasten its decline. For several hundred years previous to the restoration of 1868 the observance of these ceremonies was much neglected by the court; but with the restoration, together with many old forms, they were again brought into more or less prominence.

Special occasions of public calamity, such as the outbreak of pestilence, famine, or destructive fires, also call for the observance of *ô-harai*. Local and individual *harai* are at times observed for various reasons upon a much smaller scale. Individual *harai* has at times been looked upon as a penalty for certain offences, and in A.D. 801 was carried to such an extent that the court issued an ordinance regulating its use.

Saikai, or *monoiimi*, is a form of self-purification in preparation for worship. When the worship has been duly performed, the worshippers discontinue the *saikai* by a ceremony of *kai-sai*, dismissing the *sai*. While under *saikai*, certain things are forbidden, such as attending funerals, visiting the sick, sentencing a criminal or putting him to death, playing upon a musical instrument, or taking part in any impure or desecrating act. The length of the observance may vary from one day to a month, according to the importance and nature of the occasion.

The *Yengishiki*, or 'Book of Ceremony,' published during the Yengi era (901-923), has the following regulations concerning those who are to be regarded as polluted by various acts of impurity and who are therefore to be prohibited from taking part in Shintô worship. Pollution from the human dead shall debar for thirty days from the day of the funeral; pollution from human birth for seven days; pollution from animal dead for five days; and from animal birth, not including chickens, for three days. Those who ate the flesh of beasts were impure for three days. Participation in the reburial of the dead rendered one impure for four months or longer. Those who had attended a funeral, visited the sick, or been present at a memorial service were forbidden to enter the royal gate on the same day. Buddhist priests and nuns and those in mourning were forbidden to enter the palace during the *saikai*, and both before and after the chief festivals such as *kinen*, *kanname*, and *niname*.

Court ladies in pregnancy were obliged to withdraw from the court during the time of *saikai*, as also were those temporarily incapacitated at the time of the ceremony itself. A conflagration rendered those within the house impure for a period of seven days. Complicated regulations, as has been said, were formulated governing all possible cases; but in practice the observance has gradually decreased, so that at present slight attention is paid in general to ceremonies of purification.

Various symbols of purification are still more or less common. People returning from a funeral are not infrequently greeted with salt, that they may be freed from all impurity before entering their homes. Spitting or breathing on them is thought to remove contamination from sights and objects near at hand. Shaking the *gohei*, strips of white paper attached to a rod, is an act of purification, and the *shimenawa*, or straw rope above the entrance gate, is likewise thought to protect the dwelling from impure influences.

LITERATURE.—W. G. Aston, *Shinto: the Way of the Gods*, London, 1906; B. H. Chamberlain, *Things Japanese*, do. 1901; T. Harada, *The Faith of Japan*, New York, 1914; artt. relating to Shintô temples and ritual in *TASS*.

TASUKU HARADA.

PURIFICATION (Muslim).—I. The ritual of purification.—The Muhammadan ritual of purification is based primarily on the late Qur'anic passage, v. 9, repeated with slight variations from iv. 46:

(a) 'O believers, when ye come to fulfil the prayer, wash your faces, and your hands as far as the elbows'; (b) 'and if ye be polluted then purify yourselves' (*fatḥḥarū*; but iv. 46, 'wash yourselves,' *taḥṭasū*); (c) 'but if ye be sick, or upon a journey, or one of you come from the privy or have touched a woman, and ye find no water, then take pure earth and rub your faces and hands therewith.'

With the help of traditions, the variations in the two versions of this law have been harmonized, certain verbal and logical obscurities removed, and the details elaborated into a ritual of practice as follows.

(a) *Wuḍū'*, or *waḍū'*, the minor ablution, of the appendages (not the trunk) of the body.—It is performed regularly before each of the five daily prayers, whether at home or in the mosque; but it may be omitted if the worshipper is sure he has in no way become polluted since the last *wuḍū'*, as, e.g., when he continues praying from one period without interruption into the next. It is usual also before touching the Qur'an and at the approach of death; and it forms an integral part of the major ablution.

The *wuḍū'* is performed at a tank (*miḍā'ah*) or reservoir (*ḥanaḡiyah*) provided with spouts; after a declaration (*niyah*) that the intended act is for purposes of purification, the Muslim, with sleeves tucked above the elbow, performs each of the following acts three times: washing the hands; rinsing the mouth (here the tooth-pick also is used); compressing each nostril with the left fingers and snuffing up water from the right hand, followed by expulsion of the water; washing the face; washing the right arm and permitting the water to run from the palm to the elbow; washing the left arm similarly. Then follow once each: passing the wetted right hand over the upper part of the head, the turban being pushed back with the left; combing the beard with the wetted fingers; inserting the tips of the forefingers into the ears and passing the thumbs around the back of the ears; wiping the neck with the back of the fingers of both hands; washing each foot as high as the ankle and passing the fingers between the toes (Shi'ites, however, conform more literally to the Qur'anic passage by rubbing [*maṣḥ*] the feet with the wetted hand instead of washing them; see also *maṣḥ*, under *taḥīr*, p. 497*).

(b) *Ghusl*, the major, total ablution of the body.—As based upon the Qur'an, it is demanded in the case of certain physical pollutions, specified by tradition to be those of coition, nocturnal pollution, menses, and childbirth, the period of uncleanness in the last (*nifās*) continuing for forty days according to Sunnite law, for ten according to Shi'ite. As based upon tradition only, and hence called *ghusl masnūn*, it is demanded in the case of conversion to Muhammadanism; before the prayers of Friday and the festivals; after washing a corpse; after blood-letting; after death (performed by the *mughassil*, or washer of the dead). It must be performed in more than a certain minimum of water, which must touch every part, every hair, of the body, and hence takes place usually in the *ḥammām*, with its plunge bath. *Ghusl* includes also the *wuḍū'*, though the washing of the feet should be deferred by a *niyah* to the end of the

entire ablution; in the case of the *wuḍū'* as part of the *ghusl* of a corpse the mouth and nose are stopped with cotton instead of being washed.

(c) *Tayammum*, the minor purification with dust in place of water.—It may be performed when water cannot be secured within two miles or without incurring danger; in case of sickness, open wounds, or fractured bones; because of lack of time for the proper *wuḍū'* before the prayer on festival-days and at funerals. It consists of the declaration of intention, and of clapping dry dust or sand upon the face and hands.

(d) *Various practices of personal cleanliness*.—Some of them, together with *wuḍū'* and *ghusl*, are classed under the general term *ṭahārah*, 'purification,' some of them form part of the regular *wuḍū'* also, others are practised as occasion demands; in so far as they are not mentioned in the Qur'an, they are declared to have been sanctioned by the Prophet as *fiṭrah*, lit. 'nature,' the natural religion in which man was created (xxx. 29), interpreted also as 'customs of the [previous] prophets.' These are use of the tooth-pick (*miswāk*)—an insistent practice of Muhammad; cleansing the nose and mouth with water (*istinskāq*); clipping the ends of the moustache to prevent them from entering the mouth; clipping the finger-nails; cleaning the finger-joints; depilation of the armpits; shaving of the pubes; abstersion (*istinjā'*) with water or dry earth or a piece of stone after evacuation and urination. Washing the hands before and after meals is also declared sometimes to have been demanded by a *ḥadīth*; and it is quite generally practised. Another enumeration of five usages of *fiṭrah* includes circumcision, which in usage is also regarded as an act of purification, and hence the term *ṭaḥīr* (see below) applied to it; it is nowhere mentioned in the Qur'an, however, nor is it absolutely necessary in the case of an adult converted to Muhammadanism.

(e) *Ṭaḥīr*, the purification of objects which have become ritually unclean.—This is based on *ḥadīth* only; like personal purification, it may be performed with dry earth instead of water. One of the most important rules of *ṭaḥīr* is that termed technically *mash*, the purification of the inner boots; according to Sunnite law, if they cannot be cleansed of filth by rubbing dry earth upon them, they may still be made ceremonially clean (and worn during prayers) by stroking (*mash*) them with the wetted fingers three times; Shi'ites, however, deny that the boots may be worn at all during prayers. Some of the other numerous details of *ṭaḥīr* are the following:

Any spot can be made ritually fitted for prayer by spreading a clean rug or garment upon it; but the ground itself is clean when dry. Handling forbidden animals, such as dogs, pigs, and rats, requires purification of the person and garments. Dishes which have contained wine or the flesh of swine (conditions which may exist when such dishes have belonged to Jews or Christians) must be purified before a Muhammadan may eat from them. A vessel from which a dog has drunk must be washed seven times; a mosque defiled by a dog can be purified with water or earth together with recitations from the Qur'an; it should be noted, however, that the mere presence of the animal, if dry, does not render unclean, while, on the other hand, if wet, the mere contact of its nose with the clothes requires (so the Shāfi'ites hold) that the clothes be washed seven times, each time in fresh water, and be rubbed once with earth; even Muhammadans less strict hold that body and clothes are defiled by a dog's saliva, and naturally by its micturition; many will not use mattresses made of dogs' hair. Another tradition declares that any considerable amount of fleas' blood defiles a garment. To a certain extent the ordinary washing of clothes is considered an act of purification, since the operation is concluded by pouring clean water upon them and reciting the *shahādah*, or testification of faith.

The water used for purificatory purposes must itself be pure, i.e. clean. Therefore rain-water is preferred and regarded as specifically recommended in Qur'an, viii. 11:

'Remember when . . . He sent down upon you rain from

heaven to purify you therewith and remove from you Satan's pollution' (*riḥ*; perhaps intended rather in the sense of temptation [to desertion and idolatry]).

On the basis of *ḥadīth*, water from other sources may be used; that of the sea, springs, wells, rivers, hail, snow, and ice (but not ice itself), providing colour, smell, and taste give no evidence of pollution; with those restrictions, running water may be used even if a dead body or other unclean thing has fallen into it. The same permission is given in the case of standing water of more than a certain volume; but, if an animal falls into a well, at least 300 bucketfuls of water must be drawn, and the well must not be used for a day, or, if putrefaction of the body has set in, for three days. Earth or sand used for purification must not be damp.

2. *Origin and motive*.—The details of these purificatory practices were derived by Muhammad and the elaborators of his laws from pagan Arab, from Jewish, and from Christian sources. Occasionally a tradition seems to show that the Prophet (or those speaking in his name) was still under the influence of the primitive superstitions which gave rise to the particular practices in question; some traditions show an appreciation of the religious and ethical transmutations of Judaism and Christianity; others a mere toleration of existing customs in so far as they were free or could be freed from idolatrous implications. But to the extent that there was any logical purpose in his eclecticism at all, that purpose seems to have been partly rationalizing and disciplinary, mainly aesthetic. For it would seem that filth in any form was repugnant to Muhammad, particularly to his olfactory sense. This abhorrence of filth and keenness of smell may well have been due in part at least to his early Bedawīn apprenticeship, for both are very pronounced in the true Bedawīn. At any rate tradition is insistent in ascribing them to Muhammad.

Thus one *ḥadīth* declares that he demanded that any one who had eaten garlic or onions should avoid his presence (a variant reading restricts the prohibition to prayer-time); another tradition, accounting for the institution of the *ghusl* as a regular Friday practice, declares that he ordered it on an occasion when the people had performed their daily labour while wearing blankets and had perspired to such a degree that the odour from their bodies had become disagreeable. Again, he is reported to have said that in paradise all bodily excretions will be carried off as a perspiration with the odour of musk; that only the sensing of an odour or the hearing of a sound must be considered an interruption of the required absorption in prayer; and, still more significant, that, when a man tells a lie, the foulness of its odour drives his guardian angels a mile away.

It is possible, of course, that underneath the selfish aesthetic motive there was a trace of that sublimated anthropomorphic conception which leaves to the deity a gratification in the odour of sacrificial smoke or of incense, and hence might ascribe to God man's own aversion to foul odours. Indeed, there is even a tradition which declares that the sacrificial blood itself reaches Allāh's acceptance before it touches the ground; but, as far as Muhammad himself is concerned, this evidence is nullified by the Qur'an (xxii. 37):

'Their flesh will never reach to Allāh, nor yet their blood, but your piety will reach him.'

The tradition cited probably represents merely a popular expression of the surviving primitive superstitious conception; still more primitive in conception is the declaration that the nasal purification was instituted for the purpose of driving out the evil spirit which lodges in the nostrils during the night. From the Qur'an itself the impression is derived that Muhammad's purificatory ordinance was perhaps merely an expression of the feeling which, superstitious origins forgotten, still demands a certain decency and comeliness on the part of the worshipper; for the ordinance in

question follows immediately the rational injunction, 'Come not to prayer while ye are drunk, until ye understand.' The rationalizing tendency of Muhammadanism in the purificatory ordinances is seen also in the limitation of contactual ritual contamination to cases of actual physical transference of perceptible impurity. There is evidence that the strictness of Hebrew legislation in regard to the menstruous woman was shared at least in part by the pagan Arabs (in the earlier Arabic usage the only clear equivalents to the Hebrew *tāmē* and *tāhōr*, 'unclean' and 'clean,' seem to be *tāmīth* and *tāhīr* as applied to the menstruous and the 'clean' woman); but several traditions show that Muhammad, in accepting the general principle and some particular details from both sources, modified the severity and declared that mere contact with a woman in this condition need not be avoided. Nor does touching a corpse render unclean any one except the person who washes it for burial; still less does mourning in general, or contact with sacred objects. The same tendency to identify ritual uncleanness exactly with physical malodorous uncleanness, with excretions, dampness, and putrefaction, is evidenced in some of the definitions cited above; e.g., a dog's contact defiles only if the animal is wet; earth is clean (and cleanses) if not damp. The tradition declaring that the micturition of a 'clean' animal does not defile is, of course, not of this rationalizing tendency.

3. *Connexion with expiation.*—There are a few isolated indications that purification might by some have been regarded as having expiatory or atoning force—that it washed away guilt. Whether any such idea attaches to a tradition that in paradise the faithful will be distinguished by the marks of purification on hands and forehead is doubtful; the *ḥadīth* that he who performs the *wuḍū'* thoroughly will extract all sin from his body, even though it may lurk under his fingernails, is clear. And such an idea may have been present in the mind of the governor of Kūfah who ordered the pulpit of its mosque to be washed because his predecessor, who had been guilty of immorality and injustice, had occupied it. But such a conception of purification from sin is not found in the Qur'ān, nor has Muslim theology developed it. Even prayer, for which ablution is only a preparation, absolves only from the minor sins (those inherent in human nature and hence more or less unconsciously performed) and not from the major sins (including all crimes, usury, lying, disobedience to parents, and the frequent commission of minor sins); one looks in vain for evidence that the ablution of a convert represented a baptism into new birth, or that circumcision was really regarded as an act of purification. Neither blood nor fire appears as a purificatory medium. Nor does the use of earth as a substitute for water indicate that purification was a symbolic act; for earth or sand was regarded as an actual sanitary hygienic medium; in the case of sickness the avoidance of water was due apparently to an old and still persisting belief that water poisons wounds and, when cold, causes fever; though here again there is a contrary tradition that Muhammad thought his own fever was due to a spark from hell-fire and might be cured with cold water.

4. *Application to food.*—Muhammad's treatment of the subject of animals used as food seems to support the view that he did not place much emphasis on the ritualistic, technical distinction between clean and unclean, for he did not use the terms at all in this connexion. To him permitted foods are merely *ṭayyibah* (lit. 'good,' 'pleasant,' then 'sound,' 'healthful': ii. 269, v. 6, xxiii. 53). Forbidden animals are not specifically mentioned in the Qur'ān (except the swine); later law, how-

ever, characterizes various animals with the legal terms *ḥalāl* ('lawful'); *mubāḥ* ('permitted'; legally indifferent); *makrūh* ('disliked' or 'abominable'; disapproved, but without penalty for use); *ḥarām* ('forbidden'); the various legal schools differing in the assignment of certain animals to specific classes. Quadrupeds that seize their prey with their teeth are absolutely prohibited; included in this class are the elephant, the weasel, the ass, the mule; according to Ḥanīfite law, also the hyena, the fox (but these are regarded as lawful by the Shāfi'ites), and the horse (held to be indifferent by the Shāfi'ites, while Mālikite law agrees with Ḥanīfite). Birds which seize their prey with their talons, such as ravens and some crows, are also forbidden. According to some interpretations, all aquatic animals except fish are unlawful (though the Mālikites permit them). Included in *makrūh* are pelicans, kites, crocodiles, otters, and insects (except locusts, which are permitted); in *mubāḥ* are hares, crows that feed on grain, magpies. But all animals used for food (except fish and locusts) must be slaughtered by drawing the knife across the throat in such a manner as to sever windpipe, carotid arteries, and gullet; and at the moment of slaughter (in the case of prey at the moment when the weapon is discharged, or, in hunting with dogs, when the animal is let slip [v. 6]) the words, 'In the name of Allāh, Allāh is most great,' must be recited. And all food is forbidden if slaughtered by an idolater or an apostate from Muhammadanism.

It seems evident from the Qur'ānic passage on which this legislation is based (ii. 167) that Muhammad's own restrictions had as their purpose the avoidance of any participation in idolatrous worship and the insistence upon freshly slaughtered food; in speaking of fish used for food he emphasizes the latter idea:

'He hath subdued the sea that ye might eat therefrom flesh that is fresh' (*ṭarṭi*; xvi. 14).

He refused to accept all the ritualistic restrictions of the Jews:

'All food was allowed to the children of Israel (except what Jacob forbade himself, ere the Law was sent down' (iii. 86); and (iii. 44): 'I have come to . . . allow you part of that which had been forbidden you.'

In this permission interpretation includes the eating of fish without fins or scales, of the caul and fat of animals, and of camel's flesh; indeed, Muhammad probably intended in general that his followers might eat whatever was customary to them. There is a tradition that on one occasion he refused to eat of roast lizard when it was placed before him; being asked whether it was forbidden as food, he replied: 'No, but, as there are none in my native place, I feel a repugnance against eating thereof.'

5. *Value of the ritual.*—The prescription of ritual practices and distinctions belongs to the later period of Muhammad's life; and it may be concluded that his priestly or legal, as distinct from his prophetic, activity was one of secondary importance to him, adopted, at least in part, because of the demands for definiteness in creed, code, and practice which the mass of believers demands. Moreover, the ritualistic prescriptions provided a certain discipline of unifying value; and they were the more demanded in that his religious system dispensed with priests, and fixed personal responsibility upon each individual.

As a sanitary code which made cleanliness not next to godliness but a part of it (in a tradition: 'Cleanliness . . . is one half of the faith'), the purificatory ritual had a decided value; it has raised the standard of cleanly and healthful living among all classes of observant Muhammadans. Some Bedawin, it is true, are little observant of

ceremonies; Burton¹ quotes the Bedawin saying: 'We pray not, because we must drink the water of ablution'; nevertheless they show an innate eagerness to bathe at every opportunity. A more serious neglect is frequently noticed in the case of children, who are purposely left uncared for out of fear of the 'evil eye.' But in general those who have lived in the Muhammadan East support the emphatic verdict of Burton and Lane that there is a marked contrast between Muhammadans and non-Muhammadans in this matter of refinement.

6. *Its defects.*—On the other hand, Muhammadanism by its emphasis on ritual has subjected itself to the danger of making cleanliness not a part but the whole of godliness. In the effort to prevent this the ritual provides that each act of the *wuḍū* should be followed by a short prayer making the act at the same time the symbol of some ethical or religious idea.

Thus, after the rinsing of the mouth the prayer is: 'Oh Allāh, assist me in the reading of Thy book, in thanking Thee through worshipping Thee well'; on washing the ears: 'Oh Allāh, make me to be of those who hear what is said and obey what is best.' As a matter of fact, however, many Muhammadans neglect these intermediate prayers and finish the entire *wuḍū* in two or three minutes (despite the exactness of regulation, there is a decided difference in the manner of performance by an educated and that by an uneducated Muhammadan); and, when the prayers are recited by non-Arabic speaking peoples, they may be little better than meaningless.

7. *Outward and inward purity.*—But these defects are not necessarily to be regarded as of the essence of Islām; they are rather inherent in any system which gives to unthinking masses fixed forms and ceremonies. It might even happen in more advanced circles of thought that the Qur'an, by making clearer the distinction between forms and faith—e.g., by making of the purification ritual merely a divinely-ordered sanitary ordinance clear of superstitious connotations—might lead to a lofty spiritual conception. But it is the misfortune of any theocratic code which must provide for all the life of man that the distinction between police ordinance and moral precept is easily obscured—that, perhaps contrary to intention, emphasis is misplaced upon the easily comprehended ritual to the neglect of less specific exhortations to moral righteousness. In the Qur'an, as a matter of fact, the ritual of physical purity is a subject of but few passages; it is not mentioned at all in the definition and summary of true piety found in ii. 172. References to religious, ethical, and moral purity, however, are many, though the exact meaning of the term 'purity' is sometimes difficult to determine. On the whole, 'purity' is a negative term, denoting the absence of what is foreign and obnoxious to the normal, natural, or simple state.

Man was created in purity; though of clay, even the angels bow to him (xv. 30); and 'purity of faith' to Muhammad was merely freedom from idolatrous corruptions and superstitions which had crept into the natural, original faith of Adam. Purity of the heart is demanded under varying forms of expression. As idolatry is uncleanness (*najis*), firm belief in Allāh is purity; thus, in v. 45, 'those whose hearts Allāh does not please to purify' (*yusāḥḥir*) are those who do not believe sincerely and without hypocrisy; in xviii. 2 the Qur'an itself is 'pure' (*mutaḥḥarah*), i.e. freed from falsehood; at least according to tradition (lvi. 78, 'none shall touch it [the Qur'an] except the purified') means 'none shall understand it except those who are pure of heart.' Another word for 'purity,' one normally not used in the ritual sense, appears in ii. 146: 'And we sent you an apostle from among yourselves to read unto you our signs and purify you (*yuzakkikum*) and teach you the Book and wisdom,' in which the purification evidently refers to faith; so also xci. 9: 'Well for him who has purified it [his soul, *zakkāha*]; ill for him who has defiled it.' Or the pure heart (in the religious sense) is the 'sound heart' (*qalb salīm*: xxvi. 89, xxxvii. 82), while hypocrisy is found in those 'in whose

hearts is sickness (*fi qulūbihim maraḍun*): the sincere in heart are those who 'clarify their faith' (*mukhtisna 'd-dīna*: xl. 14); and cxii. is the '*Sūrah of Sincerity*' (*Sūrat 'l-ikhlas*). Vaguely the same idea is expressed in *barr*, 'pious' (li. 41, 172), which in Hebrew is 'pure.'

Purity of purpose is demanded in many passages where no specific term is used; thus ix. 28 is directed against those who out of fear of loss of trade were willing to make concessions to idolaters; lxxiv. 6 inveighs against those who, when they do a kindness, have in their hearts the hope of receiving in return. From the negative side purity of intention is emphasized in the teaching that no sin attaches to one who under compulsion eats forbidden food, provided that he is 'without lust or wilfulness' (ii. 168). And this Qur'anic insistence upon purity of intention is embodied in the purification ritual itself, which, like every act of devotion, must begin with the *nīyah* ('intention'), the thought or the words, 'I purpose to offer up to God only with a sincere heart'; and it is expressed doctrinally in the statement that 'the fundamentals of Muhammadanism are sincerity of belief (*ṣiḥḥat al-aqd*), truth of intent (*sidq-al-qasd*), observance of the lawful limit, and keeping of the covenant' (so stated in the Shāfi'itic exposition of Muhammadanism put in the mouth of the learned slave-girl Tawaddud in the 443rd night of the *Thousand and One Nights*). The Sayyid Amir 'Ali quotes, against those who find in the Qur'an only physical purity as a prerequisite for prayer, vii. 204:

'And think within thine own self on Allāh, with lowliness and with fear, and without loud spoken words, at even and at morn.'

8. *Moral purity.*—In the moral (sexual) sense it is difficult to fix a definite value for the term 'purity'; the relativity of the term, as denoting sexual self-restraint within varying limits of indulgence, is expressed in the *Thousand and One Nights* (night 915) in these words:

'As for the lust of reproduction, that which pleaseth Allāh thereof is, that it be of that which is permitted, and that which he dislikes is that which is forbidden.'

As compared with previous conditions, the Qur'an (see CHASTITY [Muslim], LAW [Muhammadan]) narrowed the legal limits of indulgence; but it left them much wider than the ideal limits set by Christianity, e.g., in that it specifically permitted monogamy and concubinage, and made divorce easy, especially for the male. In so far as this freedom was based only on the Semitic desire for numerous offspring, it does not involve the question of moral purity, though it might perhaps be suggested that Muhammad should by analogy have deduced the doctrine of purity in morality through monogamy from that of the purity of religion through monotheism. But Muhammad in his legislation was mainly an opportunist, a compromiser, satisfied to ameliorate the most evidently vicious social evils to the extent that he could without jeopardizing the success of his main purpose. It is doubtful, indeed, whether monogamy, if desirable, was possible of achievement under the social conditions of the Arabia of his day. And, in general, it is even possible that, by permitting a lower standard of moral purity and making it possible of attainment by those whom his mission reached, he achieved a greater amount of social good than he otherwise would have achieved. At any rate, he raised the standards of moral purity among many primitive peoples which other systems had not before, and have not since, been able to affect seriously or permanently. And, in trying to estimate how far Islām lags behind the more enlightened social systems in this matter, it is again necessary to consider not only standards of monogamy but also to what extent those standards are reached. In the first place, not even

¹ *Pilgrimage*, ii. 110.

a strictly observed monogamous relationship of necessity denotes 'purity' defined as self-restraint in sexual indulgence. Moreover, there are some who doubt whether the amount of indulgence through the lax interpretation of laws of divorce (but more especially through the legal and social toleration of prostitution) is relatively smaller among non-Muhammadan Europeans than among Muhammadans. For polygamy and concubinage, owing to imposed conditions and natural difficulties, are by no means practised by even a majority of Muhammadans; and, while the legalization of the double standard implies a lowering of the general ideal of womanhood, it has meant the saving from absolute moral degradation of a considerable portion of womanhood. For the punishment for transgressing legal bounds is strict; and the seduction of Muslim women is exceedingly rare. Legal restrictions, however, are of no avail in checking those outbursts of sexual violence which accompany the riots of mobs inflamed by racial or religious fanaticism or jealousy, whether in Muslim or in non-Muslim lands, and which are directed against the women of the persecuted race. It is in such crises, perhaps, that the moral shortcomings of Islām stand out prominently, because the Qur'anic permission for cohabitation with female captives (iv. 28, xxiii. 5, xxxiii. 49), Jewish and Christian, furnishes a ready excuse for reactionary and fanatical Muslim leaders who are willing to make lust serve the purposes of religious hate.

In so far as 'purity' is used not only of actions but also of thought and word, it is again a relative term. In Islām, since matters of sex-relations in themselves are not considered to be impure, the thought or mention of them in literature or conversation is not in itself regarded as evidence of moral depravity. Here also, if the standard of purity be made the amount of sexual stimulation produced, it is doubtful if the natural frankness of Muhammadans is worse in its results than the veiled suggestiveness permitted elsewhere; it is extremely difficult, *e.g.*, to judge what the actual effect of Muhammad's picture of the pleasures of paradise is upon the mind of the Muhammadan.

At all events a high ideal and voluntary practice of moral purity are not impossible even when the law permits (but does not command) extremes of indulgence. The interpretation of Qur'ān (and Scripture) is often more important than the letter; and, while there are not many Muhammadans who have attempted to allegorize away the sensualism of the Prophet's paradise, there are many of high moral standards who have found and emphasized other texts in the Qur'ān (see, *e.g.*, the passages quoted in art. CHASTITY [Muslim]); it may be added that in the popular version of the Shāfi'ite teaching presented by the *Thousand and One Nights* the 'super-structure of Islām' is said to include 'striving against the lusts of the soul and warring them down,' while prayer 'restraineth from lewdness and frowardness'. It is, of course, of more significance that certain Muhammadan teachers find in such passages the highest ideal of purity demanded than that detractors of Muhammadanism deny the possibility of such ideals within the faith; it is hopeful that such a passage, *e.g.*, as xxxii. 17, 'No soul knoweth what joy [or 'satisfaction'; lit. 'coolness'] of the eyes is reserved (for the good) as a reward for their works,' together with the frequent promise of the 'grace of Allāh' (lit. 'additional recompense'), is explained by some to refer to a higher reward reserved for those who are most worthy, namely, the joy of gazing upon God's face and in this spiritual pleasure forgetting the lower, sensual pleasures of paradise. In a similar way Ghazālī taught that there are degrees

of purification: that of the body from pollution and filth, of the actions from wickedness and injustice, of the heart from immoral desires and vicious promptings, of the mind from irreligious ideas and worldly distractions. Graded lessons are taught also in the matter of polygamy; there is nothing in the Qur'ān (as there is nothing in the OT) to inhibit those Muhammadans who are insisting upon higher standards of moral purity through the voluntary relinquishment of polygamy and slavery.

PURIFICATION (Roman).—1. Early history of the idea.—In the earlier ages of Rome the feeling for purity and the need for purification depended mainly on a yearning after ceremonial exactitude, in order to avert resentment of supernatural beings because of flaws in the forms of service which they required from mortals. The beings whose discontent would be dangerous were very dimly apprehended, sometimes as ghosts, sometimes as *numina*, divine forms hardly recognized with clearness as persons. Anthropomorphic ideas of the supernatural slowly made their way into Rome and came principally from without, through foreign channels. Consciousness that duty towards existences not of this world had been imperfectly performed did produce a sense of defilement, which weighed upon the soul, even when the wrong done was involuntary. At first the foulness arising from conduct, except in extreme cases, was hardly regarded as belonging to the spirit. But the use of the words *purus*, *puritas*, like that of terms cognate in meaning, such as *castus*, *sanctus*, shows a progressive development in the spiritual direction. The notion of impurity accidentally incurred, and independently of the will, tended to pass away from the religion of the educated class, and to retain its force mainly among the rude and the rustic.

Although the apprehension of divinities in the earlier days was but dim, their power to protect the household and the State was real. The strong sense of law which was characteristic of the Roman in all ages led him to conceive the relation between himself and the god or the ghosts in terms of a bilateral contract. If he did his duty by them, they were bound to do their duty by him, and to hold him free from harm. There was in time elaborated a complicated code of divine law (*ius divinum*) parallel to the human law (*ius humanum*). Originally, those who knew and expounded both forms of this law were the same, the college of *pontifices*. It is too much, however, to say, as has often been stated, that the primitive idea of obligation towards divine creatures was entirely non-ethical. The horror inspired by murder, especially of the atrocious kind called *paricidium*, and even by lesser offences, such as wrongful treatment of a client by his patrician patron, placed the offender under a ban, and rendered him accursed (*sacer*) and deprived him of civil rights.

2. Common acts of purification.—The necessity of purification ran through the life of the indi

vidual. In a sense the new-born babe was impure, and was the subject of various ceremonies. The day on which a child received its name was its *dies lustricus*, 'day of purification' (Macrob. i. 16: '*dies lustricus quo infantes lustrantur*'). The cleansing operation was probably at first conceived as a protection against spirits which might otherwise be malignant. Lustral rites were also accompaniments of marriage. The farm and the herd had in like manner to be protected by a ritual which Cato the Censor describes (*de Re Rustica*, 141). When a death occurred in a house, a cloud hung over it, which could be dispersed only by elaborate purification. Without it the family would continue to be *funesta*, i.e. at variance with the world of spirits. The *pontifices* evolved elaborate rules to bring this condition to an end (Cicero, *de Leg.* ii. 55: '*finis funestae familiae*'). Until this was accomplished, a branch of cypress was hung at the door, or in poorer houses a bundle of fir twigs, to warn from entering those who were specially bound to purity—in particular, priests and Vestals. A *pontifex* was not permitted to look on a corpse (Tac. *Ann.* i. 62, and many other passages in literature). It may be that the burning of the body on the pyre had a cathartic effect (Rohde, *Psyche*, ii. 101). The period during which the house was *funesta* ended with the curious ceremony called *ossilegium*, which affords a remarkable example of the Roman unwillingness to break entirely with the past. What was called 'the gathering of the bones' was, after the introduction of cremation, practically the collection of the ashes, but one finger-joint remained unburned, in order to do homage to the more ancient custom. All unpurged contact with the dead would bring with it foulness and a liability to misfortune. A Roman poet makes the spirit of a wife who died early say that the torch which graced her marriage must have been lit at a funeral pyre (Propertius, v. iii. 13; cf. Ovid, *Fasti*, ii. 577). The prohibition (general in the Roman empire) against burying within the walls of a city probably had its origin more in the dread of ghosts than in sanitary considerations.

Parallel to the *lustratio* of the house is the periodical purificatory ritual applied to a country district (*pagus*). The *lustratio pagi* consisted in a religious procession right round its boundaries, with sacrifice. There seems to have been in ancient days a similar procession round the walls of a city, called *amburbium*. In historical times special purification of the city (*lustratio urbis*) was carried out when calamity called for it—e.g., after the early disasters in the Second Punic War (Livy, xxii. 20). The object of all such expiations was 'to seek reconciliation with the gods' ('*pacem deum exposcere*,' of frequent occurrence in Livy). A lustral ceremony accompanied the foundation of a colony (Cicero, *de Divin.* i. 102). The *Terminalia*, protective of boundaries, and the *Compitalia*, of streets in the city, were also probably lustral in their origin. Down to a late period the priests called *Luperci* perambulated the boundaries of the earliest Rome, the settlement on the Palatine (Tac. *Ann.* xii. 24). That archaic priesthood, the Arval brotherhood (see ARVAL BROTHERS), was concerned with an annual solemn progress round the limits of the most ancient *Romanus ager*, the territory of the primitive city. The ceremony was called *Ambarvalia*, and it was distinctly piacular. When Roman territory was expanded, no corresponding extension of the lustral rite seems ever to have been made. These roundabout piacular surveys were common elsewhere, inside as well as outside of Italy, and particularly in Greece. The solemn words and prayers of the traditional chant, duly gone through without slip of tongue,

seem to have had a sort of magical effect. Any error in the pronouncement of these forms would involve a need of reparation, just as in the earliest Roman legal system the mispronunciation of the established verbal forms would bring loss of the law-suit. At Iguvium in Umbria there was a solemn lustration of the city, the details of which are contained in the great and very ancient record in the Umbrian dialect, preserved in the *Iguvine Tables*. It may be noted that, from the commonness of these lustral perambulations, the verb *lustrare* acquired its secondary sense of surveying a scene with the eyes.

Other forms of quaint ancient ritual were connected with the piacular conception. The *Salii*, ancient priests of Mars, made a journey at certain times round a number of stations in the city. They also had a 'cleansing of the weapons' (*armilustrium*) and a 'cleansing of the trumpets' (*tubilustrium*), which testify to a primitive notion that the efficiency of the army's weapons required the use of religious as well as secular means. The 'washing' (*lustrum*) with which the census ended was in essence military; for it was connected with the *comitia centuriata*, which is merely the army in civil garb (*exercitus urbanus* [Varro, *de Ling. Lat.* vi. 88]). A *lustratio exercitus* was often performed when the army was in the field, to remove a superstitious dread which sometimes attacked it; at other times it was merely prophylactic. There was also a lustration of the fleet (Livy, xxxvi. 42; Appian, *Bell. Civ.* v. 96). We very seldom find the *lustratio* referred to particular divinities. But Virgil represents the host of Æneas as offering a piacular ceremony to Jupiter on landing in Italy (*Æn.* iii. 279).

3. Irregular occasions.—In almost all the instances given above the cleansing operation is frequent and ordinary. But often it was occasional and irregular. Religious officers, particularly the *flamen* of Jupiter (*flamen Dialis*), were beset by many tabus, the breach of which would involve expiation. So, when the Arval Brothers took an iron implement into their sacred grove to cut down or trim the trees, atonement had to be made. The erring Vestal, if unpunished, brought calamity on the whole people. Individuals who made unauthorized compacts with the enemy, as the compacts rested on religious sanction, involved the nation, unless the nation, on repudiating the agreements, handed over the authors to the foe—a cheap form of expiation, adopted, e.g., in the case of the officers responsible for the agreement made after the disaster at the Caudine Forks, and in that of Hostilius Mancinus in Spain. On one notable occasion the irregular shedding of blood in political strife at Rome spread a sense of impurity among the people, which the senate thought it well to remove. The murderers of Tiberius Gracchus (a sacrosanct tribune) professed to have secular justification for their crime, but, on the advice of the keepers of the Sibylline books, a sacred embassy was sent to the temple of Ceres at Henna in Sicily, and a choir of twenty-seven maidens sang in procession at Rome (Cicero, *in Verr.* iv. 108; *Obsequens*, 27). The need of purificatory ceremonial was especially felt in times of national disaster, particularly those entailed by war or pestilence. The people's souls were harrowed by extraordinary occurrences, which long experience had shown to be signs of divine wrath. Elaborate regulations were evolved for averting the consequences. The experts of Roman origin were the *pontifices*; but from Etruria came the *haruspices*, and Greek influence established firmly the college of the *decemviri* (later *quindecimviri*), who had charge of the Sibylline oracles. Prodigies or portents of the less serious kind were expiated after consultation

with the *pontifices* or *haruspices*; extraordinary signs led to an examination of the Sibylline books (Livy, xxii. 9: 'tetra prodigia'). But the priests in all these circumstances had no initiative; they had to wait until they were asked by the senate to give an opinion. There was a fixed ritual for making appeasement when a thunderbolt struck the ground or killed a man. The spot became banned. Rain or thunder cut short the meetings for public business in Rome, as in Athens, and in other ancient states. If affairs were carried on in defiance of the sign, guilt would be incurred and a piacular offering would be due. Some ceremonies which have been deemed by scholars to have an expiatory significance can only doubtfully be so regarded. Whether the curious ceremony of driving in the nail in the temple of Minerva every hundred years was purificatory in character is uncertain. But the *ludi sæculares* certainly were, as is abundantly shown in the records of the elaborate celebration by Augustus in 17 B.C. The ceremony was a sort of larger *lustrum*, a great amplification of the censor's performance, which came every five years.

4. *Dies atri et religiosi*.—In Rome certain days in the year were called *atri*, such as the anniversary of the battle of the Allia, and others *religiosi*, on which public business was prohibited and many private affairs would be suspended. Even on a *dies nefastus*, the chief sign of which was that the law-courts were closed, a *prætor* who opened court incurred a piacular offering (Varro, *de Ling. Lat.* vi. 30).

One form of taint from which both private families and the State were careful to keep free, by forms of purification and appeasement, was derived from contact with unsatisfied spirits of the dead, who were conceived as in a sense divine and described as *di parentum*. The month of February was in part devoted to observances of the kind, and derived its name (Ovid, *Fasti*, ii. 19) from *februa*, which in the ancient tongue meant 'expiations' (*piamina*). Another application of *februa* was to the leathern thongs wielded by the *Luperi*, when in February they ran their rounds and freed from sterility the women who sought to be smitten by their blows. From the 13th to the 21st day of February was a time of ceremonial gloom. These were the *dies parentales*, and the ritual of offerings to the dead was *parentatio*. All temples were closed, all marriages forbidden, and the magistrates divested themselves of the purple-bordered robe (*prætecta*) and other marks of office. Family ceremonies called *parentalia* also took place on anniversaries of the birthdays or death-days of deceased members. In the imperial period there were in May or June two days of flower-offerings for the spirits—a 'day of the rose' (*dies rosæ*) and a 'day of the violet' (*dies violæ*). Of these there is frequent mention in inscriptions. The 21st of February was called *Feralia*, when appeasement was an affair of State. The following day was one of joyful family feasts, and bore the name of *Caristia* or *Cara Cognatio*. The characteristics of the three days in May when the ritual called *Lemuria* was performed resembled those of the gloomy *dies parentales* in February. It has been supposed that the wild festival of the *Saturnalia*, held in December, was originally directed to keeping the ghosts aloof. The theory is very doubtful; even if it is sound, the Romans early lost all memory of the origin of this revelry. Other ancient practices have been held by eminent scholars to have a purificatory character. Specially may be mentioned the custom of passing prisoners of war under the yoke, which is best known from the story of the disaster to the Roman arms at the Caudine Forks. So, too, with the passage of the

triumphing general under the *porta triumphalis*, and with the *sororium tigillum* which figures in the tale of Horatius. All these ceremonies have been believed to be modes of purging away the stain of bloodshed. The present writer is not convinced of the correctness of this explanation.

5. Means for assuring purity.—The signs of purity and the means of purification were very various. The service of the gods often required abstinence, especially from sexual indulgence. Priests were of course under stricter rules than ordinary worshippers. The innocence of young boys and maidens was welcome to divine beings who had to be propitiated. Those who took part in worship as singers or in other ways were called *camilli* or *camillæ*; from this usage Virgil's Camilla takes her name. Only such children as had living parents were permitted to serve, and these were designated as *patrimi et matrimi*. The Vestals were in touch with purificatory rites. The sacrificial offerings on such occasions were of many different kinds. In great public expiations the sacrifice of a pig, a sheep, and a bull (*suovetaurilia*) was common. The pig was offered in private as well as public expiations. Water, fire, and incense (*suffimenta*) had lustral power. Bodily impurity, and also the defilement of a bad dream, could be removed by running water (Ovid, *Fasti*, ii. 35 ff., 623 ff.; Persius, *Sat.* ii. 15). Many herbs were believed to exert a purifying influence. The laurel originally worn by the triumphing general, and later by the emperors, has often been believed to have been a means of cleansing the stain of blood shed in war; and the *verbena*, which the *fetiales* carried with them, has been supposed to be of lustral efficacy. These beliefs are very questionable (see the present writer, in *JRS* ii. [1912] 45 ff.). Myrtle was in customary use in connexion with the dead and also in the marriage ceremony, and it is possible that *lustratio* was the cause. The willow (*agnus castus*) was supposed to have purifying power, because its name was in popular etymology connected with *ἀγνός*.

6. Ethical aspects of purification.—In the belief of the rustic Italian personal purity was needed to give full effect to many operations. The birth of bees was supposed to be non-sexual; therefore the bee-keeper, when dealing with his bees, must be 'pridie castus ab rebus veneris' (Columella, ix. 14. 3). Especially did the efficacy of medicinal herbs depend on the purity of the persons who gathered or applied them. To assure this, a boy or maiden might be employed (Pliny, *HN* xxii. 27, xxiii. 130, xxvi. 93, and many passages in medical writers).

Purification was not merely ceremonial or mechanical. That an ethical element entered into it, even in very early days, is indisputably shown by the fact that some taints were inexpiable. All those to which the vague penalty 'Sacer esto' was attached were of this kind (Ovid, *Fasti*, ii. 35, is in error). There were some offenders with whom the gods would make no peace (Cicero, *de Leg.* i. 40, ii. 22). In literature from the late Republic onward a strong distinction is constantly drawn between material and spiritual purity. It is true, however, that the yearning after a clean heart which in Greece afforded an opportunity to quack purveyors of *καθαροί* was not natural to the ancient Italic peoples. Faith in the old forms was gradually lost. The calamities of the Second Punic War spread among the people a conviction that a stain lay on the nation and could be washed away only by extraordinary expiations; but the much greater horrors of the Social War, followed by the long series of civil wars which ended with the triumph of Augustus, produced no such consequences. Although there was a feeling that the Romans were steeped in guilt—a feeling to which

much in Augustan literature testifies—there was no popular response to the restoration of archaic ceremonial which Augustus promoted. There was a desire for other and more effectual modes of cleansing. Josephus remarked in the early imperial age that, while old ritual was dying, new rites were sought after which were characterized by 'all manner of purifications' (c. *Apionem*, ii. 35: καθάρσεις παντοδαπὰς). The new tendency was towards purity of a more intimate and inward character, which would bring men closer to the divine. Hence the great invasion of Eastern cults; those of Isis, the Magna Mater, and Mithras especially made a strong appeal to the Western world. Purification by sprinkling with the blood of victims in the ceremony called *taurobolium* affected worshippers profoundly. They testified to a conviction that they were 'born anew for ever' (so repeatedly in inscriptions). Christian writers considered that the devil inspired this belief, out of spite for the purification effected by the blood of Christ (Firmicus Maternus, xxvii. 8). The Pythagorean and Neo-Platonic philosophies did much to spread among educated classes in the West an idea of spiritual purity which powerfully assisted the Christian propaganda.

LITERATURE.—J. G. Frazer, *GB*, London, 1911-14, contains a rich store of material for the study of purificatory rites in all ages; G. Wissowa, *Religion und Kultus der Römer*², Munich, 1912, and J. Marquardt, *Römische Staatsverwaltung*, Leipzig, 1874-78, iii., contain abundant references to authorities. The separate artt. in Pauly-Wissowa and in Daremberg-Saglio are often important. In W. Warde Fowler, *The Roman Festivals*, London, 1899, and *The Religious Experience of the Roman People*, do. 1911, all matters connected with Roman lustration are admirably handled. Many sidelights are thrown on the subject by E. Rohde, *Psyche*³, 2 vols., Freiburg, 1898. Two recent works of interest are E. Fehrle, *Die kultische Keuschheit im Alterthum*, Giessen, 1910, and S. Eitrem, *Roman Festivals, Expiatory and Purificatory*, Christiania, 1913-17.

J. S. REID.

PURIFICATION (Teutonic).—The religion of the Teutonic peoples, as it is presented to us by our sources, was not a religion of fear. To a very considerable extent those peoples appear to have ignored the possibility that supernatural powers might exist who were hostile to mankind, and accordingly they aimed at securing the assistance of their friendly anthropomorphic gods by the positive method of sacrifice rather than by the negative process of avoiding ceremonial impurity and the resulting defencelessness against supernatural dangers. We must remember, however, that our sources paint the picture of Teutonic religion either from the point of view of the missionary, whose attention is focused on the more active forms of heathenism, or, in the case of the Icelandic sagas, from the angle of vision of the upper classes. The practices of the modern rural populations of Teutonic countries must suggest to us that the conceptions of tabu and of ceremonial purity¹ were by no means so foreign to Teutonic religion as we are inclined to believe. An examination of the older evidence in the light of modern customs will not yield very much, but the results will not be entirely negligible.

1. Birth.—In the life of the primitive individual purificatory ceremonies cluster round birth, puberty, marriage, and death. The sprinkling of water on a newly-born infant, which the sagas state to have been customary in Iceland in pre-Christian times, is clearly a purificatory ceremony, and there is no reason to suppose that it is merely a late imitation of the Christian rite of baptism. The ceremony was performed by the father; and, until it was done, the infant enjoyed no rights as a human being, for the father could refuse to have it reared.²

¹ See art. PURIFICATION (Introductory).

² See art. ABANDONMENT AND EXPOSURE; R. Cleasby and G. Vigfusson, *Icelandic-English Dictionary*, Oxford, 1874, s.v. 'Ausa.'

2. Puberty.—Of the ceremonies performed at the period of puberty we know nothing, and we must assume that they played a negligible part in the life of the individual. They seem, however, to have existed, for we are told that an Icelandic chieftain, Thord gellir, was taken to the cross-knolls held sacred by his family, at the time when he was 'introduced into manhood.'¹ It appears that the ceremony was connected with ancestor-worship, for it was the belief of this family that they 'died into' the knolls.

3. Marriage.—For marriage ceremonies we are referred almost entirely to more modern accounts, beginning with that of the Swedish archbishop Olaus Magnus, of the 16th cent., who describes the bridal hot-air bath, taken in the communal bath-house, to which the bride and her female friends walk in procession, preceded by men carrying jars of ale or wine, bread, sugar, and spices. On their return the party wear wreaths.²

A number of other Scandinavian customs, but recently extinct, show that the people have clung obstinately to the idea that by marriage they incur a kind of ceremonial impurity which lays them open to supernatural dangers. A device clearly intended to avert those dangers is that of introducing another make-believe couple to act, as it were, as scapegoats. This pair, fantastically dressed, one of them a man got up as a woman, make their appearance in various parts of Sweden during the wedding festivities, are received with much honour, have a collection made for them, and finally are driven from the house. Sometimes it is only the bridegroom who has a 'double.' In some parts of Sweden the bridegroom is driven by a grotesquely disguised 'coachman,' who sits in front of him on the sledge; and in Västmanland a kind of mock bridegroom, who was expected to amuse the company, used to be thrown into the nearest stream on the third day of the feast. In Württemberg there was no substitute for the bridegroom in this part of the ceremony, and he was obliged to choose between 'wine and water.' If he chose wine, he had to treat the company; if water, he was ducked.³

In other parts of Sweden the youngest bridesmaid walked round the table at which the guests were seated, 'in order to remove all evil.'⁴ In Norway the bride was regarded as specially open to the attacks of ethnonic deities, who had to be frightened off by the hallooing and pistol-shooting of the wedding-party.⁵ Possibly the custom mentioned by Olaus Magnus,⁶ of celebrating weddings on small islets, has its roots in a similar fear. Both in Norway and in Sweden weddings were usually celebrated at midsummer, when the powers of darkness were weakest.

In both ancient and modern wedding customs the wedding ale seems to have had a prophylactic or purificatory value. A Norwegian bishop of the 12th cent. has to assure his flock that a wedding is legal even though celebrated with whey; and the belief in the special virtues of wedding ale seems to survive in a superstition current in some parts of Sweden, that it is unlucky to call the banns 'on an empty cask,' i.e. before the wedding ale is brewed.⁷ In Sweden it was customary for the bride and bridegroom to drain a beaker before entering their house on their return from church.

The bowls used for the purpose were often apparently the property of the commune.¹ In Dalecarlia a large tree was brought into the house and 'slaughtered' by having branches lopped off it, and the company drank the 'ox-blood'—coffee and brandy.² In some parts of Sweden the 'wedding tree' was flung into a stream or pond at the end of the festivities.

4. **Death.**—In the more primitive communities purificatory ceremonies are regarded as especially necessary in the case of association with death. This idea is not actually expressed in our sources, but the customs of destroying, burning, or burying a dead man's personal property, of sending the corpse out to sea in a ship, etc., may have their *raison d'être* in some such conception. The custom of *sati*, which appears to have been at least occasionally practised, is probably connected with the fear of pollution from a dead man's personal belongings. Some traces of this fear can be found in the Norwegian custom of solemnly burning the straw of a dead man's bed. The old town-law of Bergen, while prohibiting all other bonfires, specially exempts such fires, kindled in the streets. In recent Norwegian custom the sledge on which a coffin was conveyed to the churchyard was left to rot or used as firewood by the poor.³

Ancient Teutonic religion offers but few traces of this feeling of pollution on contact with death in general. But from ecclesiastical prohibitions of unseemly laughter, songs, dances, story-telling, and mask-wearing at the memorial feasts for the dead we can guess that in the Germany of Charlemagne such observances aimed at averting the dangers of association with the dead. In Scandinavia this feast seems to have been more orderly and its original significance more obscured.

But the necessity for purification was still keenly felt in regard to persons who had been of an evil disposition during life. An Icelandic saga tells us that, when the wicked Thorolf bægifot dies in his chair, his son breaks a gap in the house wall and has him carried through it, so that the ghost may not find the way back.⁴ In spite of this precaution, the ghost 'walked' until the corpse was burned and the ashes were blown out to sea. We do not hear of any actual purificatory rites performed in houses subject to ghosts, for the account in *Eyrbyggja Saga* of the legal proceedings resorted to was probably intended by its author as farce rather than history. Here the ghosts are summoned in turn, and an adverse verdict is given against each. This saga, however, gives an example of the belief that the properties of the dead are dangerous: as long as the bed-hangings of Thorgunna were unburned, the household was a prey to every kind of misfortune. We may assume that here, as elsewhere, dead persons who had not received the proper rites were regarded as a danger to the community; for, according to Icelandic law, a man who killed another became an outlaw if he failed to cover up the body with stones or earth. In this connexion we may mention the wide-spread belief which makes it obligatory on every passer-by to add a stone to the cairn raised over some person who had died a violent death. This custom was observed until last century in some parts of Sweden.⁵

5. **Harvest.**—The various purificatory observances connected with harvest or other seasons of the year can be traced only in modern custom and can be best studied in Frazer's *Golden Bough*. An exception is the need-fire (*q.v.*), which is first mentioned as early as 742.⁶ It seems to have been

the most characteristic example of purificatory rites to be found in Teutonic custom. Leaping over the fire, usually on Midsummer Eve, was believed to avert disease, and the cattle were driven through the flames with the same intention. A similar purificatory rite, vouched for only in modern Sweden, is the custom of grinding down the edges of flint axes—'Thor's hammers,' as they are called in Sweden—and mixing them with the fodder for the cattle.

6. **The scapegoat.**—The scapegoat idea, in which the conception of the purification of the community finds its most characteristic expression, is perhaps not formally recognized in Teutonic religion. Akin to it is the expulsion or death of guilty members of the community, which can be traced in Tacitus's account of the driving out of an unfaithful wife¹ and in the clause of the Old Frisian law which enjoins the mutilation and drowning of a sanctuary breaker.² A similar conception probably inspired the slaying of a king in time of famine, of which Swedish tradition records two examples.

7. **Festivals and idols.**—In the ceremonial of religious festivals purificatory rites play only a small part. The sprinkling of the blood of the sacrificial victim upon the assembled worshippers, which appears to have been an integral part of Scandinavian festivals, may possibly have had a purificatory intention. The purification of the deity herself, reported by Tacitus in his account of the goddess Nerthus, is frequently held to have been nothing more than a rain-charm. Once a year, says Tacitus, the goddess Nerthus emerged from her retirement in a sacred grove, and was driven round the country with her priest, amid general rejoicings, after which the chariot and the goddess herself were laved in a sacred lake.³ From what we know of deities of fertility in general, and in especial of the Scandinavian god Frey and his human spouse, we are justified in considering the possibility that the immersion of the goddess was of the nature of a bridal bath. It is worth noting that a little wooden figure of a bishop which used to stand in the church at Eidsborg in S. Norway, and which the peasants called Nikuls, used to be carried down to the lake below the church every midsummer and solemnly washed. The sweat which appeared on the wood after this ceremony was believed to heal all diseases.⁴ Similar idols, without the ecclesiastical connexions, are known to have been in the possession of Norwegian families far into the 18th cent., and to have had ale offered to them at Christmas. One of them is said to have been washed every Saturday. The direct descent of these figures from heathen idols seems to be proved by the fact that one of them is said to have been regularly rubbed with fat as late as the 19th century.⁵ According to a late saga, this treatment was accorded to a wooden image of the god Balder.⁶ It is possible that this ceremonial rubbing of idols with fat was intended to avert some dangers from the idol.

Such traces of purificatory rites as we find among the Teutonic peoples seem to have been fragmentary survivals of an attitude to religion more primitive and more mystical than we find among the upper classes in the last days of heathendom. The lack of insistence on ceremonial purity is probably connected with the absence of any highly specialized priesthood, resulting in what we must regard as an enlightened

freedom from formalism, shown also in the contempt of the upper classes for magical practices. On the other hand, it may be pointed out that regard for ceremonial purity may develop into the conception of ethical righteousness, a conception to which the heathen Teutonic mind can hardly be said to have attained.¹

B. S. PHILLPOTTS.

PURIM.—'Purim' is the name given to a festival in the Jewish Church, celebrated for two days, on the 14th and 15th of the month of Adar, the last month of the Jewish lunar calendar. The supposed origin of the festival, which is of a distinctly popular character, marked by merry-making, feasting, masquerading, and exchange of gifts, is given in the book of Esther, forming part of the OT canon. According to this book, the festival marks the miraculous deliverance of the Jews resident in Persia from the destructive designs of Haman, the grand vizier of King Ahasuerus, i.e. Xerxes (485–465 B.C.), who had planned a general massacre of the Jews for the 13th of Adar in the 12th year of the king's reign, corresponding to the year 473 B.C. Through the intervention of Esther, a Jewess whose beauty led her to the king's *harem*, where she rose to the rank of queen, the plan was frustrated. Haman and his sons were condemned to the gallows, while Mordecai, the uncle of Esther, was raised from his humble station to become the second in the extensive kingdom of the Persian king. Instead of being slaughtered, the Jews were permitted to slay those who attacked them on the day set aside for the massacre, which they did with great vigour; and in commemoration of the deliverance a two days' festival was instituted. The only religious feature of the festival, however, is the reading of the book of Esther in the synagogue at the evening service for the two days in question. The otherwise purely secular observance itself points to a non-Jewish origin for the festival.

It is now universally recognized by scholars that the book of Esther is a pure romance to which a quasi-historical setting is given. From the silence of Ben Sira, the author of Ecclesiasticus (c. 180 B.C.), who does not mention Esther in his enumeration of the sacred writings known to him, the conclusion is justified that its composition cannot be placed before the middle of the 2nd cent. B.C., and was perhaps as late as 100 B.C. Apart from the fact that there is nothing to warrant the belief that in the days of Xerxes there was any persecution of the Jews in Persia, or, in fact, that there was even an extensive Jewish settlement in that country, and apart from the inherent improbability of the story itself, the chronological discrepancy in making Mordecai one of those carried into captivity by Nebuchadrezzar in 597 B.C. and yet still living 125 years later suffices to show that we are dealing with pure fiction. It so happens also that we know from Herodotus (ix. 109, 112) that the queen of Xerxes at the very time when Esther was supposed to occupy this distinction was Amestris, the daughter of a Persian general.

If, then, the book of Esther is pure romance in a quasi-historical setting but without any historical basis, it follows that the origin of the festival as given in this book is equally fictitious, and we are thrown back upon investigations independent of the festival legend to solve the problem involved. The author of the book of Esther, by his evident desire to connect the name 'Purim' with a non-Hebrew word *pûr*, supposed to mean 'lot' (³⁷ 924 26), recognizes the name as foreign. In view of the Persian setting of the festival legend, suggesting that the author of the book of Esther was a Persian Jew, one naturally thinks of a Persian origin for

the festival, and, if there were a Persian word *pûr* meaning 'lot,' the necessary proof would have been furnished that the author of the festival legend at least had in mind the adaptation of a Persian festival to the Jewish festival cycle. No such Persian word as *pûr* exists, however, and all attempts to find in it some adaptation of a Persian term (see L. B. Paton, *Commentary on the Book of Esther*, pp. 84–86, for various conjectures and suppositions, all, however, rejected by Paton and properly so) have failed. On the other hand, the possibility that the author of the book of Esther, in connecting the name 'Purim' with *pûr*, had in mind a Babylonian term must be admitted, especially as a word *pûru* exists with various meanings, among which those of 'lot' and 'term of office' are possible, though not certain (see H. Zimmern's discussion in *KAT*³, p. 518; P. Haupt, 'Purim,' in *BASS* vi. ii. [1906] 20; and art. *CALENDAR* [Babylonian], vol. iii. p. 77*). The names of the two chief personages in the festival legend, Mordecai and Esther, carry us distinctly to Babylonian soil; for Mordecai is clearly identical with the Babylonian deity Marduk, the head of the pantheon after the rise of his patron city, Babylon, to be the capital of the united districts of the Euphrates valley, while Esther is quite as unmistakably the Babylonian goddess, Ishtar, the chief female deity and as such directly associated with Marduk. Even rabbinical exegesis connected Esther with the planet Venus (Istahar=Ishtar [Talmud Bab. *M'gillâh*, 13a]), with which Ishtar was identified by the Babylonians. According to P. Jensen, who first called attention to this double identification, Mordecai=Marduk, and Esther=Ishtar, the two other names, Haman and Vashti (the queen whom Esther displaces) are Elamitic deities, Humman (or Humbar) and Mashti, skilfully disguised or connoted ('Elamitische Eigennamen,' in *WZKM* vi. [1892] 47 ff., 209 ff.). These two identifications, however, are less certain; and to go a step farther and assume that the story of the book of Esther rests upon a Babylonian myth, relating a conflict between Marduk and Ishtar, the gods of spring and light, against hostile powers symbolizing winter and darkness, and therefore identified with 'foreign' deities or as modifications of Kingu and Tiamât, who in the main Semitic-Babylonian version of creation are the personifications of primeval chaos and discord, who must be overcome by Marduk, the establisher of order in the universe—to do this is to enter the province of pure conjecture. Until some fortunate chance reveals to us the story of such a conflict with all four names unmistakably introduced, we must content ourselves with the definite proof that at the foundation of the book of Esther, or at all events as an element in it, we have some Babylonian tale of the gods in which Marduk and Ishtar play the chief rôles, and that this tale was transformed in such a manner by the Jewish author of the book of Esther as to make it the basis for an elaborate festival legend to justify the adoption of a 'foreign' festival into the Jewish calendar. The character of this festival is unmistakable. Its occurrence in the middle of the last month of the winter season and just before the beginning of the spring, the natural beginning of the year, points to its being the beginning of the celebration of the conquest of the winter by the youthful sun-god of the spring—as Marduk is regarded in various Babylonian myths. The rejoicing and merry-making of Purim fit in with such a spring festival, while the fast added at a much later date for the 12th of Adar—it cannot be traced farther back than the 9th century—is the precursor to the festival which afterwards takes on a sombre hue as a preparation for the feasting to follow. As Haupt aptly puts

¹ See art. *ETHICS* (Teutonic).

it (p. 1), 'shroving was preceded by shriving.' That the Babylonians began the year in the spring follows, apart from other evidence, from the order of the months adopted by the Jews, which begin with Nisan, the time of the spring equinox; and we know that the Babylonian New Year festival known as Zagmuk, and celebrated during the first eleven days of Nisan, became primarily the festival of Marduk and his consort in the days of the united Babylonian Empire (see CALENDAR [Babylonian]). The circumstance that in the 2nd book of Maccabees (15³⁰) the Purim festival is designated as *Μαρδοχαίου ἡμέρα*, i.e. 'Marduk (or Mordecai) day,' is a significant testimony to the association of Purim with the Babylonian New Year period, bound up with the Marduk cult. The middle of the month preceding the 1st of Nisan would thus mark the preparation for the period of rejoicing at the approaching triumph of the god of spring, Marduk, over the hostile and destructive forces of the winter and rainy season. The Jews in Babylonia and Persia, subject to the influences of their environment, would naturally be led to take part in a merry-making season, just as at the present time Jews in Europe and America participate in Christmas festivities and in New Year's exchange of felicitations, despite the fact that the old mid-winter festival has been given a Christian interpretation and that the Jews still observe a religious 'New Year' in autumn (*Rōsh Hashshānāh*, 'beginning of the year') on the first of Tishri, the seventh month, pointing to an older calendar, in which the year began in autumn.

Corresponding to the festal legend set forth in the 1st book of Maccabees for the celebration of the Roman Saturnalia or mid-winter festival at the time of the winter solstice (adopted by the Jews under Græco-Roman influence and converted into a Jewish festival by association with the victory of Judas Maccabæus and his army over the Greek forces), the romantic tale in the book of Esther was composed to provide a justification for the participation of the Jews in the general rejoicing indulged in in Babylonia and in lands where Babylonian influences prevailed, at or near the beginning of the vernal equinox. The one link missing in the chain of evidence connecting Purim with the period of merry-making in honour of Marduk and Ishtar is evidence of a celebration in Babylonia or Persia in the middle of Adar—just before the New Year's season proper two weeks later. Until such evidence is forthcoming, the view here set forth lacks definite confirmation. It may well be, however, that with the coming of the Persians into Babylonia in the second half of the 6th cent. B.C. a Persian New Year's festival celebrated at the period of the vernal equinox, and fixed for a time somewhat preceding the date selected in the Babylonian calendar for the Zagmuk, became the current New Year's season of rejoicing. The natural tendency would be to bring this Persian New Year into close affiliation with the Babylonian festival. Purim would thus represent the result of such a combination of Persian and Babylonian customs and festival rites. To this day the New Year's season is a time of rejoicing and festivity in Persia. The New Year's day, known as Nauroz, is fixed for the first day after the sun has crossed the vernal equinox, and is therefore a movable feast, like the Christian Easter, likewise an old New Year's festival. The festivities incident to the Nauroz last a week. It is to be noted, also, that in the Jewish calendar the tendency is to fix festivals connected with the transition of one season to the other either in the middle of the month (e.g., the spring festival Pesah and the harvest festival Sukkōth on the 15th day of Nisan and Tishri respectively) or at the beginning

of the month, as, e.g., the Rōsh Hashshānāh. The 15th of Adar would thus be fixed as corresponding to an average date for the vernal equinox. Finally, we find evidence that in the 2nd cent. B.C. the Jews of Palestine also celebrated the 13th of Adar as a festival and that, under the same tendency to give to popular rejoicings, when adopted from foreign sources, a Jewish setting, this festival was associated with the victory of Judas Maccabæus over the Syrian general Nicanor of Adasa in the year 161 B.C., and in consequence became known as 'Nicanor's Day' (1 Mac 7³⁹⁻⁵⁰; Jos. Ant. XII. x. 5 [409]; see FESTIVALS AND FASTS [Hebrew], vol. v. p. 866*). The book of Maccabees thus furnishes the festal legend for two holy days adopted by the Jews: (1) the Saturnalia, or mid-winter festival, at the time of the winter solstice, celebrated for a week, which became the Jewish Hanukka, in commemoration of the supposed restoration of the Temple at Jerusalem to Jewish worship after the victories of Judas Maccabæus; and (2) the spring festival in the middle of Adar, adopted under Babylonian-Persian influences and associated by the festal legend with a specific occurrence in the so-called wars of the Maccabees.

Nicanor's Day and Purim thus represent the same festival. To the one a Jewish aspect was given by making it a commemoration of a victory gained over the enemy at a critical period in Jewish history, while for the same festival adopted under Babylonian-Persian influences a festal legend was composed which transformed a Babylonian myth, celebrating the deeds of Marduk and Ishtar, into a Jewish romance. It may be also that the Jews of Persia suffered some annoyance from hostile officials, and that a liberation through the dismissal of an offensive vizier suggested some of the incidents in the festal legend, which, in accord with the tendency of legendary compositions, would give to a comparatively insignificant episode an exaggerated importance. All this, however, is purely conjectural, and it must be frankly admitted that there is no evidence for any persecution of the Jews under any of the Persian rulers, who, on the contrary, appear to have been at all times favourably disposed towards them. The main thesis in connexion with Purim, that it is a foreign festival, a precursor of the Babylonian New Year's festival or the Persian New Year adopted by the Hebrews, is not affected even if we assume some historical occurrence to be a factor in the composition of the romance, which was written to give a Jewish setting to a celebration that had become popular among the Jews of Rome and Babylonia and had spread to other countries where Jews had settled. The sad experiences of the Jews, encountering hostility and frequent persecutions in the Diaspora, tended to increase the popularity of Purim. The story in the book of Esther became typical of the sufferings of the Jews in many lands. There were Hamans everywhere who tried to work injury to the Jews, and the celebration of Purim helped to maintain their trust during the dark days in the ultimate deliverance from the dangers and difficulties besetting them. The merry-making at Purim also afforded an outlet for pent-up feelings, and furnished a much-needed relief from the serious life led during the greater part of the year.

All the festivals of the Jews except Purim take on a sombre hue, even those which, like the Passover and the Festival of Booths, were in their origin distinctly joyous occasions. The somewhat cruel and vicious spirit of the book of Esther, reciting with evident satisfaction how the Jews avenged themselves on their enemies by slaughtering thousands of them (9¹⁻¹⁰), was overlooked in the abandonment to joy that marked the two days of Purim.

Masquerading and games became one of the features of the popular rejoicing. Presents were exchanged and drinking was enjoined almost as an obligation. Sober and serious-minded persons gave themselves over to the joy of Purim, and it was regarded as quite proper to put oneself in such a condition at Purim time that one could not distinguish between 'Cursed be Haman' and 'Blessed be Mordecai' (Talmud Bab. *M'gillah*, 7b), though naturally a playful allusion of this kind must not be forced beyond the point of showing that, as far back as Talmudic days, Purim was regarded primarily as a time of jollification, devoid of any genuinely religious character. The exceptionally secular nature of the festival is also shown by the express permission of the rabbis (*M'gillah*, 18a) that the roll of the book of Esther may be read in any language in the synagogue, while otherwise, as a matter of course, only Hebrew was to be used in the service. Even the synagogue service in connexion with Purim acquired some of the boisterous character of the festival; for at the mention of Haman and his sons the congregation stamped with their feet or made a noise with rattles or by knocking two sticks on which the name of Haman was written against one another until the name was erased. Such customs are to be regarded as popular survivals of endeavours to drive away evil demons by noises or by some form of sympathetic magic. They are closely bound up with the popular view that at transition periods—and such the New Year's festival is—the evil spirits were particularly malevolent, lying in wait for victims. Masquerading is also to be viewed under this aspect as a means of disguising oneself from the evil spirits or of deceiving them. Another interesting trace of the original character of Purim as a New Year's festival is to be seen in the persistency with which the idea of its being connected with 'drawing of lots' clings to it, for, whatever the etymological origin of the word *pûr*, there is no reason to question the correctness of the tradition as set forth in the book of Esther which connects it with 'casting lots.' At the New Year's period, according to the Babylonian view, the gods sit in the council chamber of fate and decide the lot or portion of individuals in the year to come; and from the Babylonians this view passed to the Jews, for whom the ten days of the New Year's month are days of probation, corresponding to the ten or eleven days of the Babylonian Zagmuk period. On the 10th day, the Day of Atonement, the fate of the individual is definitely inscribed in the book of fate and sealed. The exchange of presents on Purim also rests ultimately on an association of ideas between 'lot' and 'portion' as something set aside for some one. The term used for 'presents' (*manôth*) in the book of Esther (9^{19, 22}) in connexion with the description of the custom is precisely the word which means 'portions,' while *pûr* is specifically explained in a gloss (9²⁴) as *ha-gôrâl*, i.e. the common term for 'lot.'

MORRIS JASTROW, JR.

PURITANISM.—1. Definition and application of the term.—The widely divergent estimates of Puritanism still current unite in recognizing its significance as a formative factor in the life and character of the English people. Probably no other religious movement has left so deep an impress on the history of England. Some of the Puritan positions have been embodied once for all in the constitutional development and Church life of the country; others of their contentions may yet be realized. In a modified form, the Puritan

ideal of a Church at once national and self-governing may be the subject of a modern revival. But whether or no the ecclesiastical programme of Puritanism has a future, reverence for the very letter of the Puritan tradition lingers in many minds, while its inner force is by no means spent.

It would conduce to clearness in historical studies if the term 'Puritanism' could be confined strictly to the movement for further reform of the Church of England whose history falls within the century from the Act of Uniformity of 1559 to the Act of Uniformity of 1662. The Puritan party consisted of all those who believed in the maintenance of one National Church in England, and who desired that Church to be reformed after the model of Geneva. According to Thomas Fuller (*Ch. Hist. of Britain*, London, 1655, bk. ix. § 66f.), 'the odious name of puritans' was first applied in 1564 to those who resisted the attempt of the bishops in that year to enforce uniformity in ritual and in the use of vestments. A passage in John Bunyan's *Life and Death of Mr. Badman* (written in 1680)—'The man was a godly old Puritan, for so the godly were called in time past'—suggests that the term began to fall out of use as a distinct party label after the overthrow of Puritanism at the Restoration. It is confusing to extend the use of the term either backwards, as S. R. Maitland does (*The Reformation in England*, ed. London, 1906), to include early reformers of the time of Henry VIII., Edward VI., and Mary, or forwards, to cover later dissent. The kinship of Puritanism with earlier elements in the English Reformation is as obvious as is the indebtedness to it of the Free Churches. But Puritanism stood primarily for an ecclesiastical ideal which was not definitely adopted by any distinct body of Englishmen before the time of the Elizabethan settlement, and which was not accepted by the Nonconformist churches of later times. Puritanism is most simply defined as the movement for Church reform whose first great leader was Thomas Cartwright and whose last was Richard Baxter.

A wider application of the term 'Puritan' to all who attempted a greater sobriety of life than was customary in Elizabethan England became familiar in the 17th cent., if not earlier. Richard Baxter says that his father was dubbed a Puritan by his neighbours because he disliked the village custom of dancing round the May-pole on Sundays, and preferred to pass his time at home, reading the Bible and the Prayer-Book:

'For my Father never scrupled Common-Prayer or Ceremonies, nor spake against Bishops, nor ever so much as prayed but by a Book or Form, being not ever acquainted with any that did otherwise: But only for reading Scripture when the rest were Dancing on the Lord's Day, and for praying (by a Form out of the end of the Common-Prayer Book) in his House, and for reproving Drunkards and Swearers, and for talking sometimes a few words of Scripture and the Life to come, he was reviled commonly by the Name of Puritan, Precisian, and Hypocrite.'¹

The wider aspect of Puritanism revealed in this application of the term cannot be ignored in any account of the subject, because the effort after a sober godly life which drew down this reproach was part of the whole religious movement of which Puritanism in the strict sense was the narrower ecclesiastical expression. It is worth noting incidentally that the name 'Puritan,' like the words 'Christian' and 'Quaker,' was a term of insult which became a title of honour.

2. Puritans as a party in Church and State.—(a) *The Prayer-Book controversy.*—When Elizabeth came to the throne in 1558, the hopes of reformers ran high. It was certain that she would reverse the religious policy of her predecessor. The burn-

¹ J. Stow's still earlier application of the term to some Anabaptists is rightly rejected as erroneous. See *OED*, s.v. 'Puritan.'

² *Reliquiæ Baxterianæ*, London, 1696, p. 3.

ing of heretics would cease, and subserviency to the pope would be ended. Though the number of convinced Protestants was not large, the country as a whole was prepared for a considerable change. In some sense England would become a Protestant power. But how far was the queen prepared to go? It was thought that she would at least re-establish the standard of reform set up by Edward VI.; it was hoped in some quarters that she would go much farther. For, while many were content with the measure of advance embodied in the Prayer-Book of 1552 (and indeed the martyrdom of some of the authors of the Prayer-Book had consecrated it in the eyes of its users), others who had been in exile on the Continent had come under the spell of Geneva, and desired a more thorough reform along the lines laid down by Calvin. The Protestant world had not stood still since the days of Edward VI., and it seemed absurd to be content with something obviously limited and faulty like the work of Cranmer. The position of many of the leaders like John Jewel, Edwin Sandys, and Edmund Grindal, who were among the first of the Elizabethan bishops, was that they would gladly go back to the system set up in the time of Edward VI. as a starting-point, but that they hoped to be allowed to make it the basis of a further development. The convenience of adopting the English Prayer-Book of 1552 was manifest. It obviated the necessity of thinking out at short notice forms of service and of government for the Elizabethan Church, and it gave a sense of continuity in the work of the Reformation in England. There was therefore no surprise or regret when the Act of Uniformity re-imposed the use of the second Prayer-Book of Edward VI.

The Act of Uniformity was preceded by the Act of Supremacy, which made Elizabeth chief governor of the Church of Christ in England. Her authority she was to exercise in the first instance through an ecclesiastical commission until a regular administration by duly appointed bishops should be possible. These two Acts ensured lay control of the Church, abolished papal authority and the Mass, and restored the English liturgy. So far, so good; but what was to be the next step?

When the revised Prayer-Book was issued, it contained one or two features which occasioned disquiet among the more radical reformers. The clause in the Litany praying for deliverance from 'the tyranny of the Bishop of Rome and all his detestable enormities' had vanished. The sentences appointed for the use of the priest in delivering the elements at communion included those from the Prayer-Book of 1549 which were capable of being interpreted to imply the doctrine of transubstantiation. Moreover, into the Prayer-Book was inserted, apparently at the last moment and without the knowledge of Parliament, an additional rubric directing that 'the minister at the time of communion and at all other times in his ministrations, shall use such ornaments in the church as were in use by authority of Parliament in the second year of the reign of King Edward VI.' In accordance with this rubric, ministers in the communion service were to put on 'a white Albe plain, with a vestment or Cope'—the garments used in the celebration of the Mass.

This was the starting-point of a renewed vestitarian controversy. To the dismay of the reformers, the queen was determined that her clergy should wear a distinctive dress in ordinary life, and should continue to use the vestments of the unreformed Church. When Archbishop Parker, under pressure from the queen, determined in 1566

resolutely to enforce uniformity in the use of vestments, the formation of a distinct Puritan party was inevitable. Some ministers resigned their cures rather than wear the prescribed dress. Small groups of parishioners in London went so far as to set up separatist meetings. The majority of men with Puritan sympathies remained in the Church, but began to entertain a doubt as to the bishops' hopes of further reform, and to subject the Elizabethan settlement to a more searching criticism.

(b) *Protests against popish abuses.*—The broader Puritan position was championed by Thomas Cartwright, Lady Margaret professor of divinity at Cambridge, who in lectures on the Acts denounced the government of the Church of England as unscriptural and illegitimate. The hierarchy, he held, was as clearly popish and anti-Christian as the vestments. Cartwright was deprived of his professorial chair in 1570, but his views found expression in two 'Admonitions' presented to Parliament in 1572. The first, written by John Field and Thomas Wilcox, is a singularly effective and vigorous statement of the Puritan programme of ecclesiastical reform.

The authors begin by laying down the essentials of the Puritan standpoint, which consist in 'abandoning all popish remnants both in ceremonies and regiment,' and 'also in bringing in and placing in Gods church those things only, which the Lord himself in his word commandeth.' The Puritans stood for making the breach with Rome as complete as possible, and the approach to the NT Church as close as possible. The writers of the Admonition then proceed to survey the condition of the Church in England in the light of the requirements of a true Christian Church, which are 'preaching of the worde purely, ministering of the sacraments sincerely, and ecclesiastical discipline which consisteth in admonition and correction of faults severlie.' With regard to the ministry, the Puritans maintained the clergy to be quite inefficient. Large numbers of the clergy were mere 'Vicars of Bray,' who had accepted every change in religion from Henry VIII.'s time onward. Many were unlearned and incapable of teaching. They were men without any call to the ministry, and the method of their ordination and appointment was irregular and unchristian. Men who could preach were discouraged, by being made subject to a special licence, and by being bound down 'to a prescript order of service.' The ordinary ministry was starved, in order to maintain an expensive hierarchy, while the abuses of pluralism deprived godly ministers of opportunities, compelled congregations to go without preachers, and were yet inevitable because the incomes of many livings did not suffice to keep the incumbent. The contrast between the Elizabethan ministry and the primitive evangelists and pastors was glaring. 'Then, as God gave utterance they preached the word only: now they read homilies. . . . Then feeding the flocke diligently: now teaching quarterly. Then preaching in season and out of season: now once in a month is thought sufficient, if twice, it is judged a worke of supererogation.' For a thorough reformation, it was necessary to 'displace those ignorant and unable ministers already placed, and in their rowmes appoint such as both can, and will by Gods assistance feed the flock.'

Passing from preaching to the sacraments, the Puritans objected to many details in the communion service, which they regarded as popish and out of harmony with primitive Christianity. Beyond their criticism of details, they complained of private communions and baptisms. This private use of the sacraments ignored their essential character as acts of Church-fellowship, and in effect 'tied the necessitie of salvation to the sacraments.' An even worse abuse was the readiness with which men were admitted to the Lord's Supper and indeed obliged by law to partake of it. 'They [the early Christians] took it with conscience. We with custome. They shut men by reason of their sinnes, from the Lordes Supper. We thrust them in their sinne to the Lordes Supper.' One of the most urgent reforms is 'that papists nor other, neither constrainedly nor customeably, communicate in the mysteries of salvation.'

In dealing in the third place with ecclesiastical discipline, the authors of the Admonition claimed that 'the whole regiment of the church' is to be committed to 'Ministers, Seniors, and Deacons.' The existing hierarchy is to be removed. In particular the exercise of discipline must no longer be left in the hands of one man—the monarchical bishop acting through chancellors, archdeacons, proctors, and what not. There was a sad confusion, they felt, between ecclesiastical and civil jurisdictions, both in procedure and in penalties. The use of excommunication should be more sparing and more solemn.

This outline of necessary reforms was supplemented by 'A View of Popishe Abuses yet remaining in the Englishe Church,' whose presence prevented the Puritan clergy from subscribing an article to the effect that the Prayer-Book contained nothing repugnant to the Word of God.

¹ See T. M. Lindsay, *Hist. of the Reformation*, Edinburgh, 1907, li. 406 f.; and H. Gee, *The Elizabethan Prayer-book and Ornaments*, London, 1902.

The chief Puritan criticisms of detail may be summarized as follows:

(1) The Prayer-Book stands for a reading ministry as contrasted with a preaching ministry. (2) It enjoins the use of homilies which have not yet appeared, and which consequently cannot be approved. Those homilies, too, are to discourage preaching—the main work of the minister. (3) It provides for the keeping of saints' days—contrary to the Fourth Commandment. (4) The order of the communion insists on the communicants kneeling instead of sitting when they receive the elements. The book, moreover, retains the term 'priest' in this connexion, and allows private communion. (5) The sacrament of baptism is divorced from teaching, and may be administered in private even by women. Public baptism is also 'full of childlike and superstitious toys,' as in suggesting that God has sanctified water to wash away sins. Other 'toys' are the impossible promise made by godparents, the interrogatories uselessly addressed to infants, and the use of the sign of the cross. (6) In the marriage service the Puritans objected to the wedding-ring, and to the phrase 'with my body I thee worshippe,' whereby a man 'makes an idol of his wife.' Other superstitious customs are associated with the ceremony. (7) Confirmation is bestowed on those 'that lacke both discretion and faith,' and is wrongly confined to bishops. (8) The burial service maintains prayer for the dead, and is associated with many undesirable customs. (9) The order of service for the churching of women 'smelleth of Jewish purification.' The Holy Scriptures are profaned as in the use of Ps 121, the Benedictus, Nunc Dimittis, and Magnificat, which are quite unsuited to the condition of those who constantly use them. (10) 'In all their order of service there is no edification . . . but confusion.' The standing up for the Gospel, and not for the Old Testament, shows that they 'are ignorant that the scriptures came from one spirit.' The bowing and scraping at the name of Jesus is equally unjustifiable. (11) Their Pontifical is simply popish. 'As the names of Archbishops, Archdeacons, Lord bishops, Chancellors, etc., are drawn out of the Popes shop together with their offices. So the government which they use, by the life of the Pope which is the Canon law is Antichristian and devilish, and contrarye to the scriptures.' (12) The titles of honour assumed by the great ecclesiastics are against the Word of God, as is also the practice of joining civil with ecclesiastical offices. (13) The remaining criticisms concern the exercise of discipline and the appointment of ministers. The bishops' authority spoils the pastor of his normal power of discipline. Ministers are made at random by the bishops, and the men ordained rashly have to seek for livings by dishonourable means. The cathedral churches maintain an idle and useless ministry at the cost of an effective parochial ministry. The whole system of patronage is wrong and encourages self-seeking among the clergy. The bishops' courts and methods of discipline, their licences, dispensations and excommunications, are also unscriptural; for their administration is secular in temper, and is far removed from the brotherly reproof and admonition which should prevail among Christians. (14) As an after-thought, they add a protest against what they hold to be the blasphemous use of the sentence 'Receive ye the Holy Ghost' in the ordination service.¹

(c) *Puritan position defined.*—The foregoing analysis will suffice to bring out the negative aspect of Elizabethan Puritanism, as revealed in this series of objections to the Prayer-Book. A more attractive positive statement of the Puritan view may be found in Walter Travers, *Ecclesiastice Discipline*. . . . *Explicatio* (La Rochelle, 1574, Eng. tr. by Cartwright, n.p., 1574). Travers had certain peculiarities of his own, but his book is broadly representative.

Travers begins by emphasizing the importance of good discipline, i.e. sound government, to all human societies. The Church, like the State, cannot continue in health without discipline. He then urges that the discipline essential for the Church must be discovered from the Word of God. If God prescribed laws for the Jews—laws to which they were not allowed to add and from which they might not subtract—it follows that He will have laid down a platform of government for the Church of Christ. If the civil ruler may determine the constitution of the Church at his or her pleasure, what becomes of the sovereignty of Christ over His own subjects? If Christ is lawgiver and king, He cannot have left the ministry and government of His Church indeterminate. There is, moreover, a clear system to be discerned in the NT—a system which must derive from Christ Himself and may not be changed. And the adoption of this system is essential to the work of reformation. For doctrine and discipline go together. The Church of England has reformed the former, but retained the latter in its old popish character. Such a half-hearted reform cannot last.

What, then, is the nature of the ecclesiastical discipline laid down in the NT? Before we discuss the particular offices of Christ's Church, we may note one general characteristic. No function is lawful in the Church apart from vocation. The

office and the mode of appointment to it must be of Divine ordering. A true vocation requires that a man be called to some certain place or church (i.e., he must not be ordained a deacon or a priest in general, but must be ordained to serve a particular community). A further requirement of a true vocation is that those called be faithful in the discharge of their office. There are two parts in vocation, viz. election and ordination. In election the elders should lead the congregation, but the assent of the congregation is necessary. It is essential that the men elected be fitted for the office for which they are chosen. This points to the necessity of careful examination of those who are to bear office, and the qualifications that they are to possess may be learnt from the Pastoral Epistles. Ordination consists of public prayer together with the laying on of hands. The latter feature of the ceremony belongs of right to the whole eldership.

Turning to the particular offices, we find two kinds of ordinary official, viz. bishops and deacons. The bishops and presbyters, or elders (for they are one and the same in the NT), are appointed to look after particular churches. They are of two kinds, doctors and pastors. Ability to teach and to pray is the chief qualification of the former; the latter's duty is to speak the word of exhortation needed on particular occasions and to administer the sacraments. The deacons, according to Travers, are also of two kinds, the first being treasurers and almoners, and the second overseers or elders responsible for the discipline of the individual members of the church. The diaconate of the NT has nothing in common with deacons' orders in the Church of England. For the latter is but a step towards the priesthood, while the former is a distinct and permanent office. These are the only offices required or, indeed, permitted in the Christian Church. It is true, the NT mentions other offices, such as apostles, prophets and evangelists; but these were extraordinary functions either peculiar to the first age of the Church or only revived in special circumstances of reform and advance, and consequently out of place in settled churches. The ordinary officers are bishops and deacons.

Travers proceeds to develop another point to which the Puritans attached great importance. The higher government of the Church belongs, not to particular officials, but to a compound office, i.e. not to individuals set over and above ordinary ministers, but to synods of the ministers themselves. The eldership or assembly gathered from the three chief orders—i.e. pastors, doctors, and overseers, or elders—exercises the highest authority. These synods are responsible for elections and depositions of Church officers. They are also responsible for discipline, alike in giving admonitions and in suspending members from communion or in pronouncing complete excommunication. The essential point is the corporate character of authority in the Church, and the corollary which the Puritans drew was to the effect that the monarchical episcopate is contrary to the spirit of early Christianity and to the letter of such passages as Mk 10^{42f.} and Mt 23⁸⁻¹².

(d) *The break with Anglicanism.*—The First Admonition to Parliament and the tract by Travers afford an excellent survey of the Puritan case regarding the liturgy and government of the Church of England. The whole field was covered in the long and embittered controversy that followed between Cartwright and Whitgift, in which both writers displayed great learning, much animosity, and an inadequate sense of proportion. But their works were overshadowed by Hooker's *Ecclesiastical Polity*, perhaps the noblest piece of controversial literature in the English language. It is not possible to trace the development of the controversy in detail. The Puritans failed to secure any part of their programme in the time of Elizabeth. Indeed, the administration of the bishops, especially under the leadership of Whitgift, rendered their position more and more difficult. No relief was given to their consciences in respect of the details to which they objected in the liturgy. They were expected, not only to conform, but also to profess themselves satisfied that the details in question were not repugnant to the Word of God. The queen was mainly responsible for this severe repression of Puritanism, and those who sympathized more or less with the Puritans were unwilling to disturb the closing years of her reign by opposing her. Hooker's searching analysis of the Puritan presuppositions and his finely tempered defence of the Prayer-Book also served to raise a barrier of moderate opinion against the advance of Puritanism. The movement as a whole became more restrained and more modest. The Millenary Petition, presented to James I. in 1603, contains no sweeping programme of reform. The demand for a complete change of Church govern-

¹ The First Admonition may be read *in extenso* in *Puritan Manifestoes*, ed. W. H. Frere and C. E. Douglas for the Ch. Hist. Soc., London, 1907, pp. 8-55.

ment is abandoned. On the whole side of the Puritan case embodied in Travers the petition is silent. Instead, the desires of the petitioners are grouped under four heads:

The first reproduces the following details from among the changes urged in the First Admonition:¹ 'In the church service, that the cross in baptism, interrogatories ministered to infants, (and) confirmation, as superfluous, may be taken away. Baptism not to be ministered by women, and so explained. The cap and surplice not urged. That examination may go before the communion. That it be ministered with a sermon. That divers terms of priests and absolution and some other used, with the ring in marriage, and other such like in the book may be corrected. The longness of service abridged. Church songs and music moderated to better edification. That the Lord's day be not profaned: the rest upon holidays not so strictly urged. That there be an uniformity of doctrine prescribed. No popish opinion to be any more taught or defended: no ministers charged to teach their people to bow at the name of Jesus. That the canonical scriptures only be read in the church. In the second place, the petition urges the importance of a preaching and resident ministry. Thirdly, they protest against the abuses of pluralities and impropriations of tithes. Under the fourth head they ask that enormities of discipline and excommunication may be redressed. They particularly desire that excommunication may not be issued by laymen, nor employed for trivial offences. They criticize the fines and the fees, and the delays in ecclesiastical courts. The oath *ex officio*,² whereby men are forced to accuse themselves, should be more sparingly used.'

In the Hampton Court Conference the Puritan representatives went somewhat farther. The uniformity of doctrine which they desired was to be found in the famous Lambeth Articles of 1595, which embodied the most rigid form of Calvinism. They desired corresponding changes in the other articles. Their plea for the association of ordinary ministers with the bishops in discipline drew from the king the famous and fatal aphorism, 'No bishop, no king.' Some minor concessions were made to the Puritans as a result of the conference, but, broadly speaking, their position was not eased. If the bulk of their more moderate demands had been conceded, or if some latitude in the use of ceremonies had been permitted, the danger of schism might have been averted. As it was, the Puritans became the party of constitutional reform, attacking alike the abuses of the royal prerogative and the claims of the monarchical episcopate. Under Laud the tide of feeling against episcopal rule steadily rose. 'Sion's plea against prelacy' commanded an ever more respectful hearing. In the Long Parliament the movement for ecclesiastical reform was no longer directed towards modifying episcopal control or securing detailed changes in the Prayer-Book; the hierarchy was to be destroyed root and branch, the Prayer-Book displaced by the Directory for Public Worship. That, however, is not the final phase of the Puritan ecclesiastical ideal. At the Savoy Conference in 1661 they put forward somewhat sweeping pleas for a reformed liturgy, and expressed their willingness to accept Archbishop Usher's scheme of a constitutional episcopate—a scheme under which the bishops governed with the assistance of representative church councils. The Puritans were out-manoeuvred at this conference. They were asked to state their full demands, and they did so, in good faith; and then the boldness of their demands was used as a justification for refusing all concessions. They would have been content with less than they asked; as it was, they got nothing but expulsion, and thus regretfully

they turned their backs on the National Church and on their ideal of such a Church, and set themselves to create their own religious organization. Puritanism as a definite movement for the reform of the Church of England was ended.

3. The influence of Puritanism as a tendency on religious and social life.—How far were the Puritans right in their ecclesiastical aims? Did they form a correct estimate of the needs and possibilities of the English Reformation? Were their criticisms of the Elizabethan settlement justified in detail and in principle? Any answer to these questions involves the introduction of the personal equation, but some answer must be attempted nevertheless.

(a) *Elizabeth's ecclesiastical policy.*—The assumption that the queen gauged the temper and wishes of the country with singular sagacity is part of the persistent legend of Good Queen Bess. Elizabeth is supposed to have given the National Church exactly the form that the mass of the people desired. In suppressing the Puritans she was restraining short-sighted extremists who would have broken the national unity, and given to the Church of England a rigid constitution which would have offended the Englishman's love of compromise. This view is frequently taken for granted, but it is really open to question. It would be truer to say that the country was prepared to accept almost any Church that Elizabeth liked to set up, provided it was more or less definitely Protestant, than to say that Elizabeth gave the country precisely the Church that it instinctively desired. No doubt the people generally would have revolted against any attempt to establish the Genevan model in England, but there is equally no doubt that, if Elizabeth had cared to go farther than she did in the Puritan direction, she would have had the approval and support of the majority of her first group of bishops and of many of her leading statesmen and favourites, including Burleigh and Leicester. Very little encouragement would have sufficed to make the clergy predominantly Puritan. As it was, a considerable and influential section of the clergy sympathized with the Puritan position. A majority in Parliament could have been found at almost any time to advocate and sanction further reforms.¹ There is no reason to suppose that in the matter of religion Elizabeth possessed any special genius for interpreting the mind of her subjects. The rank and file, like their leaders, would put up with almost anything from the queen, because the maintenance of her throne was essential to the national safety and independence. But, had she insisted on a more Calvinistic reform, the change would certainly have been accepted as readily as the actual settlement, and in all probability a more fully reformed Church would have evoked greater enthusiasm.

The limits which Elizabeth set to reform in England cannot be regarded as an inspired expression of the national mind in religion either then or since. It is possible to claim for Elizabeth's ecclesiastical policy that it was determined by a diplomatic skill to which Puritans were strangers. The retention of the ornaments may have been intended, as Lindsay suggests,² to give a Lutheran character to the Church of England and to secure for it from the emperor and the pope the toleration extended to Lutheranism by the Peace of Augsburg. The ornaments rubric and the other little changes in the second Prayer-Book of Edward VI. also conveyed to the pope and to Philip II. of Spain the suggestion that England might return to the Catholic fold at any moment and at short notice. No doubt such an impression was intended, and

¹ G. W. Prothero, *Statutes and Political Documents (1558-1625)*, Oxford, 1898, p. 414.

² This was the device which had enabled Whitgift to detect and repress Puritan clergy. In virtue of their office, ministers had been compelled by Whitgift in 1584 to answer certain questions and subscribe certain articles—thus becoming their own accusers. Cartwright's claim to have been a champion of religious liberty has been questioned (see F. Paget, *An Intro. to the Fifth Book of Hooker's Treatise*², Oxford, 1907, p. 41), but at least his refusal to take the oath '*ex officio mero*' must be counted unto him for righteousness. It is remarkable that the reference to this detested and arbitrary procedure in the Milenary Petition should be so restrained in character.

¹ Cf. Prothero, p. xxxiii.

² II. 408.

one cannot but admire the skill with which Elizabeth used her ecclesiastical settlement to minimize the dangers which she had to face in her foreign policy. But the element of statesmanship counted for less than the element of personal caprice. Diplomatic reasons justified a cautious beginning—they did not suggest an absolute halt—in the work of reform. After the pope had excommunicated her, and still more after the failure of the Armada, reasons of State counselled a stiffening of England's Protestantism rather than the reverse. If statesmanship had been the determining factor, Elizabeth might have held back the Puritans at first; she would almost certainly have encouraged them later. She did not do so, because she was a Tudor and liked her own way. She meant to have the Church reformed according to her taste, and the Puritans were not to her liking.

One reason for the queen's personal animosity to the Puritans was her indifference to religious truth. She was consequently at variance with the Puritans on the question of a preaching ministry. The queen did not greatly care whether the people were instructed in the faith or not. To the Puritans it seemed all-important that a reasoned statement of the Protestant position should be popularized. If it was desirable that the country should become Protestant at all, then undoubtedly the Puritans were right in desiring an intelligent conversion and a learned preaching ministry. On this issue Elizabeth was obscurantist; the Puritans were standing for enlightenment and education, however narrow the views may have been which they would have propounded ostensibly for popular acceptance, and in effect for popular discussion.¹ Elizabeth, in attempting to starve thought and stifle discussion, was a sheer reactionary, and one of the most short-sighted measures on which she insisted was the suppression of the prophesyings—a measure against which Archbishop Grindal vigorously protested, to his eternal honour. There is no reason to doubt that the Puritan demand for a preaching ministry could have been very largely realized, had the queen wished it. There can be no question that the maintenance of an educated ministry would have been in the best interests alike of Church and of State. Even the instruments and defenders of the queen's policy admitted that. The main obstacles to the creation of such a ministry were the avarice and prejudice of the queen.

In some particulars the Puritan leaders certainly showed a truer appreciation of the religious needs of England than did the queen. Events soon proved that they saw farther than their fellow-reformers, when they urged that reformed doctrine would not co-exist for long with unreformed discipline and worship. The apologists of the Elizabethan settlement pointed to the pure standard of reformed theology enshrined in the articles. Further reform of the liturgy or of Church government they held to be superfluous. The Puritans declared that the unreformed liturgy would undermine the reformed doctrine, and they were clearly justified in holding this view. If the Church of England was intended to be unmistakably Protestant, as the rulers of it claimed, then the Elizabethan settlement was a fatal compromise, as the critics of it urged.

(b) *The Puritan polity.*—The details of the Puritan criticism of the Prayer-Book need not detain us. Some of the weightiest charges given in the First Admonition apply not so much to the book itself as to misuse of it and to the association of superstitious customs with its rites and ceremonies. Some of the Puritan criticisms seem now

unimaginative if not captious (*e.g.*, their objection to the ring in marriage or to the use of the Magnificat in public worship). Others seem obvious, and have been more or less recognized. Thus, their demand for a revised lectionary was valid for other reasons besides the reverence for Scripture which dictated it. The protests against the strict observance of saints' days and the lax observance of the Sabbath were also necessary, though both may have been pushed too far. The 'longsomeness of matins' is likely to be taken into account in any future liturgical reform. But, in general, such reform, when it comes, will probably not owe much to Puritan criticism.

It is more important to notice that Puritan ministers might have been accorded the liberty to omit or vary unessential details, not only with great relief to their consciences, but also with advantage to their congregations. The denial of liberty of conscience to the Puritan clergy in things indifferent is not excused either by the probability that such concessions would not have contented them or by the fact that, as a party, they were as much possessed by the craving for outward uniformity as the queen and the bishops.

With respect to the ministry and government of the Church of England, the Puritans were clearly right in pleading for a better educated, a better paid, and a more carefully appointed ministry. They had good grounds for protesting against the abuses of pluralism and patronage. The system and methods of ecclesiastical discipline lay open to the charges which the Puritans made against them. By 1662 all England agreed with them as to the necessity of separating civil and ecclesiastical offices, and Laud has had no successor in the position that he secured in the councils of State. The impression that Hooker completely disposed of the Puritan case owes not a little to the neglect of the incomplete posthumous books of the *Ecclesiastical Polity*—vi., vii., and viii. When he came to grips with the Puritan criticisms of the actual working of episcopacy, Hooker was obliged to make large concessions to his opponents, and, where he would not make concessions, he did not find it easy to maintain his defence. There was, indeed, no answer to some of the main criticisms which the Puritans passed on the state of the ministry, and the only kind of reply possible was to deprecate haste in reform and to urge that the bishops were doing their best—the real obstacles being the intransigence of the queen and the vested interests of some highly placed laymen.

The platform of Church government which the Puritans drew from the Scriptures, and the appeal to the Scriptures on which it was based, raise further points of interest. As interpreters of the NT, Puritan scholars were not at fault in contrasting the diocesan episcopate with the NT bishops who were in charge of particular churches and were the same as presbyters. It was fair to insist upon the difference between the primitive diaconate—a distinct office alongside of the eldership—and the later use of the diaconate as a mere stage in the evolution of the presbyter or priest. The element of corporate action and responsibility, alike in the choice of officials and in the maintenance of discipline, undoubtedly existed in NT times, and was rightly emphasized by the Puritans. In restricting membership to communicants, and in making strict examination before communion the instrument of discipline, the Puritans were also keeping close to the early Church. It is disputed whether they were correct, as a matter of scholarship, in claiming presbyterial ordination as the normal primitive practice, and it is doubtful whether their division of NT Church offices into extraordinary and ordinary can be legitimately

¹ See Douglas Campbell, *The Puritan in Holland, England, and America*, London, 1892, i. 458.

maintained. But the point on which their position has been most effectively challenged is the assumption that there must be laid down in the NT a final form of Church government, to be rigidly enforced at all times and in all places. The Puritans took great pains to prove that 'God must have delivered in Scripture a complete particular immutable form of church polity.' Otherwise, they said, the Christians would be worse off than the Jews, and God would be negligent if He did not provide for the least detail of Church order. Hooker is never happier than when undermining this *a priori* dogmatism, in which the Puritans so frequently indulged:

'In matters which concern the actions of God, the most dutiful way on our part is to search what God hath done, and with meekness to admire that, rather than to dispute what he in congruity of reason ought to do. The ways which he hath whereby to do all things for the greatest good of his Church are more in number than we can search, other in nature than that we should presume to determine which of many should be the fittest for him to choose, till such time as we see he hath chosen of many some one; which one we then may boldly conclude to be the fittest, because he hath taken it before the rest. When we do otherwise, surely we exceed our bounds; who and where we are we forget; and therefore needful it is that our pride in such cases be controlled, and our disputes beaten back with those demands of the blessed Apostle, "How unsearchable are his judgments, and his ways past finding out! Who hath known the mind of the Lord, or who was his counsellor?"'¹

It would now be generally conceded that the government of the Church to-day cannot helpfully be made to reproduce exactly the features of the NT polity, even if we knew more accurately than we do the character of that polity. It is probable that no uniform system existed in the early Church, and Church institutions have necessarily been developed and adapted to changing conditions. The Puritan hypothesis of a divinely ordained and unalterable form of Church government is not tenable. Yet their appeal to the primitive Church was not fruitless, and is still a necessary safeguard against the easy assumption that, in the development of Church order, whatever is right. Growth in Church organization is inevitable and desirable, but not every development is suited to the genius of Christianity, and none can escape criticism in virtue of its mere existence. When we refuse to follow the Puritans in denying the legitimacy of development in the realm of Church life, we have still to consider whether they were not justified in condemning particular developments as alien from the temper revealed in the arrangements adopted by the primitive Church. When the Puritans criticized the monarchical episcopate, as involving a social distinction and a secular greatness incongruous with the Christian ministry, and as exercising an arbitrary authority unsuited to the Christian brotherhood, they were occupying ground from which it was very difficult to dislodge them. The difficulty is at once apparent in Hooker's ineffective discussion of the phrase, 'it shall not be so among you' (Mt 20²⁶).² In origin and in character the institution of diocesan episcopacy was not specifically Christian. Moreover, the representative and democratic element in early Church order cannot be dismissed as accidental. There was and there is something vital to the expression of Christianity in the presence of just that element. And, above all, the Puritans rendered a service at once to Christianity and to liberty, when they in effect set limits to the authority of the sovereign in ecclesiastical matters. At the heart of their position was the belief that the Church has a constitution of her own, which she is to determine for herself, and which is not to be shaped to suit the diplomacy of States or the caprice of princes. This challenge to the royal prerogative roused the resentment of Elizabeth. It also turned the Puritans, almost

against their intentions, into the champions of constitutional government and political liberty.

(c) *Influence on English life and character.*—After the failure of their ecclesiastical hopes and their loss of political power the Puritans did not cease to influence England. The movement left its mark, for good and ill, on popular religion and, indeed, on every department of national life. In attempting to characterize the broad effects of Puritanism on English life and character, we may begin with its appeal to the Scriptures.

'Puritanism carried the genius of the Scriptures into the very heart and soul of England.'³

As is apparent from the contemptuous protest of the First Admonition against showing special reverence for the Gospel lessons, the Puritans were more impressed with the unity of the Bible than with the difference between Law and Gospel. They recognized development, but they tended to attribute an equal authority to all books of the Bible as coming from the one Spirit. They sent men to the Bible as the Word of God, and bade them seek there comfort and guidance for every occasion. They championed the view that the Bible was the people's book, and their appeal to Scripture did in effect guarantee the religious independence of humble folk. Unlearned men could read the book and appropriate its treasures for themselves. The Puritans were sometimes shocked at the results of the Bible study which they advocated, but they could not undo the consequences of their own principles. The setting up of the Scriptures as the authority in religion favoured liberty of thinking and developed personal religion. The concentration of attention on the Bible had a remarkable educative effect on many minds. Unconsciously men like Bunyan acquired literary taste and power, because their reading was confined almost exclusively to one really great book. Dowden claims that by this means certain popular sympathies were fostered in literature:

'A homely strength, a genial warmth, a respect for man as man, a breadth of human interest, a humour that is not supercilious, a pity which is not condescending.'⁴

It is difficult to overestimate the gains, intellectual and spiritual, derived from assigning this premier position to the Bible.

There is, no doubt, a considerable discount on the services of Puritanism in this regard. In demanding direct Scripture warrant, not only for creed and Church order, but also for every act of daily life, the Puritans were in danger of depreciating ordinary reason, as Hooker declared, and they were also in danger of troubling tender consciences. Whatsoever is not of faith is sin, they urged, and whatsoever is not grounded on the Word of God is not of faith. Hooker's second book brings out admirably the dangerous exaggeration to which Puritan reverence for the Scriptures committed them:

'Admit this [that it was the drift scope and purpose of Almighty God in Holy Scripture to comprise all things which man may practise] and what shall the Scripture be but a snare and a torment to weak consciences, filling them with infinite perplexities, scrupulosities, doubts insoluble and extreme despairs?'⁵

Another result of this admission was to set man wrestling the Scriptures in order to get from them the guidance and assurance that were not on the surface. It also enhanced the temptation to fill up the lacunæ of the NT by moral precepts and civil laws derived from the OT: the uncompromising attitude of the Puritans towards popery was duly defended by the directions to the Children of Israel to destroy the Canaanites utterly; Sabbatarianism, intolerance, and the belief in the death

penalty for witches were strengthened by this appeal to the OT; the wide acceptance in Puritan circles of the theory that heathen virtues are splendid vices may also be traced to the same root. If the English are essentially an OT people, the Puritans are largely responsible for it.

(d) *Puritan theology and ethics.*—Puritan theology was simply Calvinism, ultimately worn thin. It is not necessary to describe the system, and it is not possible here to trace its development in detail. It petrified into a series of dogmas, known as the five points of Calvinism, which dealt with election and reprobation, the limited scope of the atonement, total depravity, irresistible grace, and final perseverance. Since the English people ceased to be familiar with these doctrines, they have ceased to possess a definite theology, and their thoughts on ultimate questions have become chaotic and vague. The main principles affirmed in Puritan teaching were the sovereignty and righteousness of God and the sinfulness and all-pervading character of sin. The emphasis on original sin and total depravity made mortification of sin one of the central duties of the Christian life, and this lent to Puritan devotion and Puritan sainthood a somewhat sombre and gloomy character. The devout Puritan was very different from earlier Franciscans or later Methodist saints like Billy Bray. The Puritan did not normally attain to the sense of being at home with God, which may be found in the Franciscan and in some sections of the Evangelical movements. On the other hand, he had a strong sense of responsibility, and the religion which he embraced had an individualizing influence.

'The unvarying central element in Puritanism was the belief that the relation between the invisible spirit of man and the invisible God was immediate rather than mediate.'¹

The true Puritan stood ever in the great Taskmaster's eye. He learned to fear God and found that he had nothing else to fear.

This stern creed was not without its consolations. Once convinced of the supremacy of God, men and women could face terrible things, confident that even these things would be overruled for righteousness. Mark Rutherford says with reference to this side of the subject:

'Confess ignorance and the folly of insurrection, and there is a chance that even the irremediable will be somewhat mitigated. Poor!—yes; but it is genuine; and this at least must be said for Puritanism, that of all the theologies and philosophies it is the most honest in its recognition of the facts; the most real, if we penetrate to the heart of it, in the remedy which it offers.'²

It was a creed which enabled men to face disappointment and disaster without despair.

Submission to God's will expressed itself in self-control. Indeed, Puritan emphasis on God's sovereignty and man's depravity necessitated a stern and repressive moral discipline. As the advantages of his training in a Puritan home, Mark Rutherford mentions two things: (1) an abhorrence of lying, and (2) the conviction that unchastity is a sin and not a venial weakness. Those were elementary features of Puritan morality. With regard to the first, the Puritan tradition tended to err through literal-mindedness. It became prosaic and distrusted works of imagination, alike poetry and romance, though the latter was more especially apt to be banned. But this insistence on literal truthfulness has probably not been without its effect in developing the scientific temper. The second point constitutes perhaps the greatest service rendered by Puritanism to social life. It was and remains the head and front of the Puritans' offending in the eyes of many who resent the restriction of natural pleasures. Yet even what may seem the over-

scrupulousness of Puritanism on this subject is not without its value.

'To Puritanism we owe the characteristic which, in some other countries, is expressed by the term English prudery, the accusation implied being part of the general charge of hypocrisy. It is said by observers among ourselves that the prudish habit of mind is dying out, and that is looked upon as a satisfactory thing, as a sign of healthy emancipation. If by prude be meant a secretly vicious person who affects an excessive decorum, by all means let the prude disappear, even at the cost of some shamelessness. If, on the other hand, a prude is one who, living a decent life, cultivates, either by bent or principle, a somewhat extreme delicacy of thought and speech with regard to elementary facts of human nature, then I say that this is most emphatically a fault in the right direction, and I have no desire to see its prevalence diminish.'³

Beyond any doubt Puritanism made possible and common a sound home-life in England, so far as its influence on sexual morality is concerned.

Its effects on the relations of parent and child were not altogether admirable. The doctrine of original sin led to an utter distrust of child nature. Even Bunyan bids parents remember that children are cursed creatures. The wills of children, being evil, were to be broken, and children were to be taught to keep their distance. Home discipline was to be strict, and the rod was not to be spared. The relative justification for this attitude is sometimes overlooked by those who criticize Puritan home training and education. Thus Samuel Butler, in *The Way of all Flesh* (London, 1903), looks back with regret to 'the spacious days of Queen Elizabeth.' Then the relations between parents and children seem on the whole to have been more kindly.

'The fathers and the sons are for the most part friends in Shakespeare, nor does the evil appear to have reached its full abomination till a long course of Puritanism had familiarized men's minds with Jewish ideals as those which we should endeavour to reproduce in our everyday life.'⁴

As a matter of fact, in the days of Elizabeth the friendship of father and son often meant the initiation of boys into vice in very tender years. The advantages of sowing wild oats were firmly believed in. Children who would now be at a kindergarten were sometimes familiarized with drinking and swearing, while youth was encouraged to see life. The pages of Ascham's *Scholemaster* afford a sufficient revelation of the moral laxness and parental irresponsibility against which Puritanism reacted, and no one who knows that side of Elizabethan social life would wish to return to it. The main defect of Puritanism in this connexion was its depreciation of childhood; its chief merit was its insistence on a sense of duty—on the need of making a serious use of life. It has yet to be shown that the belief in original sin, which E. G. A. Holmes⁵ regards as the root of all evil in education, and which did in fact involve a distrust of child nature,⁶ can really be abandoned without losing an element of truth and hardness which made for strength of character and purity of life.

(e) *Influence on education and industry.*—In the matter of education the Puritans had to provide for themselves after 1662, and they made no small contribution to educational progress. As a reforming party they sat loose to the mediæval and classical traditions to which the universities and grammar schools were still wedded. They were readier for changes both in method and in curriculum. It was in Puritan circles that Comenius attracted attention and sympathy in England. The Long Parliament seems seriously to have considered entrusting to him the task of reforming national education. The dissenting academies of

² P. 21 f.

³ See *What is and what might be*, London, 1911, *passim*.

⁴ The general tendency to distrust natural feeling may be illustrated further from the records of Evangelicalism—e.g., the story of Augustus Hare's upbringing by his aunt, Maria Hare, or the tragedy of Henry Martyn's love-story.

¹ Dowden, p. 11.

² *The Revolution in Tanner's Lane*, London, 1887, p. 127.

the 18th cent. compared favourably with the older universities alike in expense, morals, and intellectual keenness. It was in these academies that the teaching of modern subjects was begun.¹ The Puritans are being blamed nowadays for having been too exclusively intellectual, and it is true that 18th cent. deism and rationalism may be regarded as the children of Puritanism. But this strong intellectual tendency was really a virtue, in spite of its limitations. In the States it was the Puritan colonists who cared for education. The colonists of Virginia took no such interest in the subject, as witness the sentence of W. Berkeley, governor of Virginia in 1671:

'I thank God there are no free schools or printing, and I hope we shall not have them these hundred years.'²

After all, the sermon itself, on which the Puritans set such a high value, is an appeal to the reason of the common man, and is an instrument of education. It assumes that religion must capture the head as well as stir the feelings. And so far the Puritan appeal to reason made for a higher intellectual life and activity. The independence of character which Puritanism fostered also helped to produce pioneers in educational reform.

The moral discipline enforced by Puritanism had a considerable reaction upon industry. The Christian life was regarded as essentially an ordered life. The passions were to be under rational control. Puritanism cut men off from wasteful expenditure and worldly pleasure. Forms of indulgence which dissipated both wealth and energy were sternly denounced and repressed. Time and talents were not to be wasted. On the contrary, the Christian's first duty was to make the most of his powers and possessions in whatever might be his calling. Idleness was a sure sign that one's standing in grace was doubtful. No one should be unemployed; even the man of leisure should find some occupation which would be of service to the common weal. Puritan pressure in these directions certainly tended to develop the spirit of enterprise and industry characteristic of modern capitalism. Both by inculcating frugality and by strengthening home ties, Puritanism encouraged thrift and the accumulation of capital. Moreover, by insisting on a careful use of time and on self-control, it helped to form those regular habits on which the conduct of modern industry depends. The business virtues, viz. honesty, punctuality, and steady application to work, were reinforced by the ethic of Puritanism. Once again, the emphasis on personal responsibility which was characteristic of the movement served to make men bring an independent judgment to bear on their business problems, and so increased the power of individual initiative. After 1662 the influence of Puritanism was thrown still more clearly on the side of economic freedom. For the Puritans, having lost power, naturally distrusted State control, while they were in any case convinced opponents of State absolutism. Their first concern was toleration, and they became the champions of the movement for limiting State interference in every direction.³

(f) *Puritanism and art.*—The relations of Puritanism to art and literature are not easy to define. The movement has been wrongly held responsible for the general degradation in taste, especially in architecture, which took place in the 18th century. Much vandalism has been attri-

buted to Puritans in which they only shared or did not share at all.⁴ It is of course clear that Puritanism tended to dissociate itself from certain forms of art, particularly the dramatic art and the stage, which it treated as hopelessly corrupt, and whose moral recovery it, consequently tended to retard. It is also of the essence of Puritanism that it depreciated the outward. Calvinism has been called 'the ugliest of all religions.'⁵ Its symbolism is of the plainest. Dependence on the outward is discouraged. The central emphasis on God's righteousness still further contributed to a neglect and a distrust of the merely beautiful. The Puritan was intensely preoccupied with moral issues, and, as a result of the Puritan tradition, many have neglected and stunted the artistic sides of their nature. And yet this very concentration on the moral life and on the supremacy of God's righteousness has not been without its vivifying influence on art and literature. The deepening of the inner life due to Puritanism was bound to find expression.

'Puritanism in itself is ill-fitted to produce a great art. Yet the inward life of the soul may be intense and the more intense because it does not readily distribute itself through appointed forms; and absorbing thoughts and passions cannot fail in some way to discover or to create that outward vehicle through which alone they can secure a complete self-realisation.'⁶

Nor is the self-discipline of the Puritan unfavourable to art.

'For the maintenance of high passion the habit of moral restraint is in the long run more favourable than the habit of moral relaxation.'⁴

And it may be urged that, in the last resort, art reaches its highest achievements precisely through the practice of moral renunciation, i.e. through the Puritan acknowledgment of the supremacy of God's righteousness.

'No man does real justice to beauty till he feel the moral beauty of resisting beauty—upon due occasion. There is something incomplete in artistic taste till it see, with so great an artist as Plato, the beauty of Puritanism.'⁶

4. *Summary.*—To sum up, the Puritans stood for an ecclesiastical ideal, the chief importance of which lay in asserting that the Church must not be made the tool of the State. In thus maintaining the independence of the Church, and also the necessity of a democratic element in Church government, the Puritans promoted constitutional liberty and very powerfully influenced British ideals of government. These ideals they carried with them into the colonies which they founded in America, where their conception of Church and of State found freer expression. Through the United States Puritanism has perhaps exerted an even greater influence on the Anglo-Saxon world than it has through its effects on British character. By means of a definite if narrow theology Puritanism has shaped the thinking of generations of Englishmen on the great themes of religion. By its insistence on strict self-discipline it has inculcated 'a steady and almost stolid dutifulness,' which has expressed itself largely in industry and in industrial progress, but which is apparent in all professions and careers in the men and women who have come under the influence of the Puritan tradition. If Puritanism has favoured the growth of democracy, it has also developed those qualities of self-control and of devotion to duty without which no democracy can be preserved from corruption. In temper and outlook Puritanism has shown some of the defects associated with the somewhat parallel Jewish movement known as Pharisaism. The Puritans leaned too much to the OT. Their belief in

original sin led to a too sweeping depreciation of human nature and to harsh, unsympathetic judgments on opponents. Their religion tended to lack gladness, and their 'cardinal error lay in a narrow conception of God as the God of righteousness alone, and not as also the God of joy and beauty and intellectual light.'¹ But no movement of religious thought could fail to ennoble human life and to possess permanent worth which, like Puritanism, was inspired with the conception of the chief end of man as being to glorify God and enjoy Him for ever.

H. G. WOOD.

PURITY.—A fine passage from the works of the Cambridge Platonist Henry More (1614–87) will give a good idea of the wide meaning which the gospel attaches to the word 'purity':

'By purity I understand a due moderation and rule over all the joys and pleasures of the flesh, bearing so strict an hand and having so watchful an eye over their subtle enticements and allurements and so firm and loyal affection to that idea of celestial beauty set up in our minds, that neither the pains of the body nor the pleasures of the animal life shall ever work us below our spiritual happiness and all the compatible enjoyments of that life that is truly Divine; and in this conspicuously is contained whatever either moral temperance or fortitude can pretend to.'²

To this large conception of the meaning of purity corresponds the view of Augustine that the purity of heart mentioned in Mt 5⁸ means single-heartedness or simplicity:

'Hoc est mundum cor quod est simplex cor.'³ 'Ille est vere castus qui Deum attendit, et ad ipsum solum se tenet.'⁴

It thus appears that 'purity,' like 'temperance' and 'sobriety,' has, properly speaking, a wider sense than is usually connected with the word. It connotes the singleness or simplicity of a nature which finds the perfect satisfaction of its desires in God. The opposite of purity is uncontrolled or misdirected desire; and the characteristic reward of purity is the vision which is man's true life: 'Vita hominis visio Dei.'⁵

The origin and usage of the word are sufficiently dealt with in *HDB*, s.v. It will suffice to recall the obvious fact that the idea of purity, like that of holiness, gradually passed over from the material and ceremonial sphere into the range of ethical ideas; the notion of outward consecration or dedication to the service of the Deity gave way in

process of time to that of inward sanctity. In this process the teaching of the Hebrew prophets played a conspicuous part.¹ The culminating point is perhaps marked in our Lord's teaching recorded in Mk 7^{14–23} (Mt 15^{10–20}). Christ's saying about the thing that 'defileth a man' in fact distinguishes between two spheres, the physical and the spiritual, which men had hitherto tended to confuse. Henceforth, as Christians were led to perceive, "'pollution'" (τὸ κοινῶσαι) in the sense contemplated by the Scribes can be predicated only of that which affects man's moral nature.'² It is interesting to trace anticipations of this principle in ancient writers—e.g., Cicero:

'Caste jubet lex adire ad deos, animo videlicet, in quo sunt omnia: nec tollit castimoniam corporis; sed hoc oportet intelligi, cum multum animus corpori praestet, observeturque, ut casta corpora adhibeantur, multo esse in animis id servandum magis. Nam incestum vel aspersione aquae vel dierum numero tollitur; animi laes nec diuturnitate evanescere nec amnibus ullis elui potest.'³

As in the case of other virtues which re-appear in Christian ethics, the idea of purity directly depends upon the Christian conception of God as a Being to whom 'all hearts are open and all desires known.'⁴

i. **Purity in the narrow sense of freedom from sensual pollution** was a virtue which, before the coming of Christ into the world, held at best a precarious position. Israel cannot be said to have been very far above the general level of the ancient world in this respect. Where polygamy is not condemned, no very high standard of purity can be expected, and grave lapses from chastity in OT times were of frequent occurrence. These were often closely connected with Israel's inveterate tendency to idolatry, and in fact the prophets usually describe the apostasy of the nation as 'adultery' (Hos 2, Jer 3, Ezk 16, etc.). As regards the Gentile world, heathen moralists could inculcate purity only by appealing to self-regarding and prudential motives. They had no resources for taming or restraining the force of human passion. Purity was a virtue of which men despaired. St. Paul in his sombre picture of heathen degradation regards the Gentiles as actually given over to an abandoned mind (Ro 1^{24–28}, Eph 4¹⁹ 5¹¹). Religion itself was corrupted at the source; the current mythology was a chief factor in the general demoralization. The better elements in the ancient religion passed over into the mysteries (*q.v.*), which at least appealed to the sense of moral defilement, though they could not appease it. These bore their own imperfect witness to the truth that purity of life was needed for acceptable approach to God.

Now, Christianity dealt with the evil which was too strong for the heathen world by re-emphasizing, with sanctions peculiar to itself, the Stoic doctrine of the sanctity of the human body. Seneca had spoken of God as 'near us, with us, within us,' 'lodging in the human body.'⁵ Epictetus had said:

'Thou bearest God about with thee, within thyself; and thou dost not realize that thou art outraging Him with thy impure thoughts and thine unclean deeds, . . . God Himself being present within thee and overlooking and overhearing all,'⁶ St. Paul points to the body as the actual 'temple' of the Holy Spirit (1 Co 6¹⁹); the bodies which are misused in sin are 'the members of Christ' (1 Co 6¹⁵). The sin of uncleanness does despite to the indwelling presence of the Spirit; it outrages that nature which the Son of God made His own and hallowed by contact with His deity; henceforth

We should love all things in God, and God in all things, because He is all in all, the beginning and original of being, the perfect idea of their goodness and the end of their motion.'

⁶ *Diss.* ii. viii. 11 f., quoted in Lightfoot, p. 314 f.

the body is 'for the Lord, and the Lord for the body' (1 Co 6¹³). We find an echo of this language in Tertullian's passionate assertion of the sanctity and dignity of the material which the Son of God has condescended to assume and to hallow.

'God forbid that He should abandon to everlasting destruction the labour of His own hands, the object of His care, the receptacle of His own Spirit, the queen of His creation, the heir of His liberality, the priestess of His religion, the soldier of His testimony, the sister of His Christ.'¹

Christian purity is in fact sanctioned by motives peculiar to the religion of the Crucified. It forms a part of that self-control (*ἐγκράτεια*) which is the most characteristic element in Christian morality, and which was 'primarily identified with sexual purity, and then extended to include renunciation of the world and mortification of the flesh.'² Purity is the spirit which strives to bring every bodily impulse, every affection, every passion, every faculty—thought, imagination, memory—into subjection to Christ. But it is important to remember that purity implies not mere abstinence from illicit pleasure but the positive dominion of the Holy Spirit in man. The way to purity lies through the practice of self-control in all things great and small (1 Co 9²⁸). This is pointed out more at length elsewhere (see art. TEMPERANCE).

There are certain safeguards of purity which may be mentioned here.

(a) Of *religious faith* something has already been said. The gospel supplied a new and powerful motive to purity in teaching the sanctity of the body, hallowed by the Incarnation and redeemed by the Passion of the Son of God. That which He had worn as a vesture, exalted to the throne of heaven and made the temple of the Spirit, could no longer be employed as an instrument of sin (Ro 6¹¹⁻¹³).

The prominence of this doctrine in the NT is a proof of 'the intense desire which religion has to protect the founts of life against whatever might destroy, waste, or pollute them.' Christianity 'erects a sacred fence round the most dangerous places in our life.' It does not despise the body, but labours 'to preserve and increase vitality. With this motive, it visits with its sternest censure any assertions of the individual's right "to do what he will with his own" body.'³

Further, if purity implies the right direction of desire, the gospel brought to bear upon the force of passion 'the expulsive power of a new affection' in so far as it inspired and developed the love of God and of man for God's sake.

(b) Christ's law of *mortification* has an obvious bearing on the process of self-purification. 'If thine eye offend thee, pluck it out.' Mortification implies something more than mere self-restraint, the habit of which in other matters is so essential a condition of victory over fleshly sin. It implies the cutting off of even innocent pleasures that are found perilous to purity. It implies the use of what Jeremy Taylor⁴ calls 'some rudenesses' towards the body (cf. 1 Co 9²⁷, ὑπωπιάζω, δουλαγωγῶ)—spare diet, occasional fasting, habitual abstinence, and other wholesome austerities; it means also continual watchfulness against the beginnings and least occasions of evil.

(c) *Occupation* is also a valuable and necessary safeguard. While sloth and ease are the frequent forerunners of impurity, any kind of employment which leaves few vacant spaces of time is of great benefit.

(d) Of the power of *prayer* and of the recollection of the Divine presence it is needless to speak. Without them purity in its perfectness is impossible. One particular remedy may, however, be mentioned, namely, recollection of the sympathy of Christ with the tempted. He has felt the full pressure

of temptation, yet without sin (He 4¹⁵), and one great aid to purity is the thought of His example, of the travail which He underwent in order to be made in all things like unto His brethren, and of the cross on which He endured the open shame which is the appropriate penalty of secret sin (He 12²).

(e) Finally, we must bear in mind that the desire which occasions the sin of impurity finds its appropriate hallowing in marriage.

'Honourable marriage hath a natural efficacy, besides a virtue by divine blessing, to cure the inconveniences which otherwise might afflict persons temperate and sober.'⁵

2. Purity in the larger sense is virtually equivalent to 'simplicity' or 'single-mindedness.'

'It carries on to the whole of our nature that watchful reserve and restraint which it imposes upon the body.'⁶

Purity means the integrity of a will dedicated to God in perfect simplicity of purpose; it implies not the sacrifice of innocent desires, but the consecration of them; not the effort to acquire a single virtue, such as chastity or purity in the narrower sense, but the striving after goodness in the widest sense. Purity of intention consists in seeking to please God in all things and to make His glory the object of every act and word. The pure heart is that which is continually seeking God, passing through all things onwards and upwards to God, embracing one only object of life, and holding fast to a single purpose amid the bewildering multiplicity of calls and duties, claims and responsibilities, which make life difficult and complex. The pure heart is undivided, undistracted, unsophisticated. It imparts to character that 'moral unity' which Christ in a supreme degree exhibits, the unity which springs from devotion to a single end—the love and service of God.

And the reward of this purity is vision, insight, illumination (Mt 5⁸). 'Cor purum penetrat caelum et infernum.'⁷ Aquinas connects the beatitude 'Beati mundo corde,' etc., with the Holy Spirit's gift of 'understanding.' The reward of purity is a certain freedom from intellectual illusion and error; by purity of heart, 'etsi non videamus de Deo quid est, videmus tamen quid non est.'⁸ The perfect vision which shall satisfy not only the intellect but every element in man's complex nature is the consummation of a process that begins in this life—the cleansing of the heart and conscience from all lower aims than the service of God. Purity, in fact, in its completeness is the effect on the character of true faith in God (Ac 15⁹), the faith that works by love (Gal 5⁶). So Bernard makes it to consist in two things which are both different aspects of love: 'in quaerenda gloria Dei et utilitate proximi.'⁹ For purity is, as we have already noticed, not mere abstinence, not the mere cleansing of the heart from wrong or inordinate desires, but desire or love directed aright, and finding in God and His service the one true and satisfying end of human life. The pure heart seeks not God's gifts merely, but Himself. It thinks of Him as the only adequate response to the deepest yearnings of human nature. It believes that what He is, rather than what He gives, is the true life of man.

'Ille non aliquid ex iis quae condidit; sed se ipsum tibi dat ad fructum, se ipsum omnium conditorem.'⁶

PURUSA.—*Puruṣa* signifies in Sanskrit 'man,' then 'the living principle in men and in other beings,' and finally 'the supreme Spirit,' both the supreme personal God of theism and the impersonal world-soul in a pantheistic sense.

As early as the *Rigveda* (x. 90) there is found a hymn, which reappears with several variations in later Vedic texts, wherein the *puruṣa* is described as the primeval Being, as the personification and starting-point of the whole universe. The heavens, the atmosphere, and the earth proceed forth from the *puruṣa*, also the sun and moon, gods, men, and animals. From the head, the arms, the legs, and the feet of the *puruṣa* respectively are derived (according to vv. 11, 12) the four castes of men, which are here mentioned for the first time in Indian literature. Since in this hymn, though only in mythological fashion, the thought of man's identity with the universe is expressed, we may see in it an anticipation of the main teaching of the Upaniṣads and the Vedānta (*qq.v.*), that is, of the doctrine of the essential identity of the inner man, the soul, with Brahman, or the soul of the universe.

In the philosophical systems of India the word *puruṣa* is used in the same sense as the more common *ātman* to denote the souls of living beings; and this is done independently of the particular meaning attached to the word, whether, as in the Vedānta, the individual souls are conceived as one with the indivisible soul of the universe or, as in the Sāṅkhya, Yoga, Vaiśeṣika, Nyāya (*qq.v.*), as existing in infinite numbers.

R. GARBE.

PUSEY.—Edward Bouverie Pusey (1800–82), scholar and divine and leader of the Oxford Movement (*q.v.*) in the Church of England, later known as the Catholic Revival, was regius professor of Hebrew in the University of Oxford from 1828 to his death. This crown appointment, combining with it a canonry of Christ Church, gave him a central and independent position, from which he was able, by books, sermons, and individual personal dealings, to give a unity of character and aim to the Movement, both in its earlier and to a great extent also in its later phases.

1. His place in English life.—Pusey was by birth an English gentleman 'of the old school' (cf. the anecdote in Liddon's *Life of Edward Bouverie Pusey*, i. 186), and it may be said that some of the best influences of his time had combined in the formation of his mind and character. He was one of the first English theologians to study German, and in two long visits to Berlin, Bonn, and Göttingen in 1825–27 he worked under Freytag, Ewald, Tholuck, Schleiermacher, and Eichhorn, and came to know what scholarship meant to them.

'From Eichhorn Pusey learnt the vastness of the world of modern learning and the standard of work which was necessary in order to explore it. When in later years he would say, "A German professor would think nothing of doing so and so," he meant Eichhorn' (Liddon, i. 74).

Pusey was a fellow of Oriel at the time when this common-room was the intellectual centre of Oxford, and until his wife's death in 1839 he mixed freely in all the varied life of the university. Even in the deep seclusion from ordinary society which he inflicted upon himself after that date he was in touch through his family with the life of the English upper classes, and such sermons as that entitled 'Why did Dives lose his Soul?' (preached in All Saints', Margaret Street, on Ash Wednesday, 1865), or 'Our Pharisaism' (delivered in St. Paul's, Knightsbridge, on Ash Wednesday,

1868), show his unerring insight into their spiritual needs. This is an important element in Pusey's life, which has not always been sufficiently recognized. In social life no less than in scholarship he was a man whom none could patronize or despise, and he knew how to speak to Victorian society about its vulgarity and worldliness with a searching directness which could not be evaded or ignored (cf. his rebuke to a lady in *Spiritual Letters of Edward Bouverie Pusey*, London, 1898, p. 77, and to the heads of houses in Oxford for their luxury [Liddon, ii. 110]). Students of 19th cent. manners would find a great deal of material in his sermons. In Liddon's *Life*, i. 51, there is a charming account of Lady Emily Herbert, who was married to his brother Philip in 1822, and of her relations with Pusey, which helps to put this side of his life into true perspective.

2. His part in the Oxford Movement.—In the Church revival which began in 1833 the acknowledged leaders were Pusey, Keble, and Newman, and Pusey's special part in the work may best be understood by comparing his mind and temperament with those of his two friends. Imagine, then, a young man, interested in religion, but inclined to scepticism, coming into contact with the three leaders of the Movement in its early days, and starting some controversial subject, such as the difficulty of believing that there can be only one true Church. Keble, we can imagine, jealous for the truth of God, and looking at the matter from a high mystical plane, would make some shrewd and unanswerable remark in very simple language, which would silence and perhaps somewhat abash the questioner, even if it did not altogether convince him. Newman would instantly throw his mind sympathetically into the problem, and work it out speculatively, as if trying to arrive at the truth about it for himself. Pusey, on the other hand, would concentrate his attention on the questioner, would study his character, and begin to try to convince him of the truth. He had, that is to say, pre-eminently the mind of a pastor, and had no taste or capacity for speculation. Thus in a religious movement his would not be the mind to originate the ideas, or even to give them striking expression. His work would be to translate them into action and to press them upon men's attention. Pusey's eminence lies in his immense strength of character and of conviction. To this he added very great learning, and the power of bringing it to bear upon the matter in hand in that cumulative and somewhat uncritical manner which was more controversially effective in those days than it would be in ours.

'Pusey,' said R. W. Church, commenting on the significance of his adhesion to the original Tract writers, 'knew the meaning of real learning. In controversy it was his sledge-hammer and battle-mace, and he had the strong and sinewy hand to use it with effect' (quoted in Liddon, i. 358).

The most striking contemporary appreciation of his personality and influence is in an essay by J. B. Mozley about the sermon which he preached on 'The entire Absolution of the Penitent,' at the close of his two years' suspension (1st Feb. 1846).¹

The religious principles and ideas which it was Pusey's work to press home in this way into the unresponsive soil of Victorian England were not anything which he had acquired as the result of a sudden conversion; nor had they been adopted in any way as a working hypothesis to be tested by their success; they were part and parcel of his whole self, acquired by tradition in childhood, and confirmed by all the experiences and studies of early manhood. He never had any temptation to doubt, and was always in the mental position of a teacher. If the truth which he thus held so con-

¹ Liddon, iii. 59, and J. B. Mozley, *Essays, Historical and Theological*, i., London, 1884.

fidently were attacked, his nature would rise up to defend it with all the ardour of a crusader, and he would be ready to face all reverses and difficulties with the uncompromising courage of an early Christian martyr. Church's judgment about him was that he was 'a man after all to rank with religious leaders of high mark in all ages.'¹ His temperament was thus essentially that of the ecclesiastic, and he was mercilessly severe to anything that seemed to him like a dilettante attitude towards religion, but genuine unbelief he was quite able to understand and to meet sympathetically. While still an undergraduate, he had tried unsuccessfully to win an old school friend from atheism, and this experience left a deep and very important mark upon him (Liddon, i. 46). It is true, indeed, of all the early Tractarians that they felt themselves to be striving not for the triumph of one particular form of Christianity, but for the maintenance of genuine religion as a whole. In this they were far in advance of their time, and it is one reason perhaps for the strong prejudice which they had to overcome. Soldiers are not popular in countries which think themselves secure (cf. the striking speech made by Lord Salisbury after Pusey's death [Liddon, iv. 391 f.]). This may have been also in part a cause of that simplicity in Pusey's outlook which made him, as a Roman Catholic writer says, unable ever 'to calculate the effect of his arguments on any who differed from him.'² With this directness and intensity of character he combined an equally strong capacity for affection. The controversies and work of the Tractarians must never be thought of apart from that *ἐκέρυξ ἀγάπης* (1 P 4³) which bound them to each other, and the refined family life which was the permanent background of all their activities. The movement had indeed its centre in a university, but there was none of that easy tolerance or that cold-blooded aloofness from the real world in its leaders which make religious people rightly suspicious of the word 'academic.'

3. **Theological position.**—The foregoing considerations are necessary for a right understanding of Pusey's theology. The Tractarians were practical religious reformers, and the moral struggle against unbelief was always before them. They were never sitting, as it were, calmly in the study, as historians or critics or compilers of dogmatic systems. They were not, like the Scholastics, the products of a settled ecclesiastical world, nor, like the modern Biblical scholar, did they stand aside from the problems of practical religious endeavour. Their theological work was all called out by the needs of a religious revival and by the combat with teachers whom they felt to be hindering it.

Pusey's lasting contribution to the religious thought of his time is the conception of Christianity as being necessarily a single whole. This was the natural result of the apologetic preoccupation noticed above. God is one, and Jesus Christ is one, and the Word of God through Jesus Christ is one. So also must be the life of the Church and the faith of the Church. These are almost commonplace assumptions with Christians nowadays, but they are to a very great extent the legacy of the Tractarians and the result of the conflict of the Tractarians with the leading tendencies of their time. A recent Broad Church writer, V. F. Storr, charges Pusey and the other Tractarian leaders with having had a narrow outlook on their time, with being out of sympathy with its aims, and lacking insight into its fresh problems.

¹ For them, theology was not the science of the living God who was fulfilling Himself in many ways, but rather the formal study of the defined beliefs of the Christian Church at a certain

period of its existence: a period which they assumed was to be the norm and pattern for all time. The object of their endeavour was, confessedly, not to construct a new theology, but to recover an old one' (*The Development of English Theology in the Nineteenth Century, 1800-1860*, London, 1913, p. 257).

To write like this is to be blind to the whole moral aim and achievement of the Oxford Movement on its theological side. It is like blaming pioneers among brushwood for not raising crops as quickly as their neighbours on the prairie. Pusey and his friends found the ground occupied by the two formidable obstacles of Bible-worship and rationalism, and they had not only to expose their logical weaknesses, but also to overcome the obstinate self-satisfaction with which they were rooted in men's minds. Pusey's careful study of the way in which Christian thought in Germany was being dissolved by rationalism made him keen to observe its symptoms elsewhere, and in his first big work, the tract on baptism,¹ he pointed out in masterly fashion that the evangelical appeal to the Bible suffered from precisely the same logical inconsistencies.

By rationalism he meant, says his biographer, 'that attitude of mind which allows Reason to limit the possibilities of Revelation, instead of confining itself to its legitimate work of testing its evidence and understanding its moral weight' (Liddon, iv. 4).

And in his first public controversy, in 1836—the protest against the appointment of R. D. Hampden as regius professor of divinity—Pusey defined the principle of rationalism, against which they were fighting, thus:

'The assumption that uncontrolled human reason in its present degraded form is the primary interpreter of God's Word, without any regard to those rules or principles of interpretation which have guided the judgments of Christ's Holy Catholic Church in all ages of its history and under every variety of its warfare' (*ib.* i. 378).

That the evangelicals were logically not different from the rationalists he showed from their rejection of the plain sacramental teaching of Holy Scripture on the subject of baptism (*ib.* i. ch. xv.) because it does not fit in with their preconceived notions of 'spiritual' or 'gospel' truth.

'A great deal of the Bible,' he declared, 'is thus nowadays read with what, if men examined it, they would find to be the very spirit of unbelief' (*Scriptural Views of Holy Baptism*, p. 150).

He argued that the evangelicals, in that they rejected the sacramental view of baptism, while accepting the doctrine of the Incarnation, 'although the one doctrine is declared in Holy Scripture as explicitly, as incidentally and as variously' as the other, were applying a rationalistic 'solvent' to the totality of Bible truth. This eclectic method of dealing with the Bible was justified in evangelical circles on the ground that they were fixing their attention upon the 'kernel' of the gospel. Pusey meets this contention in a finely indignant passage, which might be quoted as a motto for the whole Tractarian teaching:

'I would by the way,' he says, 'protest against such illustrations, whereby men, too commonly, embolden themselves to call any portion of God's institution for our salvation "husk" or "shell" or the like; let it seem to us never so external, it can in no stage of the Christian course be dispensed with, which these similitudes would imply. Rather if we use any image, we might better speak of the whole Gospel as an elixir of immortality, whereof some ingredients may be more powerful than the rest, but the efficacy of the whole depends upon the attemperament of the several portions; and we, who formed neither our own souls, nor this cure for them, dare not speak slightly of the necessity of any portion' (*ib.* p. 5, quoted from *Tracts for the Times*, London, 1842, vol. ii. pt. ii.).

4. **The appeal to antiquity.**—Pusey's primary contention, in other words, was that Christian truth must be treated as a whole, and that it must be approached, like any other subject-matter, with a scientific submission to fact and in a historical spirit, instead of with arbitrary assumptions. However much men may differ from him as to the application of these principles, they should at any

¹ *Scriptural Views of Holy Baptism*, Oxford, 1835 (containing nos. 67, 68, and 69 of the *Tracts for the Times*).

² W. Barry, 'Pusey and Puseyism,' in *CE* xii. 583.

rate give him credit for having in this way cleared the ground for the intelligent modern study of theology.

Every one in that day looked on the Bible as the source of religious truth, and for the most part he did not need to go behind that. Pusey's contention merely was that the Bible must be studied in its proper historical context of the early undivided Church. If it were objected to him by Evangelicals that by this deference to the Fathers he was thereby setting up an authority other than that of Holy Scripture, he would answer:

'The contrast in point of authority is not between Holy Scripture and the Fathers, but between the Fathers and us; not between the book interpreted and the interpreters, but between one class of interpreters and another; between ancient Catholic truth and modern private opinions; not between the Word of God and the word of man, but between varying modes of understanding the Word of God' (Liddon, i. 413).

This appeal to antiquity was not with Pusey, it should be noticed, something that could be applied in a mechanical way. It was an appeal to the whole mind of an age 'which had deeper and truer thoughts, an altogether deeper way of viewing things than moderns' (*ib.* i. 410), and the early Christian writers are of permanent value not as supplying an infallible authority in matters of either faith or practice, but as being a great reservoir of true Christianity, in which those who would understand Holy Scripture for themselves should first be steeped. This standard is, of course, very difficult to apply to individual questions at any particular moment, and is perhaps difficult to defend in the face of a hard unsympathetic logic, whether from Roman Catholics or from sceptics, but Pusey believed that it represents a truly spiritual and theologically satisfactory conception of the authority of the Church, within which all that is true both in Romanism and in Protestantism is seen to be embraced. The effect of this line of thought upon an able young man who had been brought up as a Methodist may be seen in Gregory's autobiography,¹ and a clear sketch of the practical conclusions to which it led is given in a letter of Pusey's in 1840 answering the question, 'What is Puseyism?' (Liddon, ii. 140). For an account of the 'Library of the Fathers,' edited by Pusey and his friends, in order to make the chief Patristic writings available for English readers, see *ib.* i. ch. xviii.

5. Attitude towards science and criticism.—Within the limits of space available in a work like the present it has seemed better to draw out these broader aspects of Pusey's teaching than to go into the detailed controversies which accompanied the application of his principles to the life of the Church of England. A list of the main controversies is given for reference below.

The Oxford Movement proper was previous to the theological difficulties connected with evolution and other scientific hypotheses, and Pusey was the only one of its leaders who lived on into that new period. He describes the change that had taken place in thought in an interesting letter to his old pupil J. B. Mozley when he returned to Oxford in 1871 as regius professor of divinity (*ib.* iv. 221). Pusey was always a good friend to the teaching of natural science when he felt it was not being used to undermine religion, and he was much more alive to its importance than many of the 'liberal' theologians of his time. In 1855 the final vote of £30,000 for the construction of the museum at Oxford would have been lost if he and his friends had not supported it (*ib.* iv. 332). One of his last sermons bore the characteristically cumbersome title *Un-science, not Science, adverse to Faith* (London, 1878), and is described by his bio-

grapher with good reason 'as a permanent and most valuable contribution to the right understanding of the relations between Religion and Science' (Liddon, iv. 335; cf. p. 80). In regard to the science of Biblical criticism Pusey, it is well known, withdrew his first book, *The Theology of Germany*, from circulation (*ib.* i. 175) and never relaxed from an attitude of inflexible conservatism. It should be noted, however, that this was due not to any obscurantist aversion to free inquiry, but, like everything else in his life, to his preoccupation with practical religion and to his convictions about the truth and unity of the Christian Revelation. The new views, he felt, were in large measure the products of an intellectual atmosphere in which the truth of the Incarnation was ignored or denied, and the writers tended to be 'totally insensible to the religious import' of the literature with which they were dealing (*ib.* i. 73, iv. 65, 74). His 'Fabian tactics' in regard to their work have probably contributed much more than would often be acknowledged towards the creation of the far more satisfactory atmosphere in which English theologians are able to to-day.

6. Practical interest in church work.—Pusey's work has left a considerable mark upon the institutions and methods of the Anglican Church, no less than upon her theology. Of these the revival of the 'religious life' is the most remarkable. His desire for sisterhoods sprang perhaps originally from his sense of the spiritual needs of the great cities and of the lack of outlet for the religious energies of unmarried women rather than from any deliberate intention to re-establish monasticism, but his Patristic studies (Liddon, iii. 2) had made him feel that the life of virgin self-consecration was an essential feature of the Catholic tradition, and so the two motives were closely combined. He had made it a subject of prayer for some years, and this seemed to find its first answer in the strong desire of his eldest daughter Lucy, who died in 1844 at the age of 15, to devote herself to a single life and to work for the poor. He wrote from her deathbed to Newman:

'I ventured to give her in charge to pray for us all in the presence of her Redeemer, and, if it might be, for those institutions to which she had herself hoped to belong' (*ib.* ii. 386).

Marian Hughes, who died in 1913 as mother of the Convent of the Holy Trinity in Oxford, dedicated herself to the 'religious life' as early as 1841 (*ib.* iii. 10), and the first community for women was founded on 26th March 1845. Its superior, Miss Langston, was later one of the nurses taken by Florence Nightingale to the Crimea (Maria Trench, *Story of Dr. Pusey's Life*, London, 1900, p. 279). R. M. Benson, the founder of the first revived community for men in 1866, was also one of Pusey's intimate friends (*Letters of Richard Meux Benson*, Oxford, 1916, pp. 6, 206, 328).¹

Pusey's overwhelming sense of the failure of the Church to minister to the great cities showed itself also in relation to the ordinary parochial system. At the time when he was composing the tract on baptism in 1835 he wrote an article on the need for new churches in London which gave the stimulus to Bishop Blomfield's Metropolitan Churches Fund.² He and his wife gave up their carriage, and started to live much more simply in order that he might subscribe to the fund. In 1845 he founded anonymously the Church of St. Saviour's, Leeds, which was consecrated in the same month as Newman seceded, and the course of nineteen sermons which were preached during the octave of the consecration was the first of those 'parochial

missions' which have now become an ordinary feature of English church work.¹ In connexion with this absorbing interest in the spiritual welfare of the great cities may be mentioned the personal help that Pusey gave in Bethnal Green during the outbreak of cholera in 1866.²

The personal reminiscences recorded by those with whom he worked there give a pleasant and vivid impression of his personality.

'I served on the Committee of the hospital with Dr. Pusey,' wrote a clergyman, 'and very often I met him at the bedside of the patients—simple, tender-hearted, and full of sympathy. If the word "sweet" had not become somewhat canting—I should say there was something inexpressibly sweet in the smile and quiet laughter which so brightened his face when he was pleased and hopeful' (Liddon, iv. 143). This smile of Pusey's, it may be noted, was appreciated also by one who was far from being his admirer in other ways. 'Jenny Lind,' wrote Dean Stanley in 1848, 'has been in Oxford for three days. When animated she is perfectly lovely, and her smile is, with the exception of Dr. Pusey's, the most heavenly I ever beheld' (Letters of J. B. Mozley, London, 1885, p. 196; cf. also Liddon, iii. 108).

Pusey's influence upon individuals was very great. From 1838 onwards he heard confessions from persons in every rank of life (Russell, p. 78), and, though strongly opposed to any idea of making private confession compulsory, he used frequently to urge its practical necessity in the case of certain sins.³ His adaptations of Roman Catholic books of devotion, such as Scupoli's *Spiritual Combat*,⁴ though much criticized at the time,⁵ have greatly enriched the spiritual life of Anglicans, and helped to break down a great deal of the prejudice which is due to ignorance against the Roman Church. In 1856 he held a devotional conference of clergy for a week in his house, and was one of the pioneers in beginning systematic 'retreats' (q.v.).⁶ In this connexion also should be mentioned his commentary on *The Minor Prophets* (Oxford, 1877), and his little volume of *Private Prayers* (London, 1883), which shows the simplicity and fervour of his own devotional life. No undertaking for which he was responsible was nearer to his heart than the 'Companions of the Love of Jesus, engaged in Perpetual Intercession for the Conversion of Sinners,'⁷ and the volume of *Eleven Addresses* (Oxford, 1868) given in a retreat for this gild would suggest why a place has been sometimes claimed for him among the English saints.⁷

7. Pusey's principal controversies.—

- 1841-46. Jerusalem bishopric—the relation of the Church of England to Lutheranism.
- 1843. . His sermon on the Eucharist condemned.
- 1845. . Letter to the *English Churchman* on Newman's secession.
- 1846. . The condemned doctrine of the Eucharist reasserted and not challenged—'the power of the keys.'
- 1847. . The Gorham judgment—the doctrine of baptism.
- 1854. . The Denison case—the doctrine of the Holy Eucharist.
- 1860. . *Essays and Reviews*.
- 1865-70. Reunion with the Roman Church.
- 1870. . Use of the Athanasian Creed.
- 1871. . The Purchas case—ritual questions (see also Liddon, iv. ch. viii.). For Pusey's attitude towards changes in religious ceremonial cf. also *ib.* ii. 142, iv. 210, 369.

PYRRHONISM.—See SCEPTICS.

PYTHAGORAS AND PYTHAGOREANISM.—1. *Pythagoras*.—Pythagoras was regarded as more than human by the members of the society which he founded, and all differences between them were supposed to be settled by the formula *αὐτὸς ἔφα, ipse dixit*. On the other hand, he had left no written statement of his doctrine, and little more than a century after his death the most divergent accounts of it were already current. We find some Pythagoreans denying that the practice of abstinence formed any part at all of the master's teaching, while others gave it the first place. This divergence seems to have arisen from the ambiguous character of the society, which was from the first at once a religious order and a scientific school. We shall see grounds for thinking that the two things were one in the mind of Pythagoras himself, but the scientific side of his doctrine inevitably attracted some, while others clung to his religious beliefs and practices. By the 4th cent. B.C. the divergence had become so great that it is hard to find anything in common between the two sects except their reverence for the name of Pythagoras. As is natural, we have no direct testimony from the Pythagorists of the strict observance, though the denials of the more enlightened members of the society would sufficiently prove their existence. Fortunately, however, they were a favourite subject of ridicule with the 4th cent. comic poets, and we still have a considerable number of fragments in which they are made fun of for their squalid and penurious ways. It is perfectly plain that they did, as a matter of fact, abstain not only from meat but from fish, and that they wore a peculiar costume and went barefooted. They also looked for a privileged position in the next world, and regarded their present life as a sojourn in a strange land (*ἀροδῆνυλα*). For the rest, they are said to have been lousy and dirty, which is the impression that ascetics are apt to make on men of the world.

This is a matter of such importance for the history of Greek religion that it may be well to give translations of a few fragments. The originals will be most readily found in A. W. Pickard-Cambridge, *Select Fragments of the Greek Comic Poets* (Oxford, 1900), to which references are added. Aristophon, in his *Pythagorists*, says: 'In heaven's name, do you think the men of former days that turned Pythagorists were so squalid because they liked it, or that they enjoyed wearing coarse cloaks? Not a bit of it, in my opinion. It was from necessity, seeing they hadn't a thing, that they invented a fine pretext for economy, and established canons useful to the poor. Why, serve up to them fish or meat, and if they don't eat it up toes and all, I'm ready to be hanged ten times' (Pickard-Cambridge, p. 60). And again: 'He said he had descended to the dwelling-place of those below and had beheld each class of them, and that the Pythagorists had a great advantage over all the dead. He said that Pluto would eat with them alone because of their piety'—'The god is not particular, then, if he likes to keep company with such dirty fellows! . . . And they eat vegetables and wash them down with water, and none of our young men would put up with their lice and their old cloaks and their avoidance of baths' (*ib.* p. 70). In the *Tarentines* of Alexis, the following dialogue occurred: 'The Pythagorists, as we are told, neither eat fish nor anything else with life in it (*ἐμψυχον*), and they alone drink no wine.'—'Epicharides eats dogs, though, and he is one of the Pythagoreans.'—'Yes, but he kills them first; for then they no longer have life in them.'—'They live on Pythagorisms and subtle words and chiselled thoughts (*δοκίμας*), and their daily fare is this. A fresh loaf for each and a cup of water, that's all.'—'Why, that is prison fare!' (*ib.* p. 86). Other extracts will be found in Diels, *Vorsokratiker*^s, Berlin, 1912, i. 373. It will be observed that the comic poets of the 4th cent. speak of the Pythagorists very much as Aristophanes speaks of Socrates. The reference of Aristophon to the Descent into Hades (*κατάβασις εἰς Ἅιδου*) is of special importance for the reconstruction of the system. The passage about the *ἀροδῆνυλα* will be referred to later in another connexion.

On the other side, we have the statements of Aristoxenus of Tarentum, who had been personally acquainted with the leading Pythagoreans of the beginning of the 4th cent. B.C., and who had been

a disciple of the Pythagorean Xenophilus before he joined the school of Aristotle. He affirmed that Pythagoras only enjoined abstinence from the flesh of the ploughing ox and the ram; and, with respect to the mysterious tabu on beans, he said that, as a matter of fact, they were the favourite vegetable of Pythagoras, who valued their laxative properties. He also said that Pythagoras had a weakness for the flesh of young porkers and tender kids. In a similar spirit, though without the characteristic exaggeration of Aristoxenus, Dicaearchus of Messene, another disciple of Aristotle, who maintained even against his master the superiority of the active to the contemplative life, endeavoured to represent Pythagoras as a legislator and statesman.¹ No doubt it is this divergence that accounts for the almost total silence of our earliest authorities about Pythagoras himself. Plato was very deeply interested in Pythagorean doctrine, and it is a very remarkable fact that the name of Pythagoras occurs once only in his writings,² and all that we are told in that passage is that he won his followers' affection in an unusual degree (*διαφερόντως ἡγαπήθη*) by teaching them a 'way of life.'

'Even at the present day,' adds Socrates, 'their successors are conspicuous by their manner of life, to which they give the name of Pythagorean.'

So far as it goes, this is evidence that, at the supposed date of the conversation reported in the *Republic*, some time before the close of the 5th cent., the 'Pythagorean life' was known at Athens and regarded as an original part of the system. Even the scientific Pythagoreans are mentioned only once in Plato by that name, in the passage where Socrates is made to say that the Pythagoreans (*Πυθαγόρειοι*) regard music and astronomy as sister sciences.³ On the other hand, Plato has a great deal to say about the views of people whom we know from other sources to have been Pythagoreans; the strange thing is that, for all Plato tells us, we should only have been able to guess this even of such leading men as Philolaus and Echecrates. Generally he introduces Pythagorean philosophical views anonymously as those of 'ingenious persons' (*κομφοί τινες*), or the like, and he does not even say that Timæus the Locrian, into whose mouth he has placed an unmistakably Pythagorean cosmology, was a member of the society. We are left to infer it from the fact that he comes from Italy. This reticence must surely be deliberate, and Aristotle imitates his master's caution. The name of Pythagoras occurs only twice in the genuine Aristotelian writings that have come down to us. In one passage⁴ we are told that Alcmaeon was a young man in the old age of Pythagoras, which is a useful piece of information; the other⁵ is a mere quotation from Alcidas to the effect that 'the men of Italy honoured Pythagoras.' When Aristotle has to discuss definite Pythagorean theories, he uses studiously vague phrases like 'the men of Italy who are called Pythagoreans.' By great good fortune, however, he also wrote a special treatise on the Pythagoreans, which is lost, but is quoted by later writers. These quotations are invaluable; for they are evidence that the miraculous legend of Pythagoras was not, as might have been supposed, the invention of a far later age, but was known at Athens in the 4th century. It may be assumed that Aristotle heard it from some of the Pythagorists of whom the contemporary comic poets made fun. Pythagoreanism was not at all congenial to him, and he probably wished to represent Pythagoras as a charlatan.

The intention of Aristotle seems to be shown by his statement that Pythagoras busied himself with the theory of numbers, but that 'he did not break with the miracle-mongering of Pherecydes' (*τῆς Φερεκύδου θαυμασιότητος οὐκ ἀπέστη*).¹ At a later date Apollonius of Tyana (q.v.) and Iamblichus were delighted to be able to quote Aristotle's authority for the miracles of Pythagoras, and in this way that philosopher unwittingly became one of the founders of Neo-Pythagoreanism—a thing which was enough to make him turn in his grave.

The earliest reference to Pythagoras is a practically contemporary one. Xenophanes, like Pythagoras himself, was one of the Ionian *émigrés* who found a home in the West 'when the Mede appeared'; and some verses from an elegy of his are quoted by Diogenes Laertius,² in which we are told of Pythagoras that he once heard a dog howling and appealed to its master not to beat it as he recognized the voice of a departed friend. It is true that Pythagoras is not named in the verses themselves, but Diogenes, or rather the writer from whom he is excerpting, is more than usually precise in his method of citation; for he says that they occurred in the elegy of which the first line is a verse which he quotes. It is clear, then, that he had the whole elegy before him, and he can hardly have been mistaken when he said it referred to Pythagoras. If that is so, we have contemporary evidence of the fact that Pythagoras taught the doctrine of transmigration or rebirth (*παλιγγενεσία*). The verses are satirical, as we should expect from Xenophanes, and the next reference to Pythagoras is hostile too. Heraclitus said of Pythagoras³ that he had carried scientific inquiry (*ἰστορίη*) farther than any one, that he claimed its results as a wisdom of his own, and turned them into an art of mischief (*κακοτεχνίη*). Later still, though within a century of the time of Pythagoras, Herodotus⁴ speaks of him as 'not the weakest sophist (i.e. scientific man) of the Hellenes,' and says he had been told by the Greeks of the Hellespont that the legendary Scythian Salmoxis had been a slave of Pythagoras, son of Mnesarchus, at Samos, and had learnt from him the strange doctrine of immortality. Herodotus does not believe this, for he is of opinion that Salmoxis lived many years before Pythagoras; but the story is evidence that Pythagoras was well known in the 5th cent. both as a man of science and as a preacher of immortality, and that is what we want to know.

The Life of Pythagoras by Diogenes Laertius is a farrago of Alexandrian erudition and speculation, while those by Porphyry and Iamblichus are subsequent to the romantic reconstruction of the story by Apollonius of Tyana. They all contain, however, a good deal of material derived from Aristoxenus and Dicaearchus, which may embody genuine tradition in such statements as have no connexion with the particular views regarding Pythagoras which they were anxious to propagate. The historical setting came mainly from Timæus of Tauromenium in Sicily, who was anything but a trustworthy historian, but who had special means of access to original sources for the history of the West. The facts that we can really be said to know may be very briefly stated. Pythagoras, son of Mnesarchus, was a Samian, and the period of his activity fell in the second half of the 6th century B.C. According to Aristoxenus, he emigrated from Samos because he would not submit to the tyranny of Polycrates, which seems probable enough, though we do not require any special explanation for the emigration of Ionians to the west at this date. He found a new home at Croton, a powerful Achaian colony in the Gulf of Tarentum, famous for its healthy climate and the number of Olympic victors it produced. Here he established his society, which was at once a religi-

ous order and a school of science. It soon acquired a dominant position in Croton and the other Achaian states of these parts, and this naturally called forth a strong opposition, which was led by Cylon, a wealthy noble. It seems certain that Ephorus and Timæus connected the outbreak of opposition to Pythagoras with the war between Croton and Sybaris, which ended with the destruction of the latter in 510 B.C. In any case, Timæus said that Pythagoras lived at Croton for twenty years, and then emigrated to Metapontum, where he died. He also said that the Metapontines consecrated his house as a temple; and Cicero tells us¹ that, when he visited Metapontum, he refused to go to the house where he was to stay till he had seen the place where Pythagoras died. The opposition of the partisans of Cylon to the Pythagorists was carried on after their founder's death, and ended in a regular massacre, from which very few of them escaped. Polybius tells us² that the days when they set fire to the lodges (*συνέδρια*) of the Pythagoreans were followed by a period of disturbance in Magna Græcia, 'as was natural, seeing that the leading men of every state had so unexpectedly perished,' and the Greek cities of S. Italy were filled with bloodshed, civil war, and confusion of every kind, till at last they got the assistance of the Achæians in the Peloponnese, whose colonists they were, in restoring tranquillity. No date is given anywhere for this persecution, but Aristoxenus said that only two of the Pythagoreans in Croton escaped, Lysis and Archippus—for whom Plutarch³ substitutes Lysis and Philolaus. We know that Lysis was the teacher of Epaminondas at Thebes, and, as Epaminondas cannot have been born much before 420 B.C., Lysis must have been still living in 400 B.C. We must assume, then, that the great persecution took place somewhere about the middle of the 5th century. On the other hand, it must have been before the establishment of a Panhellenic colony by Pericles near the deserted site of Sybaris (444 B.C.), or we should have heard of these troubles in that connexion. It is evident from Plutarch that the Pythagoreans played a very important part at Thebes, and that it was now one of the chief seats of the society. We know from Plato's *Phædo*⁴ that Philolaus was resident there some time during the last twenty years of the 5th cent., and also⁵ that Echecrates and others, whom we know from Aristoxenus to have been Pythagoreans, were settled at Phlius near Sicyon. Some time before the death of Socrates, however, it must have become safe for the Pythagoreans to show themselves in S. Italy again, for we gather that Philolaus had already left Thebes by that time, and we know that he settled at Tarentum, henceforth the chief seat of the society, where it is represented in the next generation by the distinguished mathematician, statesman, and general, Archytas, the friend of Plato. The Pythagoreans of Tarentum were the centre of the opposition to Dionysius I. of Syracuse, and it was at their request that Plato undertook the education of his successor, Dionysius II. The story of Damon and Phintias, which Aristoxenus said he was told by Dionysius himself when in exile, belongs to this period.

The uncertainty of the chronology is a great difficulty. The dates usually given for Pythagoras himself were obtained by the usual process of synchronizing his fortieth year (his ἀκμὴ or *floruit*) with the most important event of his middle life. This was taken to be his emigration to Italy; and, on the basis of the statement of Aristoxenus referred to above, that was dated by the era of Polycrates (532 B.C.). It is also clear that some estimates were based on the dates of the previous incarnations

of Pythagoras as Aithalides and Euphorbus.¹ If we could be quite sure that Timæus and Ephorus were right in connecting Pythagoras with the war between Sybaris and Croton (511 B.C.), that would be a fixed point, though we cannot tell how old he may have been at the time. The residence of the leading Pythagoreans at Thebes towards the end of the 5th cent. is also a fact, and it is not going too far to suggest that the brilliant career of Epaminondas and the brief supremacy of Thebes in Greece may be traced to their inspiration. At any rate Aristotle² quotes from Alcidas the remark that, as soon as the 'philosophers' became the leaders of the Thebans, the city prospered. Plutarch, who knew his Boeotian history and who made use of Boeotian writers, in his dialogue *de Genio Socratis* describes the conversation that took place among the conspirators on the winter night of 379 B.C., when Pelopidas freed Thebes by seizing the Cadmea. He tells us that the conspirators had met in the house of Simmias, the Pythagorean disciple of Socrates whom we know from the *Phædo*, and that, while they were talking, Epaminondas, who disapproved of their project, introduced a Pythagorean from Italy, Theon of Croton, who had come to pour libations on the tomb of Lysis, whose spirit had appeared to the brethren and told them of his death. He relates how, after the massacre at Metapontum, from which only Lysis and Philolaus escaped, it was unknown where Lysis was, till Gorgias of Leontini reported having met him at Thebes. The Pythagoreans in Italy wished to send for Lysis or to recover his remains if he were dead, but were prevented by the civil wars and tyrannies prevailing at the time. Theon did not, however, intend to disturb his body now; for he had heard a voice while he watched by the tomb bidding him leave it where it was, and he saw that Epaminondas had given Lysis a proper Pythagorean burial down to the most secret details. No doubt this may be a romance, but it implies a very definite historical background in the mind of Plutarch, and he knew what he was talking about.

Pythagoras was an Ionian, and it is absurd to make him the champion of the 'Dorian aristocratic ideal,' as most German writers since A. Boeckh and O. Müller have done. To begin with, what they mean by the 'Dorian ideal' is really a fancy picture of the Spartan and Cretan ideal invented by Athenian conservatives of the 5th cent. and popularized by Athenian philosophers. Corinth and Syracuse were as purely Dorian as Sparta, and probably more so, and they will not fit into this picture. The source of the impression that there is something Dorian about Pythagorism is simply that the few fragments of genuine Pythagorean writing that survive belong to the generation when the Dorian Tarentum was the chief seat of the school, and were naturally composed, not indeed in the local dialect of that city, but in the 'common Doric' which was the literary language of Sicily and S. Italy at the time. The very numerous forgeries of Pythagorean writings naturally followed this model, and so there has come to be a sort of Doric veneer on the surface of Pythagorism. But Croton, Metapontum, and the other original seats of the society were not Dorian, but Achæian, and there was no love lost between Dorians and Achæians, especially in Italy. Herodotus tells us³ that the Sybarites accused the Crotoniates of getting the better of them by Dorian help—a suggestion which the Crotoniates repudiated with indignation. Besides, if a Crotoniate at this date had anything important to say, he would have written in Ionic (as Alcæon of Croton, who was a young man in the old age of Pythagoras, appears to have done); for Ionic was the recognized dialect for serious works, and even the Dorians used it. The literary use of Doric, except for farces and satires, dates only from the reaction against Athens caused by the Peloponnesian War. Grote protested long ago against the annexation of Croton to the Dorians by Boeckh, and his protest has at last been listened to in Germany by Eduard Meyer.⁴

Nor is there any evidence that the Pythagorists espoused the cause of the aristocracy. They were a religious association, and we are told a good deal about the severe tests applied by Pythagoras to aspirants to the novitiate, but there is no hint that birth or wealth was essential. The character-

istic of such associations in Greece and elsewhere is just that any one is admitted to membership who is able and willing to fulfil their requirements, whatever his condition may be. The prominent part played in the society by women from the very first depends on this. It is probably true that Pythagoras dissuaded the Crotoniates from giving up the refugees from Sybaris, but that was surely because they were suppliants, and not because they were aristocrats, if indeed they were, of which there is no evidence. Aristoxenus said expressly that Cylon, the leader of the opposition to Pythagoras, was a man distinguished by birth, position, and wealth, not a popular leader, as modern writers assert. Moreover, when the Pythagoreans did return to Italy, they settled at Tarentum, which was an extremely democratic state, and it is hard to see anything else that could have recommended a Dorian city to them. It is true that Archytas was at the head of the Tarentine government for years, but he owed his position to popular election. Lastly, though Empedocles (*q.v.*) may not have been a member of the Pythagorean society, he was certainly an enthusiastic admirer of Pythagoras, and seems to have taken him as his model; and Empedocles was the leader of the democratic party in another Dorian state, Agrigentum.

It is no doubt possible that there is some truth in the statement of some authorities that the family of Pythagoras was descended from a certain Hippasus, who left Phlius rather than submit to the conquering Dorians. The exiles settled first at Lemnos, from which island they were afterwards expelled by the Athenians, when the family of Pythagoras settled at Samos. Pausanias¹ heard this account of the matter at Phlius itself, and it is noteworthy that Echecrates and other Pythagoreans settled at Phlius in later days, and that the name Hippasus is well known as that of a Pythagorean who revealed the secrets of the society. That makes no difference, however, to the Ionism of Pythagoras; for the exiles from Phlius belonged to the original population who were settled in the Ægean before the Achæians came, and whom we must identify with the Arcadians on the one hand and the Ionians on the other. If the family of Pythagoras preserved the memory of these things, he would be less than ever inclined to sympathize with 'Dorian ideals.' Nor were the Achæians Dorians. It may be that they spoke a very similar dialect, though we have not sufficient remains of it to be sure, but that can be sufficiently accounted for if we suppose that they both adopted the language of the original population before the not very remote date when the Ionians took to saying *Elis* instead of *Valis*, for instance. The retention of the old pronunciation by backward communities is normal. The whole question has been needlessly complicated by the unwarranted assumption that the Arcado-Cypriote dialect is Achæian, whereas it is most closely akin to the dialect of Homer. It has actually been said that Pythagoras changed his name from Pythagoras in order to signify his adhesion to the 'Dorian ideal'.¹ Of course the form is due to the fact that we generally read of him in Attic writers who use the Attic form, and there is no reason to suppose that he ever called himself anything else but *Πυθαγόρας*, as he was still called by Democritus.

2. Pythagorean religion.—In the light of modern anthropology, the Pythagorean religion has become a good deal easier to understand than it was. We can see that, so far as the leading ideas on which it was based are concerned, it might have arisen anywhere; for those ideas are primitive and worldwide. The first of them is that the soul can leave the body temporarily or permanently and take up its abode in another body. The second is the kinship of men and beasts, which makes it possible for the same soul to inhabit the bodies of either. The third is the necessity of observing certain abstinences or tabus. To make a religion out of these ideas, it only requires a great teacher to give them an ethical character which they do not inherently possess, and that is why we find so many resemblances in Pythagorism to systems which can have no historical connexion with it. Some of these had already struck people in the 5th century. Herodotus² notes the agreement of the Pythagorean rule to bury the dead in linen with

the Egyptian practice of excluding wool from temples, and he hints¹ that not only this, but the belief in immortality and transmigration, came from Egypt. The rule about linen is simply, of course, a consequence of the tabu on wool as an animal product, and may arise independently in many places; and Herodotus was wrong in supposing that the Egyptians believed in transmigration. It was probably an impression that he gathered from the semi-animal figures on the monuments. As the geographical horizon became wider, Pythagoras was sent farther and farther afield for his religious instruction—to the Chaldeans and the Druids and other peoples. In modern times his system has been derived from China, and even now there are those who think it came from India. Now there are certainly some striking resemblances between Pythagorism and Buddhism, though the differences are more striking still. That can be explained quite naturally, however, when we remember that the Hindus, like the Greeks, had a bent for philosophy, and that the operation of philosophical speculation on the same basis of primitive belief would naturally yield somewhat similar results. The question of Egyptian influence is on rather a different footing; for it is historically possible, and, if we remember the close connexion between Polycrates of Samos and Amasis of Egypt, it will seem quite likely that Pythagoras visited Egypt. If we could find any real trace of Egyptian influence, we should not hesitate in admitting it. It is strange, however, that Herodotus does not say that Pythagoras had ever been in Egypt, and that the first statement that he had occurs in a work which expressly disclaims any historical character, the *Busiris* of Isocrates, and in a passage obviously based on the somewhat obscure remark of Herodotus. We must remember, too, that what Pythagoras might have learnt in Egypt at that date would have been the confused and artificial theology of the Saïte period, and we can find no trace of that. We shall see that the religion of Pythagoras, like everything else about him, has a definitely Ionian character, and that the doctrine of rebirth or transmigration was known in the Ægean before his time.

The word 'metempsychosis,' by which this doctrine is generally known, has only very late authority, and is based on a confusion of ideas; for it would mean that the same body was inhabited successively by different souls. The correct term would have been *μετενσώμασις*, which is actually used by Plotinus and the Christian apologists. The proper expression is undoubtedly *παρυψησις*, or rebirth.

The first point to notice is the intimate association of Pythagorism with the cult of Apollo at Delos. We know from the Homeric *Hymn* that the Apollonia (*q.v.*) at Delos had become a meeting-place for all Ionians long before the time of Pythagoras, though their official chief deity was the Minyan god Poseidon Helikonios, who presided over the Panionion at Mycale. Now, as L. R. Farnell has rightly insisted, Apollo Lykeios, the wolf-god (who has nothing to do with the sun in classical Greek literature) comes from the north, and his connexion with Lycia, which may have been called after him, is secondary, and due to Achæian colonization in those parts. Everything points to his having been a god of the northerners who took the place of the old Ægean rulers in the 14th century B.C. There is nothing strange in his having been adopted by the Ionians. When great sanctuaries like that at Delos are established, the seats of the gods become fixed, even though the people to whom they originally belonged have disappeared or been absorbed, as the Achæians were by the Ionians of the Ægean. In much the same way, those Achæians who were able to maintain their separate nationality after the Dorian conquest of

¹ II. 13. 1. This explains why Aristoxenus called Pythagoras a 'Tyrrhenian.' In the 4th cent. B.C. the 'Pelasgians' whom Miltiades expelled from Lemnos were called 'Tyrrhenians.'

² II. 81.

¹ II. 123.

the Peloponnese, when they expelled the Ionians from the southern shore of the Corinthian Gulf, took over the worship of Poseidon Helikonios which they found there. The most interesting trace of the northern origin of Apollo is the bringing of the offerings of the Hyperboreans to Delos every year by one or more ancient routes, and Apollo himself was supposed to revisit the Hyperboreans annually. Now Aristotle wrote in his work on the Pythagoreans that the citizens of Croton gave the name of Apollo Hyperboreus to Pythagoras.

For the Hyperboreans and their offerings see Farnell, *CGS* iv. 99 ff. They are found in the legend of Delphi too. The story told to Herodotus at Delos was as follows: 'The holy things wrapped in wheat straw were carried from the Hyperboreans to the Scythians, and were passed on by them from people to people till they reached the Adriatic. Thence they were sent southwards and were received by the men of Dodona, who were the first of the Hellenes to receive them. From Dodona they came down to the Malian Gulf and crossed to Euboea, whence they were passed on from town to town till they reached Carystus, and from Carystus they were conveyed by the Carystians to Tenos, without touching at Andros, and the Tenians handed them on to Delos.'¹ Pausanias² mentions another route by way of Sinope which has puzzled scholars. If it should prove to be the case that the Hittites spoke an Indo-European tongue of the same type as the Italo-Celtic, the meaning of this will be clear enough, and, in view of that, which seems to be more than a possibility, the Achaian character of Apollo becomes important. Now, in discussing another Hyperborean institution, the Olympian crown of wild olive, Pausanias gives us the following information: 'Olen the Lycian, in his Hymn to Achaia, was the first to affirm that there are men who dwell beyond the North Wind; for in that hymn he says that Achaia came to Delos from the Hyperboreans. Afterwards Melanopus of Cyme composed an ode on Opis and Hecaege, in which he said they too had come to the Hyperboreans before Achaia did so.'³ It does not matter for our purpose here whether Olen is a historical person or not; for it is at least clear that these statements were made in Delian hymns. It may be noted further that the Homeric *Hymn* represents Apollo as ruling over many places which were not Ionian at a later date, but which formed part of the Achaian land in the heroic age. This may possibly help to explain the similarities between Pythagorism and Druidism which made such an impression on the Greeks and Romans of a later date. W. Ridgeway⁴ holds (the present writer believes rightly) that the Achaians were Celts, and it seems plain that the Druids (*q.v.*) did teach the doctrine of transmigration.⁵ We do not know how sophisticated these Druids (who used the Greek alphabet) may have been, but there is after all a fairly general agreement that a new view of the soul reached the Greeks from the north (see art. *Soul* [Greek]), and there are certain elements in the Delian legend which seem definitely Celtic, such as the singing swans so beautifully described by Aristophanes.⁶ Now these, as every one knows, occur in Plato's account of the death of Socrates,⁷ where Socrates is made to say he is a fellow-servant of Apollo's

If we follow up the clue suggested by the identification of Pythagoras with Apollo Hyperboreus, we shall find many confirmations of the hypothesis that Delos was the source of his inspiration. In the first place, his very name suggests some family connexion with the worship of Apollo; for the most obvious etymology of it is that it means an envoy to the sister sanctuary at Pytho (cf. the *πυλαγόροι* who were sent to the Amphictyonic Council). We note further that the Hyperboreans are represented as vegetarians, and that the oldest altar of Delos, that of Apollo the Father (*γενέτωρ*), was reserved for fireless oblations of vegetable offerings like the firstfruits of the Hyperboreans. We read in Diogenes Laertius⁸ that Pythagoras worshipped at this altar only, and; though this may not be genuine tradition, it is probable enough that, in his preaching of abstinence from animal flesh (*ἀποχή ἐμψύχων*), he should have appealed to this ancient worship of his people. Moreover, purification (*κάθαρσις*) was one of the leading ideas in Pythagorism, and it certainly was a prominent feature of the cult of Apollo. There are, indeed, reasons for thinking that it was not an original

feature of this cult, but there is no doubt that, by the time of Pythagoras, Apollo was regarded as the cathartic god *par excellence*.

Further, there are indistinct memories of earlier missionaries of Apollo than Pythagoras. Herodotus tells us¹ of Abaris the Hyperborean, a holy man who travelled from country to country with a golden arrow in his hand. He tasted neither food nor drink, and averted plagues and earthquakes by his spells. Pindar said this was in the days of Croesus, only a generation before his own birth. Herodotus also speaks² of Aristaeus of Proconnesus, who, when 'rapt by Phœbus' (*φαιβόλαμπρος γένόμενος*), visited the northern peoples. His soul could leave his body, and he was seen in far distant places. Like Pythagoras, he found his way to the Achaian colony of Metapontum, and told the men of that city that to them alone in Italy had Apollo come. There was a statue of him beside that of Apollo in the market-place there. To the same circle belongs Hermotimus of Clazomenæ, who could leave his body for years at a time, and bring back prophecies of the future, till once his enemies burned his body in the absence of his soul and he was seen no more. It is plain that Pythagoras was not without predecessors, and that he had no need to visit remote regions to learn the view of the soul on which his doctrine was based.

On the cathartic element in the religion of Apollo see *CGS* iv. 295 ff. Purification (*κάθαρσις*) came to be so closely associated with Apollo that Socrates, in Plato's *Cratylus*,³ proposes to derive his name from ἀρκάσιον or ἀρκάσιον, or both.

But we can go further than this; for we can show that Pythagoras had Ionian predecessors in his cosmogony as well as in his doctrine of the soul. There are traces of cosmogonical theory even in Homer,⁴ and it is plain that Hesiod did not invent the cosmogonical figures at the beginning of his *Theogony*; for he introduces Chaos and Eros without a word of explanation, and there is no indication of the parts they played in the creation of the world. As Gomperz⁵ very justly observed, 'Hesiod's system is a mere husk of thought which must once have been filled with life.' Moreover, his doctrine⁶ that the men of the Golden Age have become 'holy spirits' (*δαίμονες ἄγροι*) who watch over mortal men goes far beyond primitive belief, though we can hardly suppose that Hesiod invented that either. Such doctrines are obviously the fruit of what we must call theological speculation, and that raises a great difficulty. It is generally evaded by attributing all such speculations to the Orphics, and there is no doubt that they held cosmogonical doctrines and entertained beliefs about the soul of the very type that we are now considering. On the other hand, there is no evidence that the Orphic communities existed at so early a date as we should have to assume if we are to account for the facts in this way. Moreover, so far as we can see, Orphism was the religion of humble people, and we know of no great Orphic teachers whom we can credit with the origination of such daring speculations. It seems as if Orphism, when it did arise, was rather a parallel phenomenon to Pythagorism than its source. It must be remembered that the Orphic god is Dionysus, not Apollo, and the worship of Dionysus is of much more recent date than that of Apollo. It certainly became tinged with mysticism like that of Apollo, and to some extent that of Demeter at Eleusis, but the problem of the origin of this mysticism remains, and it is not easy to rest content with the view that it is Thracian. The belief in ecstasy may well have been so, but that does not take us very

⁶ *Il.* xiv.

far; for what we have to account for is the existence of cosmogonical speculation and an elaborate doctrine of the soul, which presents many common features in all the religious movements of the time, so far as we know anything about them.

The obvious affinities of *Iliad* xiv. and *Odyssey* xi. with Orphic doctrine have led some scholars to suppose that they are later additions to the Homeric poems, but they would have to be so late that the theory loses all plausibility. The view that Hesiod is the originator of Greek cosmogonical speculation, which we all held in the 19th cent., is shown by a close examination of the *Theogony* to be wrong. Hesiod is certainly repeating those things at secondhand. It is of great significance that Dionysus is not any more important for Hesiod than he is for Homer. It is mentioned in passing that he is the son of Zeus and Semele, but there is no hint that he is an important god. That seems fatal to the view that there are Orphic elements in Hesiod.

Since the close of the 19th cent. it has been possible to look at these things in another light, though it is not easy to adjust our vision to the new perspective. We know now that there was a highly developed civilization in the Aegean dating from the Neolithic Age, and excavations at Menidi and Miletus have shown that it passed by gradual transition into the early Ionic civilization. There is not the slightest ground for regarding the semi-barbarous invaders from the north as the main stock of the Greek people, i.e. the people to whom we owe Greek civilization and everything that makes Greece of value to us to-day. Every day brings fresh confirmation of the view that the Achaeans or Hellenes, or whatever they called themselves, adopted the language and civilization of the conquered Aegean people and were ultimately absorbed by them. Now we can have no difficulty in supposing that the people who created the Aegean civilization were capable of theological speculation. Nor is there any need to suppose that they were dependent on Egypt or Babylon in any way for this. The Aegean civilization is as old as that of Babylon or Egypt, and in many ways superior to either of them. The Achaeans and Hellenes did not bring civilization to the Aegean, but in some ways set it back. What they did bring was apparently the Olympian gods and the war-chariot and the chivalrous ideal as we find it in the poems of Homer. In that way, no doubt, the incursion of the north-ers introduced a new and valuable element into the life of the Aegean, but for most things they were dependent on the higher civilization of the people whom they had conquered. The coming of the Achaeans marks the beginning of the Greek Middle Ages, but there was a long antiquity behind that.

It is most unfortunate that we cannot discuss Pythagoras adequately without constant reference to ethnological problems, but that is forced on us by the treatment of the subject in most recent works. It is necessary at this point to say that it seems impossible, in view of recent discoveries, to maintain the view that the Greek language reached the Aegean from the north. Its affinities are closest with the languages of Iran and India, and not with those of the Italo-Celtic type. This appears clearly from its system of declension and conjugation. The Greek, Sanskrit, and Avestan verbs are inflected on identical principles, and in particular they alone possess the augment, save for some survivals in Armenian—an exception that proves the rule and gives us a hint of the route by which Indo-European speech may have reached the Aegean. It is the fact that the oldest datable traces of Indo-European speech are to be found in Asia Minor, and this is so whether the new view of the Hittites proves to be sound or not. Hittite, if it has been correctly interpreted, is a language of the Italo-Celtic type, and has no special affinities with Greek. The distinction between *centum* and *satem* languages, of which so much has been made, is a futile one, since the sibilization of *k* is a secondary phenomenon which may occur anywhere and at any time. The Romance languages have become *satem* languages in historical times. Now, if these views are sound—and every fresh piece of evidence seems to confirm them—there is no difficulty at all in supposing that an older form of Greek was spoken in the Aegean in the Bronze Age, and that it was adopted from the original population by the Achaeans and Dorians from the north, who must originally have spoken a form of Celtic. Of course they would introduce a number of their own words, notably *decs*, which is inexplicable as a native Greek formation. The continuity of early Aegean and Ionic speculation, which is being assumed in this article, has, there-

fore, nothing startling about it. In this respect, at least, Ridgeway saw how the land lay when there was much less evidence than there is now.

If this view is correct, we can easily understand how there came to be 'theologians,' as Aristotle calls them,¹ in Ionia long before the time of Pythagoras. We still have a priceless fragment of one of the latest of these, Pherecydes of Syros, an island close to Delos (see art. COSMOGONY AND COSMOLOGY [Greek]). It is the oldest piece of Greek prose in existence, and was already known in part from Clement of Alexandria, while the beginning and some of the continuation of it have been recovered from an Egyptian papyrus published by Grenfell and Hunt. This introduces us to speculations which are most easily understood if we suppose them to be old Aegean in character, such as that of the cloak (*phâpos*), embroidered with 'Land and Ogenos and the homes of Ogenos,' which Zas (Zeus) gave to Chthonie (Earth) at their 'holy marriage,' and which was spread over a 'winged oak' (*ὀπίστερος δρύς*). For us the important point is that our earliest authorities, including Aristoxenus, who was not anxious to emphasize the mystical side of Pythagoras, agree in representing him as the disciple of Pherecydes. Aristotle too, as we have seen, spoke of his attachment to the miracle-working (*τεραστουργία*) of Pherecydes. This means at least that Pythagoras was acquainted with a speculative cosmogony, and probably with a doctrine of the soul's immortality rather less primitive in character than any we can attribute to Aristeas or Abaris. At any rate the discovery of an actual fragment of Pherecydes in Egypt makes it much more likely than it seemed before that later ages had some real knowledge of his doctrine, and that Cicero may have had good authority for his statement that he taught the immortality of the soul.

The fragments of Pherecydes will be found in Diels, *Vorsokratiker*², vol. ii. p. 202 ff. The present writer cannot believe that Pherecydes was influenced by Anaximander, as Diels supposes. The 'winged oak' points to Arcadia or Dodona rather than Miletus. Nor can it have any connexion with Babylon, where there never were any oaks. The scholiast on Apollonius Rhodius, i. 645, quotes Pherecydes for the statement that Aithalides, the herald of the Argonauts, received from Hermes the boon that his soul should be at one time in Hades and at another on earth, and from Apollonius himself we learn that he had also the gift of remembering his former lives. If we can trust this, it is very important; for Hermes is an Arcadian (and therefore pre-Achaean) god, and the Argonauts are Minyans. Now Aithalides was regarded as a previous incarnation of Pythagoras, Euphorbus being the next. The statement of Cicero³ is that Pherecydes was the first to teach the immortality of the soul, which only means that he was the first extant writer to do so. The immediate source of the statement is probably Posidonius.

There is no reason, then, for supposing that the doctrine of rebirth or transmigration was the original contribution of Pythagoras to religion, and the same may be said of his detailed prescriptions as to the avoidance of certain acts and the observance of certain abstinences. There can, in fact, be no doubt that most of the Pythagorean precepts are tabus of a thoroughly primitive type, and many of them can be matched among savage peoples to-day. Later writers, of course, interpret these *ἀνομασματα*, as they are called, as symbols or allegories of moral truth; but that view will not easily be accepted now, in view of our increased knowledge of such things. It is natural to suppose that, to many of the followers of Pythagoras, these precepts were the most important of his teachings, and that there was a rift between the higher and the lower Pythagorism from the first. That is only human nature, and it seems to be the explanation of much that we are told about the hierarchical organization of the society. It is very significant that one of the names given to the lower grade is *ἀνομαστικοί*, which can hardly mean

¹ Met. A. 6. 1071b 28, the first occurrence of this fateful word.

² Trac. i. 16 (38).

anything else than those who made the precepts, or ἀκούσματα, the principal thing. The distinction between Pythagoreans and Pythagorists has no doubt a similar origin. It is probable that modern scholars are right in holding these distinctions to be of late date, but the difference between those who were capable of assimilating only the external side of the religion and those who could reach its inner meaning must have been present from the first, and, as we have seen, it soon became so accentuated that it split the society in two. The same consideration throws light upon what we are told of the obligation of secrecy imposed on the members of the society. As usually stated, that is clearly an attempt to explain how certain doctrines were apparently unknown to the mass of the members, and so far it is unhistorical. Pythagorean doctrines were apparently quite well known, and influenced outsiders from an early date. At the same time, it is quite credible that novices were bound to silence for a period. That is too common everywhere to excite surprise, and the words which are used to describe this obligation, ἐχευθλία and ἐχερρημοσύνη, suggest this rather than the *disciplina arcani*. Now these words are distinctly Ionic in character, and that is a good reason for believing that they have come down from the early days of the society.

The following may be quoted as specimens of the ἀκούσματα: 'Not to pick up what has fallen,' 'Not to break bread,' 'Not to stir the fire with an (iron) sword,' 'Not to eat from a whole loaf,' 'Not to let swallows share one's roof,' 'Not to look in a mirror beside a light.' There can be no doubt how precepts of this kind are to be classified, and we cannot take seriously the later explanations such as that 'Not to stir the fire with a sword' only means that we should not further provoke an angry man.¹

But all this, however largely it bulked in his teaching, was only a part, and not the most important part, of the contribution of Pythagoras to religion. There must have been something to account for the striking difference between the development of the Orphic and Pythagorean sects. The former seems to have become utterly corrupt in a very few generations; and in a conversation supposed to take place well before the close of the 5th cent. Plato makes Adimantus condemn the Orphic religion as a mere traffic in pardons and indulgences.² We know that there were Pythagorists at Athens in the 4th cent., but nothing of the kind is suggested of them; they are only laughed at for their abstinence and their devotion to the simple life. On the other hand, there were at the same date a number of eminent scientific men, calling themselves Pythagoreans, who paid no respect to these external observances, and even tried to explain them away. Now the one great difference that we can discern between the Orphics and the Pythagoreans is just this—that the Pythagoreans all agreed in tracing everything to the inspiration of a great individual, while we do not hear of any great Orphic teacher at all. Those whose names have come down to us, like Onomacritus, are known chiefly because they were suspected of literary frauds. We may reasonably infer from this that the higher side of Pythagorean religion came from the founder himself.

It is not possible, of course, to prove conclusively what this higher doctrine was, but an examination of our earliest evidence will afford us some positive indications. In the *Phædo*³ Plato makes Socrates express surprise that Cebes and Simmias have not been taught by Philolaus the true reason why it is unlawful for a man to take his own life. The first reason, which he says is a 'high doctrine' and not easy to understand, is that our souls are bound in the prison-house (φρουρά) of the body, and we have no right to try to escape till God gives the signal. There is a further doctrine, which Socrates accepts,

that we are the chattels (κτήματα) of the gods, and they watch over us. There can be no doubt that Plato means us to understand all this to be Pythagorean; for Philolaus was the most distinguished Pythagorean teacher at the time of which he is speaking. We are also told that he did not give any clear account of this doctrine, which was therefore presumably one which he had inherited from his predecessors. Now it will be seen that it has a distinctly ethical tendency, such as we do not find in anything that we know of Orphism. The imprisonment of the soul in the body has a disciplinary character, and the gods or God (the two forms of expression are used quite indiscriminately) have imposed it on us for the good of our souls, so that it is our duty to submit. So much we may fairly infer from this passage, which is really our oldest and best authority.

If we may also regard the famous description of the true philosopher in the *Theætetus*⁴ as inspired by Pythagorean teaching, we may go a step further and attribute to Pythagoras the doctrine that the end of man is to become like God (ὁμοίωσις τῷ θεῷ). We are not able to prove this indeed, but it is so far confirmed by the fact that Aristoxenus makes the 'following of God' (τὸ ἀκολουθεῖν τῷ θεῷ) the keynote of the Pythagorean system as expounded by him; and an unknown writer excerpted by Stobæus⁵ gives 'Follow God' (ἑπὼν θεῷ) as a Pythagorean precept, and calls attention to the agreement of Plato with it. It is obvious that this is on a different level from 'Do not stir the fire with iron' and the rest of the ἀκούσματα, and it appears to furnish a clue to the real meaning of Pythagoras. It gives Pythagorism something more than the mainly negative attitude to life of Buddhism, and distinguishes it from Orphism, which emphasizes 'release' (λύσις) above everything else. To the Orphic the body was the tomb of the soul (σῶμα σῆμα), and what we call life was death; and that is a very different thing from regarding the body as a house of correction. There is, in fact, no evidence that the idea of a final release from the 'wheel of birth' played any part in Pythagorism. That is admitted by Rohde, who attributes it to the defectiveness of our information. Pythagorism without a final release, he says, would be like Buddhism without a *nirvāṇa*.⁶ The present writer would suggest that, imperfect as our information may be, it would be extraordinary that it should afford no evidence of this doctrine, if it had ever existed. We have the excellent authority of Aristotle for saying that the Pythagoreans divided rational living things into gods and men and 'such as Pythagoras,'⁷ and so it would seem that the fully purified soul becomes incarnate in a philosopher and religious teacher who seeks to raise others to his level. So far as we can judge from the *Phædo*, its final destiny is not any sort of *nirvāṇa*, but 'to dwell with the gods.' It is an interesting point that the purified soul remembers its previous incarnations. It is said that Pythagoras remembered that his last incarnation had been as Euphorbus the Dardanian, who, by Apollo's help, wounded Patroclus (*Il.* xvi. 804 ff.). It is not necessary either to disbelieve this or to attribute it to imposture. Men were very exalted in those days, and it is perfectly possible that Pythagoras was in dead earnest when he saw the shield of Euphorbus dedicated by Menelaus at Argos, and recognized it as that which he had borne in Apollo's service in a former life. We may gather from this the further information

that there was an interval of several generations between each rebirth, which, if we regard the myths which Plato puts into the mouth of Socrates as Pythagorean, were spent in purgatory, the very name of which has a definitely Pythagorean sound.

For the doctrine of the body as the tomb of the soul see Plato, *Cratylus*, 400 C, where we are told that the body is called *σῶμα*, i.e. *σῆμα*, 'on the ground that the soul is buried in the present life.' Socrates goes on, however, to give it as his own opinion that the Orphics (οἱ ἄμφι' Ὀρφέᾳ) really called the body *σῶμα*, because the soul is now paying the penalty for 'those things for which it pays the penalty,' and that it has a covering (περίβολος) in the likeness of a prison (δεσμωτηρίου εἰκόνα) 'so that it may be kept safe' (ἵνα σφῆται) till it has paid in full all that it owes. The word *σῶμα* is on this view derived not from *σῆμα* but from *σῶζω*. This looks very like an attempt to explain the Orphic doctrine in terms of the Pythagorean.

3. Pythagorean science.—This is not the place for a full discussion of Pythagorean science, but it is necessary for our purpose to establish its Ionian character—which will prove that it goes back to Pythagoras himself—and it is desirable that it should be shown, if possible, in what, if any, relation it stood to Pythagorean religion. The subject is difficult because, while the religion of Pythagoras underwent no important development, as far as we know, Pythagorean science was extremely progressive. That, again, is because, while the leading Pythagoreans took their religion for granted or neglected it altogether, they were obliged to defend their scientific teaching against criticism of all kinds, and of course it became greatly modified in the process. In particular, we see that it was necessary to account for the 'four elements' of Empedocles, which had become the foundation of medical science, and above all to take up a definite attitude towards Zeno's very serious criticism of the Pythagorean view of space and the unit. We are safe in referring theories which show a preoccupation with problems of this kind to a later generation of the school. On the other hand, Parmenides, who describes himself as a youth in his poems, must have written not very long after the death of Pythagoras, and there is clear evidence that he had been a Pythagorean. The cosmology which he expounds in the second part of his poem, and which he tells us has no truth in it, cannot well be anything else than Pythagorean, and, considering the time at which he wrote, it must be practically the doctrine of Pythagoras himself. Unfortunately we have only fragments, though they are instructive enough, and show pretty clearly which parts of the Pythagorean cosmology may be regarded as original. In view of the relation of Pythagoras to Pherecydes, it is not surprising that his expositions should have taken the form of a cosmogony, and we even gather from a chance remark of Plato¹ that it contained stories about the gods such as were usual in cosmogonies. The cosmogonic Eros is mentioned in a fragment that survives. It is clear, however, that the leading ideas of the system came from quite another source than Pherecydes. In the first half of the 6th cent. B.C. science, as we understand the word, had arisen for the first time in the world's history at Miletus on the mainland not far from Samos. Thales, Anaximander, and Anaximenes had been busy with the question of the stuff of which the world is made, and this had been defined as a limitless something (*ἄπειρον*), ultimately held to be air, which at that time was supposed to be a vapour and identified with steam and mist. Water and earth and other solid substances were explained as condensed air, while fire was air still further rarefied. In this limitless mass there were innumerable worlds, each with its earth, sun, moon, and stars, and these arose and passed away like bubbles in the limitless mass of vapour. Moreover, Anaximander, the second of

¹ *Symp.* 195 C.

the Milesians, had put forth a daring theory of the earth and the heavenly bodies, which was rejected by his successor Anaximenes, but evidently left its mark on the mind of Pythagoras. According to this, the earth hung free in space in the centre of the world, and it kept its place because there was no reason why it should fall in one direction rather than another. On the other hand, Anaximander was not able to shake himself free from the idea that we are living on a disk, and he was thus led to picture the earth as cylindrical, with another disk antipodal to ours. He further explained the sun, moon, and stars by supposing that they were rings of fire enclosed in air, with the fire escaping at a single orifice where we see the luminary. This was the earliest form taken by the notion of a planetary orbit. The school of Miletus had also formulated some very elementary geometrical propositions about triangles which gave them the means of calculating the distance of inaccessible objects, such as ships at sea. The influence of all this is clearly marked on the system of Pythagoras, though it is evident that he went far beyond his teachers. He was the real founder of arithmetic and geometry, and he may fairly be credited with a large part of the first six books of Euclid. The proposition about the square on the hypotenuse still bears his name, though we happen to know that the proof of it given in Euclid, i. 47, is not the Pythagorean one. It is probable that the original proof was of a more arithmetical character, and was connected with a very old piece of traditional knowledge, namely, that a triangle of which the sides are as 3, 4, 5 has always a right angle, and $3^2 + 4^2 = 5^2$. This proposition solved the problem of the duplication of the square, but it also brought up the difficulty of incommensurability, since the side and the diagonal of a square have no common measure. For that reason a number of problems which we should deal with algebraically are treated geometrically in Euclid, ii., which is in substance Pythagorean. It is also certain that Pythagoras is to be credited with the discovery of the spherical shape of the earth, which was a commonplace of Italian science in the 5th cent., though the Ionians refused to accept it, and even Anaxagoras and Democritus maintained that the earth was flat. This was closely connected with the explanation of lunar eclipses, which may also be confidently ascribed to Pythagoras, though it was not known in Eastern Hellas till a later date. To judge from the poem of Parmenides, Pythagoras also retained the theory of planetary rings, and indeed there is no evidence that spheres were substituted for rings before Eudoxus. Like Anaximenes, he regarded the stuff of which things are made as air (i.e. mist or darkness), and he must have said that the world inhales this from without; for Xenophanes already ridiculed the idea. What differentiates him completely from all his predecessors, however, is that he paid more attention to the form or limit of things than to the limitless something of which they were made. Later Pythagoreanism identified this with abstract space, but there is reason to believe that this is a more recent development. It is the fact that Pythagoras introduced the idea of the limit (*πέρας*) as the correlative of the Milesian limitless (*ἄπειρον*) that gives him his place in the history of science and affords a clue to his apparently strange doctrine that things are numbers. According to this, the limitless once limited gives us the point, twice limited the line, thrice limited the plane, and four times limited the solid; and all things are made of such geometrical solid figures in various arrangements. It will be seen that the weakness of this view is that the point is identified with unity,

instead of with zero, as it should be, and this is where Zeno's criticisms proved fatal. The definition of the point as 'unity having position' enabled Pythagoras to treat geometry as a form of arithmetic up to a certain point; but Zeno showed the difficulties of this, and the later Pythagoreans had to abandon the doctrine that things *are* numbers and to substitute the statement that things *are like* numbers. Nevertheless it was a magnificently daring conception of reality and, but for the necessary imperfections of its first statement, it is substantially the same as that of Descartes.

For all this the reader is referred to Burnet's *Early Greek Philosophy*³, chs. i, ii., and vii., with the modifications contained in his *Greek Philosophy*, pt. i, *Thales to Plato* (London, 1914), chs. ii. and v. As a proof of the remarkable scientific insight of the Pythagoreans, it should be mentioned here that the successors of Pythagoras (though not, so far as we can judge, Pythagoras himself) held that the earth and the other heavenly bodies revolved round a central luminary. This was not, indeed, identified with the sun, which was supposed to be a planet like the earth, but it was a very great step to regard the earth as a spherical planet.

Pythagoras carried his theory a step further by his great discovery that the intervals of the scale recognized in his day—the fourth, the fifth, and the octave—could be expressed by simple numerical ratios. This discovery was no doubt based on measurements of the length of the string which corresponded to these intervals, and it suggested a solution of another Milesian problem. The Milesian system had been dominated by the idea of the 'opposites,' especially hot and cold, wet and dry, which appeared to be at war with one another, and Anaximander had spoken of the observance of a due measure between these as 'justice' (*δίκη*). This Pythagoras thought he could explain from his great acoustic discovery. If high and low pitch can be brought together in a perfect attunement (*ἀρμονία*), it was natural to suppose that all other opposites could be similarly treated and that all stable reality would prove to be a 'blend' (*κρᾶσις*) of opposites in proportions which could be numerically expressed. There were certain 'means' (*μεσότητες*) between each pair of them, of which the arithmetical mean (corresponding to the octave) is only one. It is the same idea of combination in fixed proportions that Dalton introduced into chemistry. Pythagoras thought it was the key of the world, and perhaps it is. He applied it among other things to the problem of the relative distances of sun, moon, and stars, which he expressed in terms of the intervals of the scale. That ideas of this kind need not be altogether futile is shown by the fact that Bode's law of the planetary distances, which is based on a similar conception, has been of use in giving a direction to astronomical research, though it has not been empirically verified, and that Mendeléeff's periodic law has actually led to the discovery of new elements. The meaning of the statement of Socrates in Plato's *Republic*,¹ that the Pythagoreans made music and astronomy sister sciences, will now be plain.

It was in medicine that the other great application of this principle was made, chiefly, it would appear, by Alcmaeon of Croton. Health was regarded as the proper tuning (*ἀρμονία*) of the body, so that the right proportions between hot and cold, moist and dry, were preserved. Disease was just the disproportionate expansion of one of them. Alcmaeon expressed this further by comparing health to the reign of equal laws (*ισονομία*), and disease to monarchy. This is the original sense of the doctrine of the 'temperaments' which played so great a part in the history of medicine; for *temperamentum* or *temperatura* is but a translation of the Pythagorean term *κρᾶσις*.

¹ vii. 530 D.

So far we have been dealing with those 'anticipations of nature' to which after all science owes its most striking advances, but at this point the religious teacher and mystic comes into contact with the man of science. If the sun, moon, and stars really correspond to the fourth, the fifth, and the octave, they must give forth sounds like the tuned strings of the lyre. If we do not hear these notes, that is because our souls are out of tune and do not vibrate in unison with them. This is the theory generally known by the misleading name of the 'harmony of the spheres'—an expression which is meaningless as applied to astronomy before Eudoxus. It has had a great history and inspired not only Shakespeare and Milton, but even Kepler; and it seems to give definite meaning to the precept 'Follow God.' It explains at once the remark of Aristoxenus that the Pythagoreans used medicine to purge the body and music to purge the soul. Alcmaeon of Croton said the soul was immortal 'because it was like to things immortal,' and it had this likeness in virtue of its being always in motion; 'for all divine things, the moon, the sun, the stars and the whole heavens are in continuous motion.'¹ He also said that the reason men die is that 'they are not able to attach the beginning to the end,'² as the heavenly bodies do in their revolutions. We find the same doctrine of the circles of the heavens and the circles of the soul in Plato's *Timæus*, which is in the main a statement of the later Pythagorean doctrine, and we may infer that the saying quoted by Socrates in the *Phædo*, that 'philosophy is the highest music,' is Pythagorean too. If that is so, we have found the connecting link between Pythagorean religion and Pythagorean science. The highest purification (*κάθαρσις*) of all was just science, and especially mathematical science.

In the *Ode on the Nativity* Milton of course introduces the 'crystal spheres,' and in other respects gives us a later form of the doctrine. Shakespeare's statement of it is put into the mouth of Lorenzo in the fifth act of the *Merchant of Venice*. In the *Book of Homage to Shakespeare* (London, 1916) the present writer has tried to throw some light on the channels through which a knowledge of Pythagorean doctrine may have reached the England of Shakespeare's youth.

The doctrine was capable, however, of being applied in a way that Pythagoras can never have intended, and this was the chief cause of the breakdown of Pythagorism as a religion. It was only a step to say that the soul was itself an attunement (*ἀρμονία*) of the body, and that was fatal to the doctrine of its immortality. We are told distinctly in the *Phædo* that this tenet was maintained both by the Pythagoreans of Thebes and by those of Phlius at the end of the 5th cent., and Aristoxenus continued to maintain it even after he had become a member of the school of Aristotle. This may account for the vagueness of Philolaus on such subjects as reported by Cebes and Simmias, and it is noteworthy that Plato represents Socrates as refuting the theory on his dying day. It seems clear that the preoccupation of the Pythagoreans with medicine had led them to regard the soul more and more as a function of the body, and it has recently been ascertained that Philolaus wrote on medicine and played a considerable part in the development of that science. That was the end of the Pythagorist religion among the more enlightened members of the order, though the old practices and beliefs were continued underground, as it were, by other followers of Pythagoras, who handed them on to the Neo-Pythagoreans and the Neo-Platonists (*qq.v.*), who revived them by bringing them into touch with the Platonic tradition. In fact Plato was the true successor of Pythagoras, whose doctrine was represented in a one-sided way by

¹ Aristotle, *de Anima*, A. 2. 405^a 29.

² Arist. *Probl.* 916^a 33.

both sects of his nominal followers. In this way scientific Pythagoreanism became merged in the Academy (*q.v.*), while religious Pythagorism had a good deal to do with the rise of Cynicism (*q.v.*).

4. **Pythagorean ethics.**—It would, of course, be an anachronism to speak of a Pythagorean system of ethics. The constitution of such a system was the work of the schools of Athens and, with the exception of some indications of ethical theory in the fragments of Democritus (*q.v.*), of them alone. On the other hand, it is necessary to insist that the ethics of Socrates, Plato, and Aristotle were based on a Pythagorean foundation, and are not fully intelligible unless we bear this in mind. It may be added that Democritus too was a pupil of the Pythagoreans and wrote a book entitled *Pythagoras*.

Being a religious community, the Pythagoreans had of course a rule of life, and it has recently been urged with great plausibility that certain hexameter verses, which are quoted at a fairly early date, and which may have been derived from the work of Timæus of Tauromenium, are actual fragments of this rule. The *Golden Verses* are spurious, of course, but they may well have been modelled on an older original. In particular, it seems certain that the members of the society had to make an examination of conscience morning and evening. They had to go over the events of the day that was past and ask themselves, 'In what have I transgressed, what have I done that I ought not to have done, and what have I left undone that I ought to have done?' It is obvious that a rule of this kind would be favourable to the rise of speculation on ethical subjects.

For the probability that there was a rule such as that described see A. Delatte, in *Revue de Philologie*, xxiv. [1910] 175 ff. Delatte has been misled by some of his German authorities when he says that the original dialect of Pythagoreanism was Doric and that the original form of the doctrine was that things are like numbers, but he makes out a good case for the thesis that verses like *πῆ παρέβην; τί δ' ἔρεξα; τί μοι δέον οὐκ ἐπέλεσθῃ;* are really as old as the 5th cent., and formed part of a 'rule' in hexameter verse. Five verses (including the above) are quoted in Porphyry's *Life of Pythagoras* (40 Nauck) and give a description of the Pythagorean examination of conscience.

Now, we find that the ethical theories of Plato and Aristotle everywhere take for granted a classification of human lives into wisdom-loving, honour-loving, and gain-loving; and this is closely bound up with what is usually called the doctrine of the tripartite soul as expounded in Plato's *Republic*. It seems very difficult to doubt that it is Pythagorean, and, as a matter of fact, Posidonius¹ said that he had found the doctrine of the tripartite soul in the writings of the successors of Pythagoras. The story was that Pythagoras himself had used the word *φιλόσοφος* for the first time in a conversation with Leon, tyrant of Phlius or Sicyon, and it is everywhere implied in Plato that it was perfectly familiar to Socrates and his circle. 'Is not Euenus a philosopher?', asks Socrates in the *Phædo*,² and the answer comes at once, 'I think so.' It seems to mean a man who holds a certain doctrine about the soul, and to have a much more specialized sense than the corresponding verb, as it is used in Herodotus. Life, Pythagoras is said to have told Leon, is like a gathering (*παγήγυρις*) such as that which comes together for the Olympic Games. There are three classes of visitors. The lowest are those who come to buy or sell, and next above them are those who come to compete; the best class, however, are those who come to look on (*θεωρεῖν*). If this is really the teaching of Pythagoras himself, we can see at once that it is the foundation of all subsequent Greek ethics, and in particular of the doctrine of the primacy of the theoretic life (lit. 'the life of the spectator'), which was held by

Plato, with important reservations as to the duty of philosophers to take their turn in descending into the cave from which they had escaped (*καταβατέον ἐν μέρεσι*), and by Aristotle with no reservations at all.

The importance of Pythagoreanism in connexion with the rise of Greek ethical theory has been too much neglected, as is well shown by J. L. Stocks in his paper, 'Plato and the Tripartite Soul,' published in *Mind*, no. 94, new ser., xxiv. [1915] 200 ff. Important evidence of the Pythagorean origin of these ideas is furnished by a fragment of the *Tarentines* of Alexis,³ where some one, presumably one of the Pythagoreans who are the subject of the comedy, says: 'No man of sense could bear a grudge against us with reason, seeing that we do no wrong to our neighbours. Dost thou not know that what is called living is but a name, a euphemism for our human lot? For myself I cannot tell whether any one will say that I judge rightly or wrongly, but the view I take on reflexion is this, that all human affairs are wholly insensate, and that we that are living have as our portion merely a sojourn in a strange land (*ἀποδημία*), like men released for a gathering (*παγήγυρις*) from death and darkness to this passing of time and to this light that we behold.' The moral drawn from these considerations is that we should eat, drink, and be merry, which is not exactly Pythagorean, but the point may well have been the inconsistency between the doctrine and the practical inferences from it. That has always been a favourite subject of comedy. The verses are quoted here only to show that the idea of the *παγήγυρις* (Vanity Fair) and the *ἀποδημία* are Pythagorean.

This, then, seems to be the source of the view of life which is common, *e.g.*, to Plato's *Phædo* and bk. x. of Aristotle's *Ethics*, but there is a further side of their ethical doctrine which is derived from Pythagorean science rather than Pythagorean religion—the doctrine that goodness is the health of the soul, and that the soul's health is determined by a mean. This is generally associated with the name of Aristotle, but Aristotle got it in the main from Plato's *Philebus*, and Plato distinctly gives us to understand that it is of Pythagorean origin.² In this connexion it is very significant that Socrates is the chief speaker in the *Philebus*, though it is one of Plato's latest dialogues and he had for a long time given up his early custom of making Socrates the central figure. Already in the *Phædo* he makes Socrates use the doctrine that goodness is an attunement (*ἀρμονία*) of the soul, to refute the theory that the soul is an attunement of the body. That would land us with an attunement of an attunement, which is absurd. Socrates evidently expects the Pythagoreans to accept this explanation of goodness as an attunement at once, and that is just the meaning of the doctrine of the mean as we find it in Aristotle's *Ethics*. There is a fragment of Archytas in which he speaks of *πλεονεξία* and *ισότης*; very much as Socrates is made to do in the *Gorgias*,³ though it breaks off just before it comes to the point, if it ever did. But, after all, it is not a far cry from what Alcmaeon says about the health of the body to the doctrine of the mean as determining the health of the soul, and it may be that this step was already taken in the Pythagorean society. In any case it is based on Pythagorean ideas, and was implicit in the teaching of Pythagoras from the first.

It is certain that Pythagoras is entitled to be called the father of science, and it becomes more and more clear that all European religion and ethics, so far as they do not originate in Palestine, can also be traced back to him. There is still a great deal of work to be done, however, before we can grasp his historical character firmly. Most recent advances in our knowledge of the subject have been due to discoveries in other fields which have thrown a quite unexpected light on Pythagoras. What is now required is a thorough examination of all the forged Pythagorean documents of later days in the light of this new knowledge. Undoubtedly they are forgeries, and there is no chance of their being rehabilitated as genuine documents. At the same time, it is clear that

¹ Pickard-Cambridge, p. 86.

² 61 C.

they are the work of men who knew a good deal more about Pythagoreanism than we do, and they would have had no chance of passing off their productions as genuine if they had not been careful to give them an air of verisimilitude. It is not enough to condemn them because they contain ideas and use terminology which we are accustomed to regard as Platonic or Aristotelian; for nothing is more certain than that Pythagoreanism is the basis of Athenian philosophy, and some even of Aristotle's terminology is demonstrably of Pythagorean origin. That, so far as can be seen, is the direction which research may most profitably take at present.

LITERATURE.—The older works on Pythagoras and his school are antiquated, and the time has not yet come for a new synthesis. A. E. Chaignet, *Pythagore et la philosophie pytha-*

goricienne, 2 vols., Paris, 1878, was an attempt to apply reasonable principles of criticism to the subject, but it was premature. An intelligible historical view of the subject was first made possible by Erwin Rohde's 'Die Quellen des Iamblichus in seiner Biographie des Pythagoras,' *Rheinisches Museum*, xxvi. [1871] 564 ff., xxvii. [1872] 23 ff. These made clear for the first time the position of Aristoxenus and Dicearchus. The same writer's *Psyche*, Tübingen, 1910, throws much light on the subject too. The interpretation of Pythagoreanism as a system has been possible only since the publication of Paul Tannery's *Pour l'hist. de la science hellène*, Paris, 1887. Among the works which may be said to have issued from the school of Tannery, G. Milhaud, *Leçons sur les origines de la science grecque*, Paris, 1893, and *Les Philosophes-Géomètres de la Grèce*, do. 1900, deserve particular mention and may be specially recommended to those who desire a lucid exposition of the mathematical side of the doctrine. The histories of philosophy (E. Zeller, T. Gomperz, etc.) generally give a fair view of the state of the question at the time of their publication, though it must be said that German writers, to their own great loss, have done scant justice to the admirable work produced in France.

JOHN BURNET.

Q

QADIĀNĪ.—Qādiānī was the name originally given to the followers of Mirzā Ghulām Aḥmad of Qādiān, Gurdaspur District, Panjāb, in order to distinguish them from orthodox Muslims. In 1900 they were, at their own request, entered in the Government census lists as Aḥmadiya Muslims, and they have since been called by that name. Mirzā Ghulām Aḥmad (1839–1908) was a man of some learning and unusual powers of leadership. In 1889 he announced that he possessed the right to receive *bai'at* ('homage') from his followers. Two years later he declared himself to be the 'promised Messiah' of Jews, Christians, and Muslims, and the Maḥdī expected by Muslims at the last day. In asserting that he fulfilled in himself the prophecies relating to both the Messiah and the Maḥdī, he controverted the usual Muhammadan belief that the two will be distinct personalities with different missions. He said that he had come 'in the spirit and power' of Jesus and of Muhammad, and he later declared that he was greater than Jesus, since he was the Messiah of Muhammad, as Jesus was of Moses. Shortly before his death he announced that he was likewise the final incarnation (*avatāra*) of Viṣṇu, whom Hindus had been expecting; and since his death his followers have added the further claim that he was 'the latter-day reformer of Parsis' and 'the Buddha of the East.'

The proofs by which he sought to establish his claims were declared to lie in revelations and miracles, the latter chiefly taking the form of prophecies of the death or discomfiture of his enemies among orthodox Muslims, Christians, and members of the Ārya Samāj. After the sinister fulfilment of one of these prophecies, in the death under suspicious circumstances of a prominent leader in the Ārya Samāj, the Mirzā was compelled by order of the Deputy Commissioner of Gurdaspur District, dated 24th Feb. 1899, to refrain from further predictions involving the death or disgrace of another. One of the so-called miracles, which served to prepare the way for the announcement of the Mirzā's Messianic office, was the alleged discovery, through a divine revelation, of the existence of the tomb of Jesus Christ in Srinagar, Kashmir. Jesus was said to have been taken down from the cross in a swoon and healed by the miraculous 'ointment of Jesus' (*marham-i-Isa*). He then set out on a mission to 'the lost sheep of the house of Israel' in Central Asia and Kashmir, finally dying, at the age of 120, in Kashmir, where his tomb in time became confused with that of a

local saint named Yus Asaf. No serious evidence has been brought forward in proof of this novel theory, on which the whole claim of Mirzā Ghulām Aḥmad and his followers admittedly rests.

Regarding his claim to be the expected Maḥdī, the Mirzā was constrained perhaps by political considerations to make known a revelation alleging that the Maḥdī was not to be 'a man of blood,' as had been universally supposed, but was rather to lead Islām to triumph by means of a *peaceful* holy war (*jihād*). In this connexion he made much of his loyalty to the British Government. In further substantiation of his manifold claims he pointed to the corrupt condition of modern society and of the character of the accepted priests and teachers in every religion, which called for a great reformer and prophet, like himself, to bring to all hearts a new and quickening certitude in things religious. He drew a sharp line of demarcation between his followers and orthodox Muslims by enjoining all true Aḥmadis to refrain from following orthodox *imāms* in their prayers, attending non-Aḥmadi funeral services, and giving the hands of their daughters to non-Aḥmadi husbands, though their sons might marry non-Aḥmadi girls. He also turned his face resolutely against all political controversy, and denounced as mischievous the activities of the All-India Moslem League and the Muhammadan Educational Conference.

The movement has grown steadily since its inception in 1889. In 1896 it claimed 313 members. In the 1901 Government census 1113 males were returned for the Panjāb, 931 for the United Provinces, and 11,087 for the Bombay Presidency (obviously an inaccuracy). In 1904 the Mirzā claimed 'more than 200,000 followers,' and before his death he estimated the total number of his followers at 500,000. Against this manifest exaggeration must be placed the returns of the census for the Panjāb in 1911, viz. 18,695 Aḥmadis. Probably 60,000 would be a liberal estimate of the total strength of the movement throughout India to-day. There are also a few scattered followers in other countries.

Before his death in 1908 Mirzā Ghulām Aḥmad appointed his close friend and early disciple, Ḥakīm Nūr al-Dīn, as his successor, the 'first *khalīfah*' of the movement. Under the direction of the *khalīfah* the work was to be carried on by a board called the Ṣadr-Anjuman-i-Aḥmadiya. During the ensuing six years, before Nūr al-Dīn's death in 1914, a schism developed within the sect. One party, led by Khwājah Kamāl al-Dīn, a

prominent barrister, began to take part in political controversy, and in its religious literature showed a leaning towards the rationalism of Sir Syed Ahmad Khān, the founder of the Muhammadan Anglo-Oriental College at Aligarh. The other party tended to magnify the supernatural claims and unique position of Mirzā Ghulām Ahmad, and continued to emphasize the evils of present-day Islām and its priests. In short, the former wing sought to bridge the chasm separating the sect from Islām generally, whereas the latter stressed the points of difference as fundamental. When Nūr al-Dīn died, the split widened. The son of the Mirzā, Hazrat Maḥmūd Ahmad, now hailed as 'the promised son of the promised Messiah,' was hastily elected the second *khalīfat ul-Masīh* by a group of his adherents at Qādiān. The rationalistic party forthwith seceded, and founded a new society in Lahore called the Anjuman-i-isha'at-i-Islām, whose interests were vested in a group of men rather than primarily in a single individual. Two of the members of this group, Khwajah Kamāl al-Dīn and Maulvi Sadr al-Dīn, are the founders of a Muslim mission at Woking, England, through the instrumentality of which some scores of English people, including one peer, Lord Headley, have announced that they have become Muslims. A monthly paper in English, *The Islamic Review and Muslim India*, is published at Woking, and it is worthy of note that no trace of Ahmadiya influence is to be found in it, save perhaps in the evident anti-Christian animus.

The Qādiān party continues to publish *The Review of Religions* in English, and several vernacular papers, conducts a successful high school, and carries on considerable missionary work. It can truly claim to embody the real spirit and tradition of the founder and his original followers.

J. N. Farquhar thus succinctly sums up the position and importance of Mirzā Ghulām Ahmad's teachings in relation to similar movements in India to-day:

'Apart from these personal claims, his teaching is an attempt to find, amidst the irresistible inrush of Western education and Christian thought, a middle path between impossible orthodoxy and the extreme rationalism of Sir Syed Ahmad Khan' (*Modern Religious Movements in India*, p. 146).

Recent events indicate that the middle path was destined to end speedily in cross-roads.

QARO.—Joseph ben Ephraim Qaro, a famous codifier of Rabbinical Judaism, was born in Spain in 1488, and died at Safed, Palestine, in 1575. On the expulsion of the Jews from Spain in 1492, which sent many scholars to other lands and diffused Rabbinical culture more widely, his parents went with him to European Turkey, settling first in Nicopolis. Here he received thorough instruction in the Talmud from his father, who was eminently qualified to be his teacher. Later he lived in Adrianople, Salonica, and Constantinople—successive steps in his long-cherished journey to Palestine, which he reached about 1535, Safed becoming his place of residence.

It was an age of mystical tendencies in Judaism, which is so inherently opposed to such influences from the earliest times. Owing undoubtedly to long periods of persecution, which reached its climax in Spain, an added stimulus was given to Kabbalistic dreamers, whose fantasies took firm

hold on many susceptible minds which had lost judgment and balance under the burden of exile and wretchedness. Turkey, which opened its dominions to the oppressed, and where large and fairly prosperous communities could be found, attracted all types of Jews, the visionaries in goodly number. Safed in particular proved a seat of mystics, and Qaro's early fantasies were revived and strengthened by the new environment. He had met some years before Solomon Molcho, who strove to play the part of a Messiah and suffered death at the stake in 1532, and he gave full vent to his mystical ideas which, long cherished, were clamouring for expression. He was so far overwrought as to invoke a familiar—even in his Nicopolis days—and for fifty years he kept a diary which recorded his discussions with this imaginary genius. The book of visions, called *Maggid Mesharim*, whether actually written by him or merely ascribed to him by a zealous disciple, as occurs not rarely in literary history, makes him a double personality—a mystic as well as a codifier. Happily, and as one evidence that the diary or collection of desultory notes is not entirely genuine, the comprehensive works upon which his fame is really based show no mystical influences. Whatever his reverence for the *Zohar* as authority for the Kabbalistic dreamer of dreams, he gave undisputed first place to the Talmud, with his logical mind, and was impelled by the needs of the times to popularize and strengthen its hold on the life and thought of Judaism. He was not the first intellectual whose imagination was to prove an incentive, not an opiate.

Qaro's fame depends chiefly on his two digests of Rabbinical law. He wrote these in an age of dispersion when in the Jews' new settlements, which were never wholly secure, the fundamental law and authority of Judaism were imperilled as much by the violent and arbitrary changes in environment as by the half-knowledge of leaders and the almost total ignorance of the people. Considering these conditions, one can understand how his passion for saving from destruction the traditional creed and customs worked upon a susceptible nature and fostered fantastic reveries as well as lofty ambitions. If he could not be a Messiah in the popular sense, he could save his people none the less by inculcating the authority and permanence of the law.

As early as 1522 in Adrianople, he began the first of his great works, *Beth Yosef*, 'House of Joseph,' which, completed in 1542 at Safed and published in 1550-59, raised him to the front rank of Talmudists of his own age or earlier. This work, while a commentary on Jacob ben Asher's *Arba'ah Turim*, 'Four Orders,' whose method he closely followed, is more than a digest of the authorities cited therein. It gives a careful critical view of many Rabbinical opinions not quoted by his predecessor. Hence it furnishes an unsurpassed wealth of material. The range of reading displayed, in both Talmudic and post-Talmudic literature, together with the critical sagacity in the study and comparison of authorities, leaving little uninvestigated, gives a monumental character to the work. A sturdy independence is exhibited in the discussions, although the standard authorities, al-Fasi, Maimonides, and Asher ben Jehiel, are accepted. Qaro's aim throughout was partly to familiarize the Rabbi with the duties that devolved upon his high office as leader in Israel, and partly to explain to the student clearly and methodically how laws are developed from the Talmud through later Rabbinical literature. It was not merely to answer the Epicurean, but to stimulate to study and research, and to gain for practical life an intelligible,

harmonious system which would maintain the old faith for all time.

Not wholly satisfied with *Beth Yosef*, in later years he wrote his second great code, *Shulhan Arukh*, 'Prepared Table' (1565; according to Steinschneider,¹ 1555). It is possible that he underestimated its value and character, for in the introduction he speaks of having prepared it for young students, thus stamping it as elementary. He preferred the other digest in his decisions—it was for experts, for Rabbis deep in the law. Yet the *Shulhan Arukh* has rapidly outdistanced the earlier code as authority. Despite continuous controversy—in fact largely by reason of the attacks made upon it—it has become the Rabbinical code which defines Judaism to our own day in the lives and opinions of the great majority of Jews throughout the world. For almost a hundred years the contest waged—it was a bloodless battle of the books, however—the chief opposition being on the part of Talmudists who were Ashkenazim, of German stock, as contrasted with the Sephardim, or Spanish, to whom Qaro was naturally acceptable. It is the opinion of L. Ginzberg² that the Ashkenazim regarded the work as an unquestioned authority only after Isserles, who adduces still later views, had subjected it to criticism and extensive supplements. After the period of censure came the age of admiration, with a host of commentators that made it a household word in the 17th cent. and to our age. Its authority was firmly established, with here and there an eminent Rabbi, with a bent to individualism, who refused to recognize its guidance as binding.

Since the development of Reform Judaism and the rise of modernism in various lands there have been countless attacks on Qaro and his code. On the whole, most of these have been rather unjust; for he is not responsible for laws, opinions, and customs that have existed in Israel from grey antiquity. His function was to photograph Jewish tradition, to record and interpret it according to the authorities, so as to weld still more firmly past, present, and future. His office was not that of an apologist, but that of a codifier. Graetz³ claims that Qaro erred in citing all opinions, however transient and trifling, and made his work a store-house of views which do not always reflect credit on Judaism and have really furnished biting texts, if perverted, for the anti-Semite. There is no doubt force in this contention, but Qaro's candour and fullness are not to be underrated. He had nothing to conceal or to extenuate. It must also be stated in his vindication that he lays no claim to absolute authority, asserts no doctrine of infallibility. Far from forging an iron bond, he rescued Jewish thought from stagnation and promoted the conflict of opinion, eminently healthful for a creed that claims to be intelligent.

The work consists of four parts, called *Orah Hayyim*, 'Path of Life,' *Yoreh De'ah*, 'Teacher of Knowledge,' *Hoshen ha Mishpat*, 'Breastplate of Judgment,' and *Eben ha Ezer*, 'Stone of Help.' The first deals mainly with prayer, the blessings, Sabbath and holy days, and their prescribed observances. The second concerns itself with food and its preparation, and the slaughtering of animals for food, Jew and non-Jew in their relations to each other, duties to parents and charity, religious customs connected with agriculture, and the rites of mourning—a rather extended and diversified list of contents. The third part treats of marriage and divorce from the civil and religious points of view. The fourth and concluding section

discusses legal proceedings, laws as to business, and the relation of man to man in an everyday working world. All life in its variety and complexity was thus considered as part of the concern of religion. In the dark ages that were upon the Jew as the 17th and 18th centuries arrived the work preserved him from disintegration. Whether its influence was to be as salutary, with the spreading of civil and religious liberty among the nations and the gradual passing away of the Ghetto and its necessarily narrowed life, if not vision, cannot be so summarily answered. All depends upon the point of view.

Qaro's life in Safed was much influenced for a time by R. Jacob Berab, one of his most learned associates in that place. The recognized head of its Jewish community about 1535, he was the centre of a number of disciples and was called 'teacher' by Qaro. In 1538 he attempted to restore the rite of ordination, with no less an object in view than the re-establishment of the Sanhedrin in Palestine as seat of the highest authority in Israel. Qaro was elated by the idea and became one of the four disciples to be ordained without delay. Unfortunately Berab died two years later and the grandiose scheme failed to be realized. Qaro, with all his ardent leanings towards the Messianic rôle, sensibly preferred his work as teacher and author. He lived until 1575, and had the satisfaction of seeing his fame and authority more and more generally acknowledged, while hundreds of students, some of high distinction, thronged his lecture-hall to hear his opinions and interpretations.

In addition to his two codes Qaro published in his life-time *Kesef Mishneh*, 'Double Money' (Venice, 1574-75). After his death appeared *Bedeq ha Bayith*, 'Repairing of the House,' supplements and corrections to his *Beth Yosef* (Salonica, 1605); *Kelale ha Talmud*, 'Principles of the Talmud' (do. 1598); *Abkat Rokel*, 'Powder of the Merchant, Decisions' (do. 1791); *Maggid Mesharim*, 'Who preaches Righteousness' (Lublin, 1646, with supplements, Venice, 1654). Some fragments in the Bodleian, a few sermons in the collection *Oz Zaddikim*, 'The Strength of the Righteous' (Salonica, 1799), and a number of commentaries on the Mishnah and on Rashi's and Nahmanides' Pentateuch commentaries, which seem to have disappeared, complete the list.

QUAKERISM.—See FRIENDS, SOCIETY OF.

QUEEN OF HEAVEN. — This expression occurs in the AV of Jeremiah (7:16-20 44:15-30) and seems to be the natural rendering of the Hebrew when vocalized *malkat hassamayin*, and is strongly supported by the versions. But the view that the expression should imply the same idea as the often mentioned 'host of heaven' apparently suggested a different derivation, from *melaket* in the sense of 'work' or 'cult,' and led to a different vocalization which influenced other versions.

The ritual as ascribed to the worshippers of the Queen of Heaven by the prophet Jeremiah lays emphasis on the offering of 'cakes.' The Jewish women made these cakes with much ceremony; the boys of the family gathered firewood, the adult males kindled the fire, and the women kneaded the dough. The offering was made 'by fire' accompanied by libations. Jeremiah alleges this to have been a common cult in the cities of Judah and the streets of Jerusalem. It may not be wise to insist too strongly on the details, as the prophet's indignation may have led him to caricature to some extent, but this and the name are all that we have by which to identify the cult.

¹ *Catalogus Librorum Hebræorum in Bibliotheca Bodleiana*, Berlin, 1852-60, col. 1480.

² *JE* iii. 686.

³ *Hist. of the Jews*, iv. 652.

The cakes, *kawwanim*, which the LXX transcribes and the Vulgate renders *placenta*, are not without parallel in Greek cults. But it is precarious to argue as to their form or significance from such parallels. The name is literally the same as the Babylonian *kamānu*, denoting the cakes or biscuits used in the cult of Ishtar. Whether the reference to fire in the word *kitter* demands burning of the cakes in the act of offering or refers to the process of their manufacture is not easily decided; but it can hardly mean to burn incense as an accompaniment of the offering.

The difficulty felt in identifying this expression as a name of Ishtar is largely due to the fact that, while Ishtar is frequently called *belit samē* or *sarrat samē*, 'lady or queen of heaven,' *malkat samē* has not yet been found as her epithet. That *malkatu* is an equivalent of *sarratu* cannot be denied, but the question remains open whether we have in this worship a mere transfer of a Babylonian cult of Venus or a local variation of the same. The Tammuz worship which Ezekiel mentions (8¹⁴) makes it likely that we have to do with a Venus cult here. On the other hand, a connexion of *meleket* with the configuration of the sky would agree with the astral theory. The form is difficult to account for as a Hebrew word, but would be correct as a transliteration of the Babylonian; only this supposed Babylonian prototype is not yet authenticated. Still the cakes are very suggestive.

There is nothing to suggest an identification of the Queen of Heaven with the moon, which is a male deity in the Semitic world.

QUESTIONS OF KING MILINDA.—See MILINDA.

QUICHES.—See MAYANS, POPOL VUH.

QUIETISM.—Quietism may be defined as the exaggeration and perversion of the mystical doctrine of interior quiet. Viewed as a tendency, it is co-extensive with the history of mysticism (*q. v.*), and it might successfully be argued that some early and mediaeval mystics were more definitely 'Quietistic' than most of the members of the post-Reformation group known as Quietist. Viewed as a specific movement, Quietism swept over the religious life of Europe in the latter part of the 17th and the early part of the 18th cent., gaining sway in many countries and taking deep root within both Catholicism and Protestantism.

1. DOCTRINES.—I. Passivity.—On the surface it is not easy to distinguish between the Quietist doctrine of passivity and the 'orthodox' mystical doctrine of quiet, and we find so competent an authority as Heppé asserting that the teaching of Molinos was substantially identical with that of St. Teresa;¹ but it might with more justice be asserted that the characteristic doctrines of Molinos are traceable, not to his appropriation of St. Teresa's doctrine of the orison of quiet, but to his deflexions from it.

(a) *St. Teresa*.—For St. Teresa, as for the mediaeval mystics, the state of quiet is that 'busy rest' in which the soul abandons all superficial activity in order that it may engage in the deeper activity of opening itself to God. It contains of necessity a passive element, for the soul that would hold the Divine Word as a shell holds the ocean must be self-emptied and set a watch upon its undisciplined impulses even when they urge it towards the divine. But such 'wise passiveness' does not exclude the active aspect of 'stretching' towards God. Its stillness—to use the fine simile

of D. A. Baker,¹ the Benedictine mystic—is the stillness of the soaring eagle, which cleaves its way through the blue with motionless wings. It is 'the rest [that] springs . . . from an unusually large amount of actualized energy,' the rest that 'is produced by Action "unperceived because so fleet," so near, so all fulfilling.'² Moreover, such mystic quiet is not an end, but a means—not a goal, but 'like the repose of a traveller who, with- in sight of the goal, stops to take breath and then continues with new strength upon his way.'³

(b) *Molinos*.—When we turn from St. Teresa to Molinos, we find that, while the latter, in his *Guia Spirituale*, says much about interior quiet that is in complete accord with the conceptions of classic mysticism, the main trend and ultimate teaching of the book is Quietistic; i.e., the quiet for which he contends is in the last resort the negative, impassive, sterile state which Ruysbroeck⁴ casti- gated so severely in its earlier manifestations. In common with most mystical writers, Molinos distinguishes between meditation, in which the reason is active and the mind occupied with definite aspects of Christian faith and life, and contempla- tion, which may be defined as an absorbed, loving intuition of divine things, a direct spiritual apprehension of God and adhesion to Him.

To quote St. Thomas Aquinas,⁵ as epitomized by Luis de la Puente, contemplation is 'a simple view of eternal truth without variety of reasoning, penetrating it by the light of heaven with great affections of admiration and love at which ordinarily no man arrives but by much exercise of meditation and discourse (i.e., reasoning, or analysis and synthesis).'⁶

But, while the great mystics insist that pure contempla- tion is of necessity incomplete and inter- mittent and that, while discursive reasoning is suspended, the intellect (higher reason) is present and active,⁷ Molinos demands a Stoic ataraxy in which intellect as well as feeling is uncompromis- ingly renounced:

'Inner Solitude consists . . . in a perfect abnegation of all purpose, desire, thought and will. . . . For if the Soul does not detach herself from her own appetite and desire, from her own will, from spiritual gifts and from repose, even in spiri- tual things, she never can attain to this high felicity. . . .⁸ Undeceive thyself, and believe that if thy Soul is to be wholly united to God, she must lose her self and renounce life, feeling, knowledge and power; whether living or not living, dying or not dying, suffering or not suffering; without thought, or reflection. . . .⁹ Their lives [i.e. the lives of true contemplatives] are so detached, that although they continually receive many supernatural Graces, yet they are not changed nor affected thereby, being just as if they had not received them, keeping always in the inmost of their Hearts a great lowliness and self- contempt dwelling humbly in the abyss of their own unworthi- ness and vileness. In the same way they are always quiet, serene and even-minded in Graces and in extraordinary favours as also in the most rigorous and bitter torments. No news causes them to rejoice, no event saddens them. Consider noth- ing, desire nothing, will nothing, endeavour after nothing, and then in everything thy Soul will live reposed in quiet and enjoyment.'¹⁰

(c) *Madame Guyon*.—In the writings of Madame Guyon the same tendency is traceable, though in a logically undeveloped form. The highly emotional character of her work and its loose and inconsistent use of language make it difficult to determine the precise extent of her Quietistic convictions. While emphasizing the active element in the orison of quiet,¹¹ her writings abound in passages which can be construed only in an explicitly Quietistic sense.

⁵ *Summa Theol.* ii. ii. q. clxxx.

⁶ L. de la Puente, *Meditations*, Eng. tr., London, 1852-54, I., Introd. p. 53.

⁷ When, e.g., St. Teresa uses the expression 'the silence of the understanding,' she refers to the cessation of what she calls 'the eliciting from one subject many thoughts or reflections' (*Life of St. Teresa*, tr. David Lewis, London, 1870, ch. xiii. p. 32).

⁸ *Guia Spirituale*, iii. xii. 119, 120.

⁹ *Ib.* iii. vii. 71.

¹⁰ *Le Moyen court*, ch. xxi.

¹¹ *Guia Spirituale*, iii. l. 5.

¹ H. Heppé, *Gesch. der quietistischen Mystik*, p. 21. W. R. Inge takes the same view (*Christian Mysticism*, London, 1899, p. 231).

'My prayer from this moment was without forms, ideas and images [i.e. of any definite thoughts]. . . . All distinctions were lost to give room for more expansion without motives or reasons for loving. That sovereign of the powers—the will—swallowed up the two others and took from them every distinct object to unite them the better in it.'¹ 'The killing pain which one feels when one loses the definite consciousness of the Divine Presence shows that one has not yet become perfectly indifferent and that one is still tied to gifts of God.'² 'I had no more a will to submit; it had, as it were, disappeared, or rather passed into another Will. It seemed to me that this powerful and strong One did all that pleased Him, and I no more found that soul which He formerly conducted by His crook and staff with an extreme love. He appeared to me alone and as if the soul had given place to Him or rather had passed into Him, henceforth to become only one same thing with Him.'³

This losing of the soul in transcending the state in which it is shepherded by the divine love marks the extreme of Quietistic theory, and, while Madame Guyon's language cannot be pressed too far, its general tendency is unmistakable.

(d) *Fénelon*.—In Fénelon Quietism found its apologist. His *Maxims of the Saints* was written with the express purpose of defending Quietism against the popular charges of 'idle basking in the Divine Presence' and of immoral apathy. It is all the more significant that, in the very act of seeking to distinguish between true mysticism and Quietism, he moves in that atmosphere of negation and abstraction which is the logical presupposition of Quietism in its most extreme and exaggerated form.

'Pure contemplation,' he says, 'is negative, being occupied with no sensible image, no distinct and nameable idea; it stops only at the purely intellectual and abstract idea of Being.'⁴

That he makes this idea include as distinct objects all the attributes of God, the Trinity, the humanity of Christ, and all His mysteries is only one instance of the contradictions which make his work of comparatively little value as an authoritative contribution to the literature of Quietism.

2. **The one act.**—In close logical connexion with the Quietistic conception of passivity as a negative and abstract state is the doctrine that the soul's surrender to God is made once for all in an act not to be repeated. Molinos is emphatic in his assertion that the soul that has once made the great surrender to God 'by means of the act of pure Faith' remains in an indefectible state of union with God.

He contends that the soul 'may persevere in prayer though the imagination be carried about with various and involuntary thoughts.'⁵ For, according to Quietist doctrine, 'Faith and Intention are sufficient, and these always continue . . . nay, the more simple is that remembrance, without words or thoughts, the more is it pure, spiritual, internal and worthy of God. So that so long as thou retractest not that Faith and Intention of being resigned, thou walkest always in Faith and Resignation, and consequently in Prayer, and in virtual and acquired Contemplation, although thou perceive it not and remember it not, neither makest new acts and reflections.'⁶

3. **Pure or disinterested love.**—The doctrine of a continuous and 'habitual' state (as distinct from occasional aspirations, which Roman Catholic theology has always counted among the highest exercises of the soul) of loving God purely (i.e. *secundum Se*, without hope of reward or dread of punishment or any regard to even His most spiritual gifts) attained special prominence through the famous controversy upon the subject between Bossuet and Fénelon. Bossuet's point of view is summed up in his extraordinary assertion:

'Pure love is opposed to the essence of love, which always desires the enjoyment of its object, as well as to the nature of man, who necessarily desires happiness.'

Against this view Fénelon urges that a selfish or mercenary love is obviously a contradiction in terms. This is, of course, the normal Christian

view, but Fénelon passes beyond it to an explicitly Quietistic interpretation.

He declares that 'a man's self is his own greatest cross. . . . Uncompromising renunciation of this wretched self—that is the true crucifying of the flesh.'⁷ He goes so far as to say that 'all generosity, all natural affection, is only self-love of a more subtle, delusive . . . and diabolical quality. One must wholly die to all friendship.'⁸

Love, he contends, loves no particular thing or object and asks for no return, even in kind. His definition of sanctification, as a state of holy indifference and utter non-desire, applies equally to his conception of disinterested love. And, while he seeks to guard against the Quietist error by insisting with St. Paul that hope, as well as love, must abide, his whole teaching implies an indifference to salvation which robs the term 'hope' of every true meaning. Conceived with greater mental stability and expressed with more caution, his position is ultimately very much the same as that of Madame Guyon when she declares that the soul must become dead to all desire, even to its desires for spiritual gifts and graces and for salvation itself, and that it must learn to love God and prove its love by the utmost self-sacrifice and devotion, without being concerned whether He cares or responds.⁹ The whole trend of his teaching is towards a Stoical or Buddhist conception of self-renunciation and non-desire which logically excludes love of any kind, whether 'pure' or interested.

4. **Summary.**—The Quietistic doctrine of passive contemplation, of which the doctrines of the one act and of disinterested love are corollaries, is based upon the Neo-Platonic *via negativa*, which from Dionysius onwards took an Asiatic rather than a Greek form, representing 'a sense of the divine transcendence run riot.'

Molinos appeals to Dionysius in teaching that 'we know God more perfectly by negatives than by affirmatives. We think more loftily of God by knowing that He is incomprehensible than by conceiving Him under any image.'⁴

But, while the roots of 17th cent. Quietism are struck deep in metaphysical soil, it must be borne in mind that the controlling motive of post-Reformation mysticism in general and of Quietism in particular was not metaphysical, but theological. Seventeenth century Quietism is the mystical expression of the doctrine of the total depravity and helplessness of human nature, which Protestant theology and the counter-Reformation had sharpened to a despairing conviction of 'the utter miserabilism of the "creature." ' Fénelon expresses this conviction in characteristic fashion:

'As the ascetic at the end of the service snuffs out the altar candles one after another, so must grace put out our natural life; and as his extinguisher, ill applied, leaves behind it a guttering spark that melts the wax, so will it be with us if one single spark of natural life remains.'⁵

It is abundantly clear that such a sentiment is derived from Augustine rather than from Dionysius, to whom any counsel to abhor the self that is God's temple was entirely foreign. Moreover, while the 'nothingness' of Dionysius refers to that 'divine dark' in which the soul perceives and apprehends the ineffable, the nothingness of Molinos is a nothingness of the soul itself, and amounts to annihilation of all that is capable of union with God in any real sense. None the less we may see in Quietism the negative method, stimulated to its 'dying spasm' by Reformation influences. Its exaltation of an empty consciousness—an experience without differentiations in which distinction of actions vanishes⁷ and the soul can neither will nor not will—paralyzes morality.

It resolves religion at its highest into an experience in which the soul is translated to a region 'beyond good and evil,' and so cuts the nerve of morality, which always implies a clear vision of the distinction between good and evil and a definite choice in which the whole personality is active. In its consistently logical form Quietism makes communion between man and God an impossibility by annulling the distinction between them, ultimately reducing God to a vague and empty abstraction, and dehumanizing man. Its radical acosmism 'conceives the Good outside of humanity and removes conduct to a sphere of fictitious interests where the will cannot act.'¹ Although Christian Quietists have always to a greater or less extent formulated their doctrines in terms of Jesus Christ and His gospel, Quietism *per se* is fundamentally opposed to incarnational religion. On the practical and devotional side, it resolves itself into pure fanaticism, *i.e.* 'the fanaticism of expecting from God a grace which He never gives.'² Its determining motive—the desire to cleanse religion from selfishness and to emphasize an inwardness which seeks the Giver above even His most precious and purely spiritual gifts—is a valid one. While the antithesis between gift and giver as applied to God is largely false, and rests upon a conception of 'grace' which externalizes it into something 'given' by God and separable from His self-giving, Quietism represents a genuine and still much-needed protest against a theology which debases grace to a form of magic and imports the crassest self-interest into the soul's commerce with God.

II. *HISTORY*.—The term 'Quietist' was first used in the 14th cent., when its Greek form, *Hesychastai*, was applied to a certain community of monks on Mount Athos who, *inter alia*, indulged in trance-experiences not unlike those of the Indian Yogi. Quietistic teaching was first popularized by the Beghards and the Brethren of the Free Spirit (*q.v.*). Condemned by the Council of Vienna in 1311 and sorely persecuted, these mystical groups persisted for more than a century and familiarized the common people with Quietistic conceptions of religion. Eckhart was included in the ecclesiastical disapproval of Quietism, Pope John XXII. condemning his views on interior quiet in 1329; and the castigations of Quietism in the writings of Ruysbroeck and Tauler show how wide-spread the doctrine was and how disastrous in its extreme and debased forms. It must be borne in mind, however, that the primary motive of the official opposition to Quietism was ecclesiastical rather than religious. The Church authorities recognized its anti-institutional character, and no expedient was deemed too cruel or too mean, provided it bade fair to secure the extinction of Quietist sects.

But, while large tracts of pre-Reformation and counter-Reformation mysticism admit of a Quietistic interpretation, it needed the impulse of a mighty religious movement to develop the implications of what were, after all, only latent or sporadic tendencies. Such an impulse was provided by the new religious spirit, the new demand for inwardness, which found expression in the Reformation (*q.v.*). The 17th cent. Quietists were, for the most part, devoted Roman Catholics and derived their immediate inspiration and authority from the great mystics of the counter-Reformation, one of whom at least, St. John of the Cross, was more radically anti-institutional than Molinos himself. Yet they were essentially a fruit of the

Protestant spirit—a fact which Rome was swift to discern.

While by common consent Quietism, in the strictest sense of the term, is taken to begin with Molinos, the first half of the 17th cent. already exhibits individuals and groups representing strongly Quietistic convictions. Prominent among such were the Spanish mystic, Juan Falconi (1596-1638), who attracted a large following, and whose *Alfabeto et Lettera* prepared the way for the *Guida Spirituale*; Marie de l'Incarnation (1599-1672), an Ursuline of Tours, afterwards of Quebec, whom Bossuet called 'the St. Teresa of our times and of the New World';¹ the saintly layman, Jean de Bernières Lovigny (1602-59), Treasurer of France and greatly admired by Fénelon; the influential writer, Desmaretz de Saint-Sorlin, first Chancellor of the Académie Française (1595-1676); the profound but often fanciful secular priest, Henri Marie Boudon (1624-1702); the gifted ascetical writer, Jean-Joseph Surin (1600-65), formally approved by Bossuet; and many others. The Pelagiani (a society called after its founder, Giacomo Filippo di Santa Pelagia, a layman of Milan) were largely a recrudescence of the 16th cent. group of the Alombrados or Illuminati, which had been crushed out by the Inquisition for holding that one could dispense with the ordinances and ignore the requirements of the Church. That there was a vigorous Quietistic movement in France at least twenty years before the term 'Quietist' was first applied to the followers of Molinos in 1681 is shown by Nicole's rare book, *Les Imaginaires et les visionnaires*—an attack on the 'new heresies,' published as early as 1667.

When, in 1675, Miguel de Molinos published his *Guida Spirituale*, Juan Falconi's *Alfabeto et Lettera* had prepared thousands of earnest souls in Spain, Italy, and France to welcome the new doctrine. Born in Saragossa in 1640, Molinos took the degree of Doctor of Theology at Coimbra and migrated to Rome in 1669 or 1670. His piety, learning, and sympathetic personality soon made him one of the most sought-after spiritual directors and a noted figure in Roman society. Among his friends were many of the cardinals, including Cardinal Benedict Odescalchi, afterwards Pope Innocent XI., who sanctioned his position as the most esteemed confessor in Rome by giving him lodgings in the Vatican. Cardinal D'Estrée, the representative of Louis XIV., also approved of him in those days, and, when his *Guida Spirituale* appeared, it bore the approbation of various distinguished ecclesiastics, among them four inquisitors. Priests advised their penitents to discard formal prayers and devotions for the simple method of Molinos; societies for the study of this method were formed everywhere, and within six years the *Guida Spirituale* had passed through twenty editions in Italian, Spanish, French, and Latin. But soon the Jesuits realized that a method of prayer which deprecated Masses and formal devotions was contrary to the interests of the Church. Father Paul Segneri, one of their ablest and most popular preachers, was selected to confute Molinos. He did so in a small book entitled *Concordia tra la Fatica e la Quiet nell' Oratione* ('The Harmony between Effort and Quiet in Prayer'), which was published five years after the *Guida Spirituale*. But so firmly was Molinos entrenched in popular favour that Segneri, hitherto the idol of the people, was overwhelmed with scorn and denunciation, and there is reason to believe that even his life was in danger. A commission was convened in 1682 to inquire into the writings of Segneri and Molinos, as well as into a book entitled *La Contemplazione Mystica Acquistata*,

written by the saintly Cardinal Petrucci, a loyal friend of Molinos. As a result Segneri's book was condemned, Petrucci was made Bishop of Jesi, and the teaching of Molinos was triumphantly vindicated. The Jesuits, however, were determined to gain the victory, and, seeing that the Vatican protected Molinos, they appealed to Cæsar in the shape of King Louis XIV. Through his confessor, Père La Chaise, they roused the apprehensions of the king, and induced him to bring pressure to bear upon the pope. Innocent XI. was induced to refer the matter once more to the Inquisition, and this decided the fate of Quietism within the Roman Church. Molinos and Petrucci were summoned before the Inquisition in 1685, and the former was cast into prison; but it was not until two years after, when the popular indignation against his imprisonment had spent itself, that the Jesuits determined to strike. In 1687 about 200 persons, including many members of the aristocracy and some priests, were arrested and imprisoned. A commission of inquiry regarding Quietism in monastic houses resulted in the discovery that many monks and nuns had exchanged the prescribed devotions of the Church for the 'Prayer of Quiet.' A panic was created among the orthodox. Molinos was formally charged, on the ground of 68 propositions, extracted partly from his writings, partly from the declarations of his followers, with grave errors in doctrine and serious offences against decency and morality. He was also stated to have himself confessed having committed improper acts, and the populace that had once idolized him now clamoured for his execution. In the end it was announced that he had confessed his sins and was willing to abjure his heresies, in consideration of which he had been sentenced to life-long imprisonment. The recantation took place with all the pomp of ecclesiastical procedure. Nothing more is known of the fate of Molinos except that he died in prison in 1697. His books and papers were burnt; persons known to have been attached to him or in sympathy with his teaching were hunted down throughout Spain and Italy; and all writings of a Quietistic character were rigorously suppressed. Among those who fell victims to this relentless persecution was the blind mystic of Marseilles, François Malaval, whose *La Pratique de la vie vraie: théologie mystique* was first published in 1670.

In France the drama of Quietism played itself out in an atmosphere of political intrigue and personal animosity. Its central figure was Madame Guyon. Born at Montargis in 1648, Jeanne-Marie Bouvier de la Motte Guyon showed an early bent towards mysticism and asceticism, and as a child desired to enter the Order of the Visitation. Her parents had other plans for her, however, and in 1662 she was married to Jacques Guyon, Seigneur de Chesney, a wealthy man, twenty-two years her senior. It was, as might have been expected, an exceedingly unhappy marriage, sorely aggravated by the petty tyranny of a malignant mother-in-law, and the highly-strung girl turned more passionately than ever to the spiritual world. She had no difficulty in finding guides and helpers in her search for the inward way to God, since the France of her day abounded in souls of a genuinely mystical type; and, at the age of twenty, the words of an obscure young Franciscan to whom she turned in her need and who bade her seek God within her own heart finally started her on her spiritual pilgrimage. Her mystical experience was exceptionally sharply defined, falling into three distinct stages. The first was marked by an almost overwhelming influx of the Divine Presence, 'without word, thought or image,' which awoke in her soul a fierce joy of possession. This was

succeeded by a period of dryness and dereliction, during which outward troubles as well as inward trials increased. Her father, husband, and daughter died in quick succession; her son turned against her; small-pox destroyed her beauty, and was followed by one disease after another. But suddenly, in 1680, her 'obscure night of the soul' gave place to a 'unitive' state, in which she recovered all the joy that she had lost, and experienced in addition a sense of infinite freedom—a new 'God-me' taking the place of the old 'self-me.' This state was entered upon under the influence of a Barnabite monk, Francis La Combe, superior of the Barnabite Order at Thonon, who proved to be her evil genius. A man of quite mediocre mentality, deficient in moral sense, and of an unstable, neurotic temperament, he yet succeeded in exercising a hypnotic influence upon her. It was during the La Combe period that her two most original books were written—*Les Torrents spirituels*, composed largely in a state of automatism, and *Le Moyen court et très facile de faire oraison*—books which are characterized by profound spiritual insight, but which none the less exhibit some of the fatal weaknesses and extravagances of Quietistic piety. Her consciousness of an apostolic mission to found an 'interior' Church and inaugurate a world-wide spiritual reformation also dates from this period. Taking the form of a sense of spiritual 'fecundity' or 'maternity' involving much suffering ('I can bring forth children only on the cross'), it was accompanied by certain unpleasant hysterical and neurotic symptoms which brought constant ridicule and persecution upon her.

In 1681 it seemed as if she had found her vocation as the head of the newly-founded community of Les Nouvelles Catholiques at Gex—an institution for the training of the daughters of Protestants and other converts to the Catholic faith. But the work proved uncongenial, and it was not long before she abandoned it, taking refuge with the Ursulines of Thonon. From 1681 to 1688 her fortunes were closely intertwined with those of La Combe, who, in the autumn of 1687, accompanied her to Paris, only to be arrested on his arrival by order of the archbishop as an alleged follower of the ill-starred Molinos. Madame Guyon herself was arrested in the following January, but was released after eight months, thanks to the influence of Madame de Maintenon, who was profoundly impressed by her piety. As the *protégée* of Madame de Maintenon, she soon became a prominent figure in the inner spiritual circle of the court of Louis XIV. It was at this time that she first met Fénelon.

François de Salignac de la Mothe Fénelon was at that time a rising young ecclesiastic with a growing reputation as a director of consciences whose spiritual genius, religious fervour, and magnetic personality attracted the *belles âmes* of Paris. He was superior of the society of Les Nouvelles Catholiques, in which capacity he wrote his manual *De l'Éducation des filles* (Paris, 1687), and had been on a six months' mission to the Protestants of Poitou, which he conducted with characteristic tolerance. In Madame Guyon he saw not merely a woman of commanding gifts, but also a saint, and his championship of her cause was whole-hearted and generous. She, on her part, recognized in him the spiritual 'child' of her dreams, and the extraordinary correspondence which passed between them bears witness to what Rufus M. Jones describes as 'a subtle conquest,'¹ designated by Madame Guyon herself as 'spiritual filiation,' and abounding on her side in neurotic features. Fénelon was the cool and cautious partner in this intense relationship. His pastoral instinct and

¹ *Harvard Theological Review*, x. 41.

sound sense warned him against a spiritual condition which took its own impulses for divine movings, and he never allowed himself to forfeit reason or judgment in his admiration of Madame Guyon's spiritual genius.

In 1689 Fénelon was appointed tutor to the young duke of Burgundy, for whom he subsequently wrote *Les Aventures de Télémaque* (Paris, 1699). His success as an educator of princes brought him into high favour at court, and in 1695 he was made archbishop of Cambrai. Meanwhile, in 1693-94, the storm which had been gathering round Madame Guyon broke, and involved Fénelon in a bitter and ignoble conflict which ultimately drove him into exile. Madame Guyon's doctrines had penetrated to Madame de Maintenon's school at Saint Cyr, and this roused the suspicions of Bossuet.¹ He subjected her to a stringent examination, extending over six months and ending in her imprisonment as a heretic. Fénelon never saw her again, and he might easily have extricated himself from a very difficult and perilous position had he consented to join in signing her condemnation. This he refused to do—a refusal which lost him his many influential friends, including Madame de Maintenon.

There ensued the stormy controversy between Bossuet and Fénelon which stirred all France. In his *États d'oraison* Bossuet had condemned 'pure' faith (i.e. faith without content), disinterested love, and the prayer of quiet. Fénelon replied by publishing his famous *Explication des maximes des saints sur la vie intérieure*, in which he restated Madame Guyon's fundamental convictions in a more sober and cautious way. The book, which, in spite of its dry, guarded, and not always lucid manner, teaches Quietistic mysticism in an extreme and extravagant form, created intense excitement, and divided France into two opposing camps. Bossuet attacked its author with a personal animosity which amounted to persecution, and the court ranged itself on his side. Although Fénelon had the support of the Jesuits and the secret approval of the king's confessor, the clergy sided solidly with Bossuet, and in the end Fénelon was ordered to leave Versailles and banished to Cambrai. He appealed to Rome and, after long hesitation, the mild and cautious Pope Innocent VIII., impelled by urgent pressure on the part of the king and Bossuet, condemned as erroneous certain propositions extracted from the *Maximes*. Fénelon spent the remaining eighteen years of his life quietly in his diocese, devoting himself to the welfare of priests and people alike, and dying at the age of sixty-three, greatly beloved and lamented.

Madame Guyon suffered successive terms of imprisonment, and, after being liberated from her last prison in the Bastille in 1703, passed her remaining years in quiet seclusion at Blois, where she died in 1717.

Among the minor prophets of Quietism Antoinette Bourignon (1616-80) occupies a distinctive place. Born at Lille, she was, like Madame Guyon, a precocious child with an abnormally developed religious instinct. As a girl she wished to become a Carmelite, but was soon disillusioned regarding cloistral religion and set herself to find a better way of retirement from the world. When, in 1636, her father tried to force her into marriage, she escaped from home in male disguise. After some curious adventures she was brought back, but finally fled to Mons, where she placed herself under the protection of the archbishop, and under his patronage made a short-lived attempt to establish

¹ La Combe, whose mind had gradually given way under imprisonment, had confessed to improper relations with Madame Guyon, but the very careful investigations made by Bossuet and his fellow-inquisitors could show no ground for questioning her moral integrity.

an ascetic community on primitive lines. On the death of her father she brought a successful lawsuit against her step-mother, securing his entire property for herself. About this time she fell in with a decidedly questionable admirer of mystical religion, Jean de Saint Saulieu, who induced her to found an orphan home for girls, which she subsequently placed under Augustinian rule. The experiment came to an abrupt end in 1662, when she was accused of gross cruelty to her young charges and had to take flight. Her enforced wanderings took her to Mechlin, where she found her first 'spiritual child,' Christian de Cort, superior of the Oratorians. By this time she had developed her system (if such it can be called), which embodied the characteristic features of extreme Quietism in a fantastically exaggerated form. As in the case of Madame Guyon, 'spiritual maternity' occupied a central place in her consciousness. She was 'the woman clothed with the sun,' 'the bride of the Holy Ghost,' God's chosen vessel who would restore 'the Gospel spirit' to the world, 'the virgin who would bear many sons' and found a communistic, priestless brotherhood.

In 1662 she went with de Cort to Amsterdam, where she spent a period of happy intercourse with the many heretics who had made that city their Cave of Adullam. An attempt, inspired by de Cort, to found a community house for her spiritual children on the island of Nordstrand in the North Frisian Sea, and the long series of difficulties and complications to which it gave birth, occupied the rest of her stormy life. The mad scheme involved de Cort in financial difficulties from which only a premature death—in prison—released him, and embittered her remaining years. Her capricious, overbearing, stingy disposition and her entire impracticability involved her in endless legal proceedings, and finally forced her to flee once more. A few years later a printing-press which she had set up at Husum brought her into conflict with the authorities and revived the flame of persecution. For a time it seemed as if she had found a refuge with another of her spiritual sons, the eccentric Colonel La Coste. But a miserable quarrel led to his formally accusing her of sorcery in 1679, and once more she had to flee to escape arrest. She remained in hiding until her death in the following year. Her voluminous writings, which she professed to have 'received' inwardly by inspiration, abound in fantastic and neurotic elements, yet she exercised a remarkable influence over minds finer than her own, among them Comenius and Jean de Labadie. Indeed, her extraordinary influence extended to almost every land and continued long after her death. In Scotland especially she had so many followers among the clergy that from 1711 until recently 'Bourignonism' was included in the list of heresies which candidates for ordination in the Church of Scotland were required formally to forswear.

Among those who represented the practical and devotional aspect of Quietism as it appealed to the unlearned, Nicolas Herman of Lorraine (Brother Lawrence) is the classic example. Born about 1610, he was first a soldier, then a gentleman's servant, and finally a lay brother in a Carmelite monastery, where he was charged with the humble duties of the kitchen. His *Practice of the Presence of God*, as set forth in his letters, which is to-day among the best-known devotional books, expounds the central doctrines of Quietism with a winsome simplicity and a rare degree of practical wisdom. His *Maxims* give further instruction to those who would realize the presence of God along the same homely and wise lines. He died in 1691.

LITERATURE.—I. GENERAL.—The standard work is H. Heppé, *Gesch. der quietistischen Mystik in der katholischen Kirche*

Berlin, 1875 (the most valuable and authoritative study on the subject, containing the text of many important and now lost documents); J. B. E. HERMAN.

QUR'ĀN (Koran, Alkoran, etc.).—i. Names.—The names of this, the sacred book of the Muslims, are reckoned at fifty-five, of which the most familiar and the most frequently used in the book itself, *al-Qur'ān*, seems to mean 'The Lesson,' being the abstract noun of the verb *qaraa*, 'to read,' 'to recite,' occasionally employed in the original sense.

E.g., lxxv. 17: 'Verily upon us is the collecting and the reading (*qur'ān*) thereof; and when we read it, follow thou the reading (*qur'ān*) thereof'; xxviii. 85: 'He who enjoined on thee the reading'; x. 62: 'Thou dost not recite any reading thereof,' where the word *qur'ān* is used as the verbal noun of the synonymous verb *talā*, 'to read.'

The word is normal in formation (cf. *kufran*, *ghufrān*, *rujhan*), and is not borrowed from any other language, though it may be an imitation of the Hebrew *miqrā*, applied by the Jews to the Bible, of which the Arabic analogue *magra* is occasionally used for 'reading'.¹ Other etymologies are collected by Suyūṭī (see below), but they are fanciful, though it is worthy of note that a grammarian of eminence pronounced the word *quran* as though the root were *grn*, 'to associate'; and his interpretation 'collection' is at least suggested by lxxv. 17 (cited above). The word is not used by Muslims except of their sacred book, but Jews and Christians sometimes employ it as a designation of their Bible. Almost as familiar is the name *Mushaf*, of which it is said to have been invented by the Khalifah Abu Bakr, and is evidently the Ethiopic for 'book.' The word *kitāb* (Arabic for 'book') is often used as a name of the Qur'ān in the work itself and in the principles of jurisprudence, but ordinarily requires some eulogistic epithet (e.g., 'the perspicuous book'). Both this word and *Qur'ān* can be used of separate texts as well as of the whole. The name *Mufaṣṣal* is applied to the last seventh of the Qur'ān, but, as it repeatedly described itself as a book 'whose texts are distinct' (*fusṣilat*), there seems no reason why it should not be applied to the whole work;² and indeed there are various opinions as to the portion of which this name may be used.³ The etymology of the name *Furqan* in xvii. 107, 'A Qur'ān, which we have divided up (*faragāhu*) that thou mightest recite it unto the people leisurely,' is probably correct, this name being more properly applied to a book supposed to have been revealed to Moses and Aaron, Hebrew *prāqim*, i.e. 'sections'; but this particular form is Syriac and means 'deliverance'—a sense which it sometimes has in the Qur'ān. The Hebrew *Mishnah* (Aram. *Mathnitha*) seems to underlie the name *Mathānī*, said to be the plural of *mathnāt*, which appears to be used of the whole Qur'ān in xxxix. 24, whereas in xv. 87 the Deity states that He has given the Prophet seven *mathānī* and the mighty Qur'ān. The interpretations of this passage are very numerous and divergent, as may be seen from Lane, p. 300. Other names are descriptive or eulogistic—e.g., 'The Guidance,' 'The Wise Record,' 'The Revelation.'

The chapters of the Qur'ān are called by the enigmatic name *sūrah*, plural *suwar*, of which no satisfactory account has as yet been given. It is sometimes explained from the Hebrew *sōrāh* (Is 23²⁸), 'row,' 'order,' used in the Jewish oral tradition for a row or rank of men,⁴ but this seems to violate a sound-law. It is said to be used for a row of bricks in a wall, in which case it is clearly derived from *sūr* (Heb. *shūr*), 'wall,' and its transference to the region of literature might be analogous to that of 'column.' In the Qur'ān it evi-

⁴ See J. Levy, *Neuhebräisches . . . Wörterbuch*, Leipzig, 1876-80.

lently means 'homily,' 'discourse,' and is usually construed with the verb 'to send down.' Thus xxiv. styles itself 'a *sūrah* which we have sent down and ratified and wherein we have sent down clear signs.' Probably both sense and form are adequately accounted for by identification with the Syriac *sbharta*, 'preaching,' 'gospel,' 'message,' as in the title of Mark 'the Holy Gospel, preaching (*sbharta*) of Mark,' etc. The separate texts are called *āyah* (plural *āy* or *āyāt*), often used for 'sign' or 'miracle,' and clearly identical with the Hebrew *ōth*, 'sign,' 'letter,' 'miracle.' Its sense 'letter' is perhaps retained in the opening verses of certain *sūrahs*, where after a series of letters of the alphabet there follow the words, 'Those are the signs of the perspicuous book,' etc.

2. Contents.—Owing to the miscellaneous character of the work, which professes to contain 'a detailed account of everything' (xii. 111), the rapidity of its transitions, and its interminable repetitions, an analysis of its contents cannot easily be made. Those who furnished the chapters with names called them after the first words or letters, after some striking word or phrase occurring within the homily, or after some subject which occupied a prominent place in it. A certain amount of variety still exists in the naming of particular *sūrahs*, and in earlier times there seems to have been yet more. In the case of *sūrah* xii., which is called after Joseph, very nearly the whole homily is occupied with the story of the patriarch; but the second *sūrah*, which is of 286 verses, is called after 'the Cow,' described in four verses (63-66); while *sūrah* xxvi., of 228 verses, is called after 'the Poets,' with whom only three verses at the end deal; *sūrah* xvii. is called 'Asra' after a word occurring in the first verse, *sūrah* xxiv. 'Light' after verse 35. When a *sūrah* is called after a particular person, it must not be inferred that the homily deals exclusively with that person, or even gives his history more fully than it is given elsewhere.

The contents are mainly warnings, remonstrances, and assertions of or arguments in favour of certain doctrines, the narrative portions being for the purpose of enforcing morals. These narratives are for the most part of events in the remote past; but allusions to contemporary history and to the Prophet's own experiences are frequent, their purpose being to warn or to apologize. The two final *sūrahs*, each of a few words only, are incantations; xxi. is an imprecation on a contemporary foe, and lxxx., lxxxiii., and civ. are similar in purport, though the enemy is not named. The warnings being mainly of future punishment, the book abounds in realistic descriptions of both the pains of hell and the delights of paradise.

Legislation occupies a very small place in the work; hence its claim to give a 'detailed account of everything' occasions trouble even when 'everything' is restricted to the region of law.¹ Collections of commandments are indeed to be found in various places—e.g., vi. 152f.—and precepts on various subjects are scattered throughout the work, the most detailed being probably those connected with inheritance in iv. 12-16, to which verse 175 is a supplement, and those in xxiv. 2-9 dealing with adultery and accusations of it. Enactments on various subjects are also to be found in *sūrah* ii. The character of the Qur'anic legislation resembles rescripts (*fatawā*)—i.e. answers to special questions—rather than a code; and that the collection contains contradictory rulings on the same subjects is admitted by jurists, though this is variously explained. Where narratives occur in a series, there is at times an attempt

at maintaining chronological order, but at other times it is neglected.

The narratives most frequently recounted are those connected with Noah, Abraham, Lot, Moses, and the otherwise unknown prophets Hūd, Šaliḥ, and Šu'aib. The story of Adam is told in ii. vii., and xx., that of the nativity of Christ in iii. and xix.; numerous stories are told only once—e.g., that of Tālūt (a combination of Gideon and Saul) in ii., that of the Queen of Saba and King Solomon in xxvii., that of the Seven Sleepers in xviii., which also contains a fresh story about Moses and one about Dhu'l-Qarnain, thought to be Alexander the Great. Of the OT prophets the Qur'an knows Elijah and Jonah; it also contains some information about David and Job. Of Arabian history it knows the name Tubba' (xliv., 1.); the ruin of the Sabæan empire (xxxiv.); the persecutions of the Christians in the Jewish state of S. Arabia (lxxxv.), if the last passage is correctly interpreted; and the Abyssinian attack on Meccah (cv.), if the interpretation be correct and the attack historical. Of contemporary history outside Arabia, it notices the Persian invasion of the Nearer East.

Where the same story is repeated, the various versions at times contain fresh details; thus *sūrah* xl., 'the Believer,' is called after a believing subject of Pharaoh who delivers a monotheistic homily, but does not figure elsewhere; and in xi. 46 there is an account of a disobedient son of Noah who perishes in the Flood, and who also is not mentioned elsewhere in connexion with the patriarch. Though the story of Moses is often told, his adventures in Midian are recounted only in *sūrah* xxviii. These repeated versions, then, to some extent supplement one another, though they cannot always be harmonized.

The tendency of the author is to prefer the apocryphal accounts to the plainer narratives in the canonical Scriptures, whence Solomon is represented as understanding the language of the lower animals and having at his disposal the forces of the *jinn*; the mountain is said to have been raised over the heads of the Israelites, and Jesus to have made birds of clay and animated them.

Descriptions of the phenomena of nature are not uncommon, though usually exceedingly brief; their purpose is of course not scientific, but the demonstration of monotheism.

A certain amount of the matter is introspective, taking (as usual) the form of personal addresses by the Deity to the Prophet. The consolatory *sūrahs* (xciv. and xciii.) are striking specimens of this class; lxxiii. and lxxiv., which contain exhortations to the Prophet, are similar; lxxii. describes a personal experience which the Prophet is told to repeat; it is how certain of the *jinn*, hearing the Qur'an recited, were converted. Three *sūrahs* deal with his domestic affairs, which of course were of importance to the whole community, and in one of these (xxxiii.) his wives are apostrophized. The only names of contemporaries mentioned in the book are those of his adopted son, Zaid, and his unbelieving uncle, Abu Lahab. Allusions to others occur, but reliance has to be placed on the tradition for their identification.

Owing to the intensity of the Prophet's loves and hates and other emotions, and the frequency with which the expression of these takes the form of a revelation, the Qur'an might in many parts be described as the author's diary or commonplace-book; it records doubts felt by himself as to the reality of his mission and its likelihood of success, critical situations at different times in his career, what he said when they occurred, and hard blows which he received and gave. It thus constitutes the most important set of materials for

¹ See Ghazālī, *Mustafā*, Cairo, 1324, ii. 256.

his biography, its utility being somewhat impaired by the absolute want of chronological arrangement, which has to be conjecturally restored chiefly on the basis of the later official biography, which is itself largely based on the Qur'an.

3. Sources.—That the material of the Qur'an is in the main identical with that of 'the Former Leaves,' i.e. the Jewish and Christian Scriptures, is admitted in the work itself; these 'Leaves,' more accurately described as 'the Leaves of Moses and Abraham who was faithful,' are quoted in liii. 37-55 for a variety of matters.

The first, 'that no burdened soul shall bear the burdens of another and that there is nothing accounted to a man save what he has wrought,' comes from Ezk 18²⁰; verse 45, 'and that he causeth to die and maketh alive' is from 1 S 28, which is followed by a clause cited with fair accuracy in verse 49 as 'He enricheth and causeth to possess.' Further, verses 53 and 54 refer to Genesis, where the destruction of the 'people of Noah' and of the 'overturned cities' is described. Verse 50, 'that He is the Lord of Sirius,' may be identified with Job 9⁹, the name of the star being altered for the rhyme.

The narratives of the destruction of the tribes 'Ad and Thamud, also quoted from these 'Leaves,' are certainly not to be found in the Christian Scriptures; but this is not a serious inaccuracy. 'The Law' (*Taurāt*) is quoted in verse 49 for the rule, 'soul for soul, and eye for eye, and nose for nose, and ear for ear and tooth for tooth'; the reference is to Ex 21²³, where, however, 'hand' and 'foot' are found instead of 'nose' and 'ear.' The Psalms (*Zubūr*) are quoted in xxi. 105:

'We have written in the Psalms after the Record: My pious servants shall inherit the earth.'

The reference is to Ps 37²⁹, but the phrase, 'after the Record,' is most obscure. The Mishnāh of *Sanhedrin*, iv. 5, is cited in v. 35:

'On account of this we have written for the Children of Israel that whosoever slays a soul save for a soul or for mischief in the land, it is as though he had slain all mankind; and whosoever saves one, it is as though he had saved all mankind.'

The exceptions are not found in the text of the Mishnāh, but otherwise the citation is accurate. A somewhat vaguer reference to the Law and the Gospel is in xlviii. 29:

'That is their likeness in the Law and their likeness in the Gospel: like the seed which putteth forth its stalk, then strengtheneth it and it groweth stout, and riseth upon its stem, rejoicing the husbandman.'

The reference to the Gospel appears to be to Mk 4²⁶⁻²⁹; perhaps that to the Law is to Ps 72¹⁶.

These are probably the only actual quotations; reproduction of matter or of phrases occurring in the OT, the NT, the Talmud, or the NT Apocrypha is found throughout the Qur'an, and this is at times sufficiently close to render the term 'quotation' not inappropriate.

Noticeable cases are vii. 39: 'Nor shall they enter Paradise until the camel passeth through the eye of the needle' (Mt 19²⁴); xxi. 104: 'The day whereon we shall roll up the heaven as the scribe (ʾ) rolleth up the book' (Is 34⁴); xxviii. 76: 'We gave him [Corah] treasures of which the keys would weigh down a company of strong men' (B. *Pesahim*, 119a: 'The keys of the treasures of Corah were a burden for three hundred white mules'); xxxi. 26: 'If all the trees that are upon the earth were to become pens, and if God should order that swell the sea into seven seas [of ink], His words would not be exhausted' (Midrash *Rabbah*, Ca 12: 'If all the seas were ink, and the thickets pens, the heavens and the earth scrolls, and all mankind scribes, they would not suffice to write the Law').

From these quotations and borrowings it would not be permissible to infer that the author of the Qur'an had direct access to the Bible, Apocrypha, and Talmud; still less would it be permissible to infer from their inaccuracies that he had no such access; for the limits to inaccuracy in quotation cannot be fixed, and even in our own time, when numerous appliances make the verification of quotations exceedingly easy, we find experts in Homer confusing Andromache with Penelope, etc., and Biblical experts confusing Joseph with Daniel, etc. When verification was a cumbrous process, the standard of accuracy was far lower. Now, the Qur'an exhibits intimate acquaintance with

the books of Genesis and Exodus, out of which it reproduces numerous chapters—sometimes, it is true, mixed up with Midrashic matter; and this reproduction is often accompanied with serious inaccuracy, as when Moses is said to be sent to Pharaoh, Haman, and Qarun (Corah). In both matters its method resembles that of the NT, where, e.g., Stephen confuses Abraham with Jacob (Ac 7¹⁶), and Paul uses Midrash as though it were Scripture (1 Co 10⁴), though doubtless it differs in degree. The latter practice seems to come from the constant association of certain comments with the text, and has its parallel in professedly scientific works of our own time, where, e.g., the statements of the Homeric poems are mixed up with inferences drawn from them by later authors. The most natural conclusion would be that the Prophet had at some time studied those two books (Genesis and Exodus) with the aids current among the Jews, and had afterwards reproduced his information without verifying his references. His acquaintance with other parts of the OT is much slighter, yet he displays some with the books of Judges, Samuel, and Kings. In these cases, too, Midrash is mixed up with Biblical matter, and the attempt to reproduce the story of the scene between David and Nathan (xxxviii. 20-23) suggests that he had known the story at one time, but had afterwards forgotten its context and many important details.

Of the NT he clearly knows far less, the only personages belonging to it whose names he mentions being Zacharias, Yahyā (John the Baptist), Maryam (the Virgin), Isā (Jesus), and the angel Gabriel. Maryam is the daughter of Imrān (Amram), and the sister of Hārūn (Aaron). His 'Gospel of the Nativity' (in *sūrah*s iii. and xix.) is similar to what is found in the *Protevangelium Jacobi Minoris*, but contains certain details drawn from other sources; one of these, that the Virgin supported herself on a palm-tree during her throes, is clearly traceable to the Greek myth of Leto. The employment of the title 'Word' (*kalimah*) for Christ must go back to the Fourth Gospel.

The difficulty of assuming that the Biblical matter of the Qur'an was got at first hand from books lies in the fact that there is no evidence of any parts of the Bible having been translated into Arabic before Islām—even the tradition that Khadijah's relative Waraqah translated a Gospel is obscure, and may mean merely that he copied it—and none of the Prophet having studied any language but his own, coupled with the circumstance that both the proper names and the names of religious technicalities in the Qur'an belong to some four different languages. Thus *Jahannum* (Gehenna) is Hebrew, *Nūh* (Noah) Syriac, *Alyās* (Elias) and *Yūnus* (Jonas) Greek, *Shaitān* (Satan) Ethiopic. Of the form used for Jesus no satisfactory explanation has as yet been given. The assertions made by the Meccans, viz. that the Prophet had gone to school (vi. 105), that he had assistants (xxv. 5), or one foreign teacher (xvi. 103), and that his helpers dictated to him morning and night, though probably containing some truth, fail to account for all the facts.

A curious Hebraism is to be found in the name for Christians, *Anṣār*, explained (with reference to the apostles, whose name in the Qur'an is Ethiopic) as 'Helpers of God'; this is evidently the Hebrew *Nos'rim*, 'Nazarenes,' which, however, might be rendered 'protectors'; the Arabic sense 'helpers' is very close. The name for 'the Law,' *Taurāt*, is also Hebrew; probably it should have been pronounced (as it is written) *Torah*. That for the Gospel, *Inḡil*, is near, but not quite identical with, the Ethiopic *Wangel*; that for the Psalms, *Zubūr*, appears to be derived by popular etymology from

the Syriac *Mazmūrē*. Names which seem to be Biblical but cannot be identified with certainty are those of the prophets Idris, Dhu'l-Kifl, and Dhu'l-Nūn. The subject from which *sūrah* v., said to be the latest, derives its name, 'the Table,' appears to exhibit a strange conflation of different matter; the apostles (v. 112) ask 'Isā to pray that a table be sent down to them from heaven, and he, after rebuking them, prays that it may be sent down 'to be a festival to the first and to the last of us'; and the prayer is answered. The basis of this appears to be the phrase 'the table of the Lord,' in 1 Co 10²¹; but there seems also to be an allusion to Christ's feeding of the multitude and to the vision of Peter (Ac 10⁹⁻¹⁶). The extent to which the Prophet's memory and imagination, or the peculiarities of his informants, gave rise to these and similar statements will never be accurately determined. Had we not the *Protevangelium*, we might have attributed to him the confusion between Samuel and the Virgin Mary which appears in *sūrah* iii. Certain lost works appear to have contained matter which resembles what is found in the Qur'an; e.g., the *Πελοδοι τῶν Ἀποστόλων*, excerpted by Photius, had the statement that not Christ but another had been crucified, which is near the Qur'anic doctrine (iv. 156), in which the Jews are charged with falsely asserting that they had killed Christ, whereas this had happened only in semblance.

Of matter that is not Biblical but is obtained from Christians, the story of the Seven Sleepers (*q.v.*) and probably that of Dhu'l-Qarnain are examples; that of the adventures of Moses with a person called by the Muslims al-Khidr is said to have a similar origin. Of acquaintance with any foreign literature other than that belonging to these communities there appears to be no certain trace, though there are references to the Magians, whose literature is known, and the Sābians, who are still a puzzle. When we read, 'The whole doctrine of the Qur'an concerning Iblis and the genii, or Satans of the Qur'an, has been borrowed for the most part from the Magi of Persia,'¹ it is hard to see how this can be proved. For the data of the Qur'anic story are Biblical; that Adam was created from earth is known from Gn 2⁷, and that the 'ministers' are of flaming fire is known from Ps 104⁴; that the words, 'Let all the angels of God worship him' (Ps 96⁷ LXX), were said on Adam's entry into the world is known to the author of the Epistle to the Hebrews (16). The doctrine that fire is more honourable than earth, whence Satan's refusal to carry out this order is intelligible, and made the ground of it, is an Aristotelian commonplace. What we have then is a Midrash worked up in Qur'anic style, precisely as the story of Abraham and his father's idols (xxi. 52-71) is worked up from the material preserved in *Genesis Rabbāh*, 38.

That there was no native literature in the possession of the Arabs to whom the Qur'an addresses itself is stated so frequently and emphatically that we are compelled to believe it.

Passages of this type are xlv. 3: 'Bring me a book before this or a monument of knowledge, if ye speak true'; lxviii. 37: 'Have ye a book wherein ye study?'; xxxiv. 43: 'We have not given them any books to study nor sent them any one to warn them before thee'; xxxv. 38: 'Have ye given them [i.e. the pagan deities] a book, wherein they have proofs?'; xxxii. 2: 'That thou mayest warn people to whom no warner came before'; xxxvii. 158: 'Have ye any clear authority? Then bring your book, if ye speak true'; lii. 41: 'Are they in possession of secrets and do they write?'; lxii. 2: 'He it is who hath sent among the illiterates a messenger of themselves to read unto them His signs.'

Clearly, then, the Prophet had not, like the Christian missionaries among the pagan Greeks, to overthrow the authority of books which served to maintain an older system; nothing could be

cited against his assertions but immemorial practice. Although the language of the Qur'an must represent in the main that which was current in Meccah when it was composed, and to the creation of that idiom many persons must have contributed, it is improbable that the Prophet had in the language of his country any literary model to which he was indebted for either form or matter. He does, indeed, know of the existence of poets, who 'roam in every valley and say what they do not do' (xxvi. 225), and was himself charged with being a *jinn*-ridden poet, though he asserts that God had not taught him poetry; but it is evident, both from what the Qur'an says on the subject of these persons and from what it puts into the mouth of the Prophet's adversaries, that they were not writers of authority who aspired to become national classics.

According to Ṭabari,¹ certain Arabs in the Prophet's time possessed the book of Luqman, some of whose sayings are reported in *sūrah* xxxi. In the later literature he figures as a writer of fables and is often quoted for maxims; yet it is doubtful whether anything was known about him except from the passage in the Qur'an. The story of Thamūd and their prophet Šālih is located in N. Arabia, and the name of the tribe is attested by classical geography; the rock tombs were mistaken by its author for houses; the source of the story is unknown, as is that of 'Ād and their prophet Hūd. Ṭabari derives this tribe from the son of the Biblical Uz, also located in Arabia. The name seems to be the Biblical word for 'eternity,' and to be about as historical as Cadmus. The phraseology and to some extent the statements of the Qur'an are often illustrated from 'pre-Islāmic poetry'; and some of this came to be recognized as classical at any rate in the early Abbāsid period. These poets, unlike those of other communities, seem to be entirely ignorant of their national or tribal religions, whence it has been suggested that they were all Christians! There appears, however, to be no possible method of reconciling their existence with the statements of the Qur'an cited above; for, even if these had been shameless falsehoods, the work should have produced some argument or reason for ignoring the poets' words, which (e.g., the *Mu'allaqah* of Zuhair) contained moral precepts and at times accounts of the very matters narrated in the Qur'an (e.g., the poems of Umayyah b. Abi Šālt).

The source of every statement or expression in the Qur'an cannot of course be traced, and there is no reason for denying its author considerable originality. The requirements of the rhyme must of themselves have led to the invention of new phrases, and even of historical details—e.g., the location of the call of Moses in 'the holy vale Tuwā' (lxxix. 16), and of the meeting between Moses and the sorcerers 'at midday' (xx. 61). The same consideration perhaps dictated the specification of the 'tree Zaqqūm' as the food of the damned, which seems to have provoked criticism at Meccah (xvii. 62), and the description of Pharaoh as 'the man of the stakes' (*dhu'l-untad* xxxviii. 11, lxxxix. 9), though this may conceivably be a misunderstanding of the Greek word *αὐθάδης*. Originality is doubtless displayed in the descriptions of hell and paradise, though in these some details are traceable to the Johannine Apocalypse.

The claim to speak by inspiration and not as the result of study is in itself not different from that urged by other poets, who professedly obtain their information from the Muse, etc. It may have been taken too literally by the Prophet's opponents, and consequently, as it could not be withdrawn, it had to be maintained as a fact.

¹ E. M. Wherry, *A Comprehensive Commentary on the Qur'an*, London, 1882-86, i. 801.

4. Original theory of revelation.—The Qur'an is, on the one hand, something written, on the other, something read or recited. The written document, however, is in heaven.

It is 'an honourable Qur'an in a hidden book which shall not be touched save by the cleansed' (vi. 76);

and this is somewhat elucidated by another passage:

'It is a record on honourable, cleansed, exalted leaves in the hands of honourable, pure scribes' (lxxx. 11-14).

The 'cleansed leaves containing permanent writings,' which 'are recited by an Apostle from God' (xviii. 2), are thus thought of as in heaven; and in vi. 7 the 'book' is clearly distinguished from such as are on ordinary materials:

'Had we sent down unto thee a book written on parchment, and they had touched it with their hands, the infidels had surely said: "This is nought but plain sorcery."'

Since in vii. 142 it is stated that the Deity wrote for Moses on the Tables a homiletic and encyclopædic work similar in character to the Qur'an, which is itself said to be on 'a guarded table' (lxxxv. 22), it would seem that revelation means the mental perusal by the Prophet of the divine book which is in heaven, whose contents he communicates to his countrymen. And indeed the Jews are spoken of as 'those who read the Book before thee,' whom the Prophet is to consult, if he has any doubt about his revelations (x. 94). It is suggested that the language of the divine original is heavenly (xliii. 2f.), which is then translated into Arabic so as to be intelligible. Of the divine language it is probable that the letters prefixed to some of the *sūrah*s are specimens. This theory accounts in part for the fact that so many of the *sūrah*s are repetitions of the same matter; the reproduction by the Prophet of the portions of the divine book which he was privileged to peruse would not necessarily be verbally coincident. The book is brought down by 'the Faithful Spirit' (xxvi. 193), called Gabriel (ii. 91), to the Prophet's heart, while it is also in the books of the ancients (xxvi. 197), and in the breasts of those to whom knowledge has been given (xxix. 48), i.e. learned Israelites (xxvi. 197). For even the reduction of the Law of Moses to parchment is supposed to be an innovation (vi. 91), its proper seat being the memory of the rabbis (v. 48). It might have been revealed in a foreign tongue (xxvi. 198, xli. 44), but this would have involved various objections. Apostles are sent speaking the language of their own people only (xiv. 4); hence the notion of reproducing the contents of a concealed book has a tendency to give way to that of bearing a message, which the messenger would naturally express in his own words.

There does not appear to be any reference in the Qur'an to any but oral communication of its contents. The passage cited above from vi. 7 plainly indicates that it was not produced on parchment; and similarly in xvii. 95 the Meccans ask for a book to be brought down from heaven 'which they can read themselves.' The texts are recited either by the Prophet or by his followers (xxii. 71); there is little suggestion that the one or the other employed a written copy, though perhaps vi. 146, 'I find not in what has been revealed to me save . . .,' might be interpreted of a search through MSS. Hence, when the Qur'an quotes itself, it quotes rather the general sense than the exact words of the passages:

E.g., iv. 139: 'He hath sent down unto you in the Book that when ye hear the Signs of God denied and mocked, ye shall not sit with them until they discuss another topic.' The passage cited is vi. 67: 'When thou seest those who discuss our Signs, then leave them alone until they discuss another topic, and if Satan cause thee to forget, then sit not with the ungodly people.'

Where obliteration of texts is mentioned, the reference is to alterations made by the Deity in the divine original (xliii. 39, xliii. 23); to erase in

this case has for its equivalent 'to cause to be forgotten' (ii. 100).

The tradition at times agrees with the Qur'an in this matter, as where the Prophet is made to confess that he has forgotten a text which is recited to him, the genuineness of which he acknowledges,¹ or to explain differences between the forms in which the same text is current by the theory that the Qur'an had been revealed in seven different forms.² At other times it assumes that some one or other wrote down the texts as soon as they were delivered and kept a copy; so Zaid b. Thabit was summoned by the Prophet to write down a text which had been revealed (iv. 97), and brought a shoulder-blade for the purpose; presently some one complained that the verse was hard upon him, and some additional words were revealed meeting the case.³ Certain verses were lost because A'ishah kept the scroll which contained them under the Prophet's bed, and let it be worm-eaten during his illness.⁴ Long lists were given of people who 'copied down the revelations.'

On the whole, the phenomena displayed by the Qur'an itself render it difficult to suppose that it was committed to writing in the Prophet's time, though its character was greatly changed by the transference of Islam from Meccah to Medinah. The claim to uniformity and consistency which it urges is more intelligible if it is thought of as a lecturer's treatment of a subject than if it is regarded as a permanent document; the repetitions of the same narratives with insignificant variations are natural in the former case, almost unthinkable to the extent to which they are found in the Qur'an in the latter. But, if any revelation became fixed in writing, the need for having the whole so fixed would speedily make itself felt. The assertions that the statements of the Qur'an were absolutely consistent with one another and with the earlier Scriptures, which were reasonable enough when men were concerned with the general sense of what had been uttered, assumed a very different character when, by being committed to some writing material, they became definitely fixed.

When an official copy had been circulated to the exclusion of others, a theory of verbal and even literal inspiration began to be evolved, and ultimately became dominant, though loose citation is sometimes found where we should least expect it; thus Bukhārī⁵ says that the text, 'except that ye knit a relationship between me and you,' was revealed, but the commentators acknowledge that they cannot find it, and suppose the words to be a paraphrase of xlii. 22: 'save love of my kin.' Ibn Mas'ūd († 32), when ordered to alter his copy in accordance with the official text, declared that he had heard seventy *sūrah*s from the lips of the Prophet, and could not adopt these alterations;⁶ readings of his were employed as late as 322 A.H., when their use was forbidden on pain of execution,⁷ and the books which contained them were burned.⁸ These variants consisted mainly in the substitution of synonyms for the words of the text. Hence grammarians began to cite 'God who is exalted' for grammatical forms and rhetorical ornaments. A Masorah arose which counted not only chapters and verses but words and letters (the various computations are given by Suyūṭī, § 19). A pious woman never spoke except from the Qur'an for forty years, for fear of uttering what was false.⁹

In the early days of Islām inaccurate citation was common for a time at least; a Khārijite woman declared that the ignorance of God's book displayed by Umayyad governors had led her to revolt.¹ Fragments which, whether by the Prophet or not, were not included in the official Qur'ān were here and there preserved as having once belonged to it; and, when a reader made a spurious addition to a *sūrah*, it was not always easy to detect its inferiority to the genuine matter.² Stories are told of lengthy interpolations by ministers in public worship who desired to further their own ends,³ and of others which were harmless supplements to the texts.⁴ See, further, art. INSPIRATION (Muslim).

5. Chronology and arrangement.—The order of the *sūrahs* (114 in number) is evidently according to length, but this is far from strict, and early traditions suggest that certain *sūrahs* were grouped together owing to their reaching a certain length, but that their order within those groups was haphazard.

In the *Musnad*⁵ we read: 'Said Ibn 'Abbās: I said to 'Uthmān: What induced you to take the Surah Anfāl (viii.) which is one of the Mathānī [*sūrahs* of less than 100 verses?] and the Surah Barā'ah (ix.) which is one of the hundreds [*sūrahs* of between 100 and 200 verses?], and write them, not writing between the two the words "In the Name of God," etc., and to place them among the seven long *Sūrahs*? He said: 'As time passed numerous *Sūrahs* were revealed to the Prophet: when something was revealed to him, he used to summon one of his scribes and bid him place it in the *Sūrah* wherein such and such matters are mentioned; when a group of texts was revealed, he used to say, Place these texts in the *Sūrah* wherein such and such matters are mentioned; and he would say the same when a single text was revealed. Now the *Surah Anfāl* was one of the first of the Medinese *Sūrahs*, whereas the *Surah Barā'ah* was one of the last *Sūrahs* of the Qur'ān; but it resembled the other in matter, so we supposed that it belonged to it, and the Prophet died without distinctly asserting that it belonged thereto. This was the reason for our procedure.'

In the same work⁶ we are told that al-Hārith b. Khazamah brought 'Umar the last two verses of *sūrah* ix.; 'Umar recognized them as having been uttered by the Prophet; had there been three, he added, he would have made of them a separate *sūrah*; as there were only two, he bade al-Hārith find a suitable place for their insertion; he accordingly placed them at the end of *sūrah* ix.

These traditions indicate that both the second and the third Khalifahs had a hand in the arrangement of the Qur'ān, though in the main the arrangement was the Prophet's; and it is noticeable that 'Uthmān, who, according to the most familiar tradition, is responsible for the circulation of a uniform copy and the destruction of all others, in a saying put by Tabari into the mouth of one of his murderers,⁷ was the first whose hand wrote the *Mufaṣṣal*, implying that his edition was the first written edition. Usually the collecting of the Qur'ān is placed in the reign of the first Khalifah, whose scruples were overcome by the fear that the book might be lost if the readers should perish in the wars; and indeed it was asserted that parts actually perished with some of the martyrs of Yemamah;⁸ but admirers of 'Ali declared that he, noticing the bewilderment that arose after the death of the Prophet, immediately made a copy of the Qur'ān from memory in three days; and this, wanting some leaves, was said to be still in existence in the 4th century.⁹ If there were any truth in this story, the copy should have wanted those verses which the person—Zaid ibn Thābit—who is said to have edited the ordinary text found with difficulty; so, according to Bukhārī,¹⁰ when he

copied the leaves into his edition, he missed a verse (xxxiii. 23) which he had heard the Prophet recite; finally he found it in the possession of Khuzaimah, the Anṣārī, whose evidence was worth that of two men.

The persons who produced these stories had to account for a fact which is generally acknowledged, viz. that the *sūrahs* often contain matter which belongs to very different periods, coupled with the assumption that single texts or small groups of texts were often revealed. If, e.g., ix. 85 was a special revelation for the instruction of 'Umar,¹ whereas ix. 1-10 was delivered on a different occasion to 'Ali,² how came these various texts and groups of texts to form one unit called a *sūrah*? In the *Musnad* the location is said to have been dictated in most cases by the Prophet; and the tradition admits that the *sūrahs* had as yet neither names nor numbers, so that they could only be distinguished as 'containing such and such matter.' Perhaps the only passage in the Qur'ān which suggests that the Prophet arranged the texts is viii. 67, which restricts the promise of verse 66, that 100 Muslims should overcome 1000 unbelievers, to a promise that they should overcome 200, prefixing to the reduction the words, 'Now God has lightened your burden, knowing that there is weakness in you,' where the word 'now' indicates that an interval has passed between the two promises. But the suspicion lies near that this reducing verse is not from the Prophet himself, but from some later annotator. Ordinarily, where one statement corrects another, they are widely apart. So in viii. 9 the fighters at Badr are promised a reinforcement of 1000 angels; but in iii. 120 f. the number is increased to 3000 or even 5000, though the occasion on which the promise was made is the same, and the same comment is added on both (viii. 10 and iii. 122). It could scarcely have been the Prophet's intention to let both reports of his oracle remain.

Hence it is more usual to suppose that the *sūrahs*, where they are evidently collections of matter belonging to different times, represent the results of private effort, and the process called 'collecting the Qur'ān' probably refers to this preliminary putting together of revelations delivered by the Prophet. According to the tradition, as early as the battle of Uhud (A.H. 3) special honours were assigned to those who had collected the Qur'ān, and in proportion to the amount which they had collected; one Mujammi', son of Hārithah, who figures in some incidents of the Prophet's biography, got his name from his carrying out this process;³ the name of the first person who 'collected the Qur'ān' in Yemen is recorded;⁴ and we are told that 47 men of one tribe, who had collected the Qur'ān, were killed on one morning.⁵ Four persons are mentioned in the tradition as having collected the Qur'ān in the Prophet's time.⁶ Where, then, the same verses with slight differences are found in different *sūrahs*, the Prophet may be repeating himself, or the repetition may be due to our having the matter in the collections of different persons.

Cf., e.g., liii. 61: 'Say, O ye that have Judaized, if ye profess that ye are friends of God out of all mankind, then desire death if ye speak true. But never will they desire it owing to their previous handiwork, and God knoweth concerning the wrong-doers,' with ii. 88 f.: 'Say, if the last world be yours exclusively out of all mankind with God, then desire death if ye speak true. But never will they desire it owing to their previous handiwork, and God knoweth concerning the wrong-doers.'

It is hard to say whether this represents two reports of the same message to the Jews, put together by different collectors, or two messages delivered by the Prophet at different times, with a

very slight difference in the wording. And similar cases are frequent, notably the statements about the miracles in the wilderness, the entry into the Holy Land, and the transformation into apes of Israelites who broke the Sabbath, which occur in vii. 160, 161, 162, 166 and ii. 54-57, 61, though these *sūrah*s are supposed to have been delivered respectively in Meccah and Medinah.

To some extent, then, the *sūrah*s present phenomena analogous to those of the Gospels; i.e., the same matter is repeatedly produced with variation in the arrangement and in the expression, or even in the sense; it is difficult to think of these as reports of different matter; they are much more like reports of the same discourses with the variations inseparable from oral tradition.

An example may be taken from ii. 98: 'O ye that believe, say not "rā'īnā" but say "unzurnā" and "hear."' In iv. 48 there is the following: 'Among those that judaize are such as corrupt the phrase from its location and say: "We hear and disobey," and "hear, not made to hear," and "rā'īnā," twisting their tongues and attacking the religion. Had they said: "We hear and obey" and "hear" and "unzurnā," it would have been better for them and more correct.' In ii. 87 it is said of the Israelites that 'When we took their covenant and raised above them the mountain, "Take what we have given you with power, and hear," they said, "We hear and disobey."'

Now, the Arabic words quoted, of which one is approved and the other disapproved, appear to be synonymous, and in the later literature are both in common use; the phrases 'we hear and obey' and 'we hear and disobey' are contradictory; the phrase 'hear, not made to hear,' for which 'hear' is offered as the correct equivalent, is unintelligible. In *sūrah* iv. all three are offered as examples of improper expressions used by the Jews with malevolent intent; in *sūrah* ii. the phrase 'we hear and disobey' is recorded as the defiant reply of the Israelites to the commandments delivered from Sinai, whereas *unzurnā* is stated to be the proper substitute for the improper *rā'īnā*, while the improper substitute for 'hear' is not recorded. In v. 45 we have another version of the commencement of iv. 48:

'Among those that judaize are hearers of falsehood, hearers of other people who have not come to thee, who corrupt the phrase from its location.'

The account which seems to agree best with the facts is that we have the inaccurate records in these various places of the same sayings put together by different persons long after they were delivered, when the circumstances of the original delivery had been forgotten. Hence the charge of 'corrupting the phrase from its location' in one *sūrah* is thought to refer to the conduct of the ancient Israelites, in another to the Prophet's Israelitish contemporaries, in a third to incorrect reporters of the Prophet's sayings, to whose testimony the Israelites of his time attached value.

Thus the questions of chronology, arrangement, and genuineness are inextricably connected, and any attempt at arranging the *sūrah*s in chronological order is impeded by the fact that the *sūrah*s are themselves largely agglomerations, while the probability that much was not committed to writing till long after the texts to be reproduced had been uttered necessarily affects the genuineness; and doubts about the genuineness of texts are not altogether wanting in the Muhammadan chronicles.

According to Ṭabarī,¹ when Abū Bakr after the Prophet's death recited iii. 138, where the possibility of Muhammad's death is mentioned, 'the people did not seem to know that this text had been revealed to the Prophet until Abū Bakr recited it.' When this verse and another in which Muhammad's death is distinctly foretold (xxxix. 31) were repeated on this occasion, according to another account,² certain persons swore that they had not till then been aware of their existence.

The authenticity of the two final *sūrah*s was denied by some persons. European critics have naturally fewer scruples than Muslims about

obelizing verses, but, since these interpolations, if there be any, must belong to a period which is very imperfectly known, not many verses have been condemned. Certain passages very clearly belong to definite epochs in the Prophet's biography, for the order of which the work of Ibn Ishāq is generally trusted, though its authority was clearly not established in the 2nd century. Thus the authoritative Shāfi'ī¹ places the Raid of Dhāt al-Riqā', which was the occasion of iv. 103 f., after the Battle of the Trench, whereas in the narrative of Ibn Ishāq the raid was in the year 4, and the battle in the year 5. The number of texts that can be dated by these considerations is comparatively small; for a great many commentaries, or special works dealing with 'the occasions of revelation,' invent cheap fictions to which no importance should be attached. The editions of the Qur'ān regularly divide the *sūrah*s into Meccan and Medinese, but it is admitted that some Meccan *sūrah*s are interpolated with Medinese matter. It is generally held that there are in the main three periods: one in which the productions were ejaculatory and tentative, represented chiefly by the short *sūrah*s towards the end, some of which, however, are very clearly fragments; one in which they were homiletic and narrative—to this class the greater number of the longer Meccan *sūrah*s belong; and one in which they were journalistic and legislative—this is the period of the Medinese *sūrah*s. About the first and last verses we have guesses recorded by Suyūṭī; the first was either xvi. 1 or lxxiv. 1; the last was iv. 175, ii. 278, or ii. 281, etc.

The *Fihrist* gives a chronological order of the Meccan *sūrah*s and another of the Medinese, in both cases ostensibly following authorities of the 1st cent.; one which differs in numerous points is given by Suyūṭī, p. 21f. The *Fihrist* also recorded the order in which they were arranged in the copies of Ibn Mas'ūd, Ubayy b. Ka'b, and 'Alī—but the last is lost in the MSS used by the editors. In a story told by Ṭabarī² of the year 35 'Uthmān himself is made to refer to the Qur'ān according to the numbering in Ibn Mas'ūd's copy, in which the *sūrah* of Yūnus was the seventh. The author of the *Fihrist* states that he himself had seen many copies which professed to give the recension of Ibn Mas'ūd, of which no two agreed, while all differed from the authority whom he quotes for the order. His chronological list reverses ordinary notions in making *sūrah*s xcix., lxxvi., xliii., and others Medinese, since in both style and subject they seem clearly to belong to the Meccan period. Thus *sūrah* xliii. assumes that 'those who have knowledge of the Book' (i.e. the Jews) side with the Prophet against those who deny his mission, and that he is undergoing persecution which will be settled either by the fulfilment of God's promise or by his death—conditions which suit the Meccan period but had been changed when the Prophet was installed in Medinah. If these lists have the antiquity which is assigned them, they indicate that the early Muslims took no interest in the matter, and that no tradition of the occasions on which the *sūrah*s were first delivered was preserved.

The attempts made by Europeans to fix the chronology of the *sūrah*s are not likely to be more successful than those made by native critics. Thus, in Rodwell's translation, which is chronologically arranged, *sūrah* xvi. is numbered 73 and *sūrah* vi. is numbered 89; yet in xvi. 119 there is a reference to 'that which we narrated to thee before,' viz. in vi. 147! If the *sūrah*s are capable of being dated, vi. must be earlier than xvi.; on the other hand, vi. 119 states that 'God has already

¹ i. 1816.

² Ṭabarī, i. 1819.

¹ *Risālah*, Cairo, 1821, p. 27.

² i. 2963.

explained to you what food he has made unlawful for you,' and, though this may be a reference to vi. 146, yet, since the list there begins with the words, 'Say: I find in that which has been revealed unto me nothing forbidden save,' etc., the reference to xvi. 116 seems the more natural; for, if the reference be to ii. 168, then we have a worse anachronism, since there will be a reference to a Medinese *sūrah* in two Meccan *sūrahs*! Dating by the supposed development of the Prophet's psychology is naturally an unscientific proceeding; nor does it seem possible to obtain any help from the development of his knowledge; thus A. Sprenger¹ asserts that about the year 617 the Prophet learned that the stories about Hūd and Ṣāliḥ were apocryphal, and in consequence was careful to make no further allusion to them. In fact he alludes to them in *sūrah* ix. (71)—according to the tradition, the last *sūrah* but one, or the last, in the Qur'an.

6. The miracle of the Qur'an.—The meaning of the miraculous nature ascribed to the book has been the subject of much discussion, and the treatises in which it is explained are not very convincing. In xxix. 47–50 the miracle seems to be explained as the sudden acquisition by the Prophet of the ability to read and write; and somewhat the same is suggested in xlii. 52. More often it is interpreted as its claim to produce accounts of events which could have been revealed to the Prophet only by supernatural means, these being 'the contents of the former Leaves' (xx. 133). Why it should be lawful to identify the Qur'anic narratives with these, but impious to call them 'the Stories or Writings of the Ancients,' is not known. If these 'Leaves' were no longer in existence and the Prophet had no teacher, his knowledge of their contents, which was attested by the learned, could have been acquired only supernaturally; and there is nothing improbable in the Prophet's supposing these 'Leaves' to have perished, since in the 4th Islamic cent. at a public discussion in Baghhdād both the Christian and the Muslim assume that the Greek classics had all perished and only survived in Syriac translations. Hence the reader is frequently reminded in the Qur'an that the Prophet, though he is able to report an event, was not present on the occasion; he was not with Joseph's brethren when they conspired, yet he knows about it (xii. 103); he was not present when lots were drawn for the guardianship of the Virgin Mary (iii. 39); and much the same is said with reference to the Deluge (xi. 51), the adventures of Moses (xxviii. 44–46), and the dialogue at the Resurrection (xxxviii. 69 ff.). It does not appear that the Prophet's contemporaries were much impressed by this reasoning; they supposed that he had been primed (vi. 105, xlv. 13) and were even prepared to name his mentor or mentors. What is most interesting to us in these passages is the implication that the Biblical narratives were quite unknown in Meccah before the Prophet told them. More importance might reasonably be attached to the prophecies of future events—the defeat of the Jews (iii. 107 f.), the recovery of the Nearer East by the Byzantines from the Persian conquerors (xxx. 1–4), to which Gibbon attached some importance, and the continuance of the bickerings between the Christian sects until the Resurrection (v. 17), a prophecy which thirteen centuries have not falsified. These passages occupy so small a space in the book that they can scarcely give a character to the whole. Hence it is usual to fall back on the literary style, and this, it may be supposed, is meant where the opponent is challenged to produce ten *sūrahs* (xi. 16) or one *sūrah* (x. 39, ii. 21) or any talk (lii. 34; cf. xxv. 35)

¹ *Das Leben und die Lehre des Mohammed*, Berlin, 1861–65, iii. xxiii.

which could rival it, and is assured that the united efforts of mankind and *jinn* would fail in such an endeavour (xvii. 90). This doubtless limits the effectiveness of the miracle in the first place to Arabs and in the second to experts in style; but it is pointed out that in most matters the majority are laity who have to be guided by experts. Hence works are composed by rhetorical experts who show how everything in the book is expressed in the best possible way; the recently published *Tirāz*, by the Zaidi Khalifah Yahyā b. Ḥamzah († 749 A.H.; 3 vols., Cairo, 1914), proceeds on those lines, and discovers unsuspected beauties—e.g., in the phrase 'and thou didst thy doing which thou didst' (xxvi. 18).

Possibly these expressions of self-approbation in the Qur'an do not differ much from those employed by other Oriental authors and at times by Europeans. What we learn from its statements is that the Meccans in general found it intolerable, and demanded a 'reading' of another kind (x. 16); and even in the late Medinah period (ix. 66, 125) there were Muslims who, to the Prophet's extreme annoyance, ridiculed the revelations. A curious method of dealing with the miracle is that ascribed to a Mu'tazil doctor, who supposed it to lie in the failure of the Arab poets and orators to take up the challenge of the Qur'an and produce a rival performance; if in spite of their number and ability they abstained, they must have been supernaturally prevented. It is urged against this view that, were it correct, the miracle would be not the Qur'an's, but God's; but it rests besides on premisses of very doubtful validity—one, that there were at the time numerous poets and orators, and a second, that the challenge was not taken up. Indeed, it seems certain that a rival Qur'an was produced by the pretender Maslamah or Musailmah; and Palgrave¹ asserts that much of it was preserved in Yemamah as late as the 19th century. The claims of this work as against the Qur'an were settled by the sword. The challenge has probably been taken up at various times—and indeed the Qur'an comes near admitting this for its own time (vi. 93)—notably by the famous Abū'l-Alā of Ma'arrah († 449), of whose *Fuṣūl wa-Ghāyāt* some fragments are preserved;² the work itself was destroyed from pious motives, though one person thought that it should have been allowed to exist as a monument of failure.³ The eminent vizier Ibn 'Abbād was not displeased when told that his own compositions were equal to the Qur'an;⁴ and we casually hear of books written by professing Muslims in which the defects of the Qur'an were pointed out; one Ibn Abī'l-Baghī, who aspired to the vizierate in the 4th cent., is credited with a work of the kind.⁵

The magical use of the Qur'an appears to have begun at an early time; the practice of opening it for *sortes* is mentioned in the year 33,⁶ and has been common ever since; and rules for this employment of the work are found in some MSS. Certain passages are written on amulets, and the water in which some have been washed is thought to be a preservative or cure.

7. Literary form.—The style of the Qur'an is twice described in the work itself by the word *tartil*, the purpose of this artifice being to fix it in the Prophet's memory (xxv. 34); the sense of the word is not exactly known, but it is likely to refer to the rhyme, the existence of which cannot be denied, being indeed demonstrated by the variation in the order of the names Musa and Harun, of which the former as the more eminent should

⁶ Tabarī, i. 2923.

properly have the first place. But it is said to be improper to apply to this style the ordinary name for rhymed prose, *si'*, which, according to a tradition, was said by the Prophet to be characteristic of paganism. Oracles that are supposed to have been delivered by pagan wizards (*kāhins*) are, indeed, in a style that differs from that of the Qur'an by the regularity of the rhyme; these are most probably all spurious, as are other monuments of pre-Islamic Arabic prose; in the later literature this style was popular especially for orations and official letters, the unit of the rhyme being usually a couplet, sometimes extended to a triplet, whereas in the sermon style the rhyme has a tendency to be maintained throughout the discourse, perhaps in imitation of the Qur'an. Judged by these performances, the rhyme of the Qur'an is illiterate, but such a view is naturally regarded as impious, and it is thought better to regard it as inimitable. In the Meccan period the Prophet was regarded as a poet by his countrymen, and this title might well be earned by the early ejaculatory *sūrah*s; it is, however, repudiated with vehemence in the Qur'an, partly perhaps because the poets were thought to be inspired by *jinn*. Where, therefore, texts of the Qur'an admit of scansion according to one or other of the recognized metres, this is not supposed to be intentional; and there is nowhere sufficient of a series to make the word 'metre' applicable, though *sūrah* xciv. almost fulfils the conditions.

Certain *sūrah*s contain besides special artifices; thus in lv. the texts are followed for the most part by the refrain, 'Which then of the bounties of your Lord will ye twain deny?' which may be compared with the refrain in the Song of the Three Holy Children and that in Ps 136. In xxxvii. after the story of each prophet the words 'Peace upon Ibrahim,' etc., follow, either the sentence or the name of the Prophet being accommodated to the rhyme.

The tendency of the earlier *sūrah*s is to employ short sentences, whereas rhythms more accommodated to prose prevail in the later parts of the work. It is noticeable that neither the antithetic method which is characteristic of Hebrew poetry nor the counting of syllables which is usual in Syriac forms an element in the style of the Qur'an. The language claims to be perspicuous Arabic, and attention is often called to the clearness of the texts. This does not exclude the employment of phrases which require explanation; about a dozen times some phrase is employed followed by the formula, 'What is there to tell thee what it is?' Though extreme orthodoxy denies the existence of foreign words in the Qur'an, it is generally recognized that its style admits not only foreign proper names, but a considerable number of words borrowed from other languages; a meritorious collection of these is to be found in the work of Suyūṭī,¹ which, however, contains many inadmissible statements. Many words are evidently of Persian, Ethiopic, Syriac, Hebrew, Greek, and Latin origin; but it is impossible for us to discover whether they were introduced by the Prophet or were already familiar. Some of the foreign usages can more easily be distinguished and located by European than by native critics—e.g., the employment of *fath* in the sense 'judgment' (Ethiopic), *faṭara* for 'create' (the same), *jabbār*, 'mighty' (Hebrew as applied to God), etc., where the Arabic language offers possible interpretations.

8. Place in Islam.—No sooner was the Qur'an published than it became the basis of education, being studied immediately after the acquisition of the alphabet; so the first Umayyad Khalifah, Mu'awiyah, when he appointed a man governor of

Ta'if, said, 'He is in his ABC'; when made governor of Meccah, 'He is in the Qur'an.'¹ Men were chastised by the Khalifah Walid I. for not having read it.² Public and private worship consisted largely in the repetition of portions of it; verses employed by the Prophet himself for this purpose are specified in traditions collected in the *Musnad*.³ After the Prophet's death it became the primary source of law, for in his own time it was liable to abrogation or addition, whence in v. 48-55 Jews and Christians who require their causes judged are referred to the Law and the Gospel. The difficulties of using the work compiled by 'Uthmān for this purpose were very great, though not too great for the ingenuity of the jurists, who began to arise in Medinah shortly after the Prophet's death. The difficulty of teaching the Qur'an to foreign converts is said to have given rise to the study of Arabic grammar, for which of course it supplies an absolutely firm foundation. Orthodox theologians, arguing from certain statements in it, declare that it contains all possible knowledge. If Fakhr al-Din al-Rāzī († 606) could find 10,000 problems suggested by the *Fātiḥah* (introductory *sūrah* of seven short verses), it should be possible to discover 'a detailed account of everything' in it by the use of suitable methods.

Citation of and reference to the Qur'an are exceedingly common in Muslim works, whether grave or gay. When the composition of State documents fell into the hands of non-Muslim secretaries, these persons were compelled by the needs of their profession to acquire a competent knowledge of the book, though the strict interpretation of a verse cited above, 'None save the cleansed shall touch it,' is thought to render such study highly improper; and anecdotes are recorded of divine favour shown to grammarians who had refused to teach Jews or Christians their subject because of the necessary reference to Qur'anic usage. It is not easy, however, to reconcile with this theory the doctrine that the unbeliever should be converted by the miracle of the Qur'an; the doctrine has to give way to the theory, so that those who raid the lands of unbelievers are forbidden to carry the Qur'an with them lest it fall into infidel hands. Translation of the book was certainly not contemplated by the Prophet; the rhyme obviously constitutes a great difficulty, and the initial letters of some *sūrah*s an even greater one; Muslim sentiment has ordinarily been against attempts at translation even where the language of the version is one of those habitually and mainly used by Muslims; still such attempts have been made, though nothing resembling an 'authorized version' appears to exist in any Muslim language.

The Muslim notion of the sacred book as the main authority on law, the chief source of grammar, and the unapproachable model of eloquence not infrequently causes Muhammadan writers to misunderstand the place assigned to the Bible in Christian communities; on the other hand, there seems little doubt that this theory has influenced the Jews and Christians who are resident in Muslim countries.

9. Interpretation.—The sacred book gave rise to a great variety of studies, partly grammatical, partly exegetical; and the names of the authors who distinguished themselves in those lines with their works occupy some eleven pages of the *Fihrist* (28-39), though that work was composed near the end of the 4th century. Although Muhammadan learning attaches the very greatest importance to what is orally handed down, there is reason for thinking that the students had little to utilize besides the consonantal text fixed by

¹ Tabari, li. 167, anno 54.

¹ *Itqān fī ulum al-Qur'ān*, § 38.

'Uthmān at a time when the Arabic script left much ambiguity; certain peculiarities may therefore be due to misreading of this text—e.g., the form Yahyā for Yuhānan (John), Tāghūt for Ta'ūth, and even Shu'āib for Hobab. Where either the words or the allusions offer difficulties, it does not appear that there was any trustworthy tradition which the interpreters could employ; e.g., in vii. 174, when the Prophet is bidden tell the history of a man 'to whom we vouchsafed our signs, and who departed from them,' some suppose the person meant to be Balaam, others the Prophet's contemporary Umayyah b. Abi Ṣalt; a third suggestion is that he was 'the Monk,' i.e. a resident in Medinah who was unable to accept the mission of the Prophet. In xvi. 49 there occurs a phrase of which the meaning is said to have been unknown to 'Umar, and very unconvincing explanations of it are given. On the whole it may be said that the tradition furnished no help that is of value for the explanation of hard passages, though the Prophet's biography, where it is independent of the Qur'ān, furnishes some.

As Islām developed sects, the dogma of the infallibility of the sacred book was common to all; hence the champions of those sects were compelled to show that it supported their opinions; and sectarian commentaries arose, of which not many specimens survived the establishment of Ash'arite orthodoxy. The popularity of the *Kaṣṣhāf* of Zamakhshari († 538), in which Mu'tazilite opinions are boldly maintained, is surprising, and must be due to its author's fame as a grammarian and lexicographer. That unorthodox opinions are not always easy to reconcile with the text may be illustrated by his comment on iv. 51:

'Verily God forgiveth not association with Himself, but He forgiveth what is less than that to whom He will,' which he says means:

'God forgiveth not to whom He will association, unless he repent, but He forgiveth whom He will what is less than that, if he do repent.'

Yet perhaps the orthodox commentaries have at times to resort to equally drastic expedients. The most popular of the latter, the *Ma'ālim al-tanzīl* of Baiḍāwī († 691), is largely copied from Zamakhshari's work, and, though its author's object was to refute the unorthodox passages, he has taken over not a few unthinkingly. For European scholars neither of these works has the interest of the much earlier commentary of the historian Tabarī († 310), which is swollen to gigantic proportions by the chains of authorities quoted for each gloss; even so, it is said, it is an abridgment of a work three times the size, but it appears to give a complete record of the Qur'ānic interpretation current in its author's time. Hence it is of great value for tracing the sources of statements found in later works, from which the chains of authorities are omitted. Great praise is bestowed by Sprenger on the commentary of Tha'labī († 427), which is as yet unpublished; and even greater is bestowed on that by his pupil Wāḥidī († 487) in the account of this person given by Yāqūt (v. 101), who asserts that its merit was universally acknowledged. Mystical and devotional commentaries were produced by Ṣūfis, whose interpretations naturally wander far from the obvious sense of the passages. A commentary of this kind is that ascribed to Ibn 'Arabi.

D. S. MARGOLIOUTH.

10. Editions and various readings.—We have seen that the inspired oracles delivered by the Prophet in some circumstances of his life were not generally committed to writing. The Prophet had himself given orders not to hasten with the Qur'ān before its inspiration was decided (xx. 113), and intimated that its collection, reading, and interpretation were lawful only to him (lxxv. 16 f.).

Our knowledge of how it was collected and put into the form in which we read it is commonly derived from writers belonging to the 'Abbāsid period, or approximately to the 9th Christian century. The necessity for a reasoned history of the Qur'ān does not seem to have been felt very acutely under the Umayyad and the Pious Khalifahs; what occasioned the appearance of some critical works on this subject was the era of religious controversies which animated the learned circles of the city of the Khalifate. At the end of the 8th cent. Timothy, Nestorian patriarch residing in Baghdād, had a public discussion before the Khalifah Maḥdī and the Muslim theologians of his time; Abu Noh, secretary to the governor of Mosul, was writing about the same time a refutation of the Qur'ān in his native town (c. A.D. 820). Al-Kindi was completing his famous *Apology* of Christianity at the court of Ma'mūn. These public discussions and apologies, which contain severe criticisms of the Qur'ān, had the salutary effect of inducing the Muslim theologians to define their positions with regard to their scriptures.

The method of reasoning from data furnished by authors living more than two hundred years after the events is somewhat precarious, and indeed there are scholars who would give but little credence to their stories. In view of this sceptical attitude of outsiders, great care is taken by the Muslim authors to authenticate their statements, by a chain of uninterrupted links of oral traditionists going back to the first years of the Hijrah, frequently also there is reference to some accounts of men living at the end of the 1st Islāmic cent., who in their turn had heard them from companions of the Prophet; but, as these intermediary traditionists have written nothing which has come down to us, it is practically with men of the 9th cent. and even of a later date that we generally work. These oral compilations afford for our investigations a field extending from the lifetime of the Prophet to A.D. 705, or roughly from A.H. 1 to 86. According to their attribution of the Collection (*Jam'*) of the Qur'ān (1) to the lifetime of the Prophet, (2) to the time of the Pious Khalifahs, (3) to the time of the Umayyad Khalifah 'Abdul-Malik and his lieutenant Ḥajjāj, these oral traditions will be classed in three groups.

If any Qur'ānic verses were written in the Prophet's lifetime, they must have been written by secretaries and amanuenses. From different sources combined the number of these amanuenses totals forty, but it is very doubtful whether many of them did really help the Prophet in his literary task. The longest list is given by Ibn al-Athīr,¹ Dyarbakrī,² Nawawī,³ and Tabarī.⁴

Ibn Sa'd⁵ enumerates ten different persons who had collected the Qur'ān in the time of the Prophet. Bukhārī⁶ reduces this number to four; the *Fihrist*⁷ gives seven. Tabarī⁸ counts also four persons as having accomplished this task, but, as their names differ sometimes considerably in the various lists, we may perhaps be justified in saying that nothing was known with certainty at the time of the above writers. Some of them indeed report other oral traditions to the effect that it was 'Uthmān, the third Khalifah, who collected the Qur'ān under the Khalifate of 'Umar⁹ or that its collection in *ṣuḥuḥ* is due to 'Umar himself.¹⁰ Suyūṭī¹¹ has gathered a considerable number of such traditions, two of which have appealed to the critics of last century;

¹¹ *Itqān*, ed. Calcutta, 1854, p. 183.

they are those first reported by Bukhārī¹ and then reproduced by many subsequent writers. They state that Zaid ibn Thābit, one of the amanuenses of the Prophet, undertook the collection of the Qur'ān at the request of the first and third Khalifahs, and that he made two recensions of it, his sources for the first recension under Abu Bakr having been palm-branches, white stones, bones, and memory of men; the second recension, which took place under the Khalifate of 'Uthmān, would be an official revision of the previous one, its primary object having apparently been to put an end to the 'discrepancies about the Book as the Jews and the Christians have.' His work finished, the Khalifah found himself powerful enough to destroy or burn 'everything else from the Qur'ān (found) in the form of *ṣaḥīfah* or *muṣḥaf*'; to circulate his version, he sent 'to every country' a *muṣḥaf* of what Zaid had transcribed. Nothing is said about what happened to the direct witnesses of the revelation—the white stones, bones, and palm-branches; but in the absence of better data the story is generally accepted as true by all writers belonging to a period later than the 9th cent., and is quoted in our days almost in every composition referring to the sacred book of Islām. The plausibility of the account is brooded over by some subsequent writers, who put the following accusation into the mouth of the third Khalifah's enemies:

'The Qur'ān was in many books, and thou discreditedst them all but one,'² and he 'tore up the Book.'³

It would be unsafe, however, to believe that this tradition can account for all the difficulties. For instance, there are numerous verses which refer to the Qur'ān as *kitāb* not only in the sense of a 'written thing,' but also in the sense of a 'real book' (xlvi. 11, lxviii. 37, etc.). These verses, if not interpolated, can hardly be explained if the sources for the first edition of Zaid were only palm-leaves, white stones, memory of men, bones, and such things.

An attempt to produce an official edition of the Qur'ān is also attributed to the Umayyad Khalifah 'Abdul-Malik and his lieutenant Hajjāj. They are said to have written copies of the Qur'ān and sent them to different provinces, as the third Khalifah had done before them.⁴ Some historians tell also that they proscribed various readings which were used in their time.⁵ Others go even so far as to ascribe to them the final collection of the Qur'ān,⁶ and some put in the mouth of the Khalifah the important saying,

'I fear death in the month of Ramaḍān—in it I was born, in it I was weaned, in it I have collected the Qur'ān (*jama'at al Qur'āna*), and in it I was elected Khalifah.'⁷

It is a well-known fact that the Shī'ah writers accuse them of the elimination of many verses.

After A.H. 86 the process of collecting the Qur'ān came to an end, and, so far as we are aware, there are no historical data after this period for its further standardization; and therefore it is highly probable that the text with which we are familiar is the very text sanctioned by its *qurrā* (reciters and readers) of the end of the 1st Islāmic cent., and officially recognized by the third Khalifah.

Besides the official copy of the State, traces are found of the recensions made by other collectors of the Qur'ān, and the Muslim traditionalists have preserved the names of some of them. Three deserve special mention: Ubayy b. Ka'b, 'Alī b. Abi

Talib, and 'Abdallāh b. Mas'ūd. The two first are believed by all the best and earliest authorities quoted above to have even collected their Qur'āns in the lifetime of the Prophet, but, as the Sultāns and their officials had proscribed their copies, sometimes under pain of death, the author of the *Fihrist*¹ was unable to find a single one for purposes of comparison, and he contents himself with reporting the saying of Faḍl b. Shadhān that some of his friends had seen a copy of Ubayy's recension, the order of which he gives; on p. 26 the order followed by Ibn Mas'ūd is also exhibited on the authority of the same man. As to the nature of their wording we are somewhat more fortunate, since the commentators have recorded it whenever it was known in their time. Zamakhshari is in this respect the best source of information. Some words are so different that we are entitled to believe that at least a few of them come from a source completely foreign to that of the official text.

In xix. 67 the official text has, 'I shall come forth'; but Mas'ūd reads, 'And He will give thee.' Mostly, however, these variants consist of synonyms or of one or two added or eliminated words, such as 'saying' for 'order' (xix. 65), 'they will become cloven' for 'they will burst asunder' (xix. 92), 'people were disputing' for 'disputed' (xix. 36).

Some Shī'ah books give examples of wonderful interpolations, and their authors state that the words that they have added had been purposely deleted from the official text, but there is reason to believe that most of them are the outcome of political intrigues which cannot seriously affect the early edition. One of the best works on this theme is the *Kaṣf* of Abu Ja'far-al-Kulīnī († A.H. 328), which was lithographed in Persia in A.H. 1281. From a MS in the John Rylands Library we extract the following example (fol. 161):

'And if ye are in doubt of what we have revealed unto our servant, concerning 'Alī, then bring a Surah like it' (ii. 21).

The same author says that some of these interpolations were found in the Qur'āns used in the time of Imām Riḍa († A.H. 203); his contention is set forth in such an emphatic manner that we are obliged to believe him. The end of v. 11 and the beginning of v. 12 of *sūrah* xlii. were, according to him (*ib.*), as follows:

'A great thing to the idolaters is that which thou callest them to, O Muḥammad, concerning the authority of 'Alī.'

More serious is the attempt of contemporary scholars who have called attention to some interpolations, political or religious. P. Casanova² has gathered several of them.

The variants of the official text itself are of two kinds. Some are due to the defective character of the Arabic script, which has many letters distinguishable from one another only by an extraneous dot put over or under them. Since the ancient Qur'ānic MSS were undotted, *qurrā* of one country often read words with letters different from those adopted by *qurrā* of another country. A second series of variants consists mainly of the addition or omission of one or two consonants, such as the copulative particle *wāw* and the feminine *t*. Many books have been written to collect these various readings, the handiest being the *Muknī* of Dānī (A.D. 1052). Even in the 12th Christian cent. Zamakhshari tells us that there were copies which occasionally added complete words to the standard text.

In xix. 19 some copies which he used added 'he ordered me,' and in xx. 16 some others added, 'How can I show it to you (the hour)?'

Our knowledge of these variants is derived exclusively from the commentators and some works written *ad hoc* by Muslim theologians. There are

in public libraries of Europe many Qur'anic MSS of high antiquity, the oldest dating probably from the 2nd Islāmic cent., but, apart from some anomalies of spelling due to the rudimentary character of the early Arabic orthography, no real variant can be detected in them. This conclusion is borne out by Nöldeke, who examined some such MSS, and by the present writer, who for the purpose of this article consulted three of them preserved in the John Rylands Library. To our knowledge, therefore, the only extant MS which offers slight variations is a palimpsest in the possession of Mrs. A. S. Lewis; its underscript contains scraps of Qur'āns written by different hands, and its variants consist of the addition or omission of a few consonants which, however, do not injure the general meaning, although in two cases it has words completely foreign to those of the official copy; there are sufficient grounds for stating that some of these scraps belonged to those early Qur'anic copies of Medinah, Kūfah, and Damascus, which, according to Dāni and other writers, exhibited such variants.

11. External evidence for the existence of the Qur'an.—If we mistake not, there is no mention of the Qur'an in any Christian book till the end of the 8th century. The date of the Christian sources corresponds approximately with the first written records of the Muslim world. A curious fact is that the Christians of the beginning of Islām did not call the Muhammadans by the words 'Muslims' or 'Ḥanīfites,' which refer to a religious belief, but simply applied to them the adjectives 'Hagarians,' 'Ishmaelites,' and 'Ṭayyāyē,' which denote their ethnological origins rather than their religious system.* Numerous writers seriously believed that these Hagarians had come not so much to spread a new religion as to conquer new towns. The Muslims were helped in their conquests by many Christian Arabs, such as the powerful tribes of Banu Taghlib, 'Akūl, Tanūkh, and Ṭau', whose evangelization goes back to the 4th century. John of Phenek¹ expressly states about A.D. 690 that among the first Arab conquerors there were many Christians, some Monophysites and Melchites, and some Nestorians.

The anonymous historian printed by Guidi² gives Muhammad in the second half of the 7th cent. as a mere general professing the old Abrahamic faith preserved in the town of Madiān (Medinah), named after the fourth son of Abraham from Keturah. John of Phenek³ attributes to him certain practices deviating in some points from the customs of the Old Covenant, but the word *mashilmanūtha* which he uses suggests that in his time and to his knowledge there was nothing yet committed to writing among the Muslims. This view of a political rather than doctrinal character of the Prophet's teaching is generally followed by all early Christians. Joannes Damascenus, writing at a later date, is more precise. Although not mentioning any sacred book, he refers to some Qur'anic doctrines and expresses his opinion about Muhammad as follows:

* Down to the time of Heraclius (the Ishmaelites) worshipped idols; from this time to our days a pseudo-prophet has risen to them, named Maḥūd, who through colloquies with an Arian monk had access to the Old and New Testaments, and founded a special sect.⁴

From a discussion which took place in Syria on Sunday, 9th May, A.D. 639, between 'Amr the 'amir, and John I. the Monophysite patriarch of Antioch, it would seem that the teaching of the Qur'an on the matter of heritages, the denial of the divinity and death of Christ, and on the subject of

the Tōrah, for which Muhammad's oracles show a marked predilection, was familiar to the Arab conquerors present in the discussion; but, on the other hand, it is certain that no Islāmic book was mentioned in the course of the colloquy. This public discussion, the Syriac text of which has been published by F. Nau in *JA* vi. [1915] 248, is recorded by the historians Michel¹ and Barhebraeus.² The Qur'anic dogma which denies sufferings to Christ frequently helped the Nestorians against the Jacobites. So we are told in the letters of the patriarch Isho' Yabb of about A.D. 647.³ John of Phenek⁴ informs us that the Arabs 'had a special order from the one who was their leader in favour of the Christian people and the monks.' This would scarcely tend to corroborate ix. 31, 34, but it is in harmony with v. 85.

The first mention of the Qur'an by Christian writers is closely associated with the story of the monk Sergius Bhira ('the esteemed') which was current in Christian circles about the middle of the 8th cent., or some hundred years after the death of the Prophet. It is told in a modified form so persistently by Eastern and Western writers, and by Muslim traditionists themselves, that one is tempted to believe that it may contain some vague elements of truth.

The legend tells that an excommunicated monk called Sergius helped Muhammad in his literary, political, and religious career, and that after his death his rôle of mentor was taken up by a Jewish rabbi called Ka'b. According to Joannes Damascenus,⁵ Sergius was an Arian monk. More probable is the opinion held by all the Eastern and many Western historians that he belonged to the Nestorian community. The main sources of criticism are the Arabic *Apology* of al-Kindi (c. A.D. 820) and the Syriac text printed by W. Gottheil in *ZA* xiii. ff. (1898 ff.), which here and there contains elements dating from the same period. Some scholars of our day have even gone so far as to assert that the story of Sergius is necessary for the right understanding of the Qur'an.⁶

To Sergius are attributed, in their hypothesis, the very numerous passages worded in the following manner:

¹ But if God bring thee back to a company of them, and they ask thee leave to go forth, say, "You shall never go forth with me" (ix. 84).

In this sentence the subject of the imperative 'say' can hardly be 'God'; otherwise instead of the word 'God' we should have had the pronoun 'I.' Until the story of Sergius is more surely established, nothing definite can be made of these surmises. The Muslim traditionists have as usual modified proper names foreign to them; so instead of *mar Yabb* they read the uncommon *Murhib*; and instead of naming Sergius they generally adopted for his proper name the Syriac word *Bhira*, which means 'the esteemed,' and which is applied by the Syrians to every monk as a title. The Muslim traditions bearing on the subject have been gathered by Sprenger and Nöldeke,⁷ and the Byzantine sources have been analyzed by Nau.⁸

12. Translations.—The Qur'an has been translated into many European languages, but, as its miracle lies in its style, it is doubtful whether any of these translations can satisfy all the exigencies of a Semitic language exhibiting the phenomenon of rhymed prose (*saj'*). The Oriental images coloured by the tints of local

⁴ *PG* xciv. 764.

topics are also to be counted among the many difficulties which the translator has to meet, not to speak of the play on words, or intended catch-words of which only the original Arabic can give a true idea.

The first translations came into existence immediately after the period of the Crusades, when Western people became more acquainted with Islām. At the initiative of Petrus Venerabilis, abbot of Clugny, the Qur'an was rendered into Latin by Robert of Retina and Hermann of Dalmatia in 1143, and published in Basel in 1543 by T. Bibliander. A better translation is that of L. Maracci (Padua, 1698). An Arabic-Latin Qur'an was published (Leipzig, 1768) by J. F. Froriep.

The first French translation is apparently that of A. du Ryer (Paris, 1647). Better translations are those by M. Savary (do. 1783), M. Kasimirski (do. 1840), and G. Pauthier (do. 1852).

The first English translation is the extremely bad one made from du Ryer's version by A. Ross (1648-88). A much better, but somewhat paraphrastic, translation is that of G. Sale (London, 1734). J. M. Rodwell's version of 1861 marks the first attempt to arrange the *sūrah*s chronologically; the translation of E. H. Palmer (*SBE* vi., ix., Oxford, 1880-82) is more literal.

The earliest Italian version seems to be that made from the Latin of Bibliander by A. Arrivabene (Venice, 1547). A recent and much better version is that by A. Fracassi (Milan, 1914).

The first German translations were made from the Latin, the Italian, and the English. A better translation is that of G. Wahl (Halle, 1828), which is a revision of that by F. E. Boysen (do. 1773). A more recent version is that of L. Ullmann (Bielefeld, 1853).

There are also several Dutch versions, the best of which, it is said, is that by H. Keijzer (Haarlem, 1860). A Russian version appeared at Petrograd in 1776. J. Tornberg undertook in 1876 a translation into Swedish.

All the above translations are by European Christians. Some Muslims have in the last few years tried to render their Scriptures into English; the translation by Muhammad Abdul-Hakim

Khan (London, 1905) and that by Mirza Abdul-Fazl (Allāhābād, 1911) deserve special mention. The editor of the *Islamic Review* has announced a new translation, but *al-Manār*¹ is protesting against such an enterprise. Possibly it is of this translation, comprising, it is said, 30 volumes, that the first instalment appeared in 1916.

We cannot know the precise year in which the Qur'an began to be translated into Oriental languages. The public libraries of Europe contain many MSS showing translations of the Qur'an into Persian and Turkish. These versions do not seem to go back much before the era of the first Latin translations. There is reason to believe that a translation into Persian was in existence in the 13th century. The oldest MS to our knowledge which contains a translation into old Turki is found in the John Rylands Library—a beautiful MS of several volumes. The old Turki version which it contains may possibly date from the 14th century. The MS contains the Arabic text with an interlinear translation into Persian and Eastern Turkish, but the translation differs sometimes from the text (so the Arabic text of the MS in iii. 116 has 'and if it befall them,' while both Persian and Turki translations have 'and if it befall you'). There are many modern translations into Persian; the edition of Calcutta (A.D. 1831) and that of Delhi (1315 A.H.) seem to have widest circulation. Apparently the Turkish Government did not encourage the translation of the Qur'an into Osmanli Turkish, and it was only after the proclamation of the so-called Constitution in 1908 that a certain Ibrahim Hilmi could in 1912 print his version at Constantinople. It is said that the most used translation into Urdu is that by Wali Ullah (Delhi, 1790). We learn from the *Moslem World*² that a Christian missionary, W. Goldsack, had in 1908 undertaken a translation into Bengali.

LITERATURE.—A bibliography of works which had appeared in Europe bearing on the Qur'an was published by V. Chauvin, *Bibliographie des ouvrages arabes*, vol. x., 'Le Coran et la Tradition,' Liège, 1907. Of native works, Jalal al-Din-Suyuti († 911 A.H.), *Itqān fī 'ulūm al-Qur'an*, first printed Calcutta, A.D. 1857, is the most complete. A. MINGANA.

RABBINISM.—See JUDAISM.

RACE.—1. **Race-feeling and ethnology.**—The word 'race' is used in different senses by men of science and ordinary people. The scientific ethnologist is concerned to find some precise, objective classification of mankind, and he employs the word 'race' to denote the particular differentia by which he classifies. As he classifies principally by physiological factors, such as shapes and proportions of skulls, degrees of pigmentation, facial angles, cross-sections of the hair, and so on, he groups the human species into corresponding 'races'—dolichocephalic and brachycephalic, brunette and blonde, prognathous and orthognathous, round-haired and elliptical-haired. This physiological classification is dealt with in detail in the art. **ETHNOLOGY**, but there are other objective or apparently objective characteristics which can be, and generally are, taken into account. Men can be classified by their language, and in this sense we can talk of the Latin, Teutonic, or Slav race. It is equally admissible to classify them by their social organization (matri-

archy or patriarchy, blood-feud or criminal law, primogeniture or division of inheritance, etc.), or by their material technique (stone age, iron age, nomadism, agriculturalism, industrial revolution, etc.). All these classifications are taken into account by the ethnologist. See art. **ETHNOLOGY**, **MOTHER-RIGHT**, **BLOOD-FEUD**, **LAW**, **INHERITANCE**, **FIRST-BORN**, **AGRICULTURE**, **HUNTING AND FISHING**, **PASTORAL PEOPLES**, etc.

It is worth noting here that the ethnologist frequently blunders in attempting to make different schemes of classification coincide with one another. He tends to identify the group with yellow skins, round hair, and slanting eyes with the group that speaks agglutinative languages, or even with the group that has a shamanistic religion, and to bracket together all these differentiae as the marks of a single race. This tendency is unscientific, because it does not correspond to the facts. There are white populations, like the Finns, Magyars, and Ottoman Turks, who speak languages of the agglutinative family. There are yellow populations which are Christian, Muhammadan, or Buddhist in religion. The groups based on these

different factors of classification cut completely across one another; and these cross-divisions increase with the increase of civilization, for the 'objective' characteristics of civilized communities are more highly differentiated and more subject to modification than those of primitive man.

The tendency to ignore this fact is an instinctive approximation, on the part of the scientist, to the popular conception, and marks the distinction between ethnology and race-feeling. Race-feeling represents the divisions between races as clear-cut and absolute. The idea that men can belong to one race in one respect and to another in another is quite foreign to it, and this simple view is not contradicted by the data of its experience, for many of the scientific ethnologist's differentiae are unknown to it. No racial feeling, for instance, has ever been excited by difference in skull-form, on which particular stress is laid in ethnological classification. Only students are acutely aware of the cranial differentia, which demands the application of exact scientific measurements to hundreds of thousands of human beings, and an elaborate synthesis of the experimental data, before it can be used. Yet, though race-feeling is unscientific and uninformed, it is a very real factor in social psychology, and it is the purpose of this article to examine its nature.

Race-feeling generally asserts itself by contrast with other social principles.

The bonds and divisions which it creates, and actions which it excites, are remarkably different from those produced by the feeling of State. As members of a state, men are nearly always prepared to go to war for their state and to fight members of another state which is thought to menace their own state's existence. Community of race-feeling does not inhibit in any degree this willingness to fight, and some of the fiercest political wars have been inter-racial; e.g., the white populations in the Northern and Southern States of the United States felt themselves racially one, yet, because they were divided politically into Virginians, Pennsylvanians, and so on, and the Virginians held by 'State rights,' while the Pennsylvanians held by 'the Union,' they went to war with one another and fought out their difference. Again, the English-speaking ('Anglo-Saxon') race as a whole is divided into two political groups—the British Empire and the United States—which have been more hostile to one another than friendly. Britain is the only State against which the United States of America have fought twice since their independent existence. It has been the same with Prussians and Austrians on the European continent. Both were Germans, yet they went to war with one another repeatedly for more than a century to decide whether the Prussian or Austrian State should have the hegemony of Germany.

When we study this political feeling, it seems the paramount principle that divides or unites mankind. Yet all the time there are other relations between Germans as such, or 'Anglo-Saxons' as such, which are unaffected by the political barriers that happen to arise among them. The Northerners made the political rights of the Negro race the chief principle for which they fought, but their race-feeling towards the Negro has remained as strong as, or stronger than, the Southerners'. The tabu against intermarriage between the black and white races is still as absolute in the North as in the South, while Northern and Southern Whites have intermarried as freely since the Civil War as before it. Again, the political schism between the United States and Britain has not affected their feeling of a common racial inheri-

ance. The American draws his culture from Milton, King James's Bible, and Shakespeare; he holds by the Habeas Corpus Act as the foundation of his civil liberties; he makes pilgrimages to English castles and cathedrals as shrines in which the romance of his early history is preserved, while the Englishman, on his part, takes pride in the voyages of Sir Walter Raleigh and the Pilgrim Fathers, which were the foundation of the United States. It is the same with the Prussian and Austrian. Turn their minds from Sadowa and Frederick the Great to Goethe or the hero Siegfried, and they become simply Germans, of one 'race' with one another and with the German-speaking Swiss.

In most human societies there is, in fact, a sense of some 'objective' grouping more permanent, and in the last resort more strong, than the political organization created artificially by acts of will. You may make and unmake social contracts, draw up acts of union and declarations of independence, make slavery a legal status or abolish it by emancipation, but these underlying bonds and divisions remain eternal, and are not to be modified by human desire or human contrivance. This objectivity of race is proverbial. 'Blood is thicker than water,' we say, when we see the bond of race-feeling overcoming the divisions of interest and accident; or 'Can the Ethiopian change his skin?', when race-feeling emerges as a disruptive force and checks some effort after fraternity or common citizenship by the conviction that 'Black is Black and White is White,' and that good intentions cannot change them.

This sense of an objective grouping has played an important part in history, of which we shall give a brief account. But it is essential to note, once again, that we are dealing with the sense, or mental representation, of objective grouping, and not with the really objective classification which the scientific ethnologist sets out to discover. The factors which race-feeling represents to itself as objective, and from which its stimulus is derived, are often far from being objective in fact. They vary perpetually from each other and from the scientific norm. But it is the representation, and not the external stimulus of it in any given case, that is the important element in the feeling of race.

2. Racial myths.—In a completely isolated, and also completely undifferentiated, human group the race-feeling of the members would be an accurate scientific analysis of the real objective factors constituting the character of the group. These factors would be handed down unincreased and undiminished from one generation to another, and their aggregate would be as constant as the race-feeling that it stimulated represented it to be.¹ But this is only an abstraction, and there are no actual human groups of this kind. There is no known group which does not mix and cross itself to some extent with other groups of mankind, and it is probable historically that all existing groups are differentiations from a single original stock. Even endogamous communities, which aim (of course unsuccessfully) at isolation, tend, on the other hand, to a specially sharp differentiation of 'marriage-classes' internally. Whether by internal differentiation or by coalescence with other groups outside, the permanence and objectivity of the group-character are in practice destroyed, and the sense of permanence and objectivity, which we call race-feeling, can therefore only express itself intellectually by a myth.

¹ Even in a perfectly isolated and undifferentiated group this would be true only in theory, for it appears that the factors in the character of any living organism are infinite, or, in other words, that there is a constant process of variation which makes immunity from differentiation impossible.

There are probably the rudiments of a racial myth wherever race-feeling exists, though they are often inarticulate and do not attract our attention. There are cases, however, in which myths have been deliberately invented to express existing race-feeling or even to stimulate race-feeling where it did not before exist.

The name 'Belgium' is a myth of this artificial kind. In 1830-31 certain populations which had been grouped together politically, and separated from their neighbours, for about three centuries by accidents of ecclesiastical history and the dynastic balance of power, felt an impulse to break away from Holland, with which the act of a European Congress had united them for the past fifteen years, and to form an independent political group of their own. The impulse issued in a revolution; the revolution was successful; a new state was founded. It was a very living state—the creation of a group which had just asserted its independence by fighting for it, and was determined to maintain it for the future. But this group and this state were without a name. The country had been called the Spanish Netherlands or the Austrian Netherlands for the past three hundred years, but these names were merely negative; they expressed the absence of any independent group-impulse and group-idea, and therefore could not express the new growth and realization of them. A new name was wanted for a new thing; and the Southern Netherlands, ransacking history, appropriated the name of a conglomeration of tribes that lived between the Seine and the Meuse when Cæsar conquered Gaul. The real connexion between Cæsar's 'Belgæ' and 'Belgica' and the new group and state of 1831 was infinitesimal. Cæsar's Belgæ spoke Celtic, the Netherlands Teutonic and Romance, and even the Romance-speaking half of the group were only very doubtfully descended from Latinized Belgic provincials. There was no relevant continuity of culture, for the Netherlands drew their cultural inspiration from mediæval Flanders and Revolutionary France, the Belgæ theirs from the Central European iron age, and then from Rome. But the dead name artificially revived was given life by the new group-feeling by which it had been appropriated. All the national feeling of 1831 found expression in the Belgian myth; and in 1914—the next great crisis in the national history—King Albert exhorted his army to withstand the Germans by the reminder that Cæsar had called the Belgæ the bravest of the Gauls. In eighty-three years an academic myth had penetrated to the heart of a group-emotion.

The stimulation of feeling by an artificial myth, where the feeling did not exist before, can be illustrated from the history of Athens. About 511 B.C. the Athenian statesman Kleisthenes wished to abolish the traditional groupings within the Athenian State, which were bound up with the old social order, and to establish new groupings in their place which would stimulate a more democratic feeling in the members of them. The new groups that he planned were highly artificial in their character. They were to be territorial, but, to prevent them from becoming vehicles of local feeling, the territory of each group was to be scattered in three different parts of Attica. The problem before Kleisthenes was to inspire these new artificial groups with a corporate feeling stronger than the loyalty to the traditional groups. Unless he solved this, his reorganization might nominally be accepted, but would have no practical influence on Athenian political life. Yet the traditional groups not only were knit by the bonds of kinship and locality, which Kleisthenes deliberately eschewed; they were fortified by the existing body of Attic mythology, which traced back the ancestry of each *φύλη* and *φρατρία* and *γένος* to some hero worshipped by the Athenian people.

Kleisthenes decided to canonize his artificial groups by inventing an even more artificial myth for each of them. He drew up a panel of a hundred Attic heroes, asked the god at Delphi to select the ten most suitable, and then proclaimed these ten as the *ἀρχηγεῖς* ('ancestors' or 'founders') of his ten new *φύλαι*. To a modern statesman this would have seemed the surest way of exposing the new *φύλαι* to ridicule, but Kleisthenes knew just where the vein of race-feeling in his fellow-countrymen lay. The statues of the ten *ἀρχηγεῖς* were solemnly set up before the government house at Athens; festivals were enjoined on their *φύλαι* in their honour; and the contingent of each *φύλη* was placed under its own hero's protection in war. And in less than a century the *ἀρχηγεῖς* were the most living myth in Athens after the national myth of Athene Polias. They had appeared to their tribesmen in battle; they were appealed to in patriotic speeches; in fact, they had developed individual personalities. The new myth had struck root, and it had brought a new group-feeling with it. The new *φύλαι* supplanted the old as completely as the Departments supplanted the old French Provinces, and an Athenian now felt that he was an Erechtheid or Pandionid, and all his ancestors before him, back to Erechtheus or Pandion himself. The ten *φύλαι*, invented by an Athenian's statesmanship, had become for other Athenians part of the objective order of the universe.

Race-feeling is one of the strongest conservative forces in social life. It tends to stabilize any human institution, any system of grouping or division, to which it once becomes attached, no matter how recent, artificial, or transitory in its nature that institution may be. This effect of

race-feeling was known to Plato, and in a famous passage of the *Republic*¹ he exploits it, half humorously and half in earnest, to conserve the highly artificial constitution of his ideal State.

Plato's State is to be differentiated into rigid castes, with the sharpest division of function and privilege; but the castes are to be recruited by merit, and every individual, starting as a child on an equality with every other, is to be assigned to his caste by a process of selective education. The psychological problem before Plato is to reconcile the feeling of permanent objective likeness and difference implied in the system of caste with the feeling of change, development, and competition implied in the process by which the castes are to be recruited. Unless his citizens feel that they each and all belong inevitably to whatever caste they have been assigned to, the castes will be mere forms without moral influence on the life of the community. But the competition by which the caste of each individual is to be determined is calculated to stimulate the very opposite feeling—that human will and effort are the determinants of human relations; and the change, at an arbitrary moment, from competition to fixity is likely to aggravate this feeling rather than to make it give place to the other feeling of objective determinism, on which the caste-system itself must depend. On the other hand, if once the sense of fixity is implanted in the adults, they will tend to extend it to their own children in turn, and will feel that they must derive their caste from their birth, and not from the selective process through which the parents have originally passed themselves, and which, like caste, is the law of the State.

The problem, in fact, is to make the citizens of the ideal State hold two opposite views of social relations simultaneously, and Plato proposes to solve it by making them—if not the ruling caste, at any rate the rest—believe 'a single noble lie.'

'I shall try,' he says, 'to make them believe that the upbringing and education we gave them was all a dream, and that, while they imagined they were being given it, they were really being moulded and brought up in the bosom of the Earth, and that their arms and tools were being fashioned there too. Then when they were finished off, I shall tell them, the Earth, their mother, brought them to the light, and it is now their duty to take counsel and arms for the country in which they find themselves (if that country is attacked), as for their nurse and mother, and to feel for their fellow-citizens as brethren born of the same Earth as themselves. . . .

"All of you in the State are brethren," we shall tell them in our myth, "but when God moulded you, he blended gold in the substance of those among you fit to rule, and that is why they are the finest; in the warriors he put silver; and iron and bronze in the peasants and other workers. You are all of one stock, so you will generally beget children like yourselves; but sometimes there will be silver offspring from gold, gold from silver, and all the other possible permutations. So this is God's first and chiefest commandment to the rulers: Show yourselves good guardians and keep vigilant guard above all things over the children, to see which metal is blended in their souls; and if your own children are born with bronze in them or iron, have no pity on them, but dismiss them to the workers and peasants, where they belong by nature; and if workers or peasants have a gold or silver child, put him too where he belongs and promote him among the guardians or warriors, as the case may be. Thus saith the Lord, on the day when he that ruleth the State is of iron or of bronze, on that day the State shall be brought to destruction."

The imaginary speaker then proceeds to ask his interlocutor in the dialogue whether he can see any way of getting this myth believed. 'None,' he answers, 'of making your citizens themselves believe it; but one could make their children believe it, and their children's children, and everybody that followed after.'

The suggestion is a dogmatic State education, and there is nothing visionary in expecting it to produce the intense psychological effect which Plato demands. The national states of the modern world have all organized this kind of education for their children in different degrees, and the stimulation of race-feeling in each state has been remarkably proportionate to the thoroughness with which this has been done. But the racial myth is capable

of striking root without an educational propaganda, as is shown by the example of Kleisthenes quoted above. It can do so because the race-feeling to which it gives form is one of the instinctive social needs of mankind. There are other feelings and myths on which human societies may be founded, but they show a strong tendency to revert to the racial type in the last resort. The Jews, for instance, think of themselves theoretically as a 'Chosen People'; their foundation-myth is a 'Covenant'; their physical hall-mark is not a skin which they cannot change or a stature to which they can add no cubit, but the artificial and deliberate custom of circumcision. The covenant between Jahweh and Abraham is essentially an act of will on both sides (see art. COVENANT, § 3). Jahweh chooses Abraham, and Abraham accepts the choice; and logically every member of the Chosen People from Abraham onwards can be so only by receiving and answering the same call. Yet the idea of race has been imported into the Jewish foundation-myth. Abraham's covenant is made 'for his seed for ever,' and the chief factor in the Jewish group-consciousness is the racial factor of 'having Abraham to their father.' The retort that 'God out of these stones can raise up children to Abraham' is a profound criticism on the idea of race itself. It implies that an objective or external principle of grouping, even if it exists, will be utterly inconsequent in its workings. If you trace Judaism by descent, any one or any thing may be a Jew without partaking of any of the factors essential to Jewish group-character. To be a true heir to Abraham's covenant depends on a subjective not an objective factor—not on race but on will.

Christianity was in its origin a reaction against this reversion to race-feeling in the Jews. It proclaimed that the covenant was made not with every descendant of Abraham, but with any individual in the world who was converted to accepting it. Christianity deposed race and set up faith instead of it, and it is the more remarkable that Christianity, in turn, should have reverted towards race-feeling in the doctrine of predestination.

This doctrine may be reconciled with free choice by theological dialectic, but its underlying motive is to go behind free choice and represent it as a mere expression of an objectively determined classification. It really eliminates from the covenant the will of man, and leaves only the will of God, which, being external to man, is, from the standpoint of man's personality, as mechanical as physical phenomena. Predestination divides mankind into two races sundered from one another by an unalterable difference of spiritual morphology, just as ethnology divides it into races by the different morphology of pigmentation or skull-form. It is a racial myth considerably hypostatized, but it is a racial myth none the less, like the myth of descent from Abraham, or from the ten *apxnyveis*, or from the Belgæ in Cæsar's Gaul.

This persistent return of the social consciousness to the racial basis is doubtless the response to a psychological need. Race-feeling puts those who experience it into an atmosphere of eternity and certainty. It is like a treasure laid up in heaven, which cannot be impaired by the weaknesses and vagaries of the human will. It is an antidote to the sense of transience, effort, and weariness, which infects the world of time and change. But, though it lightens the burden on the individual, it also diminishes his power and cramps his initiative, and there is therefore a counter-current in mankind of revolt from racial determinism towards free association. The patriarchal myth is challenged by the hypothesis of the social contract, the system of

caste by citizenship. This tendency towards self-determination in social grouping may be classed as political, in contrast to the racial tendency (though both these terms are possibly too narrow to cover the psychological fields included under them here). The two tendencies can be seen at tension in the course of history.

3. Historical survey.—(a) *General tendencies.*—All group-feeling implies a standard—a common idea of what is 'the normal,' and a common impulse to approximate towards this type.

The need for 'normality' is illustrated by the case of the African explorer who, after he had lived several years among negroes without seeing any white man but himself, used to be turned sick by the sight of his own white skin, which now seemed a leprous and obscene exception from the normal black. The abnormal man is in fact usually more conscious of the type, and craves more keenly towards it, than members of the group who are not conscious of any peculiarity in themselves. He is his own most effective chastiser (for example, the Indian Sweeper, who accepts his caste as religiously as the Brahman, and is as careful as he to keep his proper distance when they meet in the street, though it is the Brahman who is in danger of being defiled). It is this homage to type on the part of the individual who varies from it that gives the group-spirit its crushing disciplinary power, and makes a group, once constituted, so inelastic towards its members within and towards other groups without. There is an element of rigidity in every group, which is probably necessary for its preservation; but the degree of rigidity varies vastly from group to group, in proportion to the degree in which the group-feeling is based on race or on free association.

The less advanced people are in civilization, the less their life (both physical and spiritual) is under their control. Nearly all the forces of nature, and many of the workings of their mind, are data external to their will instead of material to be moulded by it, and social groups are as rigid for them as all other phenomena. The internal bonds seem indissolubly intimate, the external barriers insuperably wide. Each tribe, each sex, each age within each sex or tribe, is discrete from every other; and it is just as incomprehensible (and formidable) that a boy should turn himself into a man, or a seed into a tree, as that a man should turn the tree-stem into a boomerang. Yet these miracles are happening all the time. Nature passes, and men like her, through the changes of birth, maturity, and death, and the human will is increasingly (though still unconsciously) imposing on its environment a purpose of its own. There is a contradiction in primitive man's experience, and he solves it by an elaborate development of initiation-ritual, to tide over the changes of unchanging things, which are an intolerable abnormality in a group founded upon race.

In primitive man race-feeling is thus strong, but it is an obstacle in his path which he is using all his ingenuity and imagination to surmount. The initiation-ritual is the germ of free association and conscious control, and these constitute civilization (see INITIATION [Introductory and Primitive]). In civilized society race-feeling is relatively weak, but it grows strong again in civilizations that are in bad health or on the decline—no longer as an obstacle now, but as a preservative.

When a group is decadent, it has lost its power of growth, differentiation, and assimilation; it is even losing the accumulated capital of the past; and change, instead of being the essential expression of its vitality, seems to be the process by which its vitality is wasting away. Change must be arrested if the decadent group is to survive, and the members of the group attempt to arrest it, not merely by conscious archaism and reactionary legisla-

tion, but by concentrating their group-feeling upon the objective, unalterable aspects of the group-character. If a Chinaman is always a Chinaman, if every Chinaman born inherits the qualities of the eternal Chinese race, then the China of the Boxer rebellion is as good as the Celestial Empire of the Han; and Chinese vitality, like water from a never-failing reservoir, is always bound to find the level of its highest altitude in the past. The 'foreign devils' may superficially be more clever and successful than the Chinaman of to-day, but that need not confound him so long as he holds fast to his race. They are children of to-day and will perish to-morrow, while he is of the race of the Han, who were at the zenith of human achievement when the foreigners lived like the brutes.

This defensive recrudescence of race-feeling is characteristic of all civilizations that have passed their prime—the Chinese, the ancient Egyptians (whose priests told Solon that 'the Greeks were always children,' and showed Hekataios the statues of 345 high-priests descending from father to son¹), the Spartans and Athenians in the first centuries of the Christian era, the East Romans in the Middle Ages. It is strong at the present day among the Jews in Europe and the Jewish and Near-Eastern immigrants in the United States; and this is a remarkable case, because the motive of self-defence is here comparatively weak. These immigrants do not find themselves at a disadvantage individually as against the aliens with whom they come in contact. Unlike the Egyptians or Chinese, they adapt themselves successfully to the modern environment, and even attain the highest positions of wealth and power in the new groups to which they attach themselves. The pressure which maintains their race-feeling is not external, but arises within themselves. The Gentile group is not closed against the Jew; it is the Jew who will not merge himself in it, because that would be a tacit admission that his own group had lost its existence—a failure which he refuses to face. The more successfully, therefore, a Jew or Eastern European adapts himself to his present group-environment, the more jealously he cherishes the race-feeling that identifies him with the group of the past. He cultivates the ritual and language, prophets and heroes, folk-songs and national dress of a group which was broken up five hundred or eighteen hundred years ago, by Muhammad the Conqueror or by Titus and Vespasian. Only a few individuals overcome this instinctive group-reaction and surrender themselves spiritually to the new group in which they live and have their individual being. Such individuals are often scorned for 'losing their race'; they should rather be commended for casting out an irrational race-feeling which no longer corresponds to their real social relations, and giving their allegiance to the new group into which they have voluntarily entered.

(b) *Race-feeling in ancient Greece.*—It has been suggested above that race-feeling in any human society tends to be in inverse ratio to the vitality of its civilization. There is not space here to trace this curve of race-feeling through the whole of history consecutively, but it may be tested in two important instances—the civilizations of ancient Greece and modern Europe.

Ancient Greek civilization sprang more abruptly out of primitive conditions than ours, and was therefore penetrated by race-feeling more profoundly at its roots. The city-state (which was the ancient Greek state-form, as the national state is ours) was rooted in it. Historically, these city-states were not racial unities at all. They were combines of smaller groups—village communities

scattered over a plain (*παρρηλαί*¹), or bands of rovers flocking together from across the sea (*φύλαι*²), and even these smaller units were not homogeneous in themselves. They had come together in the Aegean from the four quarters of the earth, and an ethnologist would have analyzed in each of them every variety of skull-form and pigmentation. Yet race-feeling dominated the group-consciousness of the city-state and its structural parts. The city's legendary founder was conceived as the ancestor of the living citizen-body. He had fixed the constitution and begotten the men and women who were to live under it. The constitution could be supplemented by current administrative regulations, but (like the American federal constitution) it could be altered only by elaborate 'initiation-ritual' or else by revolution. The citizen-body, again, could be supplemented by immigration; but the immigrants remained resident aliens. They might live in the city from father to son, build up its trade, pay its taxes, serve in its wars, and even create its literature (Lysias, the model of Attic oratory and leader of the Athenian bar, was a resident alien of ancient family); but they were still aliens, without a vote and even without a status before the law (Lysias, who could present the case of his citizen-clients, could not enter the court as a principal himself). The fullest participation in the city's life could not make the blood of the founder flow in their veins, and citizenship was inseparable from this racial qualification. 'Naturalization,' like constitutional development, could be brought about only by revolution, and revolution, when it occurred, was generally complete. Every free inhabitant of the city territory—citizen, free immigrant, or enfranchised slave—then became a citizen of what was virtually a new state, with a new internal organization and a new racial myth which made the new citizen-body just as exclusive as the old.

The city-states of ancient Greece were thus racial to the core, and that is why they were never transcended—a failure that was the political ruin of the Greeks. Greek national life, on the other hand, which sprang from the same origins as the city-state, emancipated itself from race-feeling easily and quickly. It has been mentioned that in Greece, as in primitive societies, every racial group was a religious group as well, so that race-feeling and religious feeling were co-extensive (see art. GREEK RELIGION, § 4). But there were several Greek groups—Delphi, Pisa, Eleusis—which, as it were, abnormally developed their religious side and received into their religious communion neighbour-groups which would have remained hopelessly sundered from them and from each other on the narrow racial principle. Delphi, for example, by the 6th cent. B.C. had received into its 'amphictyony' about two-thirds of the Greek-speaking population on the mainland, and had given the common name of 'Hellene' to all Greek-speaking people. All 'Hellenes,' in turn, were admitted at Pisa to the religious festival of the Olympian games. Admission to the games became the test of 'Hellenism' or Greek nationality.

This Hellenism was at first conceived racially. The Hellene was contrasted with the 'barbarian' (the man who spoke jargon), and was thus distinguished by language, which, though a far broader basis of association than the ancestral basis of the city-state and its sub-groups, was still external and objective. But his Hellenism was never tested by his mother-tongue alone. Slaves, for example, were excluded from the games, though most slaves in 6th and 5th century Greece were Greek by speech and ancestry; and a man was not necessarily a Hellene even if he spoke Greek and was free. In

¹ Herod. ii. 148.

¹ Lit. 'brotherhoods'. ² Lit. 'growths (from one stem)'.

the 5th cent. B.C. a Macedonian king entered himself for the foot-race at Olympia and was appealed against as being a 'barbarian' by his competitors, but was admitted to be a Hellene on showing that his genealogy derived from the mythical ἀρχαγευς of the city-state of Argos.¹ Now a king was certainly a freeman, and the Macedonians spoke as genuine a Greek dialect as the Argives themselves. The appeal against this Macedonian king therefore looks like a reversion from the linguistic basis of Hellenism to the narrower ancestral basis of the city-state. Really, however, it marks an advance in the other direction, for the qualification required of him was not that he should be a registered citizen of this city-state or that (as in fact he was not a citizen of Argos), but that he should be within the pale of the 'city-state culture.' Hellenism, by this ruling, implied not merely the freeman's status and the Greek mother-tongue, but a certain kind of social life, and other Greek historians besides Herodotus support this view. Thucydides calls the inhabitants of Epirus barbarians, though they too spoke Greek. Aristotle, on the other hand, talks of Rome² as a πόλις Ἑλληνική, classifying not by language but by constitution; and he also describes the constitution of the city-state of Carthage in his *Politics*—a work otherwise devoted almost exclusively to the politics of Greece.

These standards of Hellenism led up to the conception that Hellenism was not an inalienable and untransmittable race-character, but a quality that could be acquired.

'The Hellenic people,' says Herodotus,³ 'has in my opinion spoken the same language ever since it existed [a concession, this, to the objective notion of race]. It was originally an offshoot of the Pelasgian people, and started weak; but from small beginnings it has grown to include a multitude of populations which have become assimilated to it—chiefly Pelasgians, but many other barbarian populations as well. As for the Pelasgians, I do not imagine that, as barbarians, they grew to anything great previously to the growth of the Hellenes.'

In other words, the essence of Hellenism is not a certain language spoken from time immemorial by a certain group, but a development of culture which enabled this group to assimilate far larger groups outside it—the population of Attica⁴ among others. This cultural evolution of Hellenism, by which an ever-expanding group is distinguished progressively from the raw material of humanity, is sketched in by Thucydides:

'Hellen and his sons grew to power in Phthiotis and were called in to assist the other city-states; and so, one by one and by the effect of intercourse, chiefly, they came to be called Hellenes, and it is only a short time ago that this name established itself among them all.'⁵

Once all Hellas wore arms in civil life like the barbarians. The parts of Hellas that still live like this witness to the life that was once lived by all alike.

The Athenians were among the first to leave off weapons and change to less austere habits. . . . The Lacedæmonians were the first to strip naked and to take off their clothes in public and rub themselves with oil when they took exercise. Formerly even in the Olympian games the competitors wore girdles when they competed, and it is not many years since this was given up. Among some barbarians, especially the Asiatics, they still wear girdles when they box or wrestle. In fact, a great number of points can be adduced in which the life of the ancient Hellenes was undifferentiated from that of the modern barbarians.⁶

This evolutionary view of Hellenism is at the farthest remove from the racial concept of φύλη and φασαρία which pervaded the city-state, and contemporary Greek thinkers were conscious of the contrast. They called the two opposite principles νόμος and φύσις, and debated their relation to one another. Pindar, the reactionary poet, was always proclaiming the paramountcy of φύσις, but it was also his saying that 'νόμος is king of all,'⁷ and this idea entered profoundly into the attitude

of the Greeks towards the likenesses and differences between group and group.

During the 5th cent. the Greeks became intimately acquainted with peoples strikingly unlike themselves—the Egyptians in the Nile valley and the Skythians in the Russian steppes; and this might have stimulated their race-feeling afresh. To recognize a common Hellenism in the descendants of Theseus and the descendants of Herakles was one thing, but to recognize a common humanity in men with brown skins or men who never tilled the ground needed a greater intellectual effort. The Greeks, however, accomplished this feat of imagination. The strangeness of the country and climate in Egypt and Skythia struck them as forcibly as the strangeness of the inhabitants; and they concluded that the latter was conditioned by the former, and that Skythians, Egyptians, and Hellenes were the same human metal stamped with a different impress by the diverse environments into which it had been introduced. Thus the experience of alien human types, so far from stimulating race-feeling in the Greeks, tended to make them sceptical of race altogether.

This explanation of group-differences by adaptation to different environments is worked out in a treatise on *Atmospheres, Waters, and Localities* included in the 5th cent. collection of medical writings left by the Hippokratean school.¹

'Some (human) natures,' the writer lays down, 'are like well-wooded, well-watered mountains, some like thin-soiled, waterless country, some like meadow and marsh land, some like stiff, arable lowland.'² 'The Skythians,' he says elsewhere,³ 'are like one another and no other people in the world, and it is the same with the Egyptians, except that these have been forced into their physique by the heat, and the Skythians by the cold.' He explains temperaments in the same way. 'A wild, unsocial, impetuous temperament' is produced by a climate of extremes, for in such a climate 'the mind receives constant shocks which implant wildness and weaken the mild and gentle side of character.'⁴ He even traces differences in group-temperament to differences in political constitution: 'The inhabitants of Europe are also made more warlike by their institutions, because they are not ruled by kings like the Asiatics. Where people are ruled by kings, they are inevitably more cowardly.' He discusses in detail the psychological reasons for this, and cites the exception which proves the rule—'The Greeks and barbarians in Asia who are not under autocratic government, but are self-governing and labour for their own profit, are as warlike as anybody.'

But, if the group-differences between Hellene, Egyptian and Skythian, European and Asiatic, were accidental and alterable by human endeavour, if your group-character merely depended on whether you lived a thousand miles nearer the Equator or the Pole, in a swamp or on a mountain, whether you built your city with this aspect or that, whether you let yourself be governed by a king, then racial barriers were potentially abolished. Any barbarian, by taking thought, could raise himself into a Hellene, and any Hellene could sink into being a barbarian.

This conception of Hellenism, not as race, but as a culture for all humanity, gained ground steadily from the 5th cent. on. Herodotus tells the story⁵ of the Skythian king who lived as a Hellene in a Greek trading-settlement several months each year, till his tribesmen discovered the double life that he was leading and killed him. The campaigns of Alexander gave vast populations the opportunity of 'Hellenizing' themselves freely; and, though this Hellenization was sometimes superficial (e.g., in the propaganda of 'Jason' [Joshua] the Jewish high-priest, who conceived Hellenism in terms of a gymnasium and felt hate, and was very properly overthrown by the Maccabæan reaction), yet in other cases it was profound. The cities beyond Jordan produced a distinguished

generation of Hellenic rhetoricians, scientists, and poets, and a new school of Hellenic philosophy was founded by the Phœnician Zeno. Taking the profound and the superficial together, it is true to say that the idea of Hellenism in ancient Greek civilization did transcend completely the idea of race inherent in the city-state. It made possible a feeling of unity between all men, and passed over without a break into Christianity.

Christianity in its origin was the antithesis of race-feeling; its membership depended on an inward spiritual act, and within the Christian group there was no more Jew or Gentile, Skythian or Hellenic, bond or free. But in this it had been anticipated by the little Greek *pharpha* of Eleusis, which had developed its primitive initiation-ritual into a spiritual religion and had thrown it open to all mankind.

(c) *Race-feeling in modern Europe.*—The history of race-feeling is more difficult to trace in modern Europe, because it is still unconcluded, but it is clearly very different from the development just outlined in the case of ancient Greece. European civilization did not spring straight, like Greek, from primitive social life, and was therefore partly emancipated from race-feeling at the outset. It had behind it Hellenism and Christianity—two social forces which were the antithesis of race—and also Roman imperialism, which had imperfectly translated Hellenism and Christianity into political terms by building a 'world city state.'¹ The Latin Church of the Middle Ages, with its common ecclesiastical organization, common culture-language, and common outlook on life, overrode race-feeling triumphantly. It assimilated the outer barbarians who broke into the Roman Empire in its decay. It initiated into European civilization populations which had lain entirely outside the Roman pale—Angles and Saxons, Scandinavians, Poles, Hungarians, Lithuanians. It looked on all Latin Christendom as one, and on heathens and Muslims not as vessels of destruction, but as raw clay ready for the Christian mould. The legend of Prester John (*q.v.*), the mighty Christian king who was to come out of the heart of Africa or the heart of Asia and aid his fellow-Christians to make Christianity prevail all over the world, shows how completely free from race-feeling the spirit of mediæval Christendom was. And the history of mediæval theology, orthodox and heretical, shows how living was the community of thought within the Christian group. A new doctrine travelled within a few years from one end of Christendom to another, was passed on from Croats to Albigenes, from Englishmen to Czechs, receiving a fresh but unbroken development from each of the wandering students or pilgrims by whom it was transmitted. No race-feeling inhibited this general interplay of ideas.

But this great anti-racial force on which European civilization was founded has been invaded by race-feeling to an increasing degree. The linguistic basis of association and dissociation, which had been transcended first by Hellenism, and of which Christianity in its origin had been independent, began very early to assert itself and to split the Church, united by the subjective bond of a common belief and a common will, into a number of groups divided from one another by their 'mother tongues.' This relapse towards race-feeling as the basis of grouping began on the eastern fringes of the Christian world. It first made itself felt in the disguised form of doctrinal disagreement. The Jacobite, Nestorian, and Gregorian Churches left the Catholic communion nominally because they differed on some article of the creed or some ruling

of a council; and the founders of those Churches were probably unconscious that they were also ministering to an impulse in their followers to have a liturgy and a literature in their own vernacular—Coptic, Syriac, or Armenian. A few centuries later the Orthodox Church broke communion with the Roman Church, also nominally on doctrinal grounds; but the practical issue was the struggle of the Greek and Latin languages each to become the official language of the Church, and the inability of either to conquer the whole field of Christendom from the other. This linguistic element in Orthodoxy reveals itself in the liberality with which the Greek Orthodox Church allowed its Slav converts in the Balkans and Russia to form autonomous Orthodox Churches with the Bible and liturgy in their native tongue. And it is noteworthy that among the Slavs on the Adriatic littoral, who bordered on the field of Orthodox missionary expansion, the papacy was forced by competition to make equally liberal linguistic concessions, in complete contradiction to its general policy elsewhere.

The Protestant Reformation (*q.v.*) in W. Europe was in large part a linguistic movement too. The Hussites (*q.v.*) in Bohemia took up arms for 'communion in both kinds,' but they were in fact the Czech peasantry reacting against German penetration. Luther (*q.v.*), a century later, set out to restore the Bible to the laity, and with this object he and his fellow-Protestants in other countries translated the Bible into the High German, Danish, Swedish, Dutch, French, and English tongues. But the translators were also ministering to an impulse among these populations to develop native linguistic cultures of their own, of which these vernacular Bibles became the foundation.

Moreover, there was a political side to the Protestant movement, and this again was disruptive in its effect. Luther attacked the ecclesiastical centralism of the Roman papacy, and so transferred an immense field of patronage and administration to the local state. The rule '*Cuius regio eius religio*' was formulated in Germany, but it was acted upon just as ruthlessly by Henry VIII., and a momentous increase in state sovereignty was the result. Each state aimed at establishing its own uniform state religion, uniting all the members of the state to one another and dis severing them from members of other states beyond the frontier. This state uniformity at the price of a schism in European civilization was enforced by persecution (such as had only been employed before by the Catholic Church acting for Christendom as a whole), and persecution led to religious war, both internal and inter-state, which widened the breaches still further.

Historians often allege nowadays that religious persecution is obsolete, that European civilization has transcended it, and that this is a notable triumph in its progress. In reality it has not been transcended, but has simply completed its development. The Reformation and Counter-Reformation were largely secular at the outset; in the course of several centuries the groups to which they gave birth have been secularized completely. The Dutch national state—to take an example—is the lineal descendant of a Protestant group which differentiated itself in the 16th cent. from the Church of Rome; the Belgian national state owes its historical limits to the fact that the population of the present Belgian territory held fast to Catholicism when its neighbours, all round it, were breaking away. In instances like those we can see the ecclesiastical factor in the group-character being eliminated, and the linguistic factor coming to the front more and more, but all the time the race feeling, once generated in the group, has preserved

¹ 'Urberem fecisti quod prius Orbis erat' (Venantius Fortunatus to Rome).

its continuity, and has increased rather than diminished in its sense of objectivity and its intolerant spirit. It still produces persecution, civil war, and war between state and state, by a fanatical belief in the necessity and rightness of external uniformity, and by an uninhibited craving to impose this uniformity by violence. And this ideal of linguistic uniformity is the religion of Europe in the 20th cent. (so far as religion is a group-phenomenon) in the same sense as the ideal of doctrinal uniformity was in the 17th. In spite of the superficial change of orientation, the creed of 'Cuius regio eius religio' has persisted, because the race-feeling behind it has remained the same.

Thus the inheritance of internal unity which European civilization derived from Hellenism and the Christian Church has been frittered away, and the anti-racial group-feeling of Catholicism has degenerated gradually into the acutely racial group-feeling of nationalism. There has been a corresponding 'racialization' of the division between those inside and those outside the civilized pale.

It has been said that mediæval Catholicism divided mankind into Christians and pagans (including Muslims), and regarded the latter, not as creatures different in species, but as potential Christians capable of becoming actual Christians at any moment by an individual act of will.¹ But, about the time of the Reformation, the great maritime discoveries brought Europeans into contact with other populations markedly different from the people of Europe and W. Asia in externals. Their pigmentation was at the opposite extreme of the human colour-scale; their culture was too primitive to be placed in any scale of comparison at all with European culture; and the climate in which they lived was tropical instead of temperate. In coming into contact with these populations, Europeans were having the same experience as the Greeks when they came into contact with Egyptians and Skythians, but their reaction to it was not the same. The Greeks, struck by the environmental contrast as much as by the contrast in human type, explained the latter by the former, and concluded that all human beings, however acute their superficial differences, were the same in essence, and that every variation of human kind was potentially transmutable into every other. The Europeans were struck so forcibly by the external differences that it never occurred to them to explain their origin by the secondary influence of environment, or to look forward to their elimination by change of environment or progress in culture. The differences hypnotized them as the one overwhelming fact. The black man might become a Christian, he might adopt European clothes or habits of life; but he remained black, and the European white. The colour-barrier presented itself to the European as insurmountable, and it displaced religion for him as the dividing-line between people within the pale of civilization and people without. Instead of classifying mankind as Christians and pagans, transmutable, by conversion, into one another, he now classified them as 'white men' and 'natives,' the 'white race' and the 'black race,' divided from one another by external objective characteristics which no act of will on either side could surmount. And, just as the Greek's hypothesis of adaptation to environment, as an explanation of the Egyptian and the Skyth, reacted on his own feeling of Hellenism, making it more humane and un-racial in quality, so the European's hypothesis of a specific difference between Black and White reacted on his own growing nationalism and made it more uncompromisingly racial than it need otherwise have become.

¹ It is typical of mediæval Catholicism that its artists represented one of the Three Magi as a negro.

The internal unity and external assimilative power which Christendom once possessed can be inferred by comparison with the Islâmic world as it still is—Islâm being an inferior reproduction of Christianity with a belated development (see MUHAMMADANISM). The Muslim missionary in W. Africa or India makes more converts than the Christian missionary, because he really receives his converts into his own group, treats them as social equals, and gives them his daughters in marriage, while the European missionary is divided by the colour-bar from Christian natives just as acutely as from pagan, and can only organize his converts into a 'native church,' which is still outside the pale of the European community.

It is noteworthy, however, that the Muslim populations which have approached nearest to the standards of European civilization are also losing their pan-Islâmic sense of brotherhood and acquiring a sense of linguistic nationality of the European kind. Among the Arabs of Syria this new nationalism, which is dividing them from their Persian or Turkish-speaking co-religionists, has tended in compensation to break down the barriers between Christians and Muslims of Arabic speech. The Osmanli Turks, on the other hand, have developed a nationalism of the purely dissociative kind. Before 1908 the Ottoman Empire, like mediæval Christendom, was a group which gave the privileges of its membership to all inhabitants of its territory who professed the established group-religion, whether they inherited its creed or adopted it by conversion. The Young Turkish party, when it came into power, substituted for this pan-Islâmic basis a programme of 'Ottomanization,' which made the Turkish language, instead of the Muslim faith, the obligatory group-characteristic, and set out to eliminate all inhabitants of Ottoman territory who would not or could not be 'Ottomanized' by force. The racial persecutions in Turkey during the European War were directed against the Muslim Arabs as well as the Christian Armenians; and, though the Armenians were offered the traditional alternative of conversion, those who accepted it either were distributed among Turkish families, if they were individual women and children, or, if they were whole towns or villages, were made away with as mercilessly as those who refused. Communities converted wholesale would have retained their linguistic nationality, as the Slavs of Bosnia retained theirs after their wholesale conversion in the 15th century. But the Young Turks set no store by the religious uniformity¹ which had been the paramount social bond for their forefathers, if it left outstanding the external, objective differences that offended their sharpened racial sense.

This historical outline of the development of modern race-feeling raises a problem. Why should the most progressive Muslim populations be affected most powerfully by 'racialization,' which is clearly a retrogressive tendency? And, if European influence is the cause, how has European civilization made such vigorous and constant progress as it has from the Dark Ages to the present day, with this equally rapid and steady counter-current carrying it in the reverse direction?

The answer seems to be that the degeneration of group-feeling which we have traced, from the anti-racial spirit of the Catholic Church to the almost unmitigated racialism of contemporary nationality, is only one strand in the development of European civilization seen as a whole. Even in the movements through which we have observed race-feeling

¹ In the case of forced converts, the uniformity would of course be purely nominal, and in no sense an act of will implying a unity of spirit; but history shows that the spiritual bond, which the forced converts never feel, establishes itself almost automatically in their descendants.

progressively gaining ground other and anti-racial forces were disengaged. The schisms of doctrinal theology were not only expressions of linguistic particularism but fields for intellectual activity; the Lutheran Reformation was not only a descent towards the national state but a victory for freedom of thought and conscience; and the narrowest and most intransigent nationalism of the 20th cent. is not a mere substitution of dogmatic barriers for the brotherhood of mankind, but the struggle towards equality of populations which, through disunion, numerical weakness, illiteracy, or other adverse social and political conditions, had previously been dominated by other groups or had altogether lacked a group-consciousness of their own. The stimulation of race-feeling, which resulted from these movements, and which we have so far considered in abstraction from the other consequences that they had, was often only the lesser backwash of a forward wave—the toll which liberation of mind and will had to pay to slavery. And there were also movements, like the American or the French Revolution, in which the gain so outbalanced the loss that no definitely new stimulation of race-feeling can be traced to them, to offset the impulsion which they gave towards free association.

This anti-racial tendency in European civilization, which has so far outdistanced the racial tendency of nationalism by the whole span of European progress, is what we name 'democracy'; and modern democracy has liberated broad fields from race-feeling which Hellenism and Christianity never conquered.

There was the inveterate racialism of the ancient city-state, which on its political side was only superficially transcended by the Roman Empire; and the Roman Empire, at the time when Christendom was offering spiritual unity to all mankind, was disintegrating into the 'feudal system,' under which a man was bound to the soil on which he was born by more sordid and prosaic fetters than the *phylal* and *φρατρία* of the historical Greek city-state, or the citizens of gold, silver, and bronze in Plato's racial myth. Feudalism is the greatest, though by no means the only, incubus of racialism inherited by European civilization and successfully thrown off. But, as was remarked at the beginning of this section, it is impossible to trace the history of race-feeling in European civilization with a certain hand, because it is still in the making. In the phase of history that led up to the European War nationalism made such formidable advances among almost all civilized peoples that race-feeling and democracy seemed on the way to equilibrium, and the continued progress of civilization probably depends upon the ulterior consequences of the war. For this equipose which is embodied in the contemporary 'democratic-national state' is not, after all, a stable condition. Nationality and democracy are really opposite tendencies—the one towards race-feeling and the other away from it—and one of the two must have the mastery in the end. But the data are insufficient for speculation into the future, and we must be content to study race-feeling through the past history of it, which has been outlined in this article.

LITERATURE.—I. GENERAL.—W. Z. Ripley, *The Races of Europe*, London, 1900 (for distinction between race-feeling and ethnology); Eduard Meyer, *Gesch. des Altertums*², I. 1, Stuttgart, 1907.

II. ANCIENT GREECE.—Herodotus; Thucydides; Plato, *Republic*, ed. J. Burnet, in 'Oxford Texts,' Oxford, 1901-06; H. Francotte, *La Polis grecque*, Paris, 1908 (for the internal structure of the Greek city-state).

III. MODERN EUROPE.—H. S. Chamberlain, *The Foundations of the Nineteenth Century*, Eng. tr., London, 1911 (for unscientific theorization); *The Birth of a Nation*, cinematograph film produced by W. W. Griffiths (showing genuine race-feeling and its essentially negative character).

A. J. TOYNBEE.

RĀDHĀ SOĀMIS.—The Rādhā Soāmi Satsaṅg is one of the numerous sects which have sprung up in India since the opening of the 19th cent. as a result of Christian and Western influence. It is a Hindu sect, its closest affinities being with the Vaiṣṇavites, and especially with Kabir (*q.v.*).

A banker of Kṣatriya caste, resident in Agra, and known as Śiva Dayāl Saheb, was already regarded as a notable teacher and saint before the Mutiny. He came of a Vaiṣṇavite family, and had connexions with the Vaiṣṇavite priests of Brindāban. Very little is known about his life, but it is clear that he gradually gathered round him a band of devoted disciples, and exercised considerable influence. His theology was similar to that of Kabir, but he also taught his pupils a system of secret meditation, which induced trances and other hypnotic results. He claimed for himself the title Sant Satguru, 'holy preceptor.' His wife, who was a woman of character, also took part in the teaching. Photographs of husband and wife were given to disciples to be contemplated during meditation, and husband and wife were worshipped as divine *gurus*. In 1861 the *guru* made a public statement of his doctrine, and he left two books in Hindi, both called *Sār Bachan*, 'Essential Utterance,' which form part of the scriptures of the sect.

His most famous disciple was Saligram Saheb, a Government official, who rose to the position of Postmaster-General of the United Provinces and received from Government the title Rai Bahadur. He was a man of vigorous and orderly mind. The horrors of the Mutiny drew his thoughts away from the world, and he became a disciple and devoted personal attendant of the Sant Satguru. Max Müller gives a short account of him in his life of Rāmākṛṣṇa.¹

In 1878 the *guru* died, and Rai Saligram Saheb Bahadur was at once accepted by the disciples as his successor. It seems clear that, while the essentials of the system came from the first *guru*, everything else is the work of Saligram Saheb. He organized the sect, gave it its name, and formulated the theology, doubtless following closely the lines of the original *guru's* teaching. The following sketch of the system is drawn from his *Rādhā Soāmi Mat Prakāśh* ('Exposition of Rādhā Soāmi Doctrine'), a short systematic manual in English, which was printed at Benares in 1896 for private circulation:

The universe is in three spheres or divisions, each subdivided into six regions.

A. The first sphere is purely spiritual. In it dwells the Supreme Being, who is altogether unknown. His name, however, is known to be Rādhā Soāmi; for that name resounds through all regions, and can be heard by those who have had the proper initiation and training.

B. The second sphere is spiritual-material. It contains matter as well as spirit, but its matter is comparatively pure and is controlled by spirit. Over this region presides a Viceroy, who is said to be the God of the Bible, the *Brahman* of the *Upaniṣads*, the *Lāhūt* of Muslim saints.

C. The third region is material-spiritual. In it matter dominates spirit, and all spirits contained in it are clothed in gross matter. The Governor of this material universe is identical with the Hindu *Brahmā* and with the ordinary gods of other religions.

From the Supreme Being there proceeds an emanation called the *Sabda*, i.e. the Word, which streams down through all regions and returns again to the Supreme. From the *Sabda* there rings out in all regions the divine name Rādhā Soāmi.

Man's soul is a pure drop from the ocean of the Supreme Spirit; but, being wrapped in coarse matter, it falls into bondage to material things, and may degenerate seriously, unless spiritual help is given; but the Supreme Being has certain 'beloved sons'—men who have risen to perfect union with himself, who from time to time descend from the spiritual sphere in mercy and love, in order to deliver men from the bondage of matter and to enable them to rise to the highest spiritual heights. Each of the *gurus* of the sect is one of those beloved sons.

The *guru* teaches his disciples, by means of the secret discipline of the sect, to hear in their inner organs the sound made

¹ Rāmākṛṣṇa: his Life and Sayings, London, 1898, p. 20 ff.

by the Śabda, as it resounds through all regions. He then teaches them to mount on this spirit-current and to rise on it to the Supreme. There is no way of approach to the Supreme except through the Sant Satguru; so that all men ought to have recourse to him for salvation. The secret discipline is called *Surat-Sabd-Yoga*, 'union of the human spirit with the Word.' The methods of this discipline are not known further than that they are said to be meditative, and that the guru gives the disciple his photograph, and bids him contemplate it as the revelation of God in his meditations. In addition to the secret practice, men are told that prayer, works of faith and charity, a vegetarian diet, abstinence from intoxicating drink, and attendance at meetings of the sect for worship are necessary for the holy life.

The second guru died in 1898. Besides the English booklet mentioned above, he left behind him four volumes in Hindī verse, named *Prema Bānī*, 'Love Utterances,' and six volumes in Hindī prose, named *Prema Patra*, 'Love Letters.'

The third guru, Brahmā Saṅkara Miśra, a man of Bengali extraction, resident in Benares, guided the sect from 1898 until his death in 1902. His book, *Discourses on Rādhāsoāmī Faith* (Benares, 1909), contains brief statements about the gurus, which have been used in this article.

Since the death of the third guru the sect tends to fall into two sections, one of which is in favour of appointing a new guru, while the other is opposed to it. The former section recognizes at present Anand Swarūp as their guru, while the other party is led by Mādhava Prasād, who refuses to be called a guru.

The Sant Satguru is held to be identical with the Supreme Being, and receives lofty titles to express his dignity. The worship of the sect therefore centres in him. All the excesses of Hindu guru-worship are reproduced among Rādhā Soāmīs. They not only prostrate themselves before the guru, adore him, meditate on his virtues, pray to him, and believe that everything that has touched his body is filled with spiritual power; they also follow certain Hindu sects in a number of disgusting practices. They drink the water in which he has washed his feet, eat certain products of his body, and, after his death and cremation, drink his ashes in water.

When a guru dies, his relics are placed in a tomb, his photograph is affixed to it, and round it is erected a building which, because it is sanctified by the relics of the guru, is called a *gurudvāra*. Since three gurus have passed away, there are three *gurudvāras*: (1) the shrine of the first guru, who is called Rādhā Soāmī, or Soāmiji Mahārāj, is at the Rādhā Soāmī Bagh, some four miles from Agra; (2) the shrine of the second guru, who is called Huzoor Mahārāj, is at Pipalmandi, Agra; (3) the shrine of the third guru, whose title is Mahārāj Saheb, is in a fine new building in Madho Das's garden, Benares.¹

Apart from the adoration of the guru, the worship of the sect is a simple service consisting of scripture-reading, hymn-singing, prayer, and a sermon. Their scriptures are the writings of Kabīr and of certain other Hindu saints and the works of their own gurus.

Since the sect is largely guided by Kabīr, and recognizes one God only, the visiting of Hindu temples and the worship of Hindu idols are discountenanced. Yet a Hindu, a Muslim, or a Christian may remain outwardly a member of his old religious community and conform to its usages, while secretly avowing himself a Rādhā Soāmī and partaking in the worship and private meditations of the sect.

The name of the sect is rather an enigma. The word *satsaṅg* is quite clear, for it is a Hindī word used by the Sikhs for a company of pious people; but Rādhā Soāmī is obscure. It is a phonetic misspelling of Rādhāsvāmī, 'Lord of Rādhā,' a

title used of Kṛṣṇa in relation to Rādhā, his famous cowherd mistress, in the latest cycle of the myth. It is most strange that, in a sect which worships one God only, this phrase with all its coarse associations should be declared to be the name of God, and should also be used as the title of the first guru of the sect, and to form the name of the sect itself. No credible explanation has ever been given by any member of the sect. It transpires, however, that the first guru and his wife used to dress up as Kṛṣṇa and Rādhā to receive the worship of their disciples; and when, in February 1914, the writer of this article visited the *gurudvāra* of the first guru, he found two photographs hanging on the tomb. An educated member of the sect, who acted as cicerone, said that they were the photographs of Rādhā and Soāmī, the first guru's wife and the guru himself. Thus it is probable that, during the lifetime of the guru and his wife, when the disciples went to worship them, they addressed them as Rādhā and Soāmī, and that the double name thus became associated with the chief act of worship of the sect. That would be sufficient to account for the way in which it is used.

While the main body of the teaching and the practice of the sect comes from Kabīr and other Vaiṣṇavite sources, certain phrases and ideas are clearly Christian in origin. In many points both of teaching and of practice there is a curious similarity between the system and theosophy (*q.v.*).

LITERATURE.—The chief publications of the sect have been mentioned in the course of the article. A valuable pamphlet, *The Radha Swami Sect*, by H. D. Griswold, was published several years ago by the Cawnpore Mission Press, but is now out of print. The fullest account of the sect will be found in J. N. Farquhar, *Modern Religious Movements in India*, New York, 1915, pp. 167-178. J. N. FARQUHAR.

RĀDHĀVALLABHIS.—The Rādhāvallabhīs are a Vaiṣṇava sect of N. India, numbering about 25,000 adherents, and founded in the early part of the 16th cent. by one Harivaṁśa, the son of a Gauṛ Brāhmaṇa living in the Sahāranpur District. Harivaṁśa's name appears in the list of teachers of the Sanakādi-sampradāya of the Bhāgavata faith, founded by Nimbārka (see artt. NĪMAVĀTS and BHAKTI-MĀRGA, vol. ii. p. 545). This *sampradāya* was divided into five *sākhās*, or branches, by a teacher named Harivyāsa, and Harivaṁśa's name is entered in the list as that of the third teacher of the fourth branch.¹ Other authorities state that he belonged to the Mādhva-sampradāya² (see artt. MĀDHVAS and BHAKTI-MĀRGA, vol. ii. p. 545), and his teaching, as Growse³ points out, was professedly derived partly from the one and partly from the other of these churches.

Harivaṁśa was born in A.D. 1502, his father being at the time a high official in the service of the emperor.⁴ He married, and had two sons and one daughter. After settling his daughter in marriage he determined to become an ascetic. On the way to the holy land of Vṛndāvana he met a Brāhmaṇa, who declared that he had been commanded in a dream to present him with his two daughters and also with an image of Kṛṣṇa in the character of Rādhāvallabha, or lover of Rādhā. Harivaṁśa married the girls and, in A.D. 1525,⁵ set up the image in a temple which he had founded in Vṛndāvana, on the bank of the river Jamnā.

The worship of the sect founded by him is nominally directed to Kṛṣṇa as Rādhā's lover, but practically it is devoted to Rādhā herself. Rādhā was one of the *gōpīs*, or herdmaidens, who are

¹ *Vaiṣṇavasaraṅgava*, p. 15.

² *Bhaktanāmāvalī*, p. 11.

³ *Mathurā*, p. 186.

⁴ The *Bhaktamālā* does not say who the emperor was. Śikandar Lōdī was at that date reigning at Agra.

⁵ So *Bhaktanāmāvalī*, p. 11. This would make him twenty-three years old, which does not give much time for him to have a marriageable daughter. But girls are married in infancy in N. India.

¹ Farquhar, *Modern Religious Movements in India*, p. 165, lines 19-27, is erroneous.

celebrated as the companions of Kṛṣṇa during his youth spent in Vṛndāvana. The legend of his sports with these herdmajdens is fairly old. It appears in the *Harivaṁśa*, or supplement to the *Mahābhārata*, and in the *Viṣṇu* and *Bhāgavata Purāṇas*, but it is not till we get to the *Brahma Vaiṣṇava Purāṇa*, a late sectarian work, that we find prominence given to Rādhā as the leader of the *gōpīs* and as Kṛṣṇa's beloved mistress. Here we are told that Rādhā, from the beginning of all things, had been Kṛṣṇa's *śakti*, or energetic power, and that, when he came down to earth in human form, she also became incarnate.

In many religions there has been a tendency exhibited to worship a female counterpart of the deity, as his energetic power. This was not confined to India. It has even appeared in corrupt forms of Christianity which substituted the Virgin-Mother for the Third Person of the Trinity. In India this *śakti*-worship became most developed among the Śaiva sects, but it has also obtained some currency among Vaiṣṇavas, some of whom direct their prayers more particularly to Lakṣmī or to Sītā, the spouses of Viṣṇu and of Rāmachandra respectively; but among Rādhāvallabhis this is carried to an extreme length. Rādhā is the supreme object of worship, and the writings of the sect are devoted to singing her praises, and to describing, with most sensuous and erotic detail, the union of Kṛṣṇa with his beloved. The whole is, of course, capable of mystic interpretation, and is so interpreted by the pious, but Growse,¹ in commenting on one of Harivaṁśa's devotional poems, is not unfair in saying:

'If ever the language of the brothel was borrowed for temple use, it has been so here. But, strange to say, the Gosāins, who accept as their Gospel these nauseous ravings of a morbid imagination, are for the most part highly respectable married men, who contrast rather favourably, both in sobriety of life and intellectual acquirements, with the professors of rival sects that are based on more reputable authorities.'

To indicate the fervour of his love for Rādhā, Harivaṁśa took the prænomen of Hita, 'affectionate,' and he is generally now known as Hita Hari-vaṁśa. This custom was followed by his disciples, so that we find names such as Hita Dhruva Dāsa and Hita Dāmōdara as those of his pupils and imitators.

Harivaṁśa was about sixty-five years old at the time of his death. He was the author of two works. One of these, written in Sanskrit, is the *Rādhāsudhānidhi*, 'Store of the Nectar of Rādhā,' extending to 170 long couplets. The other, the *Chaurāsī Pada*, 'Eighty-four Stanzas,' is in Hindi. They are both very erotic in character and exhibit much poetical fancy. Portions of them have been translated by Growse. Stray verses attributed to him are also recited. Wilson mentions a work entitled the *Sēvāsakhi-vāṇī*, 'Sayings of the Companions in (Rādhā's) Service.' He states that it is a more ample exposition of the notions of the sect and of their traditions and observances, as well as a collection of their songs and hymns. He does not mention the author's or compiler's name.

By his later marriage Harivaṁśa had two sons, one of whom, Vraja Chandra, or Braj Chand, was the ancestor of the present Gosāins of the temple of Rādhāvallabha in Vṛndāvana, the chief temple of the sect. It dates from the end of the 16th or beginning of the 17th century.

LITERATURE.—The only English authorities who have written original accounts of this sect are H. H. Wilson, *Sketch of the Religious Sects of the Hindus*, London, 1861, p. 173 ff., and F. S. Growse, *Mathurā, a District Memoir*², Allahābād, 1880, p. 186 ff. The following Indian authorities may also be consulted: Nābhā Dāsa, *Bhaktamālā* (see *ERE* ii. 546), verse 90, and Priyā Dāsa's commentary thereon; the best ed. is that of Sītā-rāmaśaraṇa Bhagavan Prasāda, Benares, 1905 (the account in this is summarized by Wilson, and given in full by Growse);

Dhruva Dāsa, *Bhaktanāmāvalī*, ed. with full commentary by Rādhākṛṣṇa Dāsa (Nāgari Prachārīṇi Sabhā), Benares, 1901, p. 11 f.; Harischandra, *Vaiṣṇavasārvasva* (in *Harischandraśālā*, Bankipur, n.d.), p. 16; Lakṣminārāyaṇa Upādhyāya, *Hita Harivaṁśa Prāghaṭya*, Brindāban, 1910; Gaṇeśavihārī Miśra, *Syāma-vihārī Miśra*, and Sukadēvavihārī Miśra, *Mīrabān-dhuvīnōḍa*, Kharḍwā and Allahābād, 1913, p. 284 ff.

RAGGED SCHOOLS.—See JUVENILE CRIMINALS.

RAI DĀSIS.—The Rai Dāsīs are a Vaiṣṇava sect of N. India, founded by Rai (or Ravi) Dās; one of the twelve chief disciples of Rāmānanda (see *ERE* ii. 546, and art. RĀMĀNANDĪS). Its members are low-caste Chamārs, or leather-workers, and, in fact, Chamārs, as a caste, often call themselves 'Rai Dāsīs.' Their doctrines do not differ materially from those of other followers of Rāmānanda. They are chiefly found in the United Provinces of Agra and Oudh, where their numbers are considerable, but, owing to the use of the title not only as a sect name but also as the name of a caste, the total is quite uncertain. In the census of 1891 their numbers were recorded as 417,000, and in that of 1901 as 47,000; but nothing can be deduced from these figures except that, in the latter year, it is probable that many were shown, not as belonging to their particular sect, but under the more general title of Rāmāwat.

Rai Dāsa, like his followers, was a Chamār by caste, and the sect founded by him, if it can be called a sect, is hardly more than an association of Chamārs who have adopted the tenets of his master, Rāmānanda. It has no peculiar sacred book, although it has orally preserved a number of hymns attributed to its founder. Several of these have found their way into the Sikh *Granth*, and another collection of them has lately been printed under the title of *Rai-dās-jī-kī Bāṇī aur Jīvan-charitra* (Allahābād, 1908). A perusal of these hymns shows that the only important point on which their author laid more stress than did some of the contemporary Vaiṣṇavas was that *bhakti*, or devotional faith, in Rāma was of infinitely more importance than a belief in the Vedas or in the teaching of Brāhmanical Hinduism. As is natural in members of a despised community, stress was also laid on the unimportance of caste-distinctions, but this doctrine is common to all the developments of Rāmānanda's teaching.

Rai Dāsa's home was at Benares, and, as a disciple of Rāmānanda, he probably flourished in the earlier part of the 15th century A.D. He was a fellow-disciple with Kabīr (*q.v.*), with whose teaching his doctrine regarding the uselessness of the Vedas and Brāhmanical Hinduism had much in common.

In the art. RĀMĀNANDĪS attention is drawn to the catholicity of Rāmānanda's reformation. His twelve chief disciples included not only women, but men not of the Brāhman caste, such as Kabir, the Muslimān weaver, Sēna, the barber, and, lowest of all, Rai Dāsa, the despised leather-worker. Salvation was now no longer the monopoly of Brāhmins, nor was it any more conveyed through the medium of Sanskrit, a dead language. It was now freely offered to all men, of no matter what caste, and in the language of their everyday life. A man could be a saint, and yet adhere to that state of life to which it might please God to call him. Saint and teacher though Rai Dāsa was, he nevertheless lived the life of a married man, and supported himself by his caste-trade, as a shoemaker.

The *Bhaktamālā* contains several legends concerning him, of which a brief account may be given. In order to get over the inconvenient fact of his low caste, it is stated that he was originally a Brāhmaṇa. Contrary to his teacher Rāmānanda's instructions, he took alms from a shopkeeper who had dealings with Chamārs. Rāmānanda cursed him to be reborn in that

¹ *Mathurā*, p. 199.

caste. He at once died, and was born again in the house of a neighbouring Chamār; but, owing to his former piety, he came into the world with a memory of his previous instruction, and refused to drink his mother's milk till he had been duly initiated as a Vaiṣṇava. Rāmananda was informed of this by a direct divine communication, and hastened to the house. There he saw the babe; and whispered into its ear the initiatory formula, or *mantra*. The infant thereupon accepted the breast and grew up a pious votary of Rāma. His father at length expelled him from the house, and he set up a little hut close by, where he lived with his wife in great poverty, carrying on his trade as a shoemaker. He made a practice of presenting a pair of shoes to any pious man who happened to pass by, and kept body and soul together by selling what remained. Further legends tell how, by the direct interposition of Rāma, he became wealthy and was able to found a monastery, to which he attracted numerous disciples. He was persecuted by Brāhmaṇas, and hailed before the king as an unauthorized teacher; but, in consequence of a miracle performed by the deity in answer to his prayer, reminding us of Elijah's trial of strength on Mount Carmel, not only was he released, but he converted his opponents.

One of his converts was Queen Jhālī of Chitaur. She invited him to come thither to a great religious feast. The local Brāhmaṇas refused to eat with him, and were provided by the queen with uncooked food, which they prepared for themselves in a place apart. When, however, they sat down to eat, they found that, by a miracle, Rai Dāsa had multiplied himself, and was sitting and eating between each two of them. This opened their eyes, and, filled with humility, they also became his disciples. Rai Dāsa then tore open his skin, and, showing to them beneath it his former Brāhmaṇa body wearing a sacred caste-thread of gold, he died and went to heaven.

These legends were recorded by Priyā Dāsa, under the instruction of Nābhā Dāsa, who lived only three generations later than Rai Dāsa, and their marvellous character illustrates the impression that his teaching must have made upon his immediate successors.

LITERATURE.—Practically the only authority is Nābhā Dāsa, *Bhaktamāla* (see *ERE* li. 546), verse 54, and Priyā Dāsa's commentary thereon. See, however, Literature at art. ŚIVANĀRĀYAṆA. The best ed. of the *Bhaktamāla* is that of Sitā-rāmasaṇa Bhagavān Prasāda (Benares, 1905). A summary will be found in H. H. Wilson, *Sketch of the Religious Sects of the Hindus*, London, 1861, p. 113 ff., where the legends about Rai Dāsa will be found related more fully than above, but not quite in accordance with the original. Cf. also Dhruva Dāsa, *Bhaktanāṃdāvalī*, ed. with a full commentary, by Rādhākṛṣṇa Dāsa (Nāgarī Prachārīni Sabhā), Benares, 1901. In this Rai Dāsa is no. 110. According to the editor, there are still descendants of Rai Dāsa in Benares, who carry on their ancestral trade of shoemaking. For an ed. of his songs see the text above (p. 560).

GEORGE A. GRIERSON.

RAIN.—Water is the first need of man, since without it vegetation withers and animals and men languish and die. It is therefore not to be wondered at that in countries inhabited by primitive people where rain is scarce magico-religious ceremonies are resorted to in order to regulate the supply. In fact, so important is this aspect of primitive cult that a special class of magicians, and, in some cases, a particular totem, are set apart for the due performance of rain-making ceremonies. From an anthropo-geographical survey of the distribution of these rites it is evident that the supernatural control of rain is chiefly found in areas in which there is an abnormal rainfall, as, *e.g.*, in sultry lands like Australia, and parts of E. and S. Africa, where for months together the sun blazes down from a cloudless sky on the unprotected bodies of men and the parched and withering vegetation. At the same time it must be remembered that it is not unknown in the moister climate of Europe, as, *e.g.*, in Russia.

1. **The water-totems in Australia.**—Among the Arunta tribe of Central Australia is a group of people who have water for their totem, and to whom the secret of rain-making was imparted in the *alcheringa*, or 'dream-time' of long ago, by an individual named Irthwoanga, who also settled upon the exact places at which the *intichiuma* ceremony should be performed. One of the most important of the water-totem groups is a local subdivision of the Arunta, inhabiting a district about 50 miles to the east of Alice Springs, called by the natives the 'rain country' (*Kartwia quatcha*).

VOL. X.—36

When the *chantchwa*, or leader, of this group is about to hold a rain-making ceremony, 'he sends messengers, called *Inourra*, to the surrounding groups, to inform them of his intention, and to call the members of the totem together. . . . When all are assembled . . . the men of the totem march into camp, painted with red and yellow ochre and pipeclay, and wearing bunches of eagle-hawk feathers on the crown and sides of the head. At a signal from the *Chantchwa* all sit down in a line' and sing. At another signal they all jump up and walk in single file out of the camp, and spend the night a few miles away. 'At daybreak they scatter in all directions in search of game, which is cooked and eaten, but on no account must any water be drunk, or the ceremony would fail.' While some of the men paint themselves, others erect a 'wurley,' or shelter of boughs, near the main camp. When the decorating is complete, the men march back to the wurley silently and in single file. The young men enter first and lie face downwards at the inner end, while the older men, after decorating the leader, take up a position near the opening. Singing continues for some time, and then the *chantchwa* walks up and down a trench outside the wurley, his body and legs quivering in a most extraordinary manner. This performance is repeated at intervals during the night, the singing continuing practically all the time. At daybreak he executes a final quiver, and, thoroughly exhausted, 'declares the ceremony to be at an end, and at once the young men jump to their feet and rush out of the wurley, screaming in imitation of the spur-winged plover. The cry is heard in the main camp, and is taken up with weird effect by the men and women who have remained there.' On the next night an ordinary rain-dance is held by the men.¹

J. G. Frazer explains the ceremony by making it imitative of a rising storm.² The wurley, he imagines, stands for the vault of heaven, from which the rain-clouds, represented by the chief actor strutting across the trench, come forth to move across the sky. The other performers imitate birds that are supposed to be harbingers of rain.

The Kaitish tribe of Central Australia has also a water-totem.

When the headman desires to hold an *intichiuma* ceremony to make rain, 'he goes to a place called Anira, where, in the Alcheringa, two old men sat down and drew water from their whiskers, the latter being now represented by stones out of which the rainbow arose. First of all he paints the stones with red ochre, and then he paints a rainbow on the ground, one or more on his body, and one on a shield, which he also decorates with zig-zag lines of white pipeclay to represent lightning. After 'singing' the stones and pouring water from a vessel on them and on himself, he returns to camp, taking with him the shield, which must be seen only by the men of the same moiety of the tribe as himself, lest the rites be rendered of no avail. The shield is hidden away in his camp until sufficient rain has fallen, after which it is brought forth and the rainbow is rubbed out. A vessel containing water is kept by the side of the headman, into which he throws pieces of white down from time to time, representing clouds. The wife of the leader is obliged to absent herself from the camp for the time being, and on her return imitates the sound of the plover, a bird whose characteristic cry is always associated with rain in these parts. 'If rain follows it is attributed to the performance of the ceremony, but if it does not then it simply means that some one else has prevented it by superior magic.'³

2. **Rain-charms.**—(a) *Animals.*—The Tjingilli, to the north of the Arunta, have a curious ceremony concerned with rain-making, apart from the ordinary *intichiuma*.

'A fat bandicoot is caught, care being taken not to injure it.' A man belonging to a special moiety of the tribe 'then wraps it up in paper-bark and carries it about in a *pitchi* [hollowed trough], singing over it until such time as it becomes very thin and weak. Then he lets it go, and the rain is supposed to follow.'⁴ Spencer and Gillen could find no explanation of this relationship between the bandicoot and rain.

In the Anula tribe of N. Australia rain-making is specially associated with one particular spot called Upintjara, where there is a water-hole in the bed of a creek. The dollar-bird, commonly known as the rain-bird, is connected with the rainy season.

A man of the Mumbakuaku totem can make rain by catching a snake and putting it alive into the water-hole. 'After holding it under for a little time, he brings it out, kills it, and lays it down by the side of the creek. Then, in imitation of a rainbow, he makes an arched bundle of grass stalks . . . and sets it up over the snake. All that he then does is to sing over the snake and the imitation rainbow, and sooner or later the rain falls.'⁵

J. Batchelor describes a curious method of mak-

³ Spencer-Gillen, pp. 294-296.

⁴ *Id.* p. 311.

⁵ *Id.* p. 314 f.

ing rain by the aid of animals practised by the Ainus.

When fishermen, after a long spell of fine weather, are tired and long for a rest, they take out at night the skulls of racoons (animals capable of hearing a request for rain) and pray to them, throwing water over one another. If this is done properly, bad storms are sure to follow, and the people get their desired rest. As soon as the rough weather begins, the men buy *sake* and offer libations to the skull; if very bad weather indeed is required, the people make gloves and caps of racoon- and marten-skins, put them on, and dance.¹

Animals intimately associated with water, such as frogs, toads, etc., have a wide-spread reputation as custodians of rain,² and therefore often play a part in charms designed to draw the needed showers from the sky. In order to give effect to the rain-charm, the animal in some cases must be black, the colour being typical of the appearance of the desired rain-clouds. Conversely, if fine weather is needed, the animal must be of a spotless white.³

(b) *Stones* are often supposed to possess the power of bringing rain, provided they are brought into contact with water.

In New South Wales the natives supplicate 'invisible beings' to send rain, by placing a particular sort of stone on the edge of a water-hole.⁴ In this district, as in Queensland, quartz crystals figure in rain-making ceremonies.⁵ Again, in Samoa a stone was carefully housed in a village as the representative of the rain-making god. When there was too much rain, the stone was laid by the fire and kept heated till fine weather set in. In a time of drought the priest and his followers dressed up in fine mats, and, wending their way in procession to the stream, dipped the stone in and prayed for rain.⁶ This custom may, perhaps, be compared with the practice prevailing till recently in France of dipping the image of a saint in water as a means of procuring rain.

No doubt the fact that stones are often regarded as the abodes of spirits accounts for their use as rain-making charms.

(c) *Pouring water* is a common feature in ceremonies for the procuring of rain in some parts of the world, a survival of such a practice being found in various rain-charms resorted to in times of drought in S. and N. Russia.

In Africa it is common to attribute lack of rain to the concealment of miscarriages by women. To remove the pollution and thus set free the rain, a black ox is killed, and the partly digested grass from its stomach placed in a pot buried in the ground. Into this vessel little girls pour water till it overflows along four channels, representing the cardinal points. The women then strip off their clothes, dance a rain-dance, and thereupon proceed to dig up the remains of the premature births, pouring water on the graves. At dusk they bury the remains in the mud near a stream. Then the rain will be free to fall.⁷ The custom of pouring water on a leaf-clad mummer is still resorted to at carnivals in parts of Europe for the purpose of producing rain.⁸ In Celebes, in times of drought, the villagers go to a stream and splash each other with water, sometimes imitating the sound of falling rain by hitting the surface of the water with their hands or with an inverted gourd.⁹

(d) *The dead*.—Sometimes the dead are involved in rain-making ceremonies.

In New Caledonia the priests blacken themselves all over. They then exhume a dead body, take the bones to a cave, suspend the skeleton over some taro-leaves, and pour water over it so that it runs down on to the leaves. It is thought that the soul of the departed takes up the water, makes rain of it, and showers it down again. Since the rain-maker has to fast and remain in the cavern until it rains, it is not surprising that the wet months (March and April) are usually chosen for the performance of the rite.¹⁰ The Euahlayi tribe in Australia think that a dead person always sends rain within a week of his death to wash away his tracks on the earth.¹¹ In times of drought in Zululand girls carry pots of water to a certain tree

under which an ancestor who was in his day a great rain-maker has been buried. They dance around the tree and pour water on its roots, so that the rain-maker may send them rain.¹

Such ceremonies as these can hardly be described as magical, if magic imply the presence of an automatic efficacy, since they imply a belief in a control from without, the appeal for help being made to the supernatural powers of the deceased.

(e) *Bull-roarers* are used for procuring rain in Australia, Africa, and Central America. The reason for the association of this ceremonial object and rain is apparent. Heavy rainfall accompanies thunder-storms in arid regions, and therefore, since the swinging of the bull-roarer causes a noise bearing a striking resemblance to thunder and wind, both harbingers of rain, it is in accordance with the principles of savage philosophy that the bull-roarer should figure in rain-making ceremonies. The Navahos say that the 'sacred groaning stick' (bull-roarer) which makes a mimic storm may be made only of the wood of a pine tree which has been struck by lightning,² thus showing the connexion between a thunder-storm and the instrument.

Among the Zuni Indians the rain-maker whirls a bull-roarer, while one of his associates whips a mixture of water and meal into frothy suds, symbolic of clouds, and another plays the flute. 'All this is an invocation to the gods for rain—the one great and perpetual prayer of the people of this arid land.'³ The bull-roarer is then laid aside, and the offerings are sprinkled six times with the consecrated water, whereupon the bull-roarer is again sounded.

It is significant that in parts of Africa, where the bull-roarer is little more than a toy, the Kafirs still have sufficient regard for the rain-making qualities of the instrument to forbid boys to play with bull-roarers when they want dry weather, lest a gale of wind should be attracted.⁴

3. *Dances*.—From Carl Lumholtz⁵ we have a detailed description of the rain-dancing of the Tarahumare Indians of Mexico.

In describing the relation of these Indians to nature, he says that rain 'is the focal point from which all their thoughts radiate,' 'since the people obtain their subsistence from the products of the soil.' In order to induce the gods to let it rain, dancing, consisting of a series of monotonous rhythmical movements, is kept up sometimes for two nights. 'The dancing is accompanied by the song of the shaman, in which he communicates his wishes to the unseen world, describing the beautiful effect of the rain, the fog, and the mist on the vegetable world. He invokes the aid of all the animals. . . . The Tarahumares assert that the dances have been taught them by the animals.'

'The Indian never asks his god to forgive whatever sin he may have committed; all he asks for is rain, which to him means something to eat, and to be free from evil.' If there should be too much rain, the people also dance to avoid calamity from floods. Therefore dancing expresses not only prayers for rain, but also petitions to the gods to ward off evil to the crops and to man. Sometimes the family dances alone, the father teaching the boys, one being deputed to bring down the fructifying rain by this means, while the rest of the family plant, hoe, weed, or harvest. In the evening the others sometimes join the unfortunate dancer for a while, but often he goes on alone all night. In winter they dance for snow, at other times in order that the clouds from the north and south may clash and bring down rain to make the grass grow and the deer and rabbits multiply.

4. *Prayers*.—Reference has already been made to prayers for rain. In Australia the only actual instance of prayers being offered to supernatural beings is in connexion with rain-making.

In the Dieri country the sky in which the *mura-muras*—the predecessors and prototypes of the blacks—live is supposed to be a vast plain inhabited by wild tribes. The clouds are regarded as bodies in which rain is made by rain-making *mura-muras*. In times of severe drought the Dieri call upon these supernatural beings to give them power to make a heavy rainfall, proclaiming in loud voices the impoverished state of the country and the half-starved condition of the tribe consequent upon the difficulty of procuring food in sufficient quantities to preserve life.⁶ In S.W. Africa, 'if a drought has lasted long,

the whole tribe goes with its cattle to the grave of some eminent man . . . lay offerings of milk and flesh on the grave and utter their plaint: "Look, O Father, upon your beloved cattle and children; they suffer distress, they are so lean, they are dying of hunger. Give us rain."¹ Among the Bari of Central Africa the rain-maker, after anointing rain-stones with oil, prays to his dead father to send rain.² If there is a drought among the Masai, the women collect together, and, having tied grass on to their clothes, sing an invocation to their god to refresh them with his cooling showers.³ The Nandi in times of drought look towards the Tindiret or Chepusio Hill every morning and say, '*Robon, Tindiret*' ('Rain, Tindiret'). If the drought is protracted and a famine is threatened, the old men collect and take a black sheep with them to the river. Having tied a fur cloak on to the sheep's back, they push it into the water, and take beer and milk into their mouths and spit them out in the direction of the rising sun. When the sheep scrambles out of the water and shakes itself, they sing, 'God! have we prayed to thee, give us rain.'⁴ In the last instance prayer is found in association with a piece of sympathetic magic.

In Upper Burma bread, coco-nuts, plantains, and fowls are offered to the spirit who is thought to send rain, with the prayer, 'O Lord nat [spirit], have pity on us poor mortals, and stay not the rain. Inasmuch as our offering is given ungrudgingly, let the rain fall day and night.'⁵ In the sacred rites at Eleusis, the worshippers looked up to the sky and cried "Rain!" and then looked down at the earth and cried "Conceive!" These mysteries were celebrated at the end of the long drought of summer and before the first rains of autumn, and therefore no time could be more suitable for the invocation to the heavens to pour down rain, and the earth to conceive seed under the fertilizing shower.⁶

5. Sacrifice.—Closely related to prayers for rain is the offering of sacrifices in order to make rain.

Thus, in S. Africa Umbandine, the old king of the Swazis, had vast herds of cattle of a peculiar colour which he sacrificed for large sums of money to make rain. 'He could threaten to "bind up the skies" if they [the natives] did not pay him what he demanded, and thus exercised enormous power. When the ox is killed the blood is caught in calabashes, and is on no account allowed to fall to the ground. The dish of blood is then placed in a hut, together with the meat of the dead ox, which is left untouched for the night; on the morrow the meat is eaten, and on the third day the bones of the ox are burnt. The priest is said to confess over the beast the sins of the people; but this confession of sin is little more than an admission that they have not honoured the ancestral spirits sufficiently.'⁷ The Akikuyu of British E. Africa sacrifice sheep and goats beneath the sacred *umugomo*-tree by way of intercession for rain. 'The whole of the meat is left under the tree, the fat being placed in a cleft of the trunk or in the branches, as special titbits for Ngai [the good god who sends rain, riches, thunder, and lightning]. Those who worship merely cross their lips with a morsel of meat before sacrificing.'⁸

6. The rain-maker.—In Australia any members of the tribe, men and women alike, irrespective of class or totem, are permitted to take part in some of the ceremonies connected with rain-making; but in the sacred *intichiuma* ceremonies only the initiated men of the water-totem may take part. The majority of the members of this totem belong to the Purula and Kumara class, since it was to them that the secret of rain-making was imparted in the *alcheringinga*. Among the Arunta the office of *chantchwa*, or rain-maker, descends from father to son, provided he belongs to the water-totem. If the *alatunja*, or leader, has no son of the right totem, then the office descends to one of his blood-brothers, always provided that he is of the right totem; and, failing such a one, to some tribal brother or son of the water-totem as determined upon by the elder men or, more probably still, by the old *alatunja* before his death.⁹ In the Dieri country the whole tribe joins under the direction of the medicine-man in 'making rain.' Among the Kurnai the rain-makers (*bunjil-willing*) could also bring thunder, and it is said of them, as of the other medicine-men, that they obtained in dreams the songs which form part of the ceremonies.¹⁰

The principal work of the chiefs among the

Wambugwe, a Bantu people living in E. Africa, and among other African tribes is rain-making. So important is this aspect of their office that it often is a rule that, should the chief be unable to make rain himself, he must procure it from some one who can.¹ The Nandi rain-makers belong to a special clan.² In olden times the chief was the great rain-maker among the Kafirs. Some chiefs allowed no one else to compete with them, lest a successful rain-maker should be chosen as chief in their stead.³ The rain-maker invariably exerts great power over the people, and so it is important to keep this function in the 'royal household.' Tradition always treats the power of making rain as the fundamental glory of ancient chiefs and heroes, and it therefore probably played an important part in the origin of chieftainship, hedging round the chief's person with tabus, though not necessarily, as Frazer suggests, with divinity. All influential people are sacred, but the most sacred do not work—e.g., the Mikado. If the chief were divine, so sacred would be his person that he would not be able to execute his functions. An ordinary chief or king is charged with *mana* only to an extent sufficient to hedge him round with simple tabus. Frazer's divine kings are a specialization of the conception of kingship, occurring only where the *mana* aspect of chiefs is exaggerated.

The rain-maker is simply a particular individual—usually a medicine-man—who is endowed with *mana* (q.v.), by means of which he is able to control the weather by supplying wind, calm, rain, thunder, famine, and plenty at will and for a price. It is not surprising that, in those parts of the world in which recurring periods of drought are frequent, the powers of the rain-maker cannot be lightly esteemed. Among the Dinka rain-makers are considered to be animated by the spirit of a great rain-maker, which has been handed down through a succession of rain-makers. By virtue of this inspiration a successful rain-maker enjoys great power. In fact, so sacred is the office that the holder thereof is put to death before old age and infirmity creep on, lest his demise from natural causes should bring distress on the tribe. But so honoured a life and death are not always the lot of the rain-maker. His position is beset with difficulties. Though a successful career offers great rewards, the unskilful practitioner may easily hit upon hard times. When people believe that a man has power to make the rain to fall, the sun to shine, the winds to blow, the thunders to roll, and the fruits of the earth to grow, they are also apt to attribute drought and dearth to his negligence or evil magic. Thus, the Banjars of W. Africa beat the chief in times of drought till the weather changes, and the tribes on the Upper Nile rip up the abdomen of the rain-king, in which he is supposed to keep the storms, if he does not make the showers fall.⁴

7. Rain-gods.—The Dieri believe in rain-making supernatural beings, known as *mura-muras*, who live up in the sky and make the clouds, which are the 'body or substance of rain.' The rain-making ceremonies are thought to be seen by the *mura-muras*, who cause the clouds to appear in the sky, unless they are angry or influenced by the evil magic of some other tribe. In Africa rain is attributed to a high god. The Akikuyu recognize three gods, two good and one bad. The first sends rain and riches, the second good wives and healthy children, and the third sickness and loss. All three are called *ngai*, but it is the god who sends the rain that is considered the supreme deity and credited with divine powers.

The Akikuyu regard their deities as common to other tribes, such as the Masai and Akamba.¹

The Ewe-speaking people associate a falling star with a powerful rain-god, who sends the showers from the sky. In times of drought they call upon him by night with wild howls, and once a year an ox is sacrificed to him. The priests consume the flesh, while the people smear themselves with the pollen of a certain plant, and go in procession through the towns and villages, singing, dancing, and beating drums.² The Dinka believe in a great god who sends the rain from the 'rain-place' where he dwells, and who animates the human rain-maker. His name, Dengdit, means literally 'great rain.' It was he who created the world and established all things in their present order; and, according to the Niel Dinka, he was the ancestor of a clan which has rain for its totem. Bullocks are sacrificed in spring to a spirit, Lerpui, for the purpose of inducing him to move Dengdit to send down rain on the parched earth.³ Likewise among the Shilluk a bullock and a cow (or hen) are given to Nyakang, the semi-divine ancestor of their kings. One (or both) of the animals is slain, while the king prays to the divine hero for rain.⁴

In Mexico Tlaloc, or Tlalocateuchtlī, is the god of water and rain, and the fertilizer of the earth. He is thought to reside where the clouds gather, on the highest mountain-tops, especially those of Tlaloc, Tlascala, and Toluca, his attributes being the thunderbolt, the flash, and the thunder. Prayers were offered to him in times of drought, as the chief of the water-gods, to look down in mercy on the sufferings of man and beast, and give the things which are 'the life and joy of all the world, and precious as emeralds and sapphires.' When there is no rain for four years, children are sacrificed to Tlaloc by being closed up in a cave.⁵

The rain-god of the Kandhs is Pidzu Pennu, a being who rests on the sky and whom the priests propitiate with eggs, rice, and sheep, and invoke with prayers, so that he may send down water upon them through his sieve before men and cattle die of want.⁶ The Kol tribes of Bengal consider their great deity Marang Buru, 'great mountain,' to be the rain-god. His dwelling is on one of the most conspicuous hills of the plateau near Lodmah in Chotā Nagpur. In times of drought the women climb the hill, led by the wives of the *pahans*, with girls drumming, to carry offerings of milk and *bet-leaves*, which are put on the rock at the top. The women then invoke the deity to give the seasonable rain, wildly gesticulating and dancing till the prayer is answered by distant peals of thunder.⁷

E. B. Tylor thinks that the rain-god is usually the heaven-god exercising a special function, though sometimes taking a more distinctly individual form, or blending in characteristics with a general water-god.⁸ Although the tribal All-Father in very primitive cult is remote and in need of nothing that man can give, and therefore is not concerned with human affairs⁹—rain-making being the function of the *mura-muras*—yet it seems that the rain-god proper is a heaven-god. This view is supported by the evidence from the Akikuyu, where it is the supreme deity who sends down the refreshing showers to water the parched ground in answer to the prayers of the people.

Likewise, Dengdit is the creator and sustainer of all things. The Mexican Tlaloc was probably originally a heaven-god, since he is supposed to reside where the clouds gather, and is evidently superior to the god of the earth. Pidzu Pennu, the rain-god of the Kandhs, rests on the sky, and Marang Buru of the Kol tribes dwells on the top of a high hill. In classical times it was to the heaven-god Zeus that the Athenians turned with requests for rain,¹ while in later and still more enlightened ages it is the Lord of heaven and earth that men supplicate in times of drought by solemn litany and procession to send such 'moderate rain and showers that they may receive the fruits of the earth to their comfort and to His glory.'

8. Conclusion.—Frazer is of the opinion that the method adopted by the rain-maker is usually based on homeopathic or imitative magic. In other words, he seeks to produce rain by imitating it.² Now, there can be no doubt that many of the rites associated with rain-making imitate the natural process. Thus, *e.g.*, when the Dieri erect a hut over a hole in the ground and drop blood on the men sitting round, while others throw handfuls of down in the air, they symbolically represent the natural phenomena connected with rainfall. The hut portrays the firmament, the down the cirrus clouds, the dropping blood the rain. The two large stones in the centre of the hut suggest gathering clouds presaging rain, and the overthrow of the hut by men butting at it with their heads the piercing of the clouds and the downpour of rain. Such a rite as this certainly contains an element of imitation, but only because the savage is a man of action, who 'dances out his religion.' When he wants wind or rain, he does not, in the lowest states of culture, prostrate himself before his remote All-Father, but gathers certain people together, often members of a water-totem, to perform magico-religious rites. Thus he expresses by actions, sometimes accompanied by suitable exclamations, his inmost desire. Rain-making ceremonies, therefore, may be described as outward and visible signs of inward emotions and longings.

It is not surprising that primitive ritual is often imitative, since it represents symbolically that which in higher cult is expressed by utterances. Frazer's theory of imitative magic does not take into account the emotional and representative aspect of rudimentary religion—the pent-up desire to act discharging itself on the mere symbol of the object. In developed magic the operator is more or less aware that he is dealing with a symbol, yet, in his need for emotional relief, he makes himself believe that the desired effect, though enacted on the symbol, is actually transmitted to the real object.³ What applies to magic in general is equally applicable to rain-making in particular.

A modern community is chiefly dependent upon the weather for its incomings and outgoings, and for the variation in the prices of bread and vegetables, yet even so it is not easy for us to understand a condition of life in which a bad harvest means starvation. But in primitive society, where the food-supply is governed directly by the rainfall, the attitude of man towards the weather is one of grave anxiety calculated to produce states of emotional intensity. The emotions must find outlet somewhere. This they do in representative and emotional ceremonies to produce the desired result.

² GB³, pt. i., *The Magic Art*, p. 247.

³ Cf. R. R. Marett, *The Threshold of Religion*, London, 1914, ch. ii.

When the savage wants thunder to bring rain, he does not imitate it, but simply swings his bull-roarer in order that he may actually make it. It is not a noise like thunder that he imagines he hears, but the thunder itself. It is only as the belief in magico-religious practices declines that primitive ideas of making or being a thing degenerate into a merely imitative ceremony, a piece of frivolous and valueless mimicry. Thus the prayer attitude is but the more developed expression of the hope and faith with which the so-called 'magical' rite is instinct.

RAINBOW.—See PRODIGES AND PORTENTS, vol. x. p. 371 f.

RAJPUT.—Rajput (Skr. *rājaputra*, 'a king's son,' 'a prince') is the general term applied to a group of septs which constitute the so-called 'military' class of India. At the census of 1911 they numbered 9,430,095, appearing in the greatest numbers in the Panjāb, United Provinces, and Bengal. In Rājputāna, the head-quarters of the tribe, they numbered 675,789.

1. *Ethnology*.—Within the last few years an important change of view regarding the origin of the Rājputs has taken place. Following the universal tradition of the Hindus, it was generally assumed that they were the direct successors of the Kṣatriyas, one of the four groups (*varna*, 'colour') which constituted the Vedic polity. According to Manu (*Laws*, i. 89), the Creator commanded the Kṣatriya 'to protect the people, to bestow gifts, to offer sacrifices, to study (the Veda), and to abstain from attaching himself to sensual pleasures.' The true position of this group of septs has now been clearly ascertained.

'So far back as the time when the *Dialogues of the Buddha* were composed, the Kṣatriyas were recognised as an important element in society, and in their own estimation stood higher than the Brāhmins. The fact probably is that from very remote days ruling clans of Kṣatriyas essentially similar to the Rājputs of later days, existed and were continually forming new states, just in the same way as in the mediæval period. But their records have perished, and only a few exceptionally conspicuous dynasties are at all remembered, and so stand out on the page of history in a manner which does not fully correspond with the truth. The term Kṣatriya was, I believe, always one of very vague meaning, simply denoting the Hindu ruling classes which did not claim Brāhman descent. Occasionally a rāja might be a Brāhman by caste, but the Brāhman's natural place at court was that of minister rather than that of king' (V. A. Smith, *The Early Hist. of India*, Oxford, 1914, p. 408).

In the tradition, which in India ranks as history, there is a sudden gap: the old Kṣatriyas disappear, until the 6th and 9th centuries A.D., when we find a group of states under Rājput rulers. But it is impossible to say whether these rājas were merely successful adventurers, or how far they were the heads of dominant clans. The true situation has now been ascertained from a study of the epigraphic evidence in N. and W. India. It is clear that the break in the tradition—in other words, the disappearance of the old Kṣatriyas—was the result of the invasion of India by successive hordes from Central Asia. The earliest of these were the Sakas in the 2nd cent. B.C., followed by the Yueh-chi or Kushāns in the 1st cent. A.D. It is believed that the chiefs of these invading hordes rapidly succumbed to the influence of their new environment, became Hindus, and assumed, as ruling princes, the old name of Kṣatriya. But it is still uncertain whether the pedigrees of any of the ruling clans go back to this period. During the 5th cent. A.D. and the early part of the 6th cent. the Huns (or Hūnas, as the Hindus called them) made a fresh invasion, and crushed the Hindu polity. They settled

principally in the Panjāb and Rājputāna, their most important group being that of the Gurjaras, who, in name at least, are represented by the modern Gūjars (*ERE* vi. 453). The Gurjaras founded important kingdoms, and gave their name to the province of Gujarāt. These Gurjaras were soon admitted to the status of Hindus, and we are thus enabled to interpret the strange legend of the fire sacrifice at Mount Ābū (*ERE* i. 51 f.). Their passing through the fire was a mode of expressing the purgation which they underwent; their impurity was removed, and they became fitted to enter the Hindu caste system (W. Crooke, 'Rājputs and Mahrattas,' *JRAI* xl. [1910] 42).

In later times the same process of introduction into the Rājput body has continued. Many chiefs of the so-called aboriginal races, with their followers, have marked their rise to the status of rulers by assuming the title of Rājputs, which, as has been said, merely implies the fact that they claim to be rājas or cadets of a ruling house. For further details of this, the most recent and important advance in our knowledge of Indian ethnography, see Smith, p. 412 ff.; Crooke, p. 41 f.; *BG* ix. pt. i. [1901] 443 ff., where full details and references will be found.

This mixed body, containing perhaps some survivors of the older Kṣatriyas, reinforced by foreigners and aborigines, being thus admitted to Rājput status, were naturally desirous of authenticating their descent. Complacent bards, like the heralds of modern times, were ready to provide pedigrees linking the new ruling class with the gods and ancient heroes, just as Livy and Virgil affiliated the new Roman Empire with the heroes of the Trojan war. Hence arose the mass of legend assigning to various septs their descent from the sun or moon or other gods, or from the heroes who fought in the great war described in the *Mahābhārata* epic. These legendary pedigrees are recorded in great detail by J. Tod, the enthusiastic historian of the Rājputs, in his *Annals of Rajast'han*.

2. *Religion*.—As might be expected from what has already been said, the Rājput cults and beliefs are of a mixed type, including those taught by their bards and Brāhmins who trace their pedigrees to gods or legendary heroes, and those of the foreign or aboriginal stocks from which the Rājputs are derived.

(a) *The place of Rājputs in the development of Hinduism*.—In the early Hindu period tales are told which describe the antagonism between the Kṣatriya and the Brāhman. Some refractory rājas are said to have opposed the pretensions of the Brāhmins (Manu, *Laws*, vii. 38–42). Viśvāmitra, a Kṣatriya, is said to have attained the rank of a Brāhman (Muir, *Orig. Skr. Texts*, i. [1858] 58 ff.). The same feeling appears in the rise of the Bhakti-mārga, or the monotheistic Bhāgavata religion, which was the work of Kṣatriyas (*ERE* ii. 537 ff.). In the same way, both Buddhism and Jainism were the result of a Rājput reaction against the claim of Brāhmins to retain the monopoly of admission into the ascetic orders (*ERE* vi. 694, vii. 209). Even at the present day some Rājput septs assign a higher rank to the bard than to the Brāhman, and this feeling is encouraged by the notorious laxity of practice among some classes of Brāhmins in Rājputāna (*ERE* vi. 693). But the Brāhmins are anxious to accept the new situation, and by politic concessions to Rājput feeling lose no opportunity of regaining their position in the courts of the reigning princes.

(b) *Cult of Śiva and the mother-goddesses*.—As a martial race, many Rājputs favour the cult of Śiva-Mahādeva combined with that of his consorts, the latter being largely drawn from the non-Aryan races, but now freely admitted into Hinduism

If, as some believe, the cult of Śiva had its origin in the Himālaya, we may suspect that it was introduced, or rapidly assimilated, by the Scythian or Hun invaders. Vāsudeva, king of the Kushāns (c. A.D. 140-173), figured on his coins the image of Śiva with that of his bull, Nandi (Smith, p. 272). The chief Śaiva temple in Rājputāna is that known as Eklingī, 'he that is worshipped under the form of a single *lingam*.' It is also known as Kailāspurī, Mount Kailāsa being the Himālayan seat of the god. It is situated 12 miles from Udaipur, the capital of Mewār (H. D. Erskine, *Rajputana Gazetteer*, ii. A. [1903] 106; Tod, i. 409 ff.). The Rānās of Mewār combine the functions of prince and priest, and are known as the vice-regents (*dinān*) of the god (Tod, i. 182). With the cult of Śiva is combined that of his consort Durgā. In another form she is known as Māmā Devī, 'mother of the gods,' and round her image are grouped those of the other gods (*ib.* i. 553). Again, as Gaurī, the 'yellow' or 'brilliant' goddess, probably representing the ripe corn, she is the subject of a special cult, when at the Gangaur festival her image is taken to the lake at Udaipur and ceremonially bathed, possibly in order to free her from the last year's pollution, or as a rain charm; as in the worship of the Bona Dea, no male may be present at the rite (*ib.* i. 544; *IA* xxxv. [1906] 61). She is also worshipped as Annāpūrnā, 'she who is possessed of food,' and her mimic marriage to Śiva is performed (Tod, i. 455). In other forms she is worshipped as Śākambharī, 'nourisher of herbs,' Mātā Janamī, 'the birth mother,' and Āśāpūrnā, 'she who fulfils desire.'

(c) *Kṛṣṇa*.—In Rājput belief Kṛṣṇa is the deified hero of the Yādava tribe, and he has his seat at Mathurā (*q.v.*), where he sports with the *gopīs*, or milkmaids. In another form, at Dwārkā, he is god of the dark storm-cloud (J. Kennedy, *JRAS*, 1907, p. 951 ff.). His shrine is at Nāthdwārā, 30 miles N.N.E. of the city of Udaipur. His image is said to have been removed from Mathurā to escape the persecution of Aurangzib; when the cart came to this place, the god refused to go farther, and a shrine was erected for him, which is a sanctuary for criminals, receiving donations from merchants throughout the Hindu world, and his pontiff is a personage of great sanctity and authority (Tod, i. 415 ff.). It is strange that the gentle Kṛṣṇa should be worshipped side by side with Śiva. On the whole, his cult has exercised a good effect on Rājput society, and Tod quotes a case in which he interposed to prevent *satī* (i. 423).

(d) *Ancestor-cults*.—It is the primary duty of the Rājput to visit the cenotaphs of his ancestors in the season of mourning, and to feed their hungry ghosts. Special veneration is paid to the *mahā-satī*, or place of sacrifice of faithful wives.

'The Rājput never enters these places of silence but to perform stated rites, or anniversary offerings of flowers and water to the manes of his ancestors' (*ib.* i. 62).

He also venerates the heroes of his sept, as in the remarkable court at Mandor, which contains images of the heroes of the Rāthors (*ib.* i. 573 f.).

(e) *Tutelary deities*.—Each sept worships its tutelary goddess; Rāthasen or Rāshtrasenā is the embodied luck of the Sesodias of Mewār, as Nag-necha, the serpent, protects the Rāthors, and Vayan Mātā the Chāvadas, while Khetrapālā, 'the field-watcher,' is the patron of agriculture (*ib.* i. 225 n.). The patron god or goddess of the sept used to accompany the chief to battle. On one occasion the Rāthor god fell into the hands of the Kachhwāhās of Jaipur. Their prince took him to his capital, wedded him to the Jaipur goddess, and returned him with his compliments to his defeated adversary. 'Such,' says Tod (ii. 87), 'were the courteous usages of Rājput chivalry.'

The tutelary god of Kotah is Brajnāth or Kṛṣṇa, and the chief at every battle used to carry his golden image on his saddle. He too was lost in battle, and it was many years before he was restored, 'to the great joy of every Hārā' (*ib.* ii. 413).

(f) *Cult of youthful heroes*.—The cult of the youthful hero (*putra*) is common among the Rājputs. Laut, the young hero of Ajmēr, is worshipped by the Chauhān sept, and, as he wore at the time of his death a silver chain anklet, this ornament is tabu to the children of the sept (Tod, i. 200 n.). The cult is not confined to youths. The queen of Ganor, who killed by means of a poisoned robe the Musalmān who attempted to outrage her, receives no special worship, but in the spirit of sympathetic magic a visit to her tomb cures tertian ague (*ib.* i. 497).

(g) *Worship of natural objects*.—Water-spirits are honoured by throwing coco-nuts into the water. The spirit of the Banās river used to raise her hand over the water to receive the offering, but, as in the common fairy-gift legend, 'since some unhalloved hand threw a stone in lieu of a coco-nut, the arm has been withdrawn' (*ib.* i. 527; *PR* i. 287 ff.). There was a sun fountain at Valabhi, whence at the summons of Rājā Silāditya, the seven-headed horse which bears the chariot of the sun rose to bear him to battle (Tod, i. 179).

(h) *Snake-worship*.—The Pushkar lake is provided with a remarkable snake legend indicating a conflict of cults (C. C. Watson, *Rajputana Gazetteer*, i. A. [1904] 19). The Nāgpañchamī festival, 'the cobra's fifth,' is celebrated in its honour (Tod, i. 462). The usual tales are told of the serpent protecting or recognizing the true heir to the throne (*ib.* i. 236, ii. 281). The worship of snake heroes, like Tejaji, Gūgā, and Pipā, is common (*PR* i. 213 f.; Tod, i. 580).

(i) *Sacred animals and trees*.—Next to the cow, the boar is sacred to the Rājput, and possibly represents the corn-spirit (*GB*³, pt. v., *Spirits of the Corn and of the Wild*, London, 1912, i. 298 ff.). Birds of augury are carefully protected, and the pigeon, as the bird of love, has become associated with the erotic cult of Kṛṣṇa, and is still regularly fed at every courthouse in Rājputāna. Among trees the varieties of the fig are especially sacred. It was from a *pīpal*-tree (*Ficus religiosa*) that Āśāpūrnā, the tutelary goddess of Būndī, appeared to protect the queen (Tod, ii. 368).

(j) *Festivals*.—The Rājput festivals are numerous and interesting. The reader may be referred for details to Tod's classical account (i. 444 ff.). But, when he compares the ritual with that of Egypt and other countries to the west of India, it must be remembered that his theories are, to a large extent, obsolete.

LITERATURE.—The classical authority is J. Tod, *Annals and Antiquities of Rajast'han*, 2 vols., London, 1829-32 (the original ed. is now very scarce, but it has been often reprinted; the references in the text are from Routledge's popular ed., London, 1914). For the Rājputs of districts outside Rājputāna see A. K. Forbes, *Rās Mālā*, London, 1878; H. A. Rose, *Glossary of the Tribes and Castes of the Punjab and the N.W. Frontier Province*, vols. ii, iii, Lahore, 1911-14; D. C. J. Ibbetson, *Punjab Ethnography*, Calcutta, 1883; W. Crooke, *Tribes and Castes of the N.W. Provinces and Oudh*, do. 1896; R. V. Russell, *Tribes and Castes of the Central Provinces*, London, 1916.

W. CROOKE.

RĀMAISM.—I. History.—Vaiṣṇavism, one of the two main divisions of the Hindū religion, includes, besides the worshippers of Viṣṇu in his proper form as a supreme personal god, two large sects embracing not only the great majority of the Vaiṣṇavites, but also a very considerable portion of the Hindus of to-day. These two parties are the votaries respectively of Viṣṇu's two last incarnations, Kṛṣṇa and Rāma.¹ The cult of Rāma as a chief god at the present day prevails over an ex-

¹ See art. INCARNATION (Indian), vol. vii. p. 118.

tensive area in India. But Rāma was at first only an epic hero; for in the original part (bks. ii.-vi.) of the *Rāmāyaṇa* (q.v.), which celebrates his life and deeds, he is represented as an essentially human character. On the other hand, in bks. i. and vii., which are admittedly later additions, his divine nature is fully accepted. In another passage also (vi. 117), which is without doubt an interpolation, the gods, with Brahmā at their head, appear and declare Rāma, who had till then regarded himself as a man, to be Nārāyaṇa, i.e. Viṣṇu, the highest god. The character of Rāma, already a model of morality as the hero of the *Rāmāyaṇa*, was still more exalted by later poets, including those of the *Purāṇas* and especially by Bhavabhūti (first half of the 8th cent. A.D.), the author of two Sanskrit dramas concerned with the life of Rāma. Having thus become immensely popular, the epic hero was before the lapse of many centuries generally acknowledged, by a people ever prone to deification, as an incarnation—an already familiar feature of the Hindu religion—of the supreme god Viṣṇu. Though there is not sufficient evidence to show exactly when Rāma came to be accepted as an *avatār*, there is good reason to regard this belief as having already existed in the early centuries of the Christian era. Thus in the 10th canto of Kālidāsa's epic, the *Raghuvamśa*, which dates from the first half of the 5th cent. A.D., the poet, before relating the story of Rāma's birth, represents Viṣṇu as promising to be born as a son of King Daśaratha for the destruction of the demon Rāvana. The *Vāyu Purāṇa*, which probably belongs to the same century, also refers to his divine character. Much later, A.D. 1014, we find the Jain author Amitagati making the statement that Rāma was regarded as the all-knowing, all-pervading protector of the world. But, though the divinity of Rāma had thus been recognized for centuries, there is no evidence that any cult in his honour existed during this long period. It cannot, however, have been established much later than the 11th century A.D. Thus Madhva (q.v.), otherwise called Ānandatīrtha (the founder, in the 13th cent., of a Vaiṣṇava sect, which aimed at confuting not only Śaṅkara's theory of the unreality of the universe and the identity of the human soul with the supreme deity, but also Rāmānuja's doctrine that God is the material cause of the world), is declared to have brought the image of Rāma from Badarikāśrama in the Himālaya, and to have sent his pupil Naraharītīrtha to Jagannātha in Orissa, about A.D. 1264, to bring back what were called the original idols of Rāma. Hemādri, a voluminous Sanskrit writer who flourished in the latter half of the 13th cent., describes the ceremony connected with the birth of Rāma on the 9th day of the bright half of the month Chaitra (March-April). An indication of the comparative lateness of the cult of Rāma as an incarnation is the fact that, among the 24 names of Viṣṇu that are repeated at the present day by Vaiṣṇavites at the beginning of every ceremony which they perform, the name of Rāma does not occur, though those of two other incarnations, the Dwarf and the Man-lion, are mentioned. Again, while the ordinary ceremonies of Vaiṣṇavism include a repetition even of Vedic *mantras*, or formulae, this is not the case in the cult of Rāma. At the present day every Hindu is familiar with Rāma's exploits, and throughout the length and breadth of India his name is on every one's lips irrespectively of class, caste, or creed. Thus, when friends meet, they often greet each other by uttering Rāma's name twice ('Rām, Rām'). No name is more frequently given to children, and none is more often invoked at funerals and in the hour of death.

2. Literature.—The literature of Rāmaism is of

late origin. There exist in the first place various manuals which describe the forms of Rāma-worship by means of *mantras*, or formulae, and magic circles, like those prescribed in the *Sātvata-Saṃhitā* for the worship of Vāsudeva (Viṣṇu). There are besides a few works that set forth the doctrines of the Rāmaite faith. The *Adhyātma-rāmāyaṇa* aims throughout at expounding the divinity of Rāma and explaining the relation of the individual soul to him as the supreme soul. Sītā and Rāma are introduced by the author as the exponents of the doctrines inculcated in this work. The fifth canto of the last book is entitled *Rāma-gītā*, 'the Song of Rāma,' which is intended to correspond to the Kṛṣṇaite *Bhagavad-gītā* (q.v.), and which is narrated by Rāma to his brother Lakṣmaṇa, the counterpart of Arjuna in the parallel poem. The teaching is monistic throughout, the world and the individual soul being described as illusory, while the one supreme spirit, here Rāma, alone really exists. Composed of extracts from older writings, it has no claim to any connexion with Vedic literature. It is also mentioned as a modern treatise by Ekanātha, a Mahārāṣṭra saint of the 16th cent., in his *Bhāvārtha-rāmāyaṇa*. There is another Rāmaist work (published at Madras) also entitled *Rāma-gītā*, which is composed in 18 chapters like the original *Bhagavad-gītā*. Its contents are narrated by Rāma to Hanumān. It is a very modern compilation, for it professes to be based on the 108 *Upaniṣads*, some of which are unmistakably very recent. What may be regarded as the Bible of the Rāmaites is the *Rāmcharit-mānas*, an adaptation of Vālmiki's *Rāmāyaṇa*, composed in Hindi by Tulasi Dāsa, the greatest of modern Hindu poets, in the 16th century. What the *Bhāgavata Purāṇa* and the *Bhagavad-gītā* are to the Kṛṣṇaite, Tulasi Dāsa's poem, together with the Sanskrit *Rāmāyaṇa*, is to the many millions in N. India whose vernacular tongue is Hindi.

3. Doctrine.—The following are the doctrines held by all Rāmaites in common: (1) the deity is not devoid of qualities (as is *brahman*, the impersonal world-soul of Śaṅkara); (2) Viṣṇu is the supreme deity and should be the object of worship together with Lakṣmī, his wife; (3) Rāma is the human incarnation, or *avatār*, of Viṣṇu; (4) Rāmānuja and all the great teachers who have succeeded him are also *avatārs* of Viṣṇu. The first three of these doctrines afford a parallel to the conceptions of Western religion. Like Jahweh, Viṣṇu is a personal supreme deity who is an object of worship, while the relation of Rāma, as a human manifestation of the supreme deity, to Viṣṇu is analogous to that of Christ to God. The Rāmaist attitude resembles that of a Western deist who might adopt Christ as the main object of his devotions.

4. Sub-sects.—Rāmānanda, fifth disciple in succession from Rāmānuja, from whose school he seceded, was the founder of the Rāmaite sect which goes by the name of Rāmāwats, in the 14th century.¹ A teacher named Kīl, separated from Rāmānanda by a successive series of several disciples, founded the Khākī (q.v.) sect, which is a striking example of the tendency of Hinduism to eclecticism and compromise. See also art. RĀMĀNUJA.

LITERATURE.—H. H. Wilson, *A Sketch of the Religious Sects of the Hindus*, new ed. (*Select Works*, i.), London, 1861, pp. 46, 54-57, 63-65, 671.; 981.; W. J. Wilkins, *Modern Hinduism*, do. 1887; G. RĀMAKRSNA.—Rāmākṛṣṇa is the adopted name of one of the three leaders of the revival of Hinduism during the latter half of the 19th cent.,

¹ See art. RĀMĀNANDIS.

the other two being Dayānanda Sarasvatī (1824-83) and Svāmī Vivekānanda (1862-1902). All three adopted in early youth the life of the ascetic devotee—striking illustrations of the deeply-rooted conviction which prevails among Hindus that renunciation (*q.v.*) is the highest religious ideal, and which for more than two thousand years has led innumerable young Indians to give up home, marriage, property, and money for the attainment of union with God.

1. **Life.**—Gadādhara Chatterji, the son of a poor but orthodox Brāhman, was born on 20th Feb. 1834, in the village of Kamarpukur, situated in the Hugli district of Bengal. Losing his father when he was seventeen, he migrated to Calcutta, where for a few years he earned his living as a *pūjārī*, or ministrant attending to the worship of the household idols in Hindu families. In 1855, when a temple of the goddess Kālī, built on the bank of the Ganges by a rich Bengali lady named Rānī Rāsmoṇi, a few miles from Calcutta, was opened, his elder brother was appointed chief priest, while he himself not long after became one of the assistants. His religious instinct, of which he had shown signs as a boy, now developed into passionate worship of the image of Kālī in the temple. Thinking of her as the mother of the universe and as his own mother, he used to sing hymns, talk, and pray to her by the hour till he became unconscious of the outer world. He would then pass into the state of religious trance called *samādhi*, which often lasted for hours, and in which the action of the pulse and the heart became imperceptible. When he was twenty-five, his relatives, hoping to cure him of his religious ecstasies, induced him to undergo the usual ceremony of child-marriage, though his bride was only six and would not live with him as his wife till she was eleven or twelve years old. Returning to the temple and being now convinced that it was possible to see the deity visibly, he renewed his devotions with such intensity that he neglected his duties and could no longer retain his official position. So he left the temple and settled in a neighbouring wood, where for the next twelve years he lived a life of strenuous prayer and self-repression in continuous efforts to attain union with God. Having as yet received no education or training, he was helped during this period in his aspirations first by a Brāhman nun, who instructed him in *yoga*, or the system of exercises producing mental concentration, and in the *Tantras*, or manuals dealing with the worship of Kālī and the theology concerned with her cult. Afterwards he came for nearly a year under the influence of an ascetic named Totāpuri, who expounded to him the monistic Vedānta doctrine of Śaṅkara, that God is impersonal, that the human soul is identical with God, that the world is an illusion, and who taught him the highest stage of religious trance in which every trace of consciousness disappears. Totāpuri also initiated him as a *sannyāsī*, or ascetic who renounces every worldly attachment. In accordance with the practice of such devotees, Gadādhara now assumed a new name. Henceforward he was known as Rāmākṛṣṇa; and later he received from his friends the title of Paramahansa, which is given only to ascetics of profound knowledge and sanctity. After Totāpuri's departure he lived for six months almost continuously in a state of exalted religious trance. This condition ended in a severe attack of dysentery, from which, however, he recovered after a month or two.

Rāmākṛṣṇa now entered on a new phase of religious aspiration—the craving to realize the Vaiṣṇava ideal of passionate love for God. This aim he sought to realize by imagining himself one of the great devotees of ancient stories. Thus at

length in a trance he saw the beautiful form of Kṛṣṇa. Now he was satisfied; he had at last achieved mental peace. By this time (1871) he was thirty-seven years of age and was becoming famous. His wife, who was now eighteen, came to see him. When he explained that, being a *sannyāsī*, he could not live with her as her husband, she agreed to reside at the temple as his pupil and be taught by him how to serve God; she thus remained a devoted disciple till the end of his life. She survived her husband many years, during which she regarded him as an incarnation of God Himself, and endeavoured to further the work that he had begun.

Though as an ascetic he no longer had any caste, he now began to feel that he had not yet given up his Brāhman prejudices towards the lower orders. Having accordingly resolved to do the work of men of the lowest caste, he acted as a scavenger in the temple and cleansed it like a Pariah during the night. He also collected and ate the fragments of food left by the beggars who were daily fed at the temple, and who included Muhammadans, outcasts, and bad characters.

The last stage in his religious development was the result of a new desire that arose in him to know and understand other religions. Thus he went to live with a Muhammadan saint, becoming temporarily a Muhammadan in dress, manner of life, and religious practice. He then turned to Christianity and once saw Jesus in a vision, being unable for three days after to think or speak of anything else but of Him and His love. These experiences led him to the conclusion that all religions are true, as being various paths leading to the same goal.

At the end of 1872 one of his intimate friends, Paṇḍit Vaiṣṇava Charan, took him to Calcutta, where he stayed till the beginning of the following year. During this visit he made the acquaintance of Dayānanda Sarasvatī, the founder of the Ārya Samāj. About 1875 Keshab Chunder Sen, one of the leaders of the Brāhma Samāj, made the acquaintance of Rāmākṛṣṇa, and, becoming deeply impressed by his devotion and conversation, went to see him often, occasionally accompanied by a number of his adherents, and drew public attention to his merits both by talking and by writing about him. The result was that Rāmākṛṣṇa was now visited at his temple by many educated Hindus from Calcutta, and also made the acquaintance of the young men who became his attached pupils and continued his work after his death. His conversation is described as brilliant, and was listened to by many noted Indians who went to see him at his temple. During the last seven years of his life he was constantly engaged in talking to his visitors. He never wrote anything, even in this last period; but his disciples made copious notes in Bengali of his sayings, of which several collections were published after his death. He was essentially a conversationalist, and not a formal instructor; indeed, he regularly disclaimed the status of a *guru*, or teacher. According to the testimony of his most celebrated disciple, Svāmī Vivekānanda, his conversation was of two main types. On the one hand, he represented himself as the servant of all human beings and would never claim any high position. On the other hand, he would speak of himself not only as possessing all power and all knowledge, but as the re-incarnated soul that had once been born as Rāma, as Kṛṣṇa, or as Buddha. Such things were not said in any spirit of arrogance, but as a result of his intense realization of the Vedānta doctrine of the identity of the individual soul with the impersonal God.

The incessant labour of speaking to the increasing crowds of men and women that came to see

him at the temple of Dakṣiṇeśvara at last told on his health. In 1885 he began to suffer from an affection of the throat, which after a time developed into cancer. He was removed to Calcutta, where he was attended by the best physicians. They advised him to keep the strictest silence; but he could not refrain from addressing the crowds that gathered wherever he went. He would still fall into trances, on awaking from which he would talk incessantly as before. Even when his throat became so constricted that he could hardly swallow even liquid food, he continued his efforts, cheerful and undaunted, till 15th March 1886. On that day he fell into a *samādhi* from which he never returned. After his death a group of his disciples decided to devote their lives to the spread of his teaching, and to become *sannyāsīs*. The most prominent of these was Narendranath Dutt, a Bengali, who on becoming an ascetic took the name of Vivekānanda.

2. **Habits and character.**—Rāmākṛṣṇa had not many personal traits. Though a *sannyāsi*, he not only dressed, but lived, like an ordinary Bengali. He is described by one of his disciples as distinguished by profound humility and childlike tenderness, the outward manifestation of which was a singular sweetness of expression. His character was simple, for every detail of his life can be explained from the one motive of a passion for God, which mastered his whole being. It was this that made him at an early age enter the life of a *sannyāsi*, in which he renounced all earthly ties and by tremendous self-repression completely conquered the sex instinct and acquired a hatred of money. His aversion to gold and silver became so great that he could not even touch them, and the simple contact of a coin, even when he was asleep, would make him shrink convulsively. In his later days he could touch no metal, not even iron. Mathurānātha, the son-in-law of the founder of the temple, repeatedly offered to hand the temple over to him together with a property yielding an income of 25,000 rupees a year, but he refused and threatened to leave the place if the offer were pressed. A gift of 25,000 rupees pressed on him by another wealthy man was similarly declined. His deep sincerity and exclusive devotion to God won him the boundless love and reverence of his disciples, who regarded him as a divine person.

3. **Belief.**—Rāmākṛṣṇa had no proper education. He knew no Sanskrit and scarcely any English, and he possessed no scholarly knowledge even of Bengali. Never having had any systematic training in philosophy, and deriving, with the aid of a retentive memory, practically all that he knew of it from his occasional intercourse with the religious teachers with whom he came in contact at his temple, he neither was nor claimed to be the founder of a new religion. His belief regarding God and the relation of God to man and the world was based on the Vedānta system. It may be summed up thus: God is unknowable and utterly beyond the reach of man; on the other hand, every human being and every thing that exists is a manifestation of God, who is so truly all that is that everything that happens is in a sense done by Him, and therefore moral distinctions become obliterated in Him. Hence, as he looked upon every human being as a manifestation of God, Rāmākṛṣṇa would, if he met an unfortunate, bow down before her in adoration. Like every ordinary Hindu, he also regarded all deities as manifestations of the impersonal Supreme Soul. But he believed the goddess Kālī to be the chief manifestation of God as the divine mother of the universe. He worshipped her more than any other divinity, and that by means of idols; for he implicitly held

the Hindu belief that the divinity fills every one of his own idols with his presence. He further shared the ordinary Hindu idea of the *guru*, or spiritual teacher, declaring that the disciple should never criticize his own *guru* and must unquestioningly obey his behests. Thus he was a true Hindu, and was always ready to defend the whole of Hinduism. In these respects he was only one of the multitude of very devoted Hindus who might have lived at any time during the last 2000 years.

4. **Distinctive doctrine.**—What differentiated his belief from that of other revivers of Hinduism was the doctrine that all religions are true, because in their inner essence they are identical, and that each man should therefore remain in the religion in which he has been born. In order to illustrate the idea of the harmony of all religions and of the part played by Rāmākṛṣṇa in introducing it to Keshab Chunder Sen, a pupil of his caused to be painted a symbolical picture in which a Christian church, a Muhammadan mosque, and a Hindu temple appear in the background, while on one side in front Rāmākṛṣṇa is pointing out to Keshab a group in which Christ and Chaitanya are dancing together, and a Muhammadan, a Confucianist, a Sikh, a Parsi, an Anglican, and various Hindus are standing round. Rāmākṛṣṇa's universalistic theory of the truth of all religions furnishes a strong defence of Hinduism because it implies that no Hindu should abandon his religion either as a whole or in any of its individual doctrines.

LITERATURE.—F. Max Müller, *Rāmākṛṣṇa: His Life and Sayings*, London, 1898 (the best biography, together with a collection of Rāmākṛṣṇa's sayings); P. C. Mozumdar, *Paramahansa Rāmākṛṣṇa*, Calcutta, 1910; [M. N. Gupta], *The Gospel of Sri Rāmākṛṣṇa*, Madras, 1912; Svāmī Vivekānanda, *My Master* (a lecture), Calcutta, 1911; J. N. Farquhar, *Modern Religious Movements in India*, New York, 1915, pp. 188-200. The work of the Rāmākṛṣṇa mission is described in the *Hindoo Patriot*, 14th Oct. 1912.

A. A. MACDONELL.

RĀMĀNANDIS, RĀMĀWATS.—The Rāmānandis or Rāmāwats are an important Vaiṣṇava sect in N. India, numbering from 1,500,000 to 2,000,000. Their founder was Rāmānanda, a teacher who was fifth in descent from Rāmānuja (*q.v.*), the *Bhaktamāla* giving the succession as (1) Rāmānuja, (2) Dēvāchārya, (3) Hariyānanda, (4) Rāghavānanda, (5) Rāmānanda. According to the N. Indian tradition regarding Rāmānanda's life and times, Rāghavānanda was a prominent teacher of the Śrī Vaiṣṇava church founded by Rāmānuja. He travelled over India spreading its doctrines, and finally settled in Benares. In the year 4400 of the Kaliyuga, corresponding to A.D. 1299,¹ Rāmānanda was born at Prayāga, the modern Allāhābād. His father was a Kānyakubja Brāhmaṇa named Punyasādāna (or Bhūrikarmā or Dēvala), and his mother's name was Suśilā. The child was named Rāmādatta, and, as he grew up, he acquired knowledge rapidly, so that by the time he was twelve years old he had become a finished *pandita*, and went to Benares to study religious philosophy. There he attached himself to a Smārta teacher, who followed the Advaita philosophy of Śaṅkarāchārya.² One day he happened to meet Rāghavānanda, who had the power of foretelling future events, and who expressed his sorrow that Rāmādatta had not yet taken refuge with Hari (*i.e.* Rāma), as his days were fulfilled and he had but a short time to live. Rāmādatta returned to his Smārta teacher and reported the conversation. The teacher had to

¹ So all native authorities. Bhagavān Prasāda (*Bhaktamāla*, p. 432) refers to eight or nine, and quotes three. Tradition says that it was 162 years after Rāmānuja's death, which would thus have occurred in A.D. 1137.

² It is noteworthy that both Rāmānuja and Rāmānanda are represented as having begun by being followers of Śaṅkara, and later to have seen the error of their ways.

confess that the prediction was a true one, and that he himself could offer no remedy. He therefore recommended him to throw himself on the mercy of Rāghavānanda. Rāmadatta did so, and Rāghavānanda received him, taught him the Śrī Vaiṣṇava initiatory *mantra*,¹ and changed his name to Rāmānanda. He also instructed him in the *yōga* methods of suppression of breath, etc., leading the practiser into intense mental absorption, and, when the time for his death arrived, with their aid, put him into a trance. Death came to take him away, but, finding him in this death-like condition, departed leaving him unharmed. Rāmānanda then awoke from his trance, and thenceforth devoted himself to attending on and learning from Rāghavānanda, who blessed him and gave him the boon of an exceptionally long life.² After serving his *guru* for a considerable time, he went on a pilgrimage over the greater part of India. A persistent tradition asserts that he even visited the island of Gangāsāgara at the mouth of the Ganges, and that there he discovered the site of Kapila's hermitage, all trace of which had long been lost. After completing his pilgrimage he returned to Benares, and settled at Pañcagā Ghāt, where his footprints can still be seen by the faithful.

The Śrī Vaiṣṇava church, of which Rāghavānanda and Rāmānanda were members, allows only Brāhmanas to occupy the post of teacher, and imposes upon all the strictest rules as to the preparation and consumption of food. When Rāmānanda returned from his long wanderings, he essayed to rejoin the brotherhood, but they refused to receive him, alleging that it must have been impossible for him during his peregrinations to carry out all these observances. They accordingly demanded that Rāghavānanda should impose a penance upon him. Rāmānanda resisted this, and in the discussion that ensued Rāghavānanda finally solved the problem by deciding that Rāmānanda must go his own way, and might form a sect of his own. This quarrel thus resulted in one of the most momentous revolutions that have occurred in the religious history of N. India. Its effects were by no means confined to Rāmānanda's immediate disciples, for his teaching worked as a leaven upon the beliefs of nearly the whole population. Rāmānanda took his *guru* at his word, and founded the Rāmāwat sect—also nowadays called, after him, the sect of the Rāmānandīs. The philosophical system is the same as that of Rāmānuja (*q.v.*) and need not detain us; but Rāmānuja wrote for Brāhmanas and in Sanskrit, and imposed a rule of ceremonial purity that was strict in the extreme. Rāmānanda, by his expulsion from the brotherhood for an imaginary impurity, was converted to broader notions. His ethical system was based, not on spiritual pride, but on spiritual humility. It was developed in various directions by his successors, but through all their teaching we find insistence ever laid upon two great principles: (1) that perfect *bhakti*, or faith in God, consists in perfect love directed to God, and (2) that all servants of God are brothers. Rāmānanda called his followers 'Avadhūta,' because they had 'shaken off' the bonds of narrow-mindedness. His follower, Kabir, carried this doctrine of catholicity still farther, and it reached its full development, and — what is more — its general acceptance by the masses of Hindōstān, seven generations later, through the works of modern India's greatest poet, Tulsi Dāsa.

The most striking point about Rāmānanda's

teaching, and that which has so captured the mind of India as to be enshrined in a proverbial saying, is that, so long as a man or woman has genuine loving faith in the Supreme, his or her caste and position in life are matters of no importance. The Śrī Vaiṣṇavas admitted only Brāhmanas as teachers, and only people of high caste as lay members. But Rāmānanda permitted no such bounds. As the saying referred to above says, he taught:

*jāti pāti pūchhai naht kōi,
Hari-ku bhajai, sō Hari-kaū hōi,*

'Let no one ask a man's caste or with whom he eats. If a man shows love to Hari, he is Hari's own.'

Hari is the name given to the Supreme when allusion is made to him as a loving father, and, in this character, it is to the incarnation of Viṣṇu as Rāmachandra, the hero of the *Rāmāyana*, that the devotion of Rāmānanda and his followers was more particularly directed. His initiatory *mantra*, or formula, was the words 'Śrī Rāma,' the salutation among members of the community being 'Jaya Śrī Rāma,' 'Jaya Rāma,' or 'Sita Rāma.'

Rāmānanda had twelve chief disciples or apostles, and the list shows his disregard for caste in matters of religion. They were:¹ (1) Anantānanda, (2) Sukhānanda, (3) Surasurānanda, (4) Narahariyānanda, (5) Pipā, (6) Kabir, (7) Bhāvānanda, (8) Sēna, (9) Dhanā, (10) Rai Dāsa, (11) Padmāvati, (12) Surasari.

Of these nos. 11 and 12 were women. Regarding Padmāvati nothing is known. Surasari was the wife of Surasurānanda, and the *Bhaktamāla* (68) tells a pretty story of how she was once wandering alone in the forest praying, when she was attacked by Musalmān robbers. Thereupon Rāma took the form of a lion, and guarded her, like another Una, till she was out of danger.

Anantānanda was Rāmānanda's first disciple. He is most famous as the apostle of the Jōdhpur country, the king of which he converted by a miracle at Sambhar, recalling that of the barren fig-tree in Mk 11:20c (*Bhaktamāla*, 32). The third in descent from Anantānanda, in line of teacher and pupil, was Nābhā Dāsa, the author of the *Bhaktamāla*.

Sukhānanda was a poet. His hymns are famous, and have been collected in a volume entitled the *Sukhasāgara* (*Bhaktamāla*, 64).

Surasurānanda, the husband of Surasari, was famous for his faith. The *Bhaktamāla* (65) tells a curious story about him, the lesson of which reminds us of Mk 7:18. A wicked Musalmān gave him and his disciples cakes secretly mixed with flesh (an impurity). He accepted them as food offered in the name of the deity, and they all ate the food. Then the Musalmān told the disciples of the presence of meat in the cakes. They came to their master in alarm at the defilement that they had incurred. But he replied that they had not eaten the food in faith, and bade them vomit. They did so, and meat issued from their mouths. Then he vomited, and showed them that by his faith the impure meat had been transubstantiated into leaves of the holy *tulasi*-plant. He is of importance, for through him Tulasi Dāsa traced his descent from Rāmānanda in line of teacher and pupil.

A curious legend is told about Narahariyānanda. One day, being in want of fuel to dress food for a party of holy men, he took an axe, and went to a temple of Dēvi and cut away from it a sufficient portion of wood.² Dēvi promised, if he would desist from spoiling her temple, to give him a daily supply of fuel, and so it came about. A covetous and unregenerate neighbour, hearing of this, thought that he would follow the saint's example, but, as soon as he applied his axe, Dēvi attacked him, and wounded him so grievously that, when people came for him, they found him at death's door. Dēvi spared him only on condition that for the rest of his life he would supply Narahariyānanda's wants in the way of fuel (*Bhaktamāla*, 67).

Pipā was a Rājput rāja of Gāgarān. He was originally a worshipper of Dēvi, but was commanded by her in a dream to become a disciple of Rāmānanda. Rāmānanda refused to accept him, saying that he had no dealings with men of war like him, and, when Pipā persisted, angrily told him to go and fall into a well. Pipā at once tried to cast himself into the well in the courtyard of Rāmānanda's house, and was with difficulty stopped by the bystanders. Rāmānanda then took pity on him, and received him on probation as a disciple. After a year's trial he was fully admitted, abandoned all his early possessions, and, in spite of the remonstrances of his family, set out with Rāmā-

¹ The list given by Wilson (*Religious Sects*, p. 56) is incorrect, being based on a mistranslation of the *Bhaktamāla*.

² The legend of this boon is of some importance. Rāmānanda does seem actually to have lived to a great age. Nābhā Dāsa takes pains to record that he 'bore his body for a very long time,' and tradition says that he lived 111 years.

² Almost the only stringent duty laid upon the followers of Rāmānanda was that of showing hospitality to wandering holy men. The necessity of providing the means for this seems to have been held to justify almost any course of conduct. We shall see extreme instances of this in the case of Pipā. Cf. also the story of Dhanā, below.

nanda on a pilgrimage to Dvāraka, accompanied by Sītā Sahachari, one of his wives, who had become as ardent a devotee as himself.

The *Bhaktamāla* devotes much space to Pipā, and narrates or alludes to a great number of legends regarding him and his wife. Some of them are given by Wilson (p. 57 ff.). Two or three of the legends regarding Sītā Sahachari illustrate the lengths to which Rāmāwats are supposed to be willing to go in order to fulfil the duty of hospitality to wandering saints. She is represented as a peculiarly holy woman and as a devoted wife, and yet, on more than one occasion, she was ready to sacrifice her chastity in order to provide the means for carrying out this duty, being each time saved from the last extremity by miraculous intervention (*Bhaktamāla*, 61).

Kabir (ib. 60) was a Musalmān weaver. It was through him that Nānak Shāh, the founder of the Sikh religion, inherited much of Rāmānanda's teaching (see *ERE* vii. 632).

The *Bhaktamāla* gives no particulars concerning Bhāvānanda, beyond mentioning his name, nor can the present writer find anything about him elsewhere except an anonymous couplet praising his devotion to Rāma and his wisdom.

Sēnā was a barber by caste (for the tradition concerning him see art. SENAPANTHIS).

Dhanā was a simple peasant. He belonged to the Jāt caste, which is notorious for the boorishness of its peasant members. The account of him given by the *Bhaktamāla* (62) tells that one day some wandering saints asked him for food, and he gave them the only grain that there was in the house—that which had been reserved for seed. To conceal the pious theft from his parents, he proceeded to plough a field, into which he pretended to sow the grain. He was subjected to much ridicule from neighbours who knew the facts of the case; but, as time went on, a miraculous crop sprang up in the field, which surpassed the crops of those who laughed at him. On one occasion he saw a Brāhmaṇa worshipping a sacred *sālagrāma* stone, and, in his simplicity, asked him for a similar object of devotion. The other picked up an ordinary pebble, and, giving it to the silly boor, said, 'Here is your god. Take it home and worship it.' Dhanā, looking upon it as a representation of Rāma, carried it home, and tended it with great devotion. The god, pleased at the simple faith of the peasant lad, came to him in person, in the character of a fellow-Jāt, and served him as a ploughman. After some time he recommended Dhanā to go to Benares and become Rāmānanda's disciple. He did so, and, after receiving instruction from the teacher, returned home. There he again saw his ploughman, and, his eyes being opened, he recognized him as Rāma. The god then blessed him and departed, and Dhanā remained at home, carrying on his household duties, and worshipping the Supreme.

Rai Dāsa (*Bhaktamāla*, 59) was a Chamār, or leather-worker, and belonged to one of the most degraded and despised castes (for particulars see art. RAI DĀSIS).

This account of Rāmānanda's twelve apostles, childish though some of the legends may appear, is interesting, and is typical of the doctrine of the equality of all men and women before God. While we may assume that such men as Anantānanda and Sukhānanda were Brāhmaṇas, the list also contains a Musalmān, a professional soldier, a barber, a boorish Jāt, and, lowest of the low, Rai Dāsa, the Chamār. Note also the important position assigned to women. It is true that in all the sects of the Vaiṣṇava reformation (see *ERE* ii. 548) women saints are frequently met with, but, so far as the present writer is aware, Rāmānanda was the only teacher who placed the sexes on an equality by calling two women to be his apostles.

According to modern belief, Rāmānanda was a direct re-incarnation of Rāmachandra, and each of his twelve apostles was also an incarnation of some subordinate god or demi-god. Thus Anantānanda was an incarnation of Brahmā, Sukhānanda of Śiva, Surasurananda of Nārada, Kabir of Prahlāda, Sēnā of Bhīṣma, Rai Dāsa of Yama, and so on. Rāmānanda borrowed from his predecessors the title *ānanda*, 'joy,' which he added to the names of most of his disciples, to indicate the joy of their devotion to Rāma. Probably the full names of Pipā, Sēnā, and Dhanā were thus Pipānanda, Sēnānanda, and Dhanānanda. Not being Brāhmaṇas, they could be addressed familiarly, and it is a common familiar custom in India to omit the final syllables of a name, just as we say 'Will' for 'William.'

Although the great claim of Rāmānanda to recognition is his insistence on the equality of all believers, a corollary of this teaching also deserves more than a passing notice. The doctrines of his

predecessors, the Rāmānujas, were, in N. India, taught only in Sanskrit. Their scriptures were learned books, written for learned men, in a learned language. But, for Rāmānanda, with disciples like Kabir, Pipā, Sēnā, Dhanā, and Rai Dāsa, who were not Sanskrit scholars, this was intolerable. His teaching was therefore everywhere in the vernacular, and his followers wrote their hymns and other similar compositions in one or other of the various dialects of Hindī. He himself wrote little that has come down to us, but—not to mention the less known works of men like Sukhānanda—his successor Kabir was one of the most voluminous authors in that language. It was largely owing to the influence of Rāmānanda and his followers that Hindī became a literary language, and not only was its most shining light, Tulasi Dāsa, a devout Rāmāvat, but all his poetry was written under the direct influence of Rāmānanda's teaching. The debt which the literature of Hindōstān owes to Rāmānanda cannot be overestimated.

While we may be fairly certain that Rāmānanda was born in A.D. 1299, the date of his death is involved in some obscurity. The popular tradition is that he died in Samvat in 1467 (=A.D. 1410). This would give him a life of 111 years, which is improbable. We can, however, accept the tradition, borne out, as it is, by the direct statement of the *Bhaktamāla*, that he had an exceptionally long life, and this would authorize us to state that he lived during the greater part of the 14th century A.D. He was thus contemporary with the later Khiljī kings, and with nearly all the kings of the house of Tughlak. In his youth occurred the famous sack of Chitaur by 'Alau'd-din Khiljī, and his ripe manhood corresponded with the insanely tyrannous rule of Muḥammad Tughlak. If he lived to the age of 99, he saw the invasion of India by Tamerlane, and the sack and massacre of Delhi. It is impossible not to believe that this series of calamities exercised much influence on Rāmānanda, and that his doctrine of faith in the benignant and heroic Rāmachandra, offered to all classes of the community, owed much of its ready acceptance to the sufferings then being undergone by the Indian people under cruel, alien rule.

Of Rāmānanda's twelve apostles three—Kabir, Sēnā, and Rai Dāsa—founded branch sects of their own. The others contented themselves with preaching the doctrines of their master. Separate articles are devoted to Kabir, Sēnā, and the Rai Dāsīs. Kabir was the only one of these three that really founded a sect. The other two so-called sects are little more than separate groups of Rāmānandīs called after the respective names of the teachers from whom they are spiritually descended. Through the preaching of these twelve and of their followers the pure and chaste worship of Rāma became widely spread over Hindōstān, and successfully competed with the more sensuous worship of Kṛṣṇa and Rādhā that centred round Vṛndāvana, and reached its culminating point in the erotic raptures of the Rādhāvalābhīs (q.v.; see also art. BHAKTI-MĀRGA, vol. ii. p. 545, and VALLABHĀCHĀRIS).

LITERATURE.—Numerous books have been published in Hindī devoted to the life and teaching of Rāmānanda. The only really authoritative work is the *Bhaktamāla* (30 f.) of Nābhā Dāsa, with Priyā Dāsa's commentary; the best ed. is that of Sītārāmasarapa Bhagavān Prasāda (Benares, 1905), in which are given extracts from the contents of the more modern works dealing with Rāmānanda. A summary (not always correct) of the statements in the *Bhaktamāla* will be found in H. H. Wilson, *Sketch of the Religious Sects of the Hindus*, London, 1861, pp. 46 ff., 54 ff.; other European accounts are based on this, and reproduce Wilson's mistakes. For a briefer summary see R. G. Bhandarkar, *Vaiṣṇavism, Śaivism, and Minor Religious Systems* (=GIAP iii. 6), Strassburg, 1913, p. 66 f. Other Indian accounts that may be consulted with advantage

are Dhruva Dāsa, *Bhaktanāmāvalī*, ed. Rādhākṛṣṇa Dāsa (Nāgārī Prachārīpī Saṁhā), Benares, 1901, p. 63 ff.; Jivārāma, *Srīrasikāprakāśa-bhaktamālā*, Bankipur, 1887, verse 10 ff.; Harīśchandra, *Vaiṣṇavasarasva*, do., n.d., p. 14.

The account given in the present article is based entirely on Indian authorities.

GEORGE A. GRIERSON.

RAMĀNUJA.—Tradition dating from the 13th cent. A.D. ascribes the birth of Rāmānuja to the year 938 of the Śaka epoch (= A.D. 1016-17). In his youth he lived at Conjeeveram, and was a pupil of Yādavaprakāśa, an adherent of the strict Advaita philosophy of Śaṅkara. Rāmānuja, however, fell under the influence of the Vaiṣṇavism which had been made current by the efforts of the Ālvārs in the Tamil country, and separated on this ground from his preceptor, attaching himself instead to Yāmunamuni, who represented the philosophical aspect of the creed of the Ālvārs. In due course he succeeded his new teacher as the head of this school of opinion, and settled at Srīraṅgam near Trichinopoly, where most of his life was spent. In his old age he is said to have fallen under the disfavour of the Chola king, Kulottuṅga, who was an adherent of Saivism, and to have removed his residence in 1096 to the dominions of the Hoysala princes of Mysore, where in 1098 he succeeded in converting to his faith Biṭṭi Deva, or Viṣṇuvardhana, at that time a viceroy for his brother, Ballāla, and later (1104-31) himself king. Another tradition recorded in Nṛsiṁha's *Smṛtyarthasāgara*¹ refers to him as alive as late as 1127, and it would clearly be unwise to attach too much weight to the precise dates assigned for his birth; his activity, it is certain, fell in the last quarter of the 11th cent. A.D., with which accords the statement of the *Prapannāmṛta*² that in 1091, towards the end of his life, he dedicated an image of Nārāyaṇa on Yādavāchala. Numerous works are attributed to him,³ in many cases doubtless without just cause; of special importance are only the *Vedāntadīpa*, the *Vedāntasāra*, the *Vedārthasaṅgraha*, which are independent works, and his commentaries (*bhāṣyas*) on the *Brahmasūtra* and the *Bhagavad-Gītā*.

1. Philosophical tenets.—The essential contribution of Rāmānuja to Indian thought was the effort to develop in a complete system, in opposition to the uncompromising Advaitism of Śaṅkara, a philosophical basis for the doctrine of devotion to God which was presented in poetical form in the hymns (*prabandhas*) of the Ālvārs—a task for which his training under a teacher of Advaitism rendered him specially fit. In attempting this task, which he undertook on the bidding of his teacher, Yāmunamuni, he was, it is clear, not developing any essentially new line of thought, and he makes no assertion of originality; in his interpretation of the *Brahmasūtra* as a text-book of Vaiṣṇavism, he claims merely to be following the commentary (*vṛtti*) of Bodhāyana and the opinions of previous teachers, of whom elsewhere he enumerates several—Tāṇka, Dramida, Guhadeva, Kapardin, and Bhāruchi; of these Dramida at least preceded Śaṅkara, and indications in Śaṅkara's own commentary show that Rāmānuja's claim to be following tradition is not unfounded. The disappearance, however, of the works of his predecessors and the hopeless obscurity in itself of the *Brahmasūtra* render it impossible to determine what degree of independence is to be assigned to Rāmānuja. The *Śrībhāṣya*, his commentary on the *Brahmasūtra*, conveys an impression of no mean philosophical insight, and it is fair to assume that his work in substantial merit and complete-

ness far outdid any previous effort to find in the *Brahmasūtra* a basis for monotheism.

To Śaṅkara the whole universe was one, *Brahman* without a second (*advaita*), without qualities, consisting of thought, but without differentiation of subject and object: the world of experience arises from the association with the one reality of *māyā*, or illusion, and has therefore but a conventional existence, being the object of the lower knowledge as opposed to the higher knowledge of the one reality. Escape from the fetters of transmigration, which is an essential part of the conventional life, is obtained by the act of intellectual intuition which appreciates the illusory character of the empirical universe. A creator (*Īśvara*) exists, and his grace serves to secure in some degree this intuition, but the existence of God, as also of the soul itself as individual, is in ultimate analysis mere illusion, and His grace is equally illusory. To establish this scheme Śaṅkara does not rely on the human faculties unaided: freely as he uses argument, he bases his views on the *Upaniṣads* and the *Brahmasūtra* as an eternal and conclusive revelation.¹ Rāmānuja is no less dogmatic, but the doctrine which he deduces is very different. In the *Upaniṣads* his opinions find their chief support in the *antaryāmi-brāhmaṇa*, contained in the *Bṛhadāraṇyaka Upaniṣad*,² in which *Brahman* is described in detail as the inner ruler of the whole of the universe in all its aspects, and in a passage in the *Svetāśvatara Upaniṣad*³ in which stress is laid on the threefold unity in *Brahman* of the empirical subject (*bhoktr*), the objective world (*bhogyā*), and the power which instigates (*preritr*). He teaches, therefore, a monism, for all is *Brahman*, but a qualified monism (*viśiṣṭadvaita*), since room is found for the reality of individual souls and the external world. The highest reality is God, endowed with all desirable qualities, not consisting of knowledge alone, but having knowledge as an attribute, all-powerful, all-pervading, and all-merciful. Whatever exists is contained within God, and therefore the system admits no second independent element. But within the unity are distinct elements of plurality which, if effects or modes (*prakāra*) of God, are yet absolutely real, and not figments of illusion. These are souls of varying classes and degrees (*chit*) and matter in all its forms (*achit*), which together are represented as constituting the body of God, standing to Him in the same dependent relation as is occupied by the matter forming an animal or vegetable body towards the soul or spirit. Both matter and souls exist eternally in God, and have had no absolute beginning and will have no absolute end. But there are two distinct forms of this existence. In the *pralaya* condition, which occurs at the end of each world-period (*kalpa*), matter exists in a subtle state in which it possesses none of the qualities which make it an object of ordinary experience; the souls likewise cease to be connected with bodies, and, though retaining the essential quality of being cognizing agents, are unable to manifest their intelligence; in this condition *Brahman* is said to be in the causal state (*kāraṇāvasthā*). From this condition creation develops by the will of God: subtle matter takes on its gross form,⁴ souls expand their intellect, entering at the same time into connexion with bodies in accordance with their deeds in previous forms of existence; in this condition *Brahman* occupies the state of an effect (*kāryāvasthā*). But between the two states there is no essential difference; the effect is the cause which has undergone

⁴ The details of the process are borrowed bodily from the Śāṅkhya system, and have no independent value.

a process of development (*pariṇāma*). The difference, however, serves to explain in the view of Rāmānuja those passages in the *Upniṣads* which seem to deny all duality: in the causal state the differences are merely implicit and may be ignored; passages which assert the creation of the material world, while assuming the eternal existence of soul, are explained away by the fact that in its subtle state matter may be regarded as in a sense non-existent, since it has in that condition none of its essential qualities, while even in the *pralaya* condition the soul remains essentially intelligent. There is, however, clear proof that Rāmānuja felt difficulty in picturing to himself the relation of the non-sentient matter to *Brahman*: in discussing the *Brahmasūtra*¹ there are presented, as possible explanations of the relation, the views that such beings are special arrangements (*saṁsthānaviśeṣa*) of *Brahman*, as are the coils of the body of a snake, or that the relation of the two entities is comparable to that of the luminous object and light, which are one in that both are fire, or that the material world is a part (*aṁśa*) of *Brahman*, which is the position definitely assigned to the soul. The relation of souls and the material world causes Rāmānuja no difficulty; he accepts the same frankly realistic position as Śaṅkara, though in the case of the latter the realism is ultimately illusory.²

As with Śaṅkara, the fate of the soul is determined by its knowledge, but, as the nature of that knowledge differs entirely in the two systems, so does the fate of the soul. Knowledge means not extinction of individuality, but a life in heaven of eternal bliss, distinguished from God Himself merely by the fact that the released soul does not possess the powers of creating, ruling, and retracting the world which are the special characteristics of the supreme soul.

2. Religious system.—The actual system of religion expounded by Rāmānuja and his school, while resting on the basis of the metaphysics of the *Śrībhāṣya*, is clearly largely the traditional inheritance of the Pāñcharātra or Bhāgavata school; in the *Śrībhāṣya* itself the only sectarian hint is the use of the term Nārāyaṇa as a synonym of *Brahman*. In the theology of Rāmānuja God manifests Himself in five forms. The first is the highest (*para*), in which, as Nārāyaṇa or Parabrahman, He dwells in His city of Vaiṣṇṭha, under a gem pavilion, seated on the serpent Śeṣa, adorned with celestial ornaments and bearing His celestial arms, accompanied by His consorts Lakṣmī (prosperity), Bhū (the earth), and Līlā (sport); in this condition His presence is enjoyed by the delivered spirits. The second form of manifestation consists of His three or four *vyūhas*, conditions assumed for purposes of worship, creation, etc.; of these Śaṅkaraṇa possesses the qualities of knowledge (*jñāna*) and power to maintain (*bala*); Pradyumna has ruling power (*aīsvarya*) and abiding character (*virya*); Aniruddha has creative power (*śakti*) and strength to overcome (*tejas*); while Vāsudeva, when included as a fourth *vyūha*, has all six qualities. The third form comprises the ten *avatāras* of the ordinary mythology; the fourth the *antaryāmin*, in which condition He dwells within the heart, can be seen by the supernatural vision of the Yogi, and accompanies the soul in its passage even to heaven or hell, while the fifth form is that in which the deity dwells in idols or images made by men's hands.

The individual soul, which is a mode of the supreme soul and entirely dependent upon and controlled by it, is nevertheless real, eternal, endowed with intelligence and self-consciousness,

without parts, unchanging, imperceptible, and atomic³—a doctrine denied energetically by Śaṅkara. Souls are classified as eternal (*nitya*) in a special sense, such as those of Ananta or Garuḍa, which dwell in constant communion with Nārāyaṇa, released (*mukta*), or bound (*baddha*). Of the latter some seek mere earthly gains, others aim at the joys of heaven, while others strive for the eternal bliss of final deliverance. For the latter two means of attaining the end desired are available; the former is confined to the three higher classes alone, excluding the Śūdra; it leads through the *karmayoga* and the *jñānayoga* to *bhakti*, while the latter is open to those who despair of accomplishing this elaborate process and fling themselves upon the will of God (*prapatti*).

The *karmayoga* is the teaching of the *Bhagavad-Gītā*, which bids man perform acts without desire of reward; it includes the ceremonial worship of the deity—the practice of penance, the offering of sacrifice, the bestowal of charity, and the performance of pilgrimages. It serves as a preparation for the *jñānayoga*, in which the devotee attains the knowledge of himself as distinct from matter and as a mode of *Brahman*. This, again, leads to *bhakti*, which for Rāmānuja is not ecstatic devotion, but a continuous process of meditation upon God. This meditation is to be promoted by subsidiary means, including the use of none but unpolluted food, chastity, the performance of rites, the practice of such virtues as charity, compassion, abstaining from taking life, truth and uprightness, the maintenance of cheerfulness, and the absence of undue elation. Thus promoted, *bhakti* results in an intuitive perception of God, the highest state realizable. *Prapatti*, on the other hand, consists in the sense of submission, the avoidance of opposition, the confidence of protection, the choosing of God as the saviour, the placing of oneself at His disposal, and the consciousness of utter abasement.

The relation between *bhakti* and *prapatti* was left obscure in Rāmānuja's teaching, for it immediately formed a subject of bitter division between the two schools which claimed to follow his teaching—the Vādgalai, or northern school, which used Sanskrit as its medium of teaching, and the Teṅgalai, or southern, which resorted to the vernacular, thus continuing the tradition of the Ālvārs. The former, which seems to reflect more closely the temper of Rāmānuja in its conservatism and restraint, claimed that *prapatti* was merely one way of salvation, not the only way, and that it should be resorted to only when it was found impossible to attain the desired result by the other modes; moreover, they found in it essentially an element of human action in that it demanded a distinct effort on the part of the *prapanna*, resulting from the effect of his sense of submission, etc. The southern school, on the other hand, maintained that *prapatti* was the only mode of salvation, that it precluded any action on the part of the devotee,⁴ action emanating from God alone, and that the sense of submission, etc., was the outcome of *prapatti*, not the means of producing it. Similarly, the schools differed in their treatment of Śūdras: the Vādgalai confined equality to conversation alone, and forbade the teaching to them and indeed even to Kṣatriyas and Vaiśyas of the *mantra* of homage to Nārāyaṇa with the syllable *Om* prefixed, while the southern school asserted the equality of the castes and permitted the use of *Om* by all.

In addition to *bhakti* and *prapatti* Rāmānuja is credited with permitting the attainment of deliverance by *āchāryābhīmānayoga*, in which the votary places himself under the control of his

¹ III. ii. 27-30.

³ See *Brahmasūtra*, II. ii. 19-32.

⁴ Cf. art. PRAPATTI-MĀRGA.

teacher, who performs for him the necessary acts to attain deliverance.

Greater importance attaches to the ceremonial worship of the deity in the practice of the school than was seemingly laid upon it by Rāmānuja himself, though he fully accepted it and made it an integral part of his system. The modes of worship prescribed include the stamping of the discus or conch of Hari on the body, the wearing of a mark on the forehead, the repeating of *mantras*, the doing of service to his devotees, fasting on the eleventh day of both lunar fortnights, the laying of *tulasī*-leaves on his idol, the drinking of the water in which the feet of the idol are washed, and the eating of the food presented to Hari. Importance attaches to the last practice, for it bears a certain resemblance to the Christian sacrament and suggests the possibility of borrowing from the Nestorian Christian communities of S. India. The same conclusion is also indicated by certain features of the doctrine of *prapatti*, and above all by the method of salvation in which the teacher performs the necessary steps, while the part of the devotee consists in implicit faith in the teacher—a mode which bears a remarkable similarity to the doctrine of vicarious sacrifice. It is unnecessary, however, to assume that these features in the system of Rāmānuja were borrowed by him personally from Christian teaching; they are much more likely to have been already incorporated in the Vaiṣṇavism which he expounded and defended. It is characteristic of the intellectual rather than emotional character of Rāmānuja's teaching that he ignores the aspect of Viṣṇu's character in which he appears as Gopāla-Kṛṣṇa and sports with Rādhā and the cowherdesses, and that even Rāma does not appear to have been the object of his special devotion.

LITERATURE.—The chief authorities for Rāmānuja are R. G. Bhandarkar, *Report on the Search for Sanskrit MSS in the Bombay Presidency during the Year 1883-84*, Bombay, 1887, p. 88 ff., *Vaiṣṇavism, Saivism, and Minor Religious Systems* (= *GIAP* iii. vi.), Strassburg, 1913, p. 50 ff.; G. Thibaut, tr. of *Vedānta-Sūtras*, with Śaṅkara's comm., *SBE* xxxiv. [1890] introd., and tr. of Rāmānuja's *Sṛībhāṣya*, *SBE* xlviii. [1904]; A. Govindāchārya Svāmi, tr. of *Bhagavad-Gītā*, with Rāmānuja's comm., Madras, 1898, *The Life of Rāmānuja*, do. 1906, tr. of *Arthapāñchaka* of Pīlāl Lokāchārya (13th cent. A.D.), *JRAS*, 1910, pp. 565-607, and description of the points of difference between the northern and southern schools, *ib.* pp. 1103-1112. See also M. Rāṅgāchārī, *Life and Teachings of Rāmānuja*, Madras, 1895; C. S. Srinivāsa Aiyengar, *The Life and Teachings of Śrī Rāmānujāchārya*, do. 1903. A criticism of the system of Rāmānuja from the standpoint of Advaitism is given in the *Sarvadarśanasāṅgraha* of Mādhava (14th cent. A.D.), tr. E. B. Cowell and A. E. Gough, London, 1882, and P. Deussen, *Allgemeine Gesch. der Philosophie*, i. iii., Leipzig, 1903.

A. BERRIEDALE KEITH.

RĀMĀYANA.—I. **Character.**—This poem, 'the Career of Rāma,' is one of the two great Sanskrit epics of ancient India. Both have been a national possession for at least 2000 years, deeply influencing the literary production as well as the moral and religious thought of the Indian population. But they offer several contrasts. The *Mahābhārata* (*q.v.*) in its literary aspect represents the type of old popular legendary tale called *purāna*, while the *Rāmāyana* belongs to the class called *kāvya*, or artificial epic, in which form is regarded as more important than the story, and poetical ornament (*alamkāra*) is abundantly applied. The *Mahābhārata*, being a congeries of many parts only loosely connected by the thread of its epic kernel, which forms not more than one-fifth of the whole work, is hardly an epic at all, but rather an encyclopædia of moral teaching; its authors are unknown, and the traditional name of its final redactor, Vyāsa, 'the arranger,' is evidently mythical. The *Rāmāyana* is a real epic of the romantic type, being homogeneous in plan and execution, on the whole the work of a single author named

Vālmiki. Being in its main and original narrative almost free from interpolated and secondary episodes, it is also much shorter than the *Mahābhārata*, containing about 24,000 as compared with 100,000 stanzas. The warfare in the epic nucleus of the *Mahābhārata* is that of heroic human combatants on both sides; in the *Rāmāyana* it consists of conflicts with monsters and demons such as are described by writers of fairy-tales without firsthand knowledge of real fighting. The *Mahābhārata* was composed in the western portion of N. India, the ancient Madhyadeśa, or Middle Land, which lies between the eastern confines of the Panjāb and the city of Allahābād, while the *Rāmāyana* arose in the ancient kingdom of Kosala, which lay to the north-east of the Ganges, and roughly corresponds to the modern Oudh.

2. **Importance.**—The importance of the *Rāmāyana* is twofold—literary and religious. It is the first product of the artificial epic, or *kāvya*, literature of India. It thus always served as a model to be imitated by the later classical poets, who regarded it as 'the first epic' (*ādi-kāvya*) and its author as the 'first epic poet' (*ādi-kavi*). Thus it supplied the subject of Kālidāsa's epic, the *Raghuvamśa*, 'the Family of Raghu,' as well as of two of the plays of the great dramatist Bhavabhūti. Even at the present day the recital of the *Rāmāyana* is listened to with delight by many thousands of Hindus at the great festival of Rāma held every year at Benares. In the Middle Ages the Sanskrit epic was translated into the spoken languages of India, beginning with the Tamil version, which appeared at the beginning of the 12th cent. and was followed by adaptations and renderings in the vernaculars all over the country. On the *Rāmāyana* the greatest mediæval poet of India, Tulasī Dās (1532-1623), founded his religio-philosophic poem in Hindi, entitled *Rām Charit Mānas*, 'Lake of the Doings of Rāma,' which as a lofty standard of purity and virtue is like a Bible to over 90,000,000 of the population of N. India. Dramatic representations of the story of Rāma are still performed at religious festivals in the towns and villages of India. Thus the 'Play of Rāma' (*Rām Līla*), in which the most popular scenes from the *Rāmāyana* are exhibited, is annually performed at Lahore before a vast number of spectators.

Probably no work of world literature, secular in its origin, has ever produced so profound an influence on the life and thought of a people as the *Rāmāyana*. The nobility and magnanimity of Rāma's character and the conjugal devotion and fidelity of his wife Sītā have, for a great many centuries, exercised a far-reaching moral effect as paragons for imitation among Indians. His early dedication has, moreover, secured to the hero of the *Rāmāyana* the worship of the Hindus down to the present day. The belief that he was an incarnation of Viṣṇu, which forms the fundamental doctrine of the religious reformers Rāmānuja (*q.v.*) in the 12th and Rāmānanda (see art. RĀMĀNANDIS) in the 14th cent., has contributed much to counteract the diffusion of the degrading superstitions of Saivism in the south as well as in the north of India.

3. **Recensions.**—In its present form the *Rāmāyana* consists of about 24,000 couplets composed almost entirely in the ordinary epic metre called *śloka*, which consists of two hemistichs of sixteen syllables with an iambic cadence. It exists in three recensions—the Bengal, the Bombay, and the West Indian, which differ to the extent that about one-third of the verses contained in each do not occur in the other two. The oldest appears to be the Bombay recension, in which the irregularities of the epic language have not been removed, as is the case in the other two. It must not,

however, be regarded as representing the original text of which the other two recensions are mere revisions. The variations can for the most part be explained by the divergent forms which the popular tradition had assumed, in different parts of India, by the time when those three recensions came to be written down. There is, moreover, evidence to show that those recensions existed at a comparatively early period. Thus quotations from the epic in works of the 8th and 9th centuries indicate that a text allied to the Bombay recension was then in existence, while a poetical abstract of the *Rāmāyana* composed by Kṣemendra proves that at least the West Indian recension was known to that author in the first half of the 11th century A.D.

4. Present text.—The *Rāmāyana*, as it has come down to us, consists of seven books; but careful and detailed research has shown that the first and last were later additions. The former not only contrasts as inferior in language and style with the original, but contains both internal contradictions and statements conflicting with the following books. Thus it includes (in cantos i. and iii.) two tables of contents which must have been composed at different times; one of them, which takes no notice of the first and last books, was evidently made before these were added. Again, Lakṣmaṇa is stated in bk. i. to have been married at Ayodhyā at the same time as his brother Rāma, while at a later period, in bk. iii., he is expressly said to be still unmarried. The original poem evidently came to an end with the conclusion of bk. vi. For in bk. vii. as well as bk. i. the tribal hero of the old books has become a national hero, the people's moral ideal; and the human hero of those books appears in the first and last as an incarnation of the supreme deity Viṣṇu (while Indra, and not Viṣṇu, is accounted the highest god in the original parts). Again, Vālmiki, the author of the epic, is in the additional books introduced as a contemporary of Rāma and is regarded as a seer. In bks. i. and vii. the thread of the narrative is characteristically interrupted, as in the *Mahābhārata*, by numerous episodes, myths, and legends, while this feature is very rare in the other books. Some cantos have been loosely interpolated in the genuine books also, but these consist chiefly of extensions of the finest passages added by professional rhapsodists wishing to meet the demands of the popular taste. Though the additions to the original poem must have been made before the three recensions came into being, it is evident that they could have become part of the epic only a long time after the old part was composed.

5. Place of origin.—There is evidence indicating that the *Rāmāyana* was composed in the country of which the capital was Ayodhyā, the royal residence of the race of Ikṣvāku. Thus it is stated in bk. i. that the *Rāmāyana* arose in the family of the Ikṣvākus; the hermitage of Vālmiki is described in bk. vii. as situated on the south bank of the Ganges; and the poet must have been connected with Ayodhyā, for Sitā, Rāma's wife, sought refuge in his forest retreat, where her twin sons were born, brought up, and taught to recite the epic by the poet. In or near Ayodhyā, therefore, Vālmiki may be assumed to have worked into a homogeneous whole the various epic tales current among the court bards of Ayodhyā about the life of the Ikṣvāku hero Rāma. This poem was then learnt by rhapsodists, who wandered about reciting it in different parts of the country.

6. Age.—The question of the age of the *Rāmāyana* is involved in some doubt, because the arguments bearing on it are rather inconclusive. There is no evidence to show that either the *Mahā-*

bhārata or the *Rāmāyana* existed even in its earliest beginnings before the end of the Vedic period (c. 800 B.C.). As regards the relative age of the two epics, it is probable that the original form of the *Rāmāyana* was finished before the epic nucleus of the *Mahābhārata* had assumed definite shape. For, while the leading characters of the latter are not referred to in the *Rāmāyana*, the story of Rāma is often mentioned in the sister epic. Again, two of Vālmiki's lines (vi. 81, 28) are quoted in a passage of the *Mahābhārata* (vii. 143, 66) which there is no reason to regard as a later addition. There is an episode of Rāma (*Rāmapākhyānam*) in the *Mahābhārata* that presupposes the existence of the extended *Rāmāyana*, in which Rāma was already deified as Viṣṇu. The *Rāmāyana*, moreover, was along with its later additions a complete work by the end of the 2nd cent. A.D., and was already an old book by the time the sister epic had more or less attained its final shape in the 4th cent. of our era. With this divergence in the date when their growth was completed the permeation of all the old parts of the *Mahābhārata* with new matter is in keeping, while in the *Rāmāyana* such permeation hardly extends beyond the first and the last books. Both epics not only have, in all their books, many phrases, proverbial idioms, and whole lines in common, but also betray a far-reaching general agreement in language, style, and metre. Hence it may safely be concluded that the period of the growth of the *Rāmāyana* coincides with that of the *Mahābhārata*, though it came sooner to an end. The earliest elements of the original *Mahābhārata* may, however, be older than the original *Rāmāyana*, because the former has certain archaic features compared with which Vālmiki's poem shows an advance. Thus, while speakers are introduced in the longer epic with prose formulas such as 'Yudhiṣṭhira spoke,' in the sister poem such expressions invariably form part of the verse. The *Rāmāyana*, too, comes decidedly nearer the classical poets in the use of poetical figures. Various sources of evidence have been examined in order to fix approximately the upper chronological limit of the *Rāmāyana*. The history of early Buddhism supplies no decisive information. In the oldest Buddhist literature, the Pāli *Tiṭṭaka* (see art. LITERATURE [Buddhist]), there is no mention at all of the *Rāmāyana*. It is true that in a *Jātaka* (g.v.) concerned with King Daśaratha there are twelve verses in which Rāma consoles his brothers for the death of his father, Daśaratha, and that one of these verses actually occurs in our *Rāmāyana*. The fact, however, that there is only one verse in common indicates that some old story about Rāma rather than the epic itself is the source of the *Jātaka* verses; for there is not a word in the whole *Jātaka* about Rāvaṇa and his following, though it is full of fabulous matter and has much to say about demons and *rakṣasas*. On the other hand, excepting one evidently interpolated passage, there is not a trace of Buddhism in the *Rāmāyana* itself. Such silence, however, may very well be due to the absence of any reason to mention Buddhism in a poem like this. Now, H. Oldenberg has shown (*Gurupājakavumudī*, Leipzig, 1896, p. 9 ff.) that the metre of the *Rāmāyana* represents a later stage of development than that of the Pāli poetry of Buddhism. This positive evidence would place the composition of the original *Rāmāyana* appreciably later than the rise of Buddhism, c. 500 B.C.

Excepting in two passages, which have been shown to be later additions, the *Rāmāyana* contains no reference to the Greeks, who first came into direct contact with India during Alexander's expedition in 327 B.C.

A. Weber's belief that Greek influence can be traced in the *Rāmāyana* seems to be baseless. There is no real parallelism between the story of the abduction of Sītā by the demon Rāvaṇa and Rāma's rescue expedition to Laṅkā on the one hand and that of the rape of Helen and the Trojan war on the other. Nor need the account of Rāma's bending a powerful bow to win Sītā have any connexion with a similar exploit performed by Ulysses. Stories of such feats of strength for a like object are met with in the literature of others as well as the Greeks, and may easily have grown up independently.

Thus far we have no reason to go back much farther than 300 B.C. for the genesis of Vālmiki's poem. H. Jacobi, however, adduces some arguments based on the political conditions appearing in the epic to show that it dates from before the rise of Buddhism.

In the first place, he notes that the city of Pāṭaliputra (now Patna), which had become the capital of India by 300 B.C., is not mentioned at all, though Rāma is described (I. 35) as passing its very site, and the poet makes a point of referring (I. 32 f.) to the foundation of various actual cities in E. India to show how far the fame of the *Rāmāyana* had spread beyond Kosala, the country of its origin; he could therefore hardly fail to mention it had it existed. He further observes that in the old part of the *Rāmāyana* the capital of Kosala is always called Ayodhyā, while to Buddhists, Jains, Greeks, and Patañjali (c. 150 B.C.) its name is invariably Śāketa. In bk. vii. we learn that Lava, one of Rāma's twin sons, established his government in Srāvastī, a city which is not mentioned at all in the original *Rāmāyana*, but which we know to have been ruled in Buddha's time by King Prasenajit of Kosala. From these data he infers that the original epic was composed while Ayodhyā was still the capital of Kosala, before its name of Śāketa was known, and before the seat of government was shifted to Srāvastī. It would seem, further, to follow that the first and last books, which also mention Ayodhyā and, though added much later, do not know the name Śāketa, must have been composed considerably before the time of Buddha. Such a conclusion is in the highest degree improbable. Jacobi finally notes that in bk. i. Mithilā and Viśālā are twin cities governed by separate rulers, while it is known that by Buddha's time they had become a single city named Vaiśālī ruled by an oligarchy.

It is to be observed that these arguments are based on data to be found in the late first and last books, the evidence of which for the time of Buddha and before must be regarded with suspicion. They do not appear to the present writer to have any cogency as proof of a pre-Buddhist date for the original *Rāmāyana*.

A further argument has, however, been adduced to show that the old part of the *Rāmāyana* dates from before the time of Buddha.

The *Rāmāyana* is a popular epic, and its language is a popular Sanskrit. Now, about 280 B.C. King Aśoka used for his inscriptions not Sanskrit, but vernacular dialects resembling Pālī. Buddha himself before 500 B.C. preached not in Sanskrit, but in the speech of the people. A popular epic could not have been composed in a language that was already dead, but must have been written in one that the people understood. The original form of the epic must therefore date from a pre-Buddhist period when Sanskrit was still a living tongue. Now, the foregoing argument is not cogent, because Sanskrit has always lived as a literary language beside the popular dialects, and has been understood by large sections of the population. There is therefore nothing strange in Sanskrit epics being composed and listened to while Jain and Buddhist monks were writing poetry and preaching in popular dialects, especially when these dialects had as yet diverged comparatively little from the literary language. Even at the present day it is not uncommon in India for two languages to be current side by side in the same district; and in a great part of N. India there is in use a modern Indian literary language which diverges very considerably from that of everyday life.

Occasionally verses occurring in the *Mahābhārata* and *Rāmāyana* are also found as Pālī or Prakṛt verses in Buddhist and Jain texts. This by no means implies that such verses have been translated into Sanskrit from popular languages. Still more baseless is the view of several scholars that the two great epics were originally composed in popular dialects and were only later translated into Sanskrit. Not the slightest trace of any record that such a translation ever took place has come down to us. On the other hand, the fact that in the Sanskrit drama (cf. *ERE* viii. 112) the bard (*śūta*) regularly speaks Sanskrit, and not a popular dialect, indicates that the poetry of the bards, i.e. the epic, was composed in Sanskrit. This hypothesis was first propounded by A. Barth in *RC*, 5th April 1886, and further elaborated by him in *RHR* xxvii. [1893] 288 ff., xlv. [1902] 195 f. It has been refuted by Jacobi in *ZDMG* xlviii. [1894] 407-411.

A review of all the available evidence appears to the present writer to indicate that the original part of the *Rāmāyana* came into existence about the middle of the 4th cent. B.C., when popular stories

current about Rāma were collected and worked up into a homogeneous epic by the poet Vālmiki; while it attained its present extent by the end of the 2nd century A.D.

7. **Two parts.**—In the story of the *Rāmāyana*, as told in the original books, two parts can be clearly distinguished. The first is an ordinary narrative of human life without any admixture of mythological elements. Beginning with the intrigues of a queen at the court of Ayodhyā to ensure the succession of her son to the throne, it describes the results that followed. Had the poem ended with the return of Rāma's brother Bharata to Ayodhyā after the death of their father, King Daśaratha, it might have passed for an epic based on historical events. On the other hand, the second part, being founded on myths, is full of marvellous and fantastic adventures. The theory was formerly held (by Lassen and Weber) that the narrative is an allegorical representation of the spread of Aryan culture to the south of India and Ceylon. This view is, however, not borne out by the statements of the epic itself. The poet is evidently unfamiliar with the south, which he fills with the fabulous beings that might easily be imagined to haunt an unknown country. There is much more probability in Jacobi's theory that the second part of the original *Rāmāyana* represents a narrative of terrestrial events based on mythological elements traceable to the earliest Veda. The name of the heroine Sītā appears in the *Rigveda* as the personified Furrow invoked as an agricultural goddess (IV. lvii. 6). In a ritual work of the latest Vedic period (*Kausika Sūtra*, 106) she appears as a divinity of the ploughed field, a being of radiant beauty, black-eyed, adorned with lotuses, the wife of the rain-god. In the *Rāmāyana* itself Sītā is said to have arisen from the earth when her adoptive father Janaka was ploughing, and in the last book she finally disappears underground, received into the arms of Mother Earth. Her husband Rāma would then represent Indra, and his fight with the demon Rāvaṇa a modification of the Vedic conflict of Indra with Vṛtra, the demon of drought. It is here probably significant that Rāvaṇa's son is called Indra-satru, 'foe of Indra,' which is an epithet of Vṛtra in the *Rigveda*. The rape of Sītā by Rāvaṇa is parallel to the abduction by the demons of the cows later recovered by Indra. Again, Hanumān, the chief of the monkeys, who aids Rāma in flying hundreds of leagues to recover Sītā from the island of Laṅkā, is the son of the god of wind and bears the patronymic Māruti, 'son of the Maruts.' This suggests a reminiscence of Indra's association with the Maruts, or storm-gods, in his fight with Vṛtra. The name of the dog Saramā, who for Indra crosses the river Rasā in search of the captured cows, reappears as that of a demoness who consoles Sītā when imprisoned by Rāvaṇa in the island of Laṅkā.

8. **Contents.**—Such being the general character of the original *Rāmāyana*, we may now proceed to sketch the contents of the complete epic in the expanded form in which it has come down to us.

(a) *First part.*—Bk. I., called *Bāla-kāṇḍa* ('Childhood Section'), commencing with an introduction on the origin of the poem, goes on to narrate the story of Rāma's youth. We are told how Vālmiki in his forest hermitage was preparing to describe worthily the fortunes of Rāma. While he was watching a pair of birds on the bank of a river, the male was suddenly shot by a hunter and fell dead to the ground weltering in its blood. The poet, touched by the grief of the bereaved female, uttered words lamenting the death of her mate and threatening vengeance on the murderer. Strange to relate, his utterance was no ordinary speech, but issued from his lips in metrical form. As he wandered towards his hut pondering this occurrence, the god Brahmā appeared and, announcing to the poet that he had unawares created the rhythm of the *śloka* metre, bade him compose the divine poem on the life and deeds of Rāma in that measure. This story possibly preserves a histori-

cal reminiscence: it may mean that the epic *śloka*, which in the form of the *anustubh* goes back to the *Rigveda*, and which is identical in structure throughout the *Mahābhārata* and the *Rāmāyana*, was fixed in its final form by Vālmiki.

There follows an account of the city of Ayodhyā, in which the wise and mighty Daśaratha ruled. The king, being for a long time without a son, resolved to offer a horse-sacrifice, to direct which he appointed the potent seer Rāyaśrīga. Just at that time the gods were suffering many things from the violence of the demon Rāvaṇa. They accordingly turned for help to Viṣṇu, imploring him to consent to be born in human form, because Rāvaṇa was immune from death except by the hand of a human foe. Viṣṇu having consented to be born as a son of Daśaratha and the horse-sacrifice being over, the three wives of the king bore four sons, Kausalyā becoming the mother of Rāma (the incarnation of Viṣṇu), Kaikeyi of Bharata, and Sumitrā of the pair Lakṣmaṇa and Saṭrugṇa. Of these sons Rāma was his father's favourite, and to him his brother Lakṣmaṇa was particularly devoted from the beginning. After the sons were grown up, the great seer Viśvāmitra, who had come to Ayodhyā, conducted the two princes Rāma and Lakṣmaṇa to the court of Janaka of Videha. That king had announced that he would give his daughter in marriage to the prince who could bend a powerful bow that he possessed. Many had tried in vain; Rāma not only bent the bow, but broke it in two. The wedding of Rāma and Sitā, attended by King Daśaratha, was then celebrated with great festivities. For many years after the young couple lived in great happiness.

In this supplementary book the thread of the narrative is, just as in the *Mahābhārata*, interrupted by numerous episodes, many of which, in different versions, recur in the sister epic, and which are constantly alluded to in the later classical literature. One of these (i. 51-65) deals with the enmity of the famous sages Viśvāmitra and Vasiṣṭha. The former, a powerful king (though originally, in the *Rigveda*, a seer), came into conflict with the latter in the endeavour to deprive him forcibly of his miraculous cow. Unsuccessful in his attempt, Viśvāmitra undertook great penances which extended over thousands of years, and in which he resisted the seductions of beautiful nymphs, till at last he achieved Brāhminhood and became reconciled to his rival Vasiṣṭha. Among others may be mentioned the story of the dwarf-incarnation of Viṣṇu (i. 29), of the birth of the war-god Kumāra or Kārttikeya (i. 35-37), and of the churning of the ocean by the gods and the demons (i. 45). The fantastic legend of the descent of the Ganges (i. 38-44) relates how the sacred river was brought down from heaven to earth in order to purify the remains of King Sagara's 60,000 sons, who had been burnt to ashes by the sage Kapila enraged by their disturbing his devotions.

Bk. ii., called *Ayodhyā-kāṇḍa* ('Ayodhyā Section'), with which the main story of the epic begins, describes the events that occurred at Daśaratha's court of Ayodhyā. The king, by this time growing old, held an assembly, in which he announced, amid general approval, his intention to make Rāma his heir-apparent. Kaikeyi, Bharata's mother, whose heart was set on her son's succession to the throne, now reminded Daśaratha of his former promise to grant her any two boons she might choose. On his consenting to fulfil his promise, she requested him to appoint Bharata his successor and to banish Rāma from Ayodhyā for fourteen years. Kaikeyi having refused to withdraw her demand, Daśaratha passed a sleepless night. Next day, when the consecration of Rāma was to have taken place, the king sent for and explained the situation to his son. Rāma, accepting his father's commands calmly and dutifully, without delay set forth into exile, accompanied by Sitā and his half-brother Lakṣmaṇa. The old king, overwhelmed with sorrow, cut himself off entirely from Kaikeyi, remained with Rāma's mother, and died after a few days, lamenting the banishment of his son. Bharata, who had been living with his maternal grandparents at Rājagṛha, was now summoned to Ayodhyā, but, indignantly refusing the succession, set out for the purpose of bringing Rāma back as king to the capital. In the wild forest of Daṇḍaka he found Rāma living happily with Sitā and Lakṣmaṇa. But Rāma, though deeply affected by the magnanimity of his brother's request, declined to return, considering it his duty to fulfil his vow of exile. He accordingly took off his gold-embroidered shoes, and handed them to his brother, in token of transferring the succession to him. Bharata then went back to Ayodhyā and, placing on the throne Rāma's shoes surmounted by the royal umbrella as emblem of sovereignty, retired to Nandigrāma, whence he administered the affairs of State as Rāma's vicergerent. Herewith ends the first part of the original epic, which deals with the world of reality.

(b) *Second part*.—With bk. iii., the *Aranya-kāṇḍa* ('Forest Section'), we are introduced to the world of romance in which Rāma is constantly engaged in adventures and conflicts with fantastic creatures and demons of various kinds till the end of the poem. After the exiles have been living for some time in the Daṇḍaka forest, pious anchorites come to seek Rāma's protection against the *rākṣasas*, or demons, infesting the forest and terrorizing their hermitages. Rāma, having promised his aid, now enters upon a series of efforts to clear the forest of these monsters. Rāvaṇa's sister Śūrpanakhā, falling in love with Rāma, is rejected first by him and then by Lakṣmaṇa. To avenge the insult, she brings her brother Khara with 14,000 demons against Rāma, who, however, destroys them all together with their leader. She then hastens across the sea to the fabulous island of Laṅkā and complains to her brother, Rāvaṇa, its ten-headed ruler. The latter, filled with rage and bent on revenge, speeds through the air in his golden car to the forest. There he transforms one of his followers into a golden deer,

which appears to Sitā and at her request is pursued by Rāma and Lakṣmaṇa. Meanwhile Rāvaṇa, disguised as an ascetic, approaches Sitā, seizes her, and carries her off by force in his chariot through the air. The vulture Jāṭayu, an old friend of Daśaratha, attacks him on his flight and succeeds in shattering his car, but is finally slain. Rāvaṇa again seizes Sitā with his claws and carries her across the sea to his palace in Laṅkā. He shows her all its splendours and tries to persuade her to become his wife. She indignantly refuses and is finally confined in a cave guarded by female demons. Rāma returns from a fruitless chase only to find that his wife has vanished. Reduced to despair, he wanders southwards with Lakṣmaṇa in search of Sitā. They fall in with a headless demon, who advises Rāma to conclude an alliance with the monkey king Sugriva, who will help him to find his lost wife.

Bk. iv., called the *Kiṣkindhā-kāṇḍa* ('Kiṣkindhā Section'), describes the alliance concluded by Rāma with the monkeys for the purpose of recovering Sitā. At the lake Pampā they meet Sugriva, who tells them that he has been robbed of his wife and sovereignty, and expelled from his kingdom, by his brother Vālī. Rāma and Sugriva then form an alliance. At Kiṣkindhā, the capital of Vālī, a battle takes place in which Rāma slays Vālī. Among the councillors of Sugriva, who has now become king, the wisest and most trustworthy is Hanumān. He is accordingly entrusted with the task of finding Sitā, and, accompanied by a host of monkeys, proceeds southwards. After many adventures they fall in with Sampātī, a brother of the vulture Jāṭayu, who tells them he has seen Rāvaṇa carrying off Sitā, and describes the position of Laṅkā. On reaching the coast the monkeys are filled with despair as to how they can cross the sea. Hanumān, who has proved his ability to leap farther than any of the rest, ascends Mount Mahendra and prepares to bound across the ocean.

Bk. v., which describes Hanumān's doings in Laṅkā, is called the *Sundara-kāṇḍa* ('Beautiful Section'), perhaps as especially attractive because it contains more fabulous stories than any of the other books. With a mighty spring from Mount Mahendra Hanumān rises in the air and after a flight of four days, during which he undergoes various adventures, he reaches Laṅkā. From a hill he first surveys the city, which looks almost impregnable. Then, reducing himself to a minute size, he enters Laṅkā after dark, and inspects the whole city—Rāvaṇa's palace, his marvellous aerial car, and the women's apartments. After a long search he at last discovers Sitā in a grove. He rouses her from her grief by the news that Rāma is coming to the rescue. Hanumān then returns as he came, reports to Rāma the success of his search, and gives him a message from Sitā.

Bk. vi., entitled the *Yuddha-kāṇḍa* ('Battle Section'), describes the great conflict between Rāma and Rāvaṇa. Sugriva having advised the building of a bridge from the mainland to Laṅkā, an attack on the island is arranged and the vast monkey army marches to the seashore. On the news of its approach Vibhīṣana, Rāvaṇa's brother, counsels the surrender of Sitā. Repelled and insulted by Rāvaṇa, Vibhīṣana flies across the sea, allies himself with Rāma, and advises him to seek the help of the god of the sea, with whose aid the monkeys build the bridge in the course of a few days. The city being now invested, Rāvaṇa's army sallies forth and a general battle, as well as many single combats, ensues. In one of the latter Rāvaṇa's son Indrajit is slain by Lakṣmaṇa. Enraged at this, Rāvaṇa appears on the scene and fights a duel lasting a day and a night with Rāma, till at last he falls pierced to the heart. Rāma then orders the funeral of the dead chief of the demons to be celebrated and appoints Vibhīṣana to succeed him as king of Laṅkā. Summoning Sitā, he announces his victory, but rejects her in the presence of all the monkeys and the *rākṣasas*. Loudly lamenting Rāma's unjust suspicions, Sitā then throws herself into the flames of a funeral pyre, but the god Agni, raising her unhurt, hands her over to Rāma, assuring him that she has been faithful to him throughout her captivity. Rāma hereupon declares that he has never doubted her innocence, but has considered it necessary that her purity should be proved in the eyes of the people. Sitā now returns joyfully with Rāma to Ayodhyā, where he is consecrated king and reigns gloriously, inaugurating a new golden age for his subjects.

Bk. vii., called the *Ūtara-kāṇḍa* ('Last Section'), is, as we have seen, a late addition to the original poem. Only about one-third of it is concerned with Rāma and Sitā. It is here related that one day Rāma hears that the people are dissatisfied at his having taken back Sitā after she has so long been a captive of Rāvaṇa, because they thought this would have a bad influence on the women of the country. Unable to endure the reproach that he was setting a bad example to his subjects, he requests Lakṣmaṇa to take Sitā away and abandon her. Lakṣmaṇa, conducting her to the bank of the Ganges and explaining why Rāma has cast her off, leaves her there. The weeping Sitā at length finds her way to the hermitage of the sage Vālmiki, who entrusts her to the charge of the anchorite women living there. After some time Sitā bears the twin sons Kuśa and Lava in the hermitage. Many years pass by. The boys have grown up and become the pupils of Vālmiki, who takes them with him to attend a great horse-sacrifice undertaken by Rāma. The two boys are selected to recite the *Rāmāyana*, which has been composed by him, and are listened to with rapture by the audience. Rāma, hearing that the two youthful bards are the sons of Sitā, requests Vālmiki to cause Sitā to purify herself by an oath. The sage brings her and solemnly declares that she is innocent and that the twins are the actual sons of Rāma. The latter admits that he is satisfied by Vālmiki's words, but nevertheless desires Sitā to clear herself by the ordeal of the oath. Then all the gods descend from

heaven, and Sītā prays that, as surely as she has not even thought of any other man than Rāma, the goddess Earth may open to receive her. Scarcely have the words been uttered when Mother Earth, rising from the ground, embraces Sītā and disappears with her in the depths. Rāma in vain implores the goddess to give Sītā back to him; but the god Brahmā appears and holds out the hope of Rāma's being again united with her in heaven. Soon after Rāma, making over the kingdom to his two sons, enters heaven and again becomes Viṣṇu.

As in the first book, the thread of this narrative is interrupted by many myths and legends which have no connexion with the story of Rāma. Such are the well-known tales about Yayāti and Nahuṣa, of the slaying of Vṛtra by Indra, of Urvāśi, beloved of the gods Mitra and Varuṇa, besides several others aiming at the glorification of the Brāhmins quite in the spirit of the latest parts of the *Mahābhārata*.

LITERATURE.—i. **TEXTS.**—Bengal recension, ed. G. Gorresio, Turin, 1843-67, Calcutta, 1859-60; Bombay recension, with three commentaries, 8 vols., Bombay, 1896, ed. K. P. Parab², do. 1902; W. Indian recension only in MSS (cf. Hans Wirtz, *Die westliche Rezension des Rāmāyana*, Bonn, 1894).

RAM MOHAN RAY.—See BRĀHMA SAMĀJ.

RĀMOSHĪ.—The Rāmoshī, also called Nāik (Skr. *nāyaka*, 'leader'), a jungle tribe found in the Deccan and W. India, profess to derive their name from the demi-god, Rāma, who is said to have created them when on his way to Lañkā to recover Sītā; others doubtfully connect the name with Skr. *aranyavāsin*, 'jungle dwellers.' At the census of 1911 they numbered 60,064, found in Bombay, with a small body in the Central Provinces and Berār.

Those in the Deccan appear to be an outlying branch of the Kanarese or Telugu tribe or group of tribes known under the general name of Bēḍar or Byāḍaru, hunters or woodmen.¹ The fact that the branch in Poona is divided into two groups, Chauhān and Yādava, names of leading Rājput septs, has been held to indicate an admixture of higher blood. Like their neighbours the Kolis (see art. KOL, KOLARIAN), they were for a long time notorious on account of their disorderly and predatory habits. They supported the Marhātā leader, Śivaji, against the Muhammadans, and under British rule, as late as 1879, they committed outrages in Satārā and the neighbouring districts. In virtue of their traditional descent from Rāma, some of the tribes in Poona are called Rāmbhakt, 'worshippers of Rāma,' and are vegetarians. But more generally they have adopted Śiva in his form Khaṇḍobā as their tribal deity. He is represented riding on a horse with two women—a Vānī (or merchant-women), his wedded wife, and his Dhāngar (one of the jungle tribes) concubine behind him. As turmeric is a vegetable in which Khaṇḍobā is supposed to dwell, they swear by it, and no other oath is considered so binding. The oath ritual prescribes that the person swearing shall take a leaf of the *bel*-tree (*Egle marmelos*)

¹ E. Thurston *Castes and Tribes of S. India*, Madras, 1909, i. 180 ff.

sacred to Śiva, a few grains of millet, and some turmeric powder which has been laid on the *liṅga*. The oath is recited with an imprecation against perjury, a little powder is eaten, and some is rubbed on the forehead. They also revere Kedāri, now regarded as a form of Śiva, the tutelary deity of the Purandhar fort in the Poona District, before whose image Ragbūji, one of their leaders, is said to have laid his turban, with an oath that he would never wear this head-dress until his tribe should be restored to the privileges of which they had been deprived by the Marhātas. Besides these they worship many local gods, Musalmān saints (*pir*), the demon-leader Vetāla, who has many female spirits, or 'mothers,' in his train. The tomb of an Englishman in the neighbourhood of Poona is called by them Rāmdeval, 'Rāma's temple,' and is tended by an old Rāmoshī woman, who pours water over it, keeps a lamp burning, and allows no one who has eaten meat that day to visit the place.

Mackintosh remarks that both men and women had frequently to 'undergo the expiatory penance of the swinging ceremony, when the penitent is elevated to a considerable height and swung over a pole erected in front of the entrance of the temple, supported by a hook run through the skin and sinews of the back.'¹

Indications of totemism are found in the badge, or crest (*devak*), which is generally some tree or a bunch of the leaves of several trees. Persons with the same crest are regarded as brothers and cannot intermarry, nor can they eat the fruit or use the tree in any way. They dread the spirits of the dead. At a funeral, on the way to the grave, the corpse is turned round and the bearers change places in order to baffle the spirit and prevent its return. As an additional precaution, heavy stones and thorns are placed in the grave. The same fear of the dead appears in the marriage rites. If a woman has lost three husbands in succession and wishes to marry a fourth, she holds a cock under her left arm, and the tribal priest marries her to the bird before she is joined to her new husband. The intention is that the vengeance of her former husbands may fall upon the bird. Their belief in amulets is shown by the story told of their noted leader, Dādji. When he was brought to execution, it was impossible to behead him until he had made an incision in his arm and removed from his flesh a gem which he had inserted as a protective. Like other tribes in the same state of culture, they are much vexed by witches and sorcerers, and have a profound faith in omens.

LITERATURE.—The best account of the tribe is that by A. Mackintosh, *An Account of the Origin and Present Condition of the Tribe of Ramoosies, including the Life of the Chief Oomiah Naik*, Bombay, 1833; W. F. Sinclair, *IA* iii. [1874] 186 ff.; *BG* xviii. pt. i. [1885] 409 f., pt. iii. [1885] 34 ff., xvii. [1884] 209, xix. [1885] 105 f., xxi. [1884] 174 f., xxiv. [1886] 107; *Census of India*, 1911, vol. viii., Bombay, 1912, pt. i. p. 300; *Bombay Ethnographical Survey*, monograph no. 138, do. 1909; M. Kennedy, *Notes on the Criminal Classes of the Bombay Presidency*, do. 1908, p. 143 ff.; R. V. Russell, *TC Central Provinces*, London, 1916, iv. 472 ff.

W. CROOKE.

RANTERS.—The term 'Ranters' was the nickname given to an antinomian movement—hardly cohesive enough to be properly called a sect—in the period of the English Commonwealth, appearing about 1644. The name is derived from the English verb 'to rant,' i.e. to talk in an extravagant, high-flown manner (cf. Shakespeare's phrase, 'I'll rant as well as thou' [*Hamlet*, v. i. 307]).

The Ranters constituted the somewhat chaotic 'left wing' of a serious attempt to work out in England in the 17th cent. a type of Christianity conformed to apostolic, primitive Christianity, free from what the leaders of this movement called 'the apostacy,' and loosely enough conjoined and

¹ *Account*, p. 53.

organized to allow very wide individual liberty of thought and action. The central individualism of the movement tended to produce a great variety of groupings around prominent leaders, so that England at this epoch appeared to 'swarm with sects,' though the 'sects' were hardly more than marked variations of one general ground-swell movement. Ephraim Pagitt's description is vivid and well expresses the horror which the guardians of orthodoxy felt as this 'infection' swept over the country:

'The plague is of all diseases most infectious: I have lived among you almost a jubile, and have seen your great care and provision to keep the city from infection. The plague of heresy is greater, and you are now in more danger than when you buried five thousand a week. You have power to keep these heretics and sectaries from conventickling and sholing together to infect one another' (*Herestography*, Dedication to the Lord Mayor).

Marsden very well reproduces the prevailing feeling among those who were contemporary with what Milton called the 'year of sects and schisms.'

'Absurd excesses of opinion now appeared, as exotics in a hotbed. The distractions of the times suspended the restraints of Church discipline; opinions monstrous and prodigious started up every day, and were broached with impunity in public and in private, and multitudes were led astray. The number of new sects, religious and political, with which England swarmed appears almost incredible. The sober Puritans were confounded. The state of England reminded them of the fabulous description of the sands of Libya, where scorching suns produce new monsters every year' (*Hist. of the Later Puritans*), p. 224).

All movements, such as this one, which express a deep popular striving to escape from the rigidity of old systems and to secure a large area of individual freedom tend to develop an extreme wing. Persons of unstable equilibrium are swept on by the contagion of the movement. Those who are abnormally responsive to suggestion are certain to be carried along with the movement. These psychopathic persons, lacking in perspective and balance, bring into strong light the dangers that are involved in complete religious liberty. The Ranters were largely composed of this type of person, and some of them were obviously insane.

The Ranters, so far as they can be differentiated from the general ferment of the time, show two marked characteristics: they were (1) pantheistic, and (2) antinomian. Masson says:

'Pantheism or the essential identity of God with the universe, and His indwelling in every creature, angelic, human, brute or inorganic, seems to have been the belief of most Ranters that could manage to rise to a metaphysics' (*Life of Milton*, v. 18).

Richard Baxter says of them:

'These also made it their Business . . . to set up the Light of Nature, under the name of *Christ in Men*, and to dishonour and cry down the Church, the Scripture, the present Ministry, and our Worship and Ordinances; and call'd Men to harken to Christ within them' (*Reliquiae Baxterianae*, i. 76).

Joseph Salmon and Jacob Baunthumley may be taken as characteristic specimens of the leaders and exponents of the Ranter idea. Baunthumley (or Bottomley), who was called by George Fox 'a great ranter' (*Journal*, ed. N. Penney, i. 151), was the author of a pantheistical book with the title *The Light and Dark Sides of God* (London, 1650). The book opens in his best and sanest vein as follows:

'O God, what shall I say thou art, when thou canst not be named? What shall I speak of thee, when speaking of thee I speak nothing but contradiction? For if I say I see thee, it is nothing but thy seeing of thyself; for there is nothing in me capable of seeing but thyself. If I say I know thee there is no other but the knowledge of thyself, for I am rather known of thee than know thee. If I say I love thee it is nothing so, for there is nothing in me can love thee but thyself, and therefore thou dost but love thyself. My seeking thee is no other but thy seeking of thyself' (p. 1 f.).

On p. 77 he develops his extreme doctrine of the inward Light:

'It is not so safe to go to the Bible to see what others have spoken and writ of the mind of God as to see what God speaks within me and to follow the doctrine and leading of it in me.'

Joseph Salmon wrote *Heights in Depths*, and *Depths in Heights*: or *Truth no less Secretly than*

Sweetly, Sparkling out of its Glory (London, 1651). This strange tract recounts in extravagant style the mystical experiences of the writer:

'I appeared to myself as one confounded into the abyss of eternitie, nonentitized into the being of beings, my soul split and emptied into the fontaine and ocean of divine fulness, expired into the aspires of pure life' (p. 18).

The tract is throughout a presentation of extreme pantheism. A tract entitled *The Smoke of the Bottomlesse Pit* (London, 1650-51), written by J. Holland Porter, who claims to be 'an eye and ear witness,' gives many details of the Ranters' views and their manner of life. All contemporary writers unite in the opinion that the Ranters were morally disordered in their way of living, and that they held antinomian views of conduct; i.e., they were 'above' the usual moral distinctions of right and wrong. George Fox's *Journal* gives many concrete accounts of personal experiences with Ranters, and these accounts generally emphasize the two aspects under consideration—the pantheistical and the antinomian. In 1649 Fox went to visit a group of Ranters in prison in Coventry. He says:

'When I came into the jail, where the prisoners were, a great power of darkness struck at me, and I sat still, having my spirit gathered into the love of God. At last these prisoners began to rant, and vapour, and blaspheme, at which my soul was greatly grieved. They said they were God; but that we could not bear such things. When they were calm, I stood up and asked them whether they did such things by motion, or from Scripture; and they said, from Scripture. A Bible being at hand, I asked them to point out that Scripture; and they showed me the place where the sheet was let down to Peter, and it was said to him, what was sanctified he should not call common or unclean. When I had showed them that that Scripture proved nothing for their purpose, they brought another, which spoke of God's reconciling all things to himself, things in heaven, and things in earth. I told them I owned that Scripture also, but showed them that that was nothing to their purpose either. Then seeing they said they were God, I asked them, if they knew whether it would rain to-morrow? they said they could not tell. I told them, God could tell. Again, I asked them, if they thought they should be always in that condition, or should change? and they answered they could not tell. Then I said unto them, God can tell, and God doth not change. You say you are God; and yet you cannot tell whether you shall change or not' (*Journal*, bi-centenary ed., i. 47 f.).

Under date of 1654 Fox writes:

'During the time I was prisoner at Charing-Cross, there came abundance to see me. . . . Among those that came to see me, was one Colonel Packer, with several of his officers; and while they were with me, came in one Cobb, and a great company of Ranters with him. The Ranters began to call for drink and tobacco; but I desired them to forbear it in my room, telling them, if they had such a desire for it, they might go into another room. One of them cried, "all is ours"; and another said, "all is well"' (ib. i. 211 f.).

Richard Baxter's testimony almost certainly overstates the case against the Ranters, but, as it is the opinion of a high-minded contemporary, it must be given due weight. After presenting the views of the Ranters, he describes their manner of life:

'But withal, they conjoynd a Cursed Doctrine of *Liber tinism*, which brought them to all abominable filthiness of Life: They taught as the *Familists*, that God regardeth not the Actions of the Outward Man, but of the Heart; and that to the Pure all things are Pure (even things forbidden): And so as allowed by God, they spake most hideous Words of Blasphemy, and many of them committed Whoredoms commonly. . . . There could never Sect arise in the World, that was a lower Warning to Professors of Religion to be *humble, fearful, cautious, and watchful*. . . . But the horrid Villanies of this Sect did . . . speedily Extinguish it' (p. 76 f.).

The Ranters were vigorously dealt with by Acts of Parliament, and many of the extreme Ranters were severely punished for their views and for acts considered either blasphemous or immoral. The better element in the groups of Ranters were 'convinced' by the preaching of George Fox and became Quakers. The movement was checked, and gradually disappeared from public notice, though the antinomian tendency has at intervals continued to reappear sporadically both in England and in America.

LITERATURE.—The most important books for a study of the movement are the following: E. Pagitt, *Heresiography*, London, 1645; T. Edwards, *Gangrana*, do. 1646; L. Stuckley, *Gospel Looking-Glass*, do. 1667; R. Hickock, *A Testimony against the People called Ranters*, do. 1659; J. H. Porter, *The Smoke of the Bottomless Pit*, do. 1650-51; G. Roulston, *A Ranters Bible*, do. 1650; J. Jackson, *A Sober Word to a Serious People*, do. 1651; G. Fox, *Journal*, 2 vols., ed. N. Penney, Cambridge, 1911, and bi-cent. ed., 2 vols., London, 1901; W. Penn, *The Spirit of Alexander the Copper-smith lately Revived*, do. 1673; R. Baxter, *Reliquiae Baxterianae*, ed. M. Sylvester, do. 1696; S. Fisher, *Baby Baptism meer Babism*, do. 1653; R. Barclay, *The Inner Life of the Religious Societies of the Commonwealth*, do. 1876; R. M. Jones, *Studies in Mystical Religion*, do. 1909; D. Masson, *Life of Milton*, 6 vols., do. 1859-80; J. B. Marsden, *Hist. of the Later Puritans*, do. 1854; H. Weingarten, *Die Revolutionskirchen Englands*, Leipzig, 1863; J. Sippell, *William Dells Programm*, Tübingen, 1911.

RUFUS M. JONES.

RASHI.—This is the name familiarly applied to Rabbi Solomon ben Isaac; it is, indeed, derived from the Hebrew initials of his name. Some writers erroneously called him Jarchi (Yarhi), supposing that his name was connected with the city of Lunel (*yerah* = *luné* = moon). Rashi, however, was born in Troyes in 1040, and died in the same town in 1105. Like most of his contemporaries, Rashi did not derive any emoluments from his work as rabbi. He was among the many Jews of his epoch in France who engaged in viticulture. He was nevertheless an industrious student and author, and his works have won an enduring fame. No mediæval commentator is more studied in modern times. His exposition of the Pentateuch is still beloved of Jews, while his Commentary on the Talmud remains absolutely indispensable to the understanding of that work.

The first Hebrew book to be printed (of known date) is Rashi's Commentary on the Pentateuch (Reggio, Feb. 1475). Rashi expounded most of the Bible, but his repute now depends on his Pentateuch. In this Commentary he combined the newer grammatical method with the older Mid-rashic style, creating a harmony of unique charm. Nicholas de Lyra (1270-1340) familiarized Europe with Rashi's Biblical exegesis, and through de Lyra Luther carried on Rashi's influence into his German translation. A well-known line tells of Luther's indebtedness to de Lyra: 'Si Lyra non lyrasset, Lutherus non saltasset'; and Lyra, on his part, was much indebted to Rashi.

Rashi compiled *Responsa*, liturgical and other compendia, but apart from his Pentateuch he is best known for his great Commentary on the Talmud. He did much to settle the text, and added notes which for lucidity and brevity have few rivals. The Talmud is invariably read with Rashi by Jewish students, and all scholars are dependent, either directly or indirectly, on his interpretation. This has stood the test of time, and the numerous super-commentaries and annotations on Rashi have only brought out the supreme merits of his work.

LITERATURE.—L. Zunz, 'Salomon b. Isaac,' in *Zeitschrift für die Wissenschaft des Judenthums*, 1823, pp. 277-384, Heb. tr., Lemberg, 1840; I. H. Weiss, 'Rabben Shalom b. Yizhak,' in *Beit-Talmud*, ii., nos. 2-10, reprinted in *Toledot Gedole Yisrael*, Vienna, 1882; M. Liber, *Rashi* (Jewish Worthies Series), tr. from French, London and Philadelphia, 1906, with bibliography, pp. 231-239.

I. ABRAHAMS.

RATIONALISM.—I. Definition.—Rationalism, says A. W. Benn, means the hostile criticism of theological dogma, 'the mental habit of using reason for the destruction of religious belief.'

'Custom has ruled that the submission of belief to pure reason shall be called rationality in reference to every branch of natural knowledge, and rationalism only when it leads to the rejection of those supernaturalist beliefs with which religion has become identified.'

J. B. Bury has the following:

'The uncompromising assertion by reason of her absolute rights throughout the whole domain of thought is termed

rationalism, and the slight stigma which is still attached to the word reflects the bitterness of the struggle between reason and the forces arrayed against her. The term is limited to the field of theology, because it was in that field that the self-assertion of reason was most violently and pertinaciously opposed.'

The usage involves us in obvious difficulties. An argument will or will not be rationalistic, not according to its intrinsic contents alone, but according to the intention of the user or to its effects upon the hearer—and indeed certain theses of geology or astronomy which have been classed as rationalistic in one century have in a later century been accepted by all parties. A further difficulty lies in the use of the word 'reason.' It would seem impossible to deny the right and the duty of good thinking, of the utmost use of intelligence, in every department of life. Even the appeals to revelation or to authority, to the usefulness of a certain belief, or to the needs and rights of feeling and action, are themselves appeals to our intelligent judgment for comprehension and sympathy. Thought can be criticized, on whatever grounds, only through thought.

The use of 'rationalism,' indeed, whether as a war-cry or as a term of reproach, is a use belonging to popular philosophy, and cannot be pressed with too much exactness. (Its more technical uses in the theory of knowledge are not considered here.)

On the whole, the usage is governed by two considerations. (1) An argument is rationalistic when it is directed against a belief which by many of its holders at any rate is counted a 'religious' belief. The person bringing the argument may or may not have a constructive philosophy of his own to maintain. He may be a monotheist attacking polytheism, or a deist criticizing the doctrine of the Trinity; he may be a materialist, or an agnostic, or none of these things; the 'rationalism' of his argument lies in its attack, in the name of sound thinking, on the particular shape of a particular religious system. Obviously such arguments, though anti-religious in one sense, may be used in the service of religion. A higher form of religious belief in conflict with a lower must sometimes use negative criticism as well as positive teaching. And a developing belief, trying to fit itself continually better to the facts of the soul and of the universe, must often use such criticism on itself.

(2) In its derogatory use, on the other hand, the name of 'rationalism' is specially applied to a certain kind of bad thinking—an unimaginative criticism from the outside. If a difficult idea has been crudely and imperfectly stated by those who have groped after it and only half attained it, the lower rationalism makes no attempt to reach it and to state it better, but fastens on the crudities of the accepted statement, is triumphant in showing the untenability of this as it stands, and therewith rejects the whole conception.

In rationalism in this sense 'reason holds off, as it were, from trying to comprehend what is most characteristic in religious experience. Instead of allowing the paradoxical nature of religious doctrines to be provocative to it and to stimulate it to further effort, the rationalistic understanding makes it a ground for declining to consider them further. Thus doctrines like those of the Trinity or of Original Sin in Christian theology are set aside because in arithmetic one and three are different numbers, and because the citizen of a civilized state will not accept responsibility for his ancestors' criminal acts. The question is not put, why such obvious contradictions to our ordinary ways of thinking have been entertained and considered of high importance. Or it is put, and the answer is suggested that we have here mere survivals of fanciful notions elsewhere discarded; and the further question is not raised, why they are not discarded here also; for it is plainly not because they have not been made the subject of close attention. The rationalistic criticism ought only to bring out the need of putting and answering such enquiries; but it may simply lead to the neglect of them as not worth pursuing.'

¹ *Hist. of Freedom of Thought*, p. 18.

² C. C. J. Webb, *Problems in the Relations of God and Man*, London, 1911, p. 72 f.

¹ *Hist. of English Rationalism in the Nineteenth Century*, vol. i. pp. viii, 4, 6.

2. History.—There can scarcely have been a century or a country in the history of the world where rationalistic thoughts have not existed in some men's minds. For the Western world rationalism enters into history with the criticisms brought by Ionian philosophers against the popular mythology of Greece. Early Christian apologists attacked paganism on rationalistic grounds. In the Middle Ages the controversies among Christians and Jews and Muhammadans similarly had to be largely rationalistic. When men of one religion dispute with men of another, they can appeal only to the human intelligence which is common judge for both. After the Reformation, again, when Church opposed Church, or Church collided with State, reason was invoked by all parties.

In the development of Christian thought rationalistic contributors or opponents have stood sometimes outside the Christian Church and sometimes inside it. Of their arguments, drawn from philosophy, science, history, or the criticism of documents, some have fallen to the ground; others have had real effect in modifying or developing the doctrines grouped together under the general name of Christianity. For this, like every other system of living thought, has developed partly by taking up criticisms into itself, and it is almost inevitable that disputes should arise in each generation as to the amount of new modification that can be allowed if the system is still to retain the name of Christian.

It is not possible to write the history of rationalism as one would write the history of a religion or a science, or that of a nation. The story of England can show a continuous line of movement; it is complex but unified; whereas the story of 'attacks on England' will have disconnected factors of the most various kinds. A religion has unity and definite movement, but the series of criticisms brought against that religion may have little of either. Some slender thread of historical development must, indeed, run through it, appearing and disappearing, since to some extent the criticism must follow the movement of religious thought—changes in this either giving rise to new forms of attack or abolishing old forms. Or, again, the story of rationalism may exhibit fragments of many histories, because some part of the negative criticism in any generation may be the cutting edge of a single positive, brought forward by a rival religion, or by a school of philosophy or science, whose own development makes a true history.

All these features appear in the rationalism of the last hundred years in Europe. The first point hardly needs illustration—new developments in religion are sure to call out opposition and therefore argument, not only from those who stand outside the religion, but still more from conservative supporters of the religion itself, and from followers of rival movements within it. The second event—the supersession of an important criticism by a change in the doctrine criticized—is a good deal rarer, but has occurred more than once even in the last hundred years. Historical examination of Biblical documents had been practised ever since Spinoza, but 19th cent. studies gave it impetus enough to take irresistible effect, and the Mosaic authorship of the Pentateuch (at any rate) is probably no longer a 'religious opinion' in most circles. The idea of a gradual formation of the world and its inhabitants is a good deal older than Darwin, but, since it was taken up into the form that he gave it, the ordinary religious belief of educated persons has gradually ceased to include a six days' creation. For the third point—the exhibition of fragments of other histories—the illustrations just given would still serve, since they belong not only to the history of religious opinion but also to that

of the study of documents and of natural science. Or we might select another fragment: part of rationalist argument in the last four generations has been the cutting edge of a change in the science of collective psychology, and this has turned not only against certain religious doctrines but against some older criticisms of them. D. F. Strauss, *e.g.*, offers his 'mythical' account of the Resurrection deliberately as superseding older explanations, such as the suggestion that the disciples stole the body of Jesus for the sake of their own ambition and self-interest, or the other suggestion (which Strauss calls specially 'rationalist') that Jesus recovered consciousness after a deep swoon but was never able thenceforth to persuade his disciples that he was not a being from another world.¹ We are probably safe in saying that these explanations have indeed been superseded by the growth of a psychological school in which Strauss may stand as one of the pioneers.

Nevertheless, it is impossible to arrange individual rationalists in a clear order of historical development. The threads cross too much. Opinions and criticisms which are obsolete in some circles are not obsolete in others. Different men may use the same argument in the interests of the most diverse schools of thought; and few men can be fairly described as if they were specialists of a single argument. What Renan says of himself is true of most—that their doubts arose not from one train of reasoning but from ten thousand.

Renan's own difficulties, indeed, were comparatively specialized, numerous as they were:

'If I could have believed that theology and the Bible were true, none of the doctrines . . . would have given me any trouble. My reasons were entirely of a philological and critical order; not in the least of a metaphysical, political, or moral kind. These orders of ideas seemed scarcely tangible or capable of being applied in any sense. But the question as to whether there are contradictions between the Fourth Gospel and the synoptics is one which there can be no difficulty in grasping. I can see these contradictions with such absolute clearness that I would stake my life, and, consequently, my eternal salvation, upon their reality without a moment's hesitation.'²

A clearer example than Renan's of doubts arising from ten thousand trains of reasoning may be found in one who, like Renan, started from the most devout and orthodox standpoint of his time and country, and only gradually and reluctantly came to oppose what he used to believe. This was Francis William Newman, younger brother of Cardinal Newman. In *Phases of Faith, or Passages from the History of my Creed* (London, 1850), he describes his evangelical upbringing and youthful belief, then his testing of various points by his Bible reading. In one matter after another—the Sabbath, the Mosaic Law, infant baptism, episcopacy, the Lord's return—he found discords between the teaching of the NT and what he had been taught himself. Persisting, as a lay missionary in Persia, in trying to read the Gospels with fresh eyes, he found the Fourth Gospel clash with the Athanasian Creed, and returned to England to find himself cast off by his friends as a heretic. He moved next, on grounds of moral criticism, to the rejection of eternal punishment, original sin, and the vicarious suffering of Christ. He had already begun to discern that it was impossible with perfect honesty to defend 'every tittle contained in the Bible,' and further study forced him to conclude that the assumed infallibility of the entire Scripture was a proved falsity, not merely as to physiology and other scientific matters, but also as to morals. Finally, the NT miracles became a burden to the doctrine instead of a support. Miracles were irrelevant as a means of proving the goodness and veracity either of the person who

¹ *Der alte und der neue Glaube*, Bonn, 1874, sect. 15.

² *Recollections of my Youth*, Eng. tr.³, London, 1897, 'The St. Sulpice Seminary,' pt. iii. p. 260.

worked them or of God; and the kind of evidence on which the NT writers accepted them was definitely inadequate for a modern mind.

Newman claimed that what was left to him in the end was still the essential part of religion—the heart's belief in the sympathy of God with individual man. What Renan kept was not theology, but the sympathy of a scholar, a poet, and an Eastern traveller with the persons who founded Christianity. His *Vie de Jésus* (Paris, 1863) was not intended as a scientific work either for historians or for theologians, but was simply a poetic retracing, in the clearest and the tenderest colours at his command, of a picture which religious tradition had veiled, he thought, from many readers.

A very different book on the same subject was published almost immediately afterwards—D. F. Strauss's *Leben Jesu für das deutsche Volk* (Leipzig, 1864). His more famous *Leben Jesu* had appeared nearly thirty years before. The purpose in these books is not to paint a picture, but to re-interpret the growth of a doctrine. Stories of miracles arise for the most part, the author urges, not by any one's deliberate invention, but out of the unconscious imagination of a community. As with ancient myths, the fact is created by the idea, the legend grows of itself. Interpretation on this line was not new as regards the OT, but Strauss was the first to apply it with anything like such thoroughness to the narratives in the Gospels. His view in 1835 was that very few of these were newly created myths; most were based on OT legends and pictures, transferred, between the Exile and the birth of Jesus, to the person of the expected Messiah. The Messiah must be transfigured like Moses, must multiply food and raise the dead like Elijah and Elisha, must perform works of healing because Isaiah had said that in His day the eyes of the blind and the ears of the deaf should be opened. In 1864 Strauss left much more room for the growth of legend within Christian circles, reflecting the growth of Christian experience and thought, and laid less stress on the OT correspondences. It was far easier of course to apply interpretation by myth to the Gospels, if once it had been admitted that none of these was the work of an eye-witness; and Strauss, though not himself a professional critic of documents, had studied most attentively the contemporary work of F. C. Baur and others. His sketch of the doings and the personality of Jesus is less vivid and definite than Renan's, largely because of his scrupulousness in evaluating the sources and confining himself to what he thought to be proved facts.

While Strauss worked at re-stating the history of the Christian form of religion, his contemporary, L. A. Feuerbach, in *Das Wesen des Christentums* (Leipzig, 1841), re-stated its philosophy. The universal reason of the human race operates on an uncultured man only under the image of a personal being. He must separate from himself the element in his own nature which gives him moral laws, and place it in opposition to himself; thus we have the picture of a personal God. Yet, if God were really a different being from myself, why should His perfection trouble me? God is the latent and the ideal human nature, the truth of man; to doubt of Him is to doubt of myself. Our gods are strong first, because physical strength is the first thing we count as glorious; then they are majestic and serene; finally, God loves and suffers, because we have come to see that feeling is absolute, divine in its nature. 'God loves man' is an Oriental expression of the truth, 'The highest conceivable is the love of man.' Not the attribute of the divinity, but the divineness or deity of the

attribute, is the first true Divine Being. When this projected image of human nature is made an object of theology, it becomes an inexhaustible mine of falsehoods. The foundation of religion is man's feeling of the sacredness of man and nature; the result of religion too often is that he sacrifices man and nature to his God.

In the line of Strauss and of Feuerbach, whether consciously or not, stand several living writers, including in France Emile Durkheim (*Les Formes élémentaires de la vie religieuse*, Paris, 1912) and L. Lévy-Bruhl (*Les Fonctions mentales dans les sociétés inférieures*, do. 1910) and in England F. M. Cornford (*From Religion to Philosophy*, London, 1912) and Jane E. Harrison (*Ancient Art and Ritual*, do. 1911, *Themis*, Cambridge, 1912, *Alpha and Omega*, London, 1915). For these writers the beginning and the foundation of religion is the 'collective consciousness' of a group, dominating the primitive individual as an irresistible pressure from outside, and answering to itself as the voice of conscience within. He 'projects' it first in the figure of a totem animal or plant, later in other figures which grow out of primitive ritual. All such projections are embodiments of collective emotion, desire, and law. High emotional tension is caused and maintained for a savage only by a thing felt socially; the group-consciousness in tension then makes a picture of itself, which takes finally the form of a god. The mystery-god is both human and dæmonic, re-created at every celebration of his central rite, in the collective emotion of his congregation. Such a scheme provides the appropriate setting for figures half-human and half-divine—actual living prophets who during their lives or after their deaths become the dæmons of religious societies. Group-action and group-emotion, not their formulation in any theology, make the essence of religion.

In this line of writers we certainly find a section of real history of rationalism. How far we judge them to have succeeded in interpreting the facts of religion will probably depend on our opinion, and on our estimate of these writers' opinion, of the reality of the concrete universal. In the common Spirit within us, and in the divinity of the attribute, have we something which merely deludes us into forming a religion, or have we something of which the highest language of religion is really true?

There remain some typical or outstanding figures in 19th cent. rationalism which stand apart from those already described. F. K. C. L. Büchner (*Kraft und Stoff*, Leipzig, 1855) is not so much a landmark as a type recurrent in every century, though the special forms of the arguments change. He attacks the idea of the creation of the world; for no force can exist except as a property of matter; and matter itself can never be either produced or annihilated. Writing five years before the appearance of *The Origin of Species*, Büchner claims it as highly probable, even certain, that life may be spontaneously generated out of the non-living, and that higher forms of life have been slowly developed by a natural process out of lower forms. No soul can exist without brain; the experimenter's knife cuts off the soul piecemeal. It would be waste of words to try to prove the impossibility of a miracle. No educated, much less a scientific, person, who is convinced of the immutable order of things, can nowadays believe in miracles. There exist no supersensual or supernatural things, and no supersensual capacities; and they can never exist, as the eternal conformity of the laws of nature would thereby be suspended. Having laid down these metaphysical doctrines, Büchner adds that there is no such thing as meta-

physics, and that all metaphysical systems come to nothing and lose themselves in an unintelligible play of words. All our knowledge is relative; we can have no knowledge and no conception of the Absolute—of that which transcends the sensual world.

Büchner ends with agnosticism, though he does not begin with it. The name 'agnostic' was originated by Huxley, but popularized by Leslie Stephen, whose *Agnostic's Apology* was first published in the *Fortnightly Review* for June 1876. Dogmatic atheism, he holds, is a rare opinion, but agnosticism is increasing. The agnostic asserts that there are limits to the sphere of human intelligence, and that theology is 'metempirical' knowledge which lies outside these limits. In the whole history of the race no agreement on theological questions has ever been attained. In matters that are still involved in endless and hopeless controversy ignorance is no shame, but a duty. Many of the Christian doctrines have created far more numerous and far more horrible difficulties than those which they profess to remove. It is better to admit openly that man knows nothing of the Infinite and Absolute, that the ancient secret is a secret still.

Agnosticism is metaphysics binding her own hands, and constructive criticism of religious doctrine will not come from this quarter. A different position belongs to philosophical workers whose negative criticisms are incidental, though necessary, in their own constructive thought. Such, among living writers, is J. M. E. McTaggart (*Some Dogmas of Religion*, London, 1906). The subjects of religious discussion, he says, are the most important and the most practical in the world. Religion rests on a conviction of the harmony of ourselves with the universe, and nothing but exact metaphysics can justify us in holding this conviction. We are not justified in believing any dogma because all, or most, people believe it; nor because it is held by people who can work miracles; nor because of its importance for our happiness. Nor could observation without metaphysics ever give it sufficient support.

McTaggart's negative criticism is directed chiefly against certain conceptions of the Deity. If God is strictly omnipotent, He cannot be good, for He has permitted evil when He need not have permitted it. It is said that He could not secure the benefits of human free will without also permitting the evil of sin, but there is nothing that an omnipotent being cannot do. When believers in God save His goodness by saying that He is not really omnipotent, they are taking the best course open to them; but then they must accept the consequences of their choice, and realize that the efforts of a non-omnipotent God in favour of good may, for anything they have yet shown, be doomed to almost total defeat. Again, suppose God not to be omnipotent—can He be creative and still be good? A creator has nothing but his own nature to determine him, and, if a being who is completely self-determined produces evil, knowing that it is evil, how can we say that such a being is not wicked? Could there be a God, perhaps, who was neither omnipotent nor creative, but just a person more wise, good, and powerful than any other? He might be well deserving of worship, and might dominate the universe as much as an efficient schoolmaster dominates his school. It is a possible theory, though not an established one.

But, McTaggart asks, does religion require the existence of a personal God at all? Suppose our metaphysics led us to believe that the universe consisted, not of matter, but of a harmonious system of selves. Then the directing mind of a God, though not disproved, would not be needed

in any way to account for the traces of order in the universe.

'The non-existence of God would leave it as possible as it was before that love should be the central fact of all reality. . . . Whether the friends whom all men may find could compensate for the friend whom some men thought they had found is a question for each man to answer. It is a question which can never be answered permanently in the negative while there is still a future before us' (p. 290).

'If we want to know the truth . . . we must have faith in the conclusions of our reason, even when they seem . . . too good or too bad to be true. Such faith has a better claim to abide with hope and love than the faith which consists in believing without reasons for belief. It is this faith, surely, which is sought in the prayer, "Suffer us not for any pains of death to fall from thee," And for those who do not pray, there remains the resolve that, as far as their strength may prevail, neither the pains of death nor the pains of life shall drive them to any comfort in that which they hold to be false, or drive them from any comfort in that which they hold to be true.' (p. 75).

LITERATURE.—For all except the most recent years A. W. Bann, *Hist. of English Rationalism in the Nineteenth Century*, 2 vols., London, 1906, covers the ground and gives a great number of references. A smaller book is J. B. Bury, *A Hist. of Freedom of Thought*, do. 1913. Brilliant work within its own limits is to be found in O. Pfleiderer, *The Development of Theology in Germany since Kant, and in Great Britain since 1836*, Eng. tr., do. 1890. HELEN WODEHOUSE.

REALISM AND NOMINALISM. — I. Ancient and mediæval.—Although these terms are most properly used only of mediæval schools of philosophy, the disputes of the Middle Ages were prepared by the division already existing in the fragments of Greek philosophy which they inherited. Plato was known as a realist, and Aristotle was usually believed to be opposed to him—in spite of the fact that after Thomas Aquinas 'Aristotle' meant a synthesis of realism and its opposite. We may judge from the first statement of metaphysics which we now possess, the Platonic dialogues, that the forms (ideas) had been accepted as the explanation of the likeness between objects or individuals, before Plato wrote.¹ This meant that the data of experience were (1) individuals, objects, or things, and (2) certain other realities called 'forms' (*εἶδη, ἰδέαι*) with peculiar relations to the individuals. The relation was sometimes said to be participation or copying; and it was implied in the Platonic school that the individuals were in some sense less real than, or dependent upon, the forms. Aristotle seems to have objected that this was only to add a new kind of individual existence to what was obvious; and his argument was perhaps intended to prove that individuals were ultimately real; but the result was that he appeared to make the forms less real than, or dependent upon, the individuals.

At the very beginning of mediæval thought (cf. art. SCHOLASTICISM) Scotus Erigena² attempted to reduce to logical coherence the confusion of semi-philosophical statements, primitive science, and popular superstition, which was known as *catholica fides*. But the guide that he took was the obscure Neo-Platonism of the pseudo-Dionysius. In accordance with this, he established a form of realism. Being, the most general of all likenesses or forms, was said to be the ultimately real, and we departed more and more from reality in approaching the objects of sensation. The theological results we need not discuss; on the philosophical side, realism implied that what is usually called 'abstraction' is the correct method for the study of the real world to the subordination, if not the exclusion, of sense-perception, and therefore the real was contrasted with the apparent. The result was a form of mysticism in which all exact knowledge seemed to be useless.

Against this nominalism was a revolt. Aristotle had said that 'things [*res*=realities] cannot appear

¹ Cf. A. E. Taylor, *Varia Socratica*, ser. 1., Oxford, 1911; J. Burnet, *Greek Philosophy*, pt. 1., 'Thales to Plato,' London, 1914.

² *De Divisione Naturæ*.

as predicates,' and the conclusion was made that universals, or the likenesses between things, were not *res*. But, since the word *res* seemed to mean what we now mean by 'reality,' the nominalists were charged with saying that universals were mere words or *flatus vocis*. Unfortunately we know the early nominalists only from their opponents. It is, however, quite possible that they were attempting to turn philosophical attention towards the individual objects of perception. Abelard (*q.v.*), the first great mediæval thinker, easily showed, on the other hand, that the classification of things as like, one to the other, cannot be due to the caprice of the perceiver and must therefore have a ground in the things. It is probably unhistorical to make Abelard a pure conceptualist or to suppose that he had a theory of forms of the mind or categories due to the structure of mind. It is difficult to be historically just to the early mediæval thinkers. They were probably even more simple and primitive than their words seem to imply. The great step onwards came with the introduction of more works of Aristotle; and Thomas Aquinas (*q.v.*) easily dominated the current of thought. He was a realist in the sense that, although he held the individual to be ultimately and irreducibly real, he maintained that universals are objective (in the mediæval language, 'subjective') and are 'in the things' (*universalia in rebus*). Duns Scotus, the great opponent of Aquinas in other issues, in this did not differ very much from him, although he preferred 'thisness' (*hicceitas*) to the 'principle of individuality' (*principium individuationis*) as the explanation of the individual. It is to be noted, however, that both seem to hold the individual object of perception to be a composite, made up of universals (likenesses, etc.) with some individuating element added. Realism, thus modified, was triumphant. It was conclusive in showing that classification was not arbitrary, and that objects or individuals were like one another quite independently of the perceiver. But it had in it the seed of its own destruction in the mistaken Aristotelian attempt to secure the universal by making it a component part of the object of perception.

The last stage of the mediæval controversy was reached by William of Ockham (see art. SCHOLASTICISM), who to the mind of his time completely destroyed the realism of Aquinas and Scotus. His most effective argument was directed against the *principium individuationis* of his predecessors. He showed that this ultimate difference was nothing else than the individual itself; and, asserting that the individual needed no explanation, he turned upon the universals of the realists. He showed that they did not exist *in re* and the alternative, as he phrased it, was that they existed *in mente*. Probably Ockham was not clear as to what he meant; but he certainly did not mean that universals are fictions or even 'the work of the mind'; for he expressly dismisses that theory. At this stage the controversy was displaced from its mediæval prominence; but, being still logically implied in every new metaphysical theory, it was handed on through the Renaissance to modern philosophers. The accepted view was generally what Ockham had left it. The individual objects of perception were real and the source of all our knowledge; and the likenesses between them were mental or conceptual. There was still the implication that such likenesses were due to the structure or activities of the perceiving mind; but the attention to sense-perception for which Ockham's nominalism stood combined readily with the new interest in physical science. Thus Ockham was opposed to mediæval realism, according to which universals were *actual*, but he is the precursor

of modern realism in giving them conceptual (objective) existence and in refusing to suppose the thing to be made up of its qualities.

It is not quite fair to the earlier modern philosophers to class them as realists and nominalists; for this particular issue was never faced in the same terms after the Renaissance. The two tendencies, however, continued, and conceptualism (*q.v.*) was developed as a theory that the objects of perception were what they were because of the perceiving mind. This theory in Berkeley and Hume (*qq.v.*) seems to have implied that there was a certain human arbitrariness in classing things as like, one to another. The elaborate study of mental process added to the philosophical prejudices which implied that we never observe the thing 'itself'; and then with Hegel (*q.v.*) the whole of what the plain man regards as the world was supposed to be an emanation from percipient mind. The result was to make of exact science only a study of mental process or its effects; and realism was driven from the field.

C. DELISLE BURNS.

2. Realism in modern thought.—Modern realism differs from its earlier connotation largely owing to this displacement of the centre of interest from ontology to epistemology; it is a doctrine concerning the relation between cognition and the thing known. In its simplest form as the naive realism of the unphilosophical man it holds that the subject has immediate knowledge of the external world, that things are what they seem, and that they are independent of being known. The view that things are what they appear as, taken apart from the further supposition of independence, is variously called 'epistemological monism,' 'the theory of immanence,' and 'phenomenalism.' The last term is a survival from, and represents the antithesis of, an earlier meaning of the 'real' as contrasted with appearance. In this sense the real is that of which something is known, not what it is known as. The 'natural realism' of the Scottish school was of this 'substance' type,¹ and arose as a protest against the 'theory of ideas' of Berkeley and Hume (see art. SCOTTISH PHILOSOPHY). Cartesian dualism had asserted that we can have experience only of 'ideas' which merely represent external objects, and led to a subjectivism which Reid was anxious to avoid. He argued that, since the qualities of a body do not themselves constitute the body, there can be no question of their remaining mere ideas through the uncertainty of the existence of the underlying body. This argument as against ideas is curious; for, in sharply distinguishing between a body and its qualities, the possibility is introduced that in all cognition what is known is never the object itself but only an idea representing that object. And it was precisely this dualism in knowledge that Reid wished to avoid;² indeed he claims, but nowhere substantiates, that cognition is immediate. In fact epistemological dualism is born of the belief that propositions about things are of the subject-predicate form (cf. below, § 3), and leads naturally, as in Hamilton and Spencer, to agnosticism regarding the 'real' object—thus being fatal to all naturalisms of substance. It remains to be shown how the epistemological monism part of naive realism came to be recognized as expressing a relational view of cognition.

Shadworth H. Hodgson, the forerunner with L. T. Hobhouse³ of English 'new realism,' sought in his 'subjective analysis of what is actually experienced'⁴ to reach the reality of objects in

¹ Reid, 'On the Intellectual Powers,' in *Works* 2, ed. Sir W. Hamilton, Edinburgh, 1849, p. 232.

'face to face perception.' A thing is what it is known as¹—a reality independent of the existence of a perceiving consciousness. Now, Berkeley himself had escaped from the difficulties of epistemological dualism by denying it; and it was therefore of vital importance for realism to distinguish between his monism and his subjectivism so as to be able to avoid the latter and to assert independence. That is why 'The Refutation of Idealism' by G. E. Moore² cleared the way for future realist construction. Moore contends that a sensation is in reality a case of knowing or being aware of something. Therefore, when we know that the sensation of blue exists, the fact which we know is that there is awareness of blue. On analysis the 'sensation of blue' is thus seen to include, besides 'blue,' both a unique element, awareness, and a unique relation of this element to blue. From this it follows that, when we know that the sensation of blue exists, we know blue—i.e., we are already outside the subjectivist's circle of his own ideas and sensations. This distinction between sensation and sense-data thus forms a step towards the generalized argument against subjectivism,³ basing itself on the externality of relations—a doctrine supported by the success of modern logic, since it merely expresses the justification of logical analysis.⁴ New realist adherence to analysis⁵ is exemplified in the significant attempt of the 'platform' realists,⁶ E. B. Holt, W. T. Marvin, W. P. Montague, R. B. Perry, W. B. Pitkin, and E. G. Spaulding, at what Russell called, in welcoming their appearance, the 'patient co-operative accumulation of results by which the triumphs of science have been achieved.'⁷ Perry⁸ believes that realism is further strengthened by the possibility of showing that critical naturalism 'gives to being in the last analysis a logical rather than a physical character.'⁹ But 'logical atomism,' the search for 'piecemeal, detailed, verifiable results,'¹⁰ renders it difficult to give any adequate summary, in the crude unanalyzed language of common discourse, of the positions gained, such as the according of full ontological status to logical entities (not only particulars but also universals are real) or the acceptance of Kant's contention that, if any knowledge is possible, mathematical and logical knowledge is,¹¹ without acknowledging the priority of epistemology.¹²

There is one important difference between, speaking roughly, American and English new

⁹ Cf., however, C. D. Broad's acute critique of anti-realist thought in *Perception, Physics, and Reality: An Enquiry into the Information that Physical Science can supply about the Real*, Cambridge, 1914. In this work it is shown by detailed analysis how much more must be assumed than is generally believed before even the naivest realism can be overthrown. Broad differs from Russell in clinging to the physical object as well as to sense-data and sensation; but in his discussion of Russell's present view of 'things' as series of aspects in *Proc. Arist. Soc.*, new ser., xv. [1914-15] 250, a partial reconciliation seems indicated.

¹⁰ Russell, *Our Knowledge of the External World as a Field for Scientific Method in Philosophy*, Chicago and London, 1914, p. 4.

realists; and this is due largely to William James, who has been to the one school what Hodgson was to the other. In his *Essays in Radical Empiricism* (London, 1912) James approved of the view that things are what they are known as (p. 27), but insisted that they need not be known in order to be (p. 26). The divergence comes when he urges that there is no specific character of mental things, the difference between mental and physical being one of context and arrangement (*ib.* p. 25). The origin of this lies far back in Hume's application of the argument from the ego-centric predicament to the subject as object. Thus, if subjectivism is assumed, we reach the radical phenomenalist world of neutral elements in momentary being at the instant of perception. The further step of giving these elements independent existence apart from perception Hume mentioned¹ only to reject it because he thought that the so-called illusions of sense proved the dependence of ideas on the structure of our organs. But, on Hume's initial assumption, our organs have no permanent structure; they exist when somebody perceives them and not otherwise.² If we now retrace our steps, we have the following results: (1) since the argument based on relativity to sense-organs is inoperative, Hume's tentative step of assuming independence for the elements becomes a possible one; but (2) we were led to the necessity for this step by the difficulty of knowing the subject as object, which (3) arises only if subjectivism is assumed, and this (4) has been refuted by Moore. Now American realists believe that they can retrace step (1) without retreating farther, and so find themselves in James's position of neutral epistemological monism plus independence. The argument against this, elaborated above, applies equally to the phenomenistic naturalisms of Clifford, Karl Pearson, Ernst Mach, and Avenarius.³

A detailed analysis of neutral monism is given by Russell.⁴ Some important consequences follow from the theory; e.g., a mind which had only one experience would be a logical impossibility, since, according to it, a thing is mental in virtue of its external relations—a view which places the important realist claim of independence at the mercy of a thoroughgoing relativist like N. Wiener.⁵ Furthermore, neutral monism unduly assimilates belief or judgment to sensation and presentation, thus leading to the view of error as belief in the unreal, and so to the admission of unreal things.⁶ The problem of error must, however, be disentangled from that of 'sense-illusion.' The more complete avoidance of subjectivism by the English realists makes this easier, and renders the question of secondary qualities much more amenable. The objects of acquaintance cannot be illusory or unreal;⁷ so, when a hot metal touches a cold spot on the skin, the 'coldness' is objective.⁸ Though sensations are functions of the sense organs and the nervous system, this is not primitive knowledge and cannot form part of the epis-

¹ *Treatise of Human Nature*, ed. L. A. Selby-Bigge, Oxford, 1888, p. 207.

² Broad, p. 165.

³ We may note that S. Alexander holds that Berkeley in some passages avoids the confusion of mental act and what it is about (the confusion which gives rise to subjectivism), and regards sensible things as independent presentations ('The Basis of Realism,' *British Academy*, vi. [1914]; cf. also J. Laird, 'Berkeley's Realism,' *Mind*, new ser., xxv. [1916] 308).

temological premisses of epistemology.¹ Furthermore, the difficulty of colours occupying the same place at the same time has been resolved. T. P. Nunn² concluded that a wider idea of 'thing' must be constructed. The necessary logical work has been accomplished by Bertrand Russell, who showed that the difficulty over the phrase 'in the same place' arose from a too simple and unambiguous conception of space.³

It is obvious that much remains to be done; in the words of a keen critic of realism, 'the new philosophy is not out of the wood, but it has cleared hopeful paths in it.'⁴ A. E. HEATH.

3. Modern logic and realism.—A stimulus to philosophical realism came through modern logical analysis of mathematics and mathematical advances in theories of infinity and continuity (cf. art. CONTINUITY, vol. iv. pp. 96-98).

The traditional logic of Aristotle and the Schoolmen was principally a collection of rules of syllogistic inference, and propositions were analyzed into attributing of predicates to subjects. Leibniz, indeed, perceived that there could be valid asyllogistic inferences, such as 'Jesus Christ is God, therefore the mother of Jesus Christ is the mother of God,' and 'If David is the father of Solomon, without doubt Solomon is the son of David.'⁵ The logic of relations which was indicated by Leibniz was cultivated with not much success by Johann Heinrich Lambert,⁶ and with great success in the middle of the 19th cent. by Augustus de Morgan. In this respect de Morgan's work was on quite different lines from that of George Boole, whose symbolism for logic was ultimately based on the Aristotelian logic. De Morgan's work was published in the *Transactions of the Cambridge Philosophical Society* from 1850 to 1865 and in his *Syllabus of a Proposed System of Logic* (London, 1860). This part of de Morgan's work may be shortly indicated by saying that it was a successful attempt to fulfil a certain recommendation expressed by Sir William Hamilton:

'Whatever is operative in thought must be taken into account and consequently be overtly expressible in logic; for logic must be, as to be it professes, an unexclusive reflex of thought, and not merely an arbitrary selection—a series of elegant extracts—out of the forms of thinking.'⁷

But modern logic proper may be said to begin with the work of Gottlob Frege. Frege's first work, *Begriffsschrift, eine der arithmetischen nachgebildete Formelsprache des reinen Denkens* (Halle, 1879), should be read in connexion with his second work, *Die Grundlagen der Arithmetik, eine logisch-mathematische Untersuchung über den Begriff der Zahl* (Breslau, 1884). For the purpose of coming to a decision as to the nature (synthetic or analytic, *a priori* or *a posteriori*) of the concept of number, Frege devised an extraordinarily effective, though rather clumsy, symbolism for expressing with great precision the various concepts and methods of deduction in logic; and this symbolism and analysis were developed in the years 1879-1903. Frege's final statement of his whole theory is in his *Grundgesetze der Arithmetik begriffsschriftlich abgeleitet* (2 vols., Jena, 1893-1903). Philosophically speaking, Frege's point of view is clearly expressed in his criticism of the psychological logic of Benno Erdmann's *Logik* (Halle, 1892):

'It seems to me that different conceptions of the truth are

the origin of the controversy. I look upon the truth as something objective and independent of the person who judges. It is not so according to the psychological logicians. What Erdmann calls "objective certainty" is only a general acknowledgement proceeding from those who judge, and which therefore is not independent of them but may change with their psychical nature. . . . I acknowledge an objective domain which is not a domain of actual things; while the psychological logicians, without more ado, look upon the non-actual as subjective.'¹

In many of his works Frege carried on a sometimes ironically expressed polemic against the thesis that the subject-matter of arithmetic is the actual symbols and not the universals denoted by the symbols. Even eminent mathematicians such as H. L. F. Helmholtz, L. Kronecker, H. E. Heine, J. Thomae, O. Stolz, A. Pringsheim, H. Schubert, and many others maintained, in most cases quite explicitly, this form of nominalism. Frege succeeded in showing quite satisfactorily that the numbers used in arithmetic belong to a domain which is both non-actual and non-mental.

The logical work of Giuseppe Peano began to be published nine years after that of Frege, but was quite independent of Frege's work. The foundations of Peano's logical system were much more in conformity with those of Boole and his successors, but Peano used a very convenient and ingenious symbolism and attempted with great success the analysis of whole trains of reasoning which included already symbolized mathematical deductions. Peano laid stress on the fact that his symbolism was a true 'ideography' and thus did not make use of anything expressed in ordinary language. Although in many respects Peano's analysis was greatly inferior to that of Frege, Peano has the merit of being the first explicitly to point out the fact that the two propositions 'Socrates is mortal' and 'All men are mortal' are different in form. This distinction, which seems to have been well known to Frege also, though it was not explicitly expressed by him until after Peano had done so, was and is unfamiliar to most other logicians, including some symbolic logicians, because of the use of verbally the same copula ('is' or 'are') in both cases. The philosophical aspect of this distinction has been thus expressed by Russell:

'This [corresponding] confusion . . . obscured not only the whole study of the forms of judgment and inference, but also the relations of things to their qualities, of concrete existence to abstract concepts, and of the world of sense to the world of Platonic ideas.'²

The work of Bertrand Russell began with the completion of Peano's system by the addition of a correspondingly symbolized logic of relations, and advanced, by the independent discovery of many of Frege's subtle distinctions as well as by unanticipated discoveries, to a very satisfactory combination and development of the results of Frege in logic, Georg Cantor's results in the theory of transfinite numbers, and Peano's symbolism. The more philosophical discussion formed the subject of *The Principles of Mathematics* (vol. i., Cambridge, 1903), and a detailed symbolical exposition of the theory of A. N. Whitehead and B. Russell was given in *Principia Mathematica* (3 vols., Cambridge, 1910-13).

The philosophical bearing of modern logical work has been particularly emphasized by Russell. Broadly speaking, proper names stand for particulars, while other substantives, adjectives, prepositions, and verbs stand for universals. Pronouns and some adverbs stand for particulars, but are ambiguous. Only those universals which are named by adjectives or substantives have been much or often recognized by philosophers, while those named by verbs and prepositions have

usually been overlooked. Speaking generally, adjectives and common nouns express qualities or properties of single things, whereas prepositions and verbs tend to express relations between two or more things. Thus the neglect of prepositions and verbs, which is due to the fact that, in practical life, we dwell only upon those words in a sentence which stand for particulars, led to the belief that every proposition can be regarded as attributing a property to a single thing (the belief that all propositions are of the subject-predicate form) rather than as expressing a relation between two or more things. Hence it was supposed that ultimately there can be no such entities as relations, and this leads either to the monism of Spinoza (*q.v.*) and Bradley or to the monadism of Leibniz (*q.v.*).¹ The belief just referred to gives rise to reflexions of much the same kind as the one of Hamilton and de Morgan mentioned above.² It seems that most philosophers have been less anxious to understand the world of science and daily life than to convict it of unreality in the interests of a super-sensible 'real' world either revealed to mystical insight or consisting of unchangeable logical entities. We find examples of such reasons with Parmenides, Plato, Spinoza, Hegel,³ and this is at the bottom of the idealist tradition in philosophy. However, it is not true that all relations can be reduced to properties of apparently related terms.⁴ Here we may refer to § 2 above and to *Principles*, p. viii; cf. p. 448.

Another of the grounds on which the reality of the sensible world has been questioned by philosophers is the supposed impossibility of infinity and continuity.⁵ The explanation of the world which assumes infinity and continuity is much easier and more natural,⁶ but from the time of Zeno, whose paradoxes were invented to support indirectly the doctrine of Parmenides,⁷ the supposed contradictions of infinity have played a great part in philosophical speculation. Some of the problems of infinity were well treated by Bernard Bolzano;⁸ but it was the mathematician, Georg Cantor, who, about 1882, first practically solved the difficulties. In fact, it is not essential to the existence of a collection, or even to knowledge and reasoning concerning it, that we should be able to pass its terms in review one by one; but infinite collections may be known by their characteristics although their terms cannot be enumerated—collections can be given all at once by their defining concepts. Thus, an unending series may form a whole, and there may be new terms beyond the whole of it.⁹ Because of the fact that infinite collections are not self-contradictory, 'the reasons for regarding space and time as unreal have become inoperative, and one of the great sources of metaphysical constructions is dried up.'¹⁰

LITERATURE.—See the works quoted throughout the article.

PHILIP E. B. JOURDAIN.

REALITY.—The words 'real' and 'reality' are used in a variety of different senses; it is therefore impossible to give a single satisfactory definition of them. Moreover, in the most fundamental sense in which they are used they are indefinable. Their meaning is best made clear by considering certain correlative expressions in which they are commonly met (*e.g.*, reality and appearance) and

by discussing their relations to certain other notions with which they are very closely connected (*e.g.*, existence).

1. Existence and reality.—In the ordinary philosophic use of reality it would seem that a distinction is drawn between it and existence; for some things which would be asserted to exist would be denied by the same philosopher to be real, and some things that are said to be real are denied to exist. The two words, therefore, cannot be reasonably regarded as having the same intension, and any one who says that their extension is identical is called upon to give some proof of his assertion; *e.g.*, many philosophers deny that such things as colours are real, but it seems hardly possible to deny that they exist. When I see a colour or hear a sound, I am aware of something, and not of nothing. Also I am aware of something different in the two cases, and the difference seems to be between the objects of which I am aware, and not merely between my two awarenesses as mental acts.

Sounds and colours then may be said to exist, at any rate so long as any one is aware of them; and those who deny that they are also real are denying something the absence of which is compatible with their existence in the above sense. The two words are not, however, used consistently, and it would perhaps be as much in accordance with usage to say that colours are real but do not exist. At any rate, this example shows that reality and existence differ in intension; and we shall see reasons for preferring to say that colours exist even though they be unreal rather than that they are real even though they do not exist.

The fact that reality and existence differ in intension can also be shown from another side. Many philosophers hold that such things as the number 3 are real; but hardly any one would say that 3 exists, though of course certain collections of three things may exist—*e.g.*, the Estates of the Realm and the Persons of the Trinity.

As a foundation for setting up a consistent terminology, we have the following two facts about the common use of words: (a) hardly any one would think it appropriate to say that such things as numbers exist, but many would say that they are real; and (b) there are two kinds of things which almost every one would agree to exist if they be real—physical objects and minds with their states. With these two facts fixed, we may proceed to deal with the more doubtful cases of such objects as sounds and colours. We note that the two kinds of objects which are said without hesitation to exist if they be real are particular individuals; *i.e.*, they are terms which can be subjects of propositions but not predicates. Minds and physical objects clearly stand in this position. Objects which are said to be real but are seldom naturally said to exist are universals, whether qualities or relations—*i.e.* terms which can be subjects of propositions but can also occupy other positions in them. The number 3 is an example; for we can say both that 3 is an odd number and that the Persons of the Trinity are three. We may therefore lay it down as a general rule that objects are most naturally said, not merely to be real, but also to exist, when they are real and have the logical character of particular individuals.

When a man says that he sees a colour, he means that he is aware of an extended coloured object and not merely of a quality. This coloured object—*e.g.*, a flash of lightning—is a particular, and therefore, if real, exists. When we say that red exists, we mean two things: (1) that there are red objects, and (2) that these are particulars. The first part of our meaning corresponds to the

wider technical use of existence which is involved when mathematicians talk of existence-theorems. In this sense a universal is said to exist if it can be shown that it has or may have instances. Thus the number 3 exists in this sense because we can point to collections having three terms. But this is not the common use of existence in philosophy. To be able to say that a quality like red exists, we must be able to show both that it has instances and that these are particulars; for it is only particulars that are primarily said to exist, and existence, in the secondary sense in which it is ascribed to red, is derived from the existence, in the primary sense, of its instances. It seems, however, that we do not naturally ascribe existence to a universal in all cases where it has instances which are particulars. The number 3 has instances which are particulars, yet we do not commonly say that it exists. This difference in usage seems to depend on whether or not the judgment in which the quality is asserted of the subject occurs instinctively and without a recognized process of intellectual analysis. When we see a red object, we pass, if we choose, to the judgment 'This is red' without explicit analysis, and so we say that red exists; to judge that a collection which we see has three members, we have to break it up in thought and re-synthesize it, and so we hesitate to say that 3 exists, though we admit that it is real. It is difficult to believe that this difference of usage is of any philosophical importance, but it is necessary to notice it.

2. Reality of universals.—We have now to ask in what sense such objects as colours can be said to be unreal though they exist. It certainly seems that in the primitive senses of reality and existence nothing can exist that is not real. And this must be accepted; coloured objects, while we see them, both exist and are real in the primary sense of reality. But both their reality and their existence are denied by many philosophers; those philosophers must therefore be using the terms in a new sense. To say that red is unreal though it exists means (a) that red objects exist while they are perceived; (b) that nothing is red except when some one perceives it; and (c) that it is commonly believed that things might be red though no one perceived them. The third factor is quite essential. Toothache exists only when some one feels it, yet no one calls toothache unreal on this account. We may say, then, that reality is denied of a quality in this special sense when there are particular instances of it which we perceive, and our perception is accompanied by the belief in unperceived instances of it, and this belief is held to be erroneous.

It is clear that every immediate object of our senses both exists and is real in the primary meaning of these terms so long as we remain aware of the object. For it seems to be a synthetic *a priori* proposition that anything of which we can be directly aware by our senses is both real and particular; and what is real and particular exists in the primary meaning of that word. In a secondary meaning of reality, such objects may be called unreal if they give rise instinctively to judgments asserting the continued existence of the same or similar objects when unperceived, whereas in fact nothing of the kind can exist unperceived. Questions as to the reality of any particular, when reality has its primary sense, can arise only if that particular be not an object of direct awareness. Thus we ask, Does God really exist? or, Are atoms real? The meaning of such questions is as follows: God and atoms are not the direct objects of our minds at any time; if they were, there could be no doubt of their existence and reality in

the primary sense at certain times (viz. when we were directly aware of them). But we know what we mean by the words 'God' and 'atom'; e.g., we may mean by 'God' an *ens realissimum* or a First Cause. But these descriptions which we understand are partly in terms of universals; thus 'first' and 'cause' are universals. When we ask whether God really exists, we mean, Is there an instance of the complex universal involved in the definition or description of what we mean by the word 'God'? We can see that, if there be an instance, it must be a particular; so that, if there be one, God is both real and existent.

We may now turn to those objects that commonly would be said to be real but not to exist. It would seem that every simple universal of which we are immediately aware must be real (a) in the primary sense, and also (b) in a secondary sense which involves the already-mentioned secondary sense of existent as a special case. If we are directly aware of a universal, it is the object of a thought, and is clearly something real in the same sense in which a particular flash of light is real when it is the object of our senses. It does not, however, exist in the primary sense, because it is not a particular. Again, to be aware of a simple universal, it is necessary to have been aware of some instance of it. Thus any simple universal of which we are directly aware must have instances. It must therefore exist in the mathematical sense. It need not, however, exist in the philosophical sense, because its instances may not be particulars; e.g., we are directly aware of the universal colour, but the instances of colour are red, yellow, etc., which are themselves universals. Thus it seems more natural to say that colours exist than that colour exists. Nevertheless this is largely a matter of mere usage. We cannot become aware of a simple universal of a higher order unless we are aware of one of the next lower grade, and so on till we come to the lowest universals in the hierarchy—those whose instances are particulars. Thus, to become acquainted with colour, we need to be acquainted with colours; and, to become acquainted with colours, we need to be acquainted through our senses with particular coloured objects. So we may fairly say that every simple universal of which we are directly aware either exists in the secondary sense or is known through universals that are instances of it and themselves exist in the secondary sense.

It follows that the only universals about the reality of which questions can reasonably be asked are either (1) those which are not directly cognized by us, but are described in terms that we understand, or (2) complex universals. The questions that can be asked about the reality of such universals are closely connected; e.g., it may reasonably be doubted whether any one is directly acquainted with the number twelve million and forty-nine. But we all know this number perfectly well under the description of 'the number which is represented in the decimal scale of notation by the symbols 12,000,049,' provided that we are acquainted with all the terms involved in this description and with the significance of their mode of combination in it. It is then open to ask: Is there really such a number? This question involves two others: (a) Is there anything contradictory or incoherent in the description, as there would be if a number were described as that represented in the decimal scale by a bow and arrow? and (b) If the description be self-consistent and intelligible, is there really an object answering to it? If both these questions can be answered in the affirmative, the number will be said to be real in the primary sense. We can then go on to ask

the question: Is there any collection of particulars that has this number? If so, we can add that the number exists in the secondary philosophic sense in which existence can be predicated of universals.

Very similar questions arise over complex universals—e.g., a golden mountain. It would seem that complex universals which involve no internal incoherence must be real in the primary sense if their constituents be real. Thus the universal 'golden mountain' is real even though there are as a matter of fact no golden mountains. If the universal has no instances, it will exist neither in the mathematical nor in the philosophic sense; if it has instances which are not particulars—as, e.g., the complex universal 'perfect number'—it will exist in the mathematical but not in the philosophic sense. But very difficult questions arise as to the reality of complex universals which involve a contradiction or some other *a priori* incoherence—e.g., a 'round square.' Can we say that such universals are in any sense real?

This question has been discussed very fully and acutely by Meinong and his pupils. The following are arguments for supposing that such universals are in a sense real. These incoherent universals appear as the subjects of propositions—e.g., in 'A round square is round' and 'A round square is impossible.' Such propositions are not about nothing; they seem to be about round squares; hence even these universals must have primary reality. Again, when we understand such a proposition as 'A round square is impossible,' the proposition is the object of an act of judgment, and, as such, is real. But the proposition is a complex, and, to understand it, its elements must also be the objects of acts of presentation. Hence the universal 'round square' must be the object of certain mental acts; it therefore cannot be nothing, and must have primary reality. It will be seen that the question discussed here is similar to that raised by Plato in the *Sophist*: In what sense, if any, can not-being be?

Meinong and his school have been led to the view that there is a most primitive form of being that applies to all objects about which assertions or denials can be made, whether they be internally coherent or not; that reality is a species of this and existence a species of reality. We may agree that anything that is really the object of a state of mind, or is really the subject of a proposition, has what we have called primary reality; but we may doubt whether such objects as round squares have any kind of being at all. For Meinong's views lead to very grave difficulties. This form of being will have no opposite, and the law of contradiction will not hold for propositions about impossible objects. Thus the propositions 'A non-human man is human' and 'A non-human man is not human' will both be necessarily true, and yet be contradictory. Again, the expedient leads to an infinite series of orders of being of increasing absurdity. Suppose we agree with Meinong that a round square has being. Then the proposition 'A non-being round square has not being' seems as genuine and necessary as 'A round square is round.' But, if the latter forces us to ascribe a kind of being to round squares, the former must equally force us to ascribe a kind of being to non-being round squares. And this process of postulating fresh and ever more absurd kinds of being will go on indefinitely. Closely connected with these difficulties is the question whether propositions, and in particular false propositions, be in any sense real. Meinong assumes that all mental acts concerned with propositions are founded on an act in which the proposition is before our minds as sense-data and universals are when we are directly

aware of them. If so, propositions which we judge, whether they be true or false, have exactly the same claims to primary reality as a red patch that we see or the quality of redness that we cognize. Yet it is very difficult to believe that every false proposition that any one has ever judged is real; whilst, if we reject the reality of false propositions, we can hardly save that of true ones.

The general means of meeting Meinong's difficulty depends on recognizing the fact that, in the verbal forms which stand for propositions, the word or phrase that counts as grammatical subject cannot be regarded always as the proper name of the logical subject of the proposition. In the sentence 'Red is a colour' the grammatical subject 'red' is the proper name of the logical subject of the proposition, and therefore the universal red is real; but it does not follow that in the grammatically similar form of words, 'A round square is round,' the phrase 'a round square' is the name of anything. In fact two other possibilities remain open: (1) that the sentence 'A round square is round,' though it has the same verbal form as some sentences which do stand for propositions—e.g., 'A penny is round'—does not itself stand for any proposition; and (2) that, whilst the sentence does stand for some proposition, the proposition for which it stands can be analyzed into a combination of several in none of which a single object whose name is 'round square' appears as subject.

Both these alternatives may be used for dealing with the reality of round squares. In the first place, we may suggest that a sentence like 'A round square is round' seems to stand for a proposition only because of its similarity in grammatical form to certain sentences which do stand for genuine propositions. Actually, when we see these marks or hear the corresponding sounds, we do not think of any proposition whatever. And likewise, when we say that it is necessary that a round square should be round, we mean only that sentences in which the name of a part of the grammatical subject appears as the grammatical predicate stand for necessary propositions if they stand for propositions at all. On the other hand, the statement 'A round square is contradictory' does stand for a genuine proposition, but it is not a proposition about an object denoted by the phrase 'round square.' The proposition really is: 'If an object be round, it cannot be square, and conversely.' This proposition does not contain a complex term denoted by 'round square,' but asserts a relation of incompatibility between roundness and squareness. Hence its reality, truth, and intelligibility do not imply the reality of a complex universal 'round square.'

Before leaving this subject, a word must be said about the reality of objects that involve an *a priori* incompatibility, but in which the incompatibility is not obvious without proof as in the case of 'round' and 'square.' Does the phrase, 'an algebraical equation of the second degree one of whose roots is π ,' stand for any real object? It does not, for it involves *a priori* incompatibilities. But we must not say that sentences with this phrase as their grammatical subject as used by most people are in the same position as 'A round square is round.' For persons who do not see the *a priori* incompatibility these sentences may stand for propositions, though they cannot be about any object of which the phrase in question is the name.

3. Appearance and reality.—The question of the reality of propositions would lead us into problems connected with Bertrand Russell's theory of judgment and G. F. Stout's doctrine of real possibilities which would carry us too far afield. We will

therefore pass at once to the opposition between reality and appearance, with which is connected the doctrine that there are degrees of reality.

The simplest and most obvious case of this opposition is what is known as the contrast between sensible appearances and physical realities. A cup is believed to be round, yet from all points of view but those which lie in a line through the centre of the circle and at right angles to its plane it appears elliptical. The elliptical shapes seen from the various points of view are called the 'sensible appearances' of the cup, and are contrasted with its real shape. It must be noticed that the opposition between sensible appearance and physical reality is not simply that between true and false judgment. The elliptical appearance may never lead us to the false judgment that the cup is elliptical; moreover, if it should do this and the error should afterwards be corrected, the cup does not cease to appear elliptical. It is important to be clear on this point because efforts are sometimes made to hold that appearances are not objects connected in a certain way with a physical reality, but are certain ways of viewing a physical reality. The latter theory makes appearances mind-dependent in a way in which the former does not. When we talk of different ways of viewing one reality, the differences must be supposed to qualify our acts of viewing, and not the object viewed; they are thus differences in mental acts and can subsist only while the acts themselves exist. But, if we suppose different appearances to be different objects, then, though it is possible and may be probable that these objects exist only when the acts which cognize them exist, it remains a fact that they are not in any obvious sense states of mind or qualities of such states.

Now it seems certain that different sensible appearances are different objects, and not merely different mental relations to the same object. Inspection shows clearly that the elliptical shape which is seen from the side is as good an object as the circular shape seen from above. Moreover, if we call the appearances mental acts, to what precisely does the quality 'elliptical' which we ascribe to the appearances belong? Surely not (a) to any mental act, for these have no shape; nor (b) to the physical object, for this is supposed to be round; and, if it be said (c) that it applies to 'the physical object as seen from such and such a place,' the supporter of this alternative may be asked to state what he supposes this partly mental and partly physical complex to be, and how he supposes it to have the spatial predicate of ellipticity. The view against which we are arguing is somewhat supported by the common phrase, 'The cup is round but looks elliptical.' But the only meaning which it seems possible to give to this is the following: viewing the cup from a position from which the real shape cannot be seen, we are aware of an appearance that has the same shape as we should see if we looked straight down on a cup that was really elliptical.

We may say, then, that a sensible appearance is a reality; but it is not a physical reality, because it does not obey the laws of physics; and it is not a mental reality in the sense of a state of mind, nor is it any quality of a mental act, though it is commonly believed that it exists only as the object of an act of sensation or perception. We may agree, then, so far with two celebrated dicta about appearance and reality: 'Reality must in some way include all its appearances,'¹ and 'Wieviel Schein soviel Hindeutung auf Sein.'² Since an

¹ F. H. Bradley, *Appearance and Reality*, bk. I. ch. xii. p. 132 (2nd ed.: 'Appearances exist . . . And whatever exists must belong to Reality').

² J. F. Herbart, *Hauptpunkte der Metaphysik*, in *Sämmtl. Werke*, ed. G. Hartenstein, Leipzig, 1850-52, iii. 14.

appearance, taken by itself, is as real as anything else (in the primary sense of reality), it can be called an appearance only in virtue of some essential reference in it to something else with which it is contrasted. Thus *sensible* appearance is contrasted with *physical* reality; both are real in the primary sense, but the former is called an appearance because it always tends to make us think of the existence and qualities of the latter, and we have a tendency to ascribe qualities to the one that belong only to the other.

The last point is of considerable importance with reference to the statement that Reality is a harmonious whole and that appearances are condemned because of their internal incoherence or contradiction. Reality is here used as a concrete substantive, and means the whole system of what really exists. But presumably it is also true that anything that is real, and therefore any part of Reality, must be internally coherent. Now, sensible appearances are real, as we have tried to show; hence they must be internally consistent. There is no internal inconsistency in a red elliptical patch seen by any one, and the person who calls this an appearance does not do so because of any internal incoherence, if he knows what he is about. The incoherence arises when the elliptical red patch is taken to be identical with some other part of Reality (e.g., a colourless circle) whose qualities are incompatible with its own. The elliptical red patch is certainly real, and the colourless circle may very well be real; the former is called an appearance, and the latter a reality, because objects of the latter kind are of much greater practical interest and importance as obeying the laws of physics, and because the intimate relations between the two are liable to cause us to make the mistake of identifying the qualities of the two where they really differ. Reality—the whole system of all that exists—must include both the elliptical red patch and the colourless circle, if both be real; and their precise nature and relations are a matter for further philosophical investigation.

This seems obvious enough when we consider only the contrast between sensible appearance and physical reality. But we must notice that eminent philosophers use the contrast in many cases where what they call the appearance is not an object of sense-perception. F. H. Bradley, e.g., argues that the self and goodness and relations are all appearances, though appearances of different degrees of reality. What precisely does this mean? Primarily, that certain notions which we all use in thinking about the world are internally inconsistent. We treat the world, e.g., as consisting of various terms in various relations to each other. Bradley tries to show that such a view involves vicious infinite regresses. When appearance is used in this sense, it seems to be connected with a special kind of false judgment, viz. the assertion that the world or some part of it has incompatible characteristics. This is very different from the kind of false judgment connected with sensible appearances. (1) As we saw, no kind of false judgment need be made there, and, if it be made and corrected, the sensible appearance continues to exist and be perceived. (2) There is nothing self-contradictory in the predicate that is wrongly ascribed to physical reality through confusing it with sensible appearance. The judgment 'This cup is elliptical' is false, not because there is anything self-contradictory in the predicate 'elliptical,' but because it is incompatible with the circularity that the physical cup is supposed to possess. On the other hand, if the self be an appearance in Bradley's sense, the assertion 'Socrates is a self' is false, because the predicate is self-contradictory;

it is like saying 'Socrates is both tall and short.' The quality of being a self can be truly asserted of nothing, whilst that of being elliptical can be truly asserted at least of the sensible appearance. There is thus a great difference between what is meant by calling the seen ellipse an appearance and calling the self an appearance.

When this difference is recognized, we see that, whilst it is obvious that sensible appearances are contained in Reality, it is not at all obvious in what sense such appearances as the self can be contained in it; for these would seem to be in the position of round squares. This brings us to the doctrine that there are degrees of reality. It is held that all appearances are internally incoherent, but that some are more coherent than others. As a corollary to this, it is maintained that no appearance is as such contained in Reality; on the other hand, as Bradley puts it, 'appearances are transmuted' in order to be contained in Reality, and the one-sidedness of one appearance cancels out with and is corrected by that of others. This doctrine seems to be closely connected with three others: (a) Reality as a whole being a harmonious system, it is assumed that, the more an appearance needs to be modified and supplemented in order to take its place in Reality, the less coherent and therefore the less real it is; and (b) this is largely dependent on the view that all appearance is connected with the peculiar position of finite minds, which can know Reality only fragmentarily and from an individual angle; lastly (c) it is held that no part of Reality can be internally coherent in abstraction from its relation to the rest of Reality. We may trace the development of this view in Spinoza's doctrine of the three kinds of knowledge and in the Hegelian dialectic to its completest form in Bradley's philosophy.

It is clear that both (a) and (c) are needed if it is to be assumed that Reality is the only harmonious system. And this is assumed; for very often something is condemned as appearance, not so much because of any internal incoherence that can be directly detected in it as because it obviously cannot be predicated of Reality as a whole. It is impossible to give a fair and adequate criticism of so subtle and elaborate a doctrine here. But the following remarks may be made:

(1) Either Reality can be correctly regarded as possessing parts or not. If so, it would seem that there must be some propositions that are true about the parts and not about the whole (e.g., that they are parts). And again, if the parts be real, they must be as internally harmonious as the whole. It may be perfectly true that what we take as one self-subsistent differentiation of Reality is often neither one nor self-subsistent, but a mere fragment whose limits do not correspond with those of any single differentiation (cf. here Spinoza's distinction between the hierarchy of infinite and eternal modes and the finite modes, and his closely connected theory of error). But even a fragment is something and has a nature of its own, and perfectly true judgments should be possible about it. We may of course make erroneous judgments if we ignore the fact that it is a fragment, and if we make assertions about that in which depends on its relations to what is outside it. But we do not always ignore the fact that what we are talking about is not the whole; e.g., when we say that Socrates is a self, we are perfectly aware that Socrates is only a part of Reality, and that our statement may be false of the whole. And it is not obvious that all assertions about a fragment must depend for their truth on what is outside the fragment (cf. here Spinoza's doctrine of the function of the *notiones communes* in passing from imaginative to rational knowledge).

If, on the other hand, we suppose that Reality cannot be correctly regarded as having parts, the question arises: What precisely is it that is called an appearance, and what precisely is supposed to be 'transmuted and supplemented' in Reality? Something must be transmuted and supplemented; it cannot be Reality as a whole; what can it be unless Reality has real parts? Bradley has seen these difficulties perhaps more clearly than any other philosopher of his general way of thinking; but it is hard to believe that his doctrine that Reality is a supra-relational unity, and that all predication involves falsification is a satisfactory solution. Indeed, it perhaps comes to little more than a re-statement of the theological position that the nature of God can be described only in negative terms which at least ward off error.

(2) Sensible appearances, which, as we have seen, differ in important respects from others, are also held to exhibit what may be called degrees of reality in a special sense. As we know, these realities are called appearances and unreal only with respect to their relations to a supposed physical reality about which they are held to be an indispensable source of information. Now, those who deny the physical reality of secondary qualities would be inclined to say that the colours seen in waking life are less real than the shapes that are seen at the same time, and more real than the colours and shapes seen in dreams, delirium, or illusions. We may usefully compare here Kant's distinction between *Schein*, *Erscheinung*, and *Ding-an-Sich* in his example about the rainbow to that between the colours and shapes of dreams, the colours of waking life, and the qualities of physical objects (it is not of course suggested that Kant had in mind precisely the distinctions which we are now considering).

As far as can be seen, the ascription of degrees of reality to sensible appearances simply depends on how intimately their qualities are supposed to be connected with those of a corresponding physical reality. To a man who takes the position of Locke and of most natural scientists the elliptical shapes seen in waking life (to revert to our old example) are the most real of appearances, because the corresponding physical reality actually has a shape, and that shape is a closed conic section connected by simple laws with that of the appearance. The colours seen in waking life are less real appearances because it is not believed that any physical object has colour, though it is held that the colour seen is correlated with the internal structure of the corresponding object. And the shapes and colours of dreams or hallucinations are held to have the lowest degree of reality, because, while it is admitted that they are correlated with distinctions that exist *somewhere* in the physical world, it is held that these distinctions exist in the brain or in the medium rather than in any object that can be regarded as specially corresponding to the appearance in the way in which the round physical cup corresponds to the elliptical visual appearance seen in waking life.

4. Ethical sense of the term.—It remains to notice one more use of the words 'real' and 'reality.' They are sometimes used in an ethical sense to stand for what ought to be as distinct from what is. This is rather a paradoxical use of terms. Often we contrast real and ideal, and say that what actually exists is real, whilst what ought to exist but does not is ideal. Yet some ethical writers use the word 'real' for 'ideal,' when they speak of the real or true self, meaning the self that ought to be as contrasted with that which now is. This use of terms is generally connected with metaphysical theories of ethics such as Kant's or Green's, which hold that the self that

ought to be really exists and has a higher degree of reality than what would commonly be called the self as it really is.

LITERATURE.—The following works are of importance in connexion with the subject of this article. (1) On the relation of reality to existence and on the reality of contradictory objects.—Plato, *Sophist and Theaetetus*; St. Anselm, *Proslogium* and *c. Insuperantem*; A. Meinong, *Über Annahmen*, Leipzig, 1910, *Über die Stellung der Gegenstandstheorie, do.* 1906-09, *Untersuchungen zur Gegenstandstheorie und Psychologie, do.* 1904; B. A. W. Russell, *The Problems of Philosophy*, London, 1912, *The Principles of Mathematics*, Cambridge, 1903; A. N. Whitehead and B. A. W. Russell, *Principia Mathematica*, do. 1910, 1.; G. F. Stout, 'The Object of Thought and Real Being,' *Proc. of the Aristotelian Society*, 1911. (2) On the relation of reality to appearance.—Spinoza, *Ethics*, tr. W. H. White, London, 1894; F. H. Bradley, *Appearance and Reality*, London, 1902, *Essays on Truth and Reality*, Oxford, 1914. (3) On sensible appearance and physical reality.—Descartes, *Meditations*; G. Berkeley, *Principles of Human Knowledge*, London, 1776; Kant, *Critique of Pure Reason*, tr. J. H. Stirling, Edinburgh, 1881; H. A. Prichard, *Kant's Theory of Knowledge*, Oxford, 1909; Russell, *Our Knowledge of the External World*, Chicago, 1914; Stout, *Manual of Psychology*, London, 1913; S. Alexander, artt. in *Mind*, new ser., xxi. [1912], *Proc. Arist. Soc.*, new ser., xi. [1910-11], and *Proc. British Academy*, vi. [1914]. C. D. BROAD.

REALITY (Buddhist).—In religious philosophy as in metaphysics the words 'real,' 'reality' express more than one aspect of things—the actual as opposed to the fictitious, the essential as opposed to the accidental, the absolute or unconditioned as opposed to the relative or conditioned, the objectively valid as opposed to the ideal or the imagined, the true as opposed to the sham, the important as opposed to that which, in the same connexion, is of less value, and finally, that which ultimately and irreducibly is as opposed to that which names conventionally signify in the average mind's stock of knowledge.

Neither in the *Suttas* of the earlier Buddhist religious doctrines nor in the early or the early mediæval elaborations of a more metaphysical kind do we meet with terms quite so packed with meanings as 'real' and 'reality,' but all the above-named antitheses occur and find expression in a variety of terms. The *Suttas* are more deeply concerned with the truth and the pragmatical importance of things. And the true and the actual, or that-which-is, are identified by one and the same word: *sacca*=*sat-ya*, i.e. fact, or the existent (see art. TRUTH [Buddhist]). There were certain facts or realities relating to spiritual health concerning which it was of the first importance to hold right views and take action accordingly. To rank other realities, such as objects of sensuous and worldly desires, as of the highest value (*aggato karoti*) was likened to the illusion that the painted forms in a fresco were real men and women,¹ or to the illusions achieved in conjuring or occurring in dreams.² Metaphors again play around, not the actuality, but the essential nature of the living personality, physical and mental. Thus the material factors of an individual are compared to a lump of foam: 'Where should you find essence [lit. pith] in a lump of foam?', the mental factors—feeling, perception, volitional complexes, and consciousness—to bubbles raised in water by rain, to a mirage, to a pitiless plant, and to conjuring respectively.³ The world is also compared to a bubble and a mirage,⁴ etc. These figures are not meant to convey the later decadent Indian Buddhist and Vedāntist sense of the ontological unreality of the objects and impressions of sense. The similes convey on the one hand a repudiation of (a) permanence, (b) happy security, (c) super-phenomenal substance or soul, and on the other a depreciation of any genuine satisfying value in the spiritual life to be found in either 'the pride of life' or the 'lust of the world.'

This trend in Buddhist teaching was not due to the absence of theories concerning the nature of being in the early days of Buddhism. There were views maintained very similar both to that of the Parmenidean school in Greater Greece—that the universe was a *plenum* of fixed, permanent existents; and to the other extreme as maintained by Gorgias and other Sophists—that 'nothing is.' These Indian views, probably antedating those of Greece by upwards of half a century, were confronted by the Buddha with his 'middle theory' of conditioned or causal becoming. His brief discourse is given in the *Suttas* of the *Saṃyutta Nikāya*,¹ and is cited by a disciple in another *Sutta* nearly adjacent to that containing the similes referred to above.² And we hear no more of the extremist views till we come to the book purporting to be the latest in the canon—the *Kathāvatthu*. There among the first, presumably the earliest compiled, arguments of the work³ we find that the positive theory—'everything exists' (i.e. continues to exist)—so far from being generally rejected among Buddhists, was maintained by a school which attained to great eminence not only in North India, especially in Kashmir, but also in Central and Eastern Asia, and in the south-eastern islands—the school of Sarvāstivādins (g.v.; Pali, Sabbathivādins), or 'All-is-believers.'

The attitude taken up in the Theravāda, or mother-church, towards what might now be called reality, developed along a different line. This confronts us in the very first line of the *Kathāvatthu*: 'Is the person (self or soul) known in the sense of a real and ultimate fact?' In other words (as is revealed in the process of the long series of arguments), does the term 'person,' conventionally used as a convenient label for the composite phenomenon of a living human being, correspond to any irreducible and permanent entity, nomenon, ego, soul, immanent in that phenomenon? This distinction between the current names in conventional usage and the real nature 'behind,' or 'above,' what is designated by them is anticipated already in the earlier books of discourses and dialogues ascribed to the Buddha.⁴ A man's personality is conceded as being real, or a fact (*sacca*) to him at any given moment, albeit the word expressing that personality is but a popular label, and is not paralleled by any equally fixed entity in man. But, in the inquiry of the later book, the *Kathāvatthu*, the more evolved philosophical problem is betrayed by the first appearance of a more technical nomenclature. *Sacca* ('true,' 'fact') is used in adjectival form—*saccika*, 'actual.' And *paramattha* ('ultimate sense,' lit. 'supremething-meant'), a word which, in Theravāda literature, has become an equivalent of philosophic or metaphysical meaning, here starts on its long career. It is along the line of this distinction between popular and ultimately real or philosophic meaning that the commentator (c. 5th cent. A.D.) discusses the opening argument in the controversy and perorates at the close of it.⁵ It is in the forefront of Anuruddha's planning of his classic manual, *A Compendium of Philosophy (Abhidhammattha-saṅgaha)*: 'These things are set forth in their ultimate sense as Categories Four,'⁶ the commentaries pointing out that *paramatāthto* is opposed to *sammūti*, the conventional. And Anuruddha discusses in his eighth chapter⁷ the distinction between the things that are real existents and those that are, in virtue of a name, apparently so. Finally the present-day vitality

of this aspect of reality for Buddhists is visible in the writings of Ledi Mahāthera.¹

In his discussion of the terms *paramattha* and *sacca* S. Z. Aung quotes mediaeval philosophical works, which are practically at one in interpreting *paramattha* as meaning either a sense-datum or a thing *per se* (*sabhāva*) which is verifiably existent to the extent of irreversibility or infallibility. Such ultimately real things, referred by Anuruddha to a 'fourfold category,' may also be distinguished under two heads—as unconditioned and conditioned. Under the former head, meaning 'whatever is not causally related to anything else,' Buddhist philosophy refers its metaphysical conception of *nibbāna* (*nirvāṇa*), i.e. its hypothetical state which is not life, in that there is no birth or death, the essentials of life. Under the conditioned are comprised all the elements (not the compound phenomena) of matter and mind. In the former the elements, abstractions from earth, water, fire, air, are, respectively, that which extends itself, coheres, burns, moves. Mind is ultimately conceived as consciousness *plus* a number of what the present writer has called mental coefficients (Pāli, *cetasika-dhammā*, 'mentals'), such as feeling, perception, volition, etc. All these conditioned elements, though ultimately real, are in a perpetual state of change, i.e. of genesis and cessation, wherein there is always a causal series, one momentary state arising because of its predecessor and transforming itself into its successor. Nothing is casual or fortuitous. All is in a state of causally determined becoming. In the ultimate constituents of conditioned things, physical and mental, Buddhism has never held that the real is necessarily the permanent. Unwitting of this anticipation, Bertrand Russell is now asking modern philosophy to concede no less.²

REASON.—1. Definition.—In the most generalized sense of all, reason might be defined as the relational element in intelligence, in distinction from the element of content, sensational or emotional. Such a definition could justify itself by etymology: both *λόγος* and *ratio*, from which the word as a philosophical term descends historically, have sometimes the meaning simply of 'relation.' This, however, is too generalized to be serviceable. We must seek for something more limited.

At the beginning of the search we are met by an ambiguity. Man is defined as the 'rational animal'; yet the 'reason of animals,' at a level below the human, is currently spoken of. The explanation of this ambiguity will point out the definition which we require.

It is true that the lower animals have 'reason' as well as 'instinct' (which may be defined as the direction, psychical as well as physical, of actions to ends, without knowledge of the end) in the sense that they, in varying degrees, direct their actions intelligently to desired ends; but not even the animals nearest to man have the power of thinking in general terms expressed in language. Man has this; and, in the traditional definition of man, it is this that is distinguished by the name of 'reason.' The subject may thus be dealt with either psychologically or epistemologically—i.e., we may consider the origin and growth of conceptual thought; or we may consider it as actually exercised in the discovery of true propositions.

¹ E.g., *Vipassanādiṇi*, Rangoon; 'Expositions,' *Buddhist Review*, Oct. 1915; 'Some Points in Buddhist Doctrine,' *JPTS*, 1913-14, p. 129, as well as in S. Z. Aung's art. 'The Philosophy of the Real,' *Journ. Burma Research Society*, Rangoon, 1917.

² 'The Ultimate Constituents of Matter,' *The Monist*, London, 1915, p. 401 f.

Psychologically it has been dealt with under the head of INTELLECT. In the present article we shall consider reason, not further in relation to the classification of the mental powers, and not genetically, but in relation to the philosophical discussions on the validity of scientific knowledge, of moral precepts, and of metaphysical beliefs.

2. The term in Greek philosophy.—(a) *The pre-Socratics.*—Reason, of course, was used by man long before the use of it was reflected on, and long before it was appealed to as the ground of knowledge or belief. When it is thus appealed to, it comes to be set, along with experience, in antithesis to passively accepted custom or tradition; and then again, more precisely, in antithesis to the particular facts known, as distinguished from the form and the generality of knowledge. The last stage was reached in the early philosophy of Greece—not at the very beginning, but as early as Heraclitus and Parmenides (6th to 5th cent. B.C.). For the earlier period of the Hellenic world, as for the pre-Hellenic world generally, the vague Homeric use of such words as *νόος*, *φρένες*, *πρωτίδες*, in which reason is not clearly distinguished from sense, or the mental process from the organic process that goes with it physiologically, may be taken as characteristic. Something of this vagueness indeed always remains in literary and even in philosophical usage;¹ but there comes a time when language enables us to distinguish if we choose. The time when generalizing thought was consciously recognized, in distinction from the sense or experience in which it is immersed, arrived when the deductive science of mathematics had begun as a new departure of Greek science, marking a step beyond the accumulation of observations and empirical formulæ in the science of the ancient East. It was this, though perhaps neither thinker was fully aware of the source of his thought, that caused Heraclitus and Parmenides to begin the series of articulate statements of a philosophical criterion. Earlier thinkers had already started the series of doctrines, but without a definite test of truth.

The balance, as a necessary consequence of the new departure in which the inquiry had its source, inclines at first to reason in its distinctive meaning as against the later-formulated criterion of experience. Heraclitus, indeed, appeals also to experience against tradition² in the saying, *ὀφθαλμοὶ τῶν ὄντων ἀκριβέστεροι μάρτυρες* (frag. 15 [Bywater], 101^a [Diels]); but to reason is given the predominance. The final criterion is the judgment of the soul, not the witness of eyes (experience) or of ears (tradition), though the eyes are more trustworthy than the ears:
